"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 7TH, 1883.

BIRTH.

On the 2nd instant, at No. 203, Bluff, the wife of EDWARD J. MOSS of a Son.

WEEKLY NOTES.

THE situation in Tonquin remains unchanged, but although nothing definitive with regard to the negotiations between France and China is announced, the prospect of a peaceful solution has unquestionably improved. The cause of this growing assurance is doubtless to be sought in the fact that public opinion recognises the entire absence of any valid *casus belli*. The arrangement concluded between M. Bourée and the Tsung-li Yamén—though not endorsed by the Cabinet at Paris—taken in conjunction with the semi-official manifesto recently published in the Shanghai journals, shows plainly that China has absolutely nothing to fight about. She has virtually declared her willingness to surrender her so-called suzerain rights over Annam, for the sake of interposing between herself and France's proposed acquisition a neutral zone in-

habited by lawless tribes, and it is a reasonable inference that she will be willing to surrender the neutral zone for the sake of avoiding a war which must be disastrous and might mean the dismemberment—of the "mummy empire." If this is really her mood, and there seems no reason to doubt that it is, an appeal to arms can only be the alternative of exceedingly bungling diplomacy. M. Tricou has a much easier task to perform than was formerly supposed, and under the circumstances his success is not impossible. Meanwhile, we are not likely to hear anything of moment until the result of M. Kergardec's Mission to the Court of Hué is known. It appears that the envoy's instructions are to notify the Indo-Chinese monarch that since he cannot keep order in Tonquin, France feels constrained to undertake the task for him. He has only to abstain from opposition and keep his mandarins at their posts until the emissaries of the new republic have established themselves definitively in the country. He will further be required to sign a protocol recognizing a French protectorate over the whole of Annam and the right of France to impose customs duties and taxes. In return for thus effacing himself, he is to be guaranteed the integrity of his dominions and a third of the revenues, approximately. The financiers of Paris calculate that with skilful management they will be able to collect nearly 7 millions of dollars per annum, one-third of which will be devoted to the expenses of administration, one-third to public works, and the residue to pension the King. Of course the alternative to all this arrangement is war, with a view to which contingency General Bouet is concentrating troops at Hanoi. Probably by this time he has from four to five thousand men under his command and three batteries of artillery, but under no circumstances is it likely that any extensive operations will be undertaken during the heat of mid-summer. If China means to be troublesome she will have plenty of time to push her forces southward, and she requires time, for apart from her natural lack of promptitude, the nature of the country on her southern frontier is said to be very unfavorable to the passage of troops. Public sympathy is not with France in this business. Some of her writers profess to think that the source of Chinese opposition is to be sought in German and English counsels, but a war between China and France would scarcely be more disastrous to the Middle Kingdom than to English and German interests in the Far East. The plain truth is that, however civilization and commerce would be benefited by the establishment

of French rule on the Fleuve Rouge, national morality would suffer severely by such a conjuncture. M. Challemeil Lacour has virtually confessed that the reverses of 1871, compel France "to make her influence felt among distant populations, which have been misled as to her situation." This is perhaps an entirely erroneous statement of motives, but it obtains pretty general credence, and the public may be pardoned if they fail to applaud the spectacle of a great Power seeking to recover its lost laurels in conquests that may entail disgrace but cannot possibly confer renown.

THE Financial estimates for the fiscal year ending June 30th, 1884, have been published. They put the total revenue at yen 75,606,059, against 66,814,122 last year, the increase—yen 8,791,937—being derived from an augmentation of the taxes on patent medicines, exchanges (rice and stock), tobacco, and *sakk*. The whole of the increment is devoted to military preparations, a supplementary war fund, and public works. The paper money in circulation, independent of that issued by the National Banks, is shown as 98,290,352 yen against 105,639,238 in 1882. The revenue and expenditure balance.

THE illness of His Excellency Iwakura does not mend. Much anxiety is felt on his account, and special enquiries for his health are daily made by His Majesty the Mikado.

A RUMOUR has been circulated to the effect that China's extensive military preparations, though ostensibly intended for the protection of Tonquin, are in reality destined to be employed against Japan. Improbable as the idea seems, it is not entirely beyond the range of possibility. Li Hung-chang's patience is known to have been tried almost beyond endurance by a succession of real or imaginary insults to which his country has been subjected, and should his negotiations with France result in anything resembling fresh humiliation and consequent disgrace to himself, the *pis aller* of a sudden descent upon Riukiu might present undue attractions. China's chances of ultimate success in a campaign beyond her borders are exceedingly small. If she succeeded in landing an army in the Okinawa Prefecture, to be driven out again with ignominy would be its fate. We do not for a moment believe that she will attempt anything so rash, but it is plain that Japan has felt uneasy about her designs for some time. Thus, among other preparations, we hear of increased coast-defences—including

the restoration of the forts at Shimonoseki—which are to be placed under the charge of a French engineer. China and Japan have nothing to fight about, but it cannot safely be said that that is their best reason for not fighting.

THE appointment of Sir Harry Parkes to represent Her Majesty at Peking, and that of the Honorable F. R. Plunkett to succeed him in Japan, are now officially announced. The date of Sir Harry's departure for his new post is still uncertain, but it is probable that he will not delay it longer than necessary, as his presence at Peking is universally desired in the interests of peace. The high reputation which Mr. Plunkett earned during his previous term of service in this country renders his appointment exceedingly popular, though the community feel that in Sir Harry Parkes they lose a Minister whose place can never be entirely filled.

THE site of the offices of the Prefecture which were destroyed by fire last year, have been sold for a sum of *yen* 67,707. The extent of the lot is 2,480 *tsubo*, so the price obtained is only 27½ *yen* per *tsubo*, which is considerably less than the market value of land in that neighbourhood. The purchasers are an association of silk merchants who propose to employ the ground as the site for a central market and conditioning house. We learn, however, that they have no intention of commencing operations yet, but have secured the land of the Kencho because such a lot is not likely to come into the market again.

It is stated that the sums contributed for the construction of the Emperor's new Palace amount to 300,000 *yen*, besides large presents of wood, stone, and other building materials. The style of the main building does not appear to have been definitely determined as yet, some conservative members of the Government stoutly supporting the adoption of Japanese designs. We confess that this difficulty of selection seems a little unaccountable. The Japanese style of architecture has many picturesque features, but it is not suited to an European style of living. Had the Court adhered to Japanese costumes and customs, then indeed to follow an European plan in building and furnishing the Palace would be somewhat incongruous, but the conditions being as they are, one is disposed to think that there ought to be no hesitation. Presumably, too, His Majesty will have more than one Palace, in which case conservatism might be conciliated by constructing the second on purely Japanese lines.

A VIOLENT storm, causing considerable damage, is reported to have visited the province of Higo, Kiushiu, on the 30th ultimo. From the south and east exceedingly heavy rains are also reported. These were experienced to some extent in the Tokiye district on the 4th and 5th instant.

MR. TAKAHASHI, Consul for Japan at New York, has been nominated Commissioner for this country to the Boston Exhibition, and the

Government has granted a sum of \$10,000 to defray expenses.

THE Koreans appear to be turning to Japan for assistance to exploit their mines. A Korean official, charged with the superintendence of mining industries, recently visited Nagasaki and engaged there a number of Japanese miners for service in the peninsula. Something trustworthy ought soon to be known about the mineral resources of the Hermit Kingdom. Any expression of doubt as to their abundance seems to be resented by some of the Shanghai journalists as a personal libel, but it is a little difficult to persuade oneself that no disappointment is in store for marvel-mongers in this instance. Korea had once an art reputation based in part upon her bronzes, but it does not appear that her workmen, though borrowing their ideas in general without much compunction from China, followed the latter's example in employing the precious metals for bronze compositions or external decoration. That peculiarly beautiful compound known as *Shunleu*, or *Sentoku*, bronze, which is said to have been originally the result of an accidental melting of gold, copper, and silver ornaments, dates back nearly 500 years, and there does not seem to be any reason why imitations of it should not have been produced in Korea as well as in Japan. Such, however, was not the case, so far as we know, and the same may be said of the far older device of inlaying with gold and silver. History does not furnish many instances of countries where the precious metals, though abundantly procurable, found little if any employment at the hands of a tolerably refined civilization. Against this, however, must be set the continual export of gold dust from Korea to Japan, a fact which proves, as has been sapiently observed, that there is some gold in the country. Considering the doubts which exist as to Japanese mineral resources, we ought not, perhaps, to be surprised that everything connected with the same subject in Korea is still completely *in nubibus*.

AN enterprising Japanese, Mr. Asai Toshichi, has engaged troops of Japanese dancing girls—so, at any rate, his announcement says—to play the celebrated piece known as the “Chiu-shin-gura, or the Forty-seven Ronin,” at the Gaiety Theatre, in Yokohama. The scheme is a novel one for two reasons; first, that no Japanese theatrical company has ever performed in this settlement before, and second, that the notion of converting dancing girls into actresses is entirely at variance with Japanese stage traditions. Troops of female actresses do exist in Japan, and their performances are sometimes of a high order, but they are, nevertheless, regarded by their own people as a very second rate substitute for the real thing. Strange to say, the Japanese find it much less incongruous and unbecoming that a man should act a woman's part than that a woman should act a man's. Judged by Western canons of decency, they are right, for when a Japanese woman takes a man's part on the boards she is

“every inch” a man and shrinks from nothing that is considered appropriate to the stern sex. But, on the other hand, her theatrical training, though even more severe than that of her male confrère, does not enable her to personify a man with anything like the wonderful fidelity of representation which her own sex receives at the hands of male actors. In this, doubtless, the secret of her comparative failure is to be found. A foreign audience, however, will be less exacting, and we shall not be surprised to find that Mr. Asai's venture proves a marked success.

DR. A. GEERTS, Sanitary Adviser to His Imperial Majesty's Home Department, has addressed to the local press, a letter contradicting some statements embodied in the recently published Trade Report of Her Majesty's Consul for Kanagawa. These statements were two: first, that “the standard of purity sought to be imposed upon imported drugs, medicines, and chemicals at the Government Laboratories is too high when compared with that in force in most other countries, and manufacturers find it difficult to meet the Government requirements in this respect;” second, that owing to the long delay in examining and passing such articles, the foreign importer is subjected to a heavy loss in charges and interest. Dr. Geerts denies the latter statement altogether, pointing out that though delay sometimes occurs, it is unavoidable, as chemical analyses cannot be performed in a minute; while of the former he effectually disposes by explaining that pending the compilation of a Japanese pharmacopoeia the standards imposed at the Government Laboratories are those of the countries from whence the goods under examination have been exported, or where they were produced. It is to be observed that the Consul's statements are avowedly embodiments of complaints made to him, and in no sense a distinct assertion of fact. Before, however, admitting such complaints into an official document, some reference to the Government Laboratories would surely have been not less just than judicious.

NOTES.

It is stated that the Japanese troops will be withdrawn from Korea during the course of this month, and their places taken by policemen. The treaty, it will be remembered, provided that the troops should remain for one year certain, and that at the expiration of that time their withdrawal should be at the discretion of the Japanese Envoy. If the latter has decided that they can be removed, it may be presumed that the step involves no risk, but we find it very difficult to believe that the state of Korea warrants such a proceeding. Many considerations cannot fail to present themselves to those upon whom the responsibility of the decision devolves. There would naturally be an anxiety to save Korea as far as possible from the humiliation to which Japan herself was long subjected by the presence of a large body of foreign troops upon her soil. There would also be a scarcely less

efficient desire on the part of the Tokijo Government to escape from a position which after all can only be construed as an attempt to establish commercial relations under the ægis of bullets and bayonets; and there would finally be a very proper reluctance to establish a precedent which, if followed by other Powers, might convert the Korean Capital into a barrack for alien troops. Whatever may be said or written, the fact remains that to Japanese influence and example must be attributed not alone Korea's emergence from seclusion, but also everything of liberality or good faith she has exhibited in her foreign relations. It would be an unfortunate sequel to all this if Korea's new treaty friends, on coming to establish their Legations at Sôul, found that of Japan guarded by 500 Japanese soldiers. From every point of view, therefore, it is most desirable that the troops should be withdrawn, though we had scarcely hoped that the step would be deemed feasible. There was always a danger of collision between the Japanese guards and the Chinese braves, who, if half of what we hear be true, have by no means earned for themselves a high reputation among the law-abiding citizens of the Korean Capital. We shall be curious to see whether China follows Japan's example in this matter. Possibly some mutual understanding has been arrived at, for it is difficult to see how the Japanese Legation can dispense with a guard so long as the Government of Peking thinks the peninsula sufficiently unsettled to warrant the retention of a large Chinese garrison at Sôul.

We should probably be filled with amazement and indignation if the Japanese residents of Yokohama were to address to the Consular Board a remonstrance against the foreign system of firing salutes with big guns whenever officials of consequence visit a ship or make their appearance on public occasions. The Japanese, however, might justly urge that such a practice is eminently calculated to disturb peaceful folk and to shatter the nerves of delicate individuals; that a weak and offensively-smelling imitation of thunder is anything but a civilized fashion of polite greeting; that it would be much cheaper and far more musical to hang on the mainmast of every ship an enormous bell or gong which could be violently struck when a deafening din is desired; that a still more sensible device would be to train the men on watch to hoot or yell in unison nine, thirteen, seventeen, or twenty-one times according to the rank of the gentleman whose honour is at stake, and that finally such fashions not being recognized in Japan or provided for in the treaties, are open to valid objection. It is unnecessary to predict what sort of reception such a remonstrance would receive at our hands, or might have received had Japan herself been sufficiently well advised to reject the barbarisms, while adopting the refinements, of our civilization. Nevertheless, it is interesting to analyse the difference between firing salutes at sea and on shore. We do both ourselves. True the latter performance is generally confined

to parade grounds, but there are places, as for example Yokohama and Hongkong, where the parade grounds are surrounded by private houses. Salutes are also fired in barracks, when there happens to be a battery there, and we have very little doubt that the guns in the saluting battery at Hongkong used to cause the good people of that place, Chinese and foreigners alike, a great deal of annoyance in old times. But we never heard that anyone complained, and we can easily imagine how much satisfaction he would have obtained had he been so rash. It is to be hoped that people are at least sufficiently enlightened to refrain from remonstrating against things sanctioned by Her Majesty's Regulations and British custom. Chinese custom is a horse of another colour. In the Middle Kingdom there obtains an insane rule that the soldiers on guard at the residence of an Imperial Commissioner and Commander-in-Chief shall fire a certain number of blank cartridges with small arms when the great man enters or leaves his residence. Nothing can be more barbarous and grotesque. If the thing were done with big guns mounted in a battery or on board ship and capable of making a real row, it would be refined, polite, and proper. But small arms, and for a Chinese dignitary, and fired by Chinese soldiers! it is a pestilential burlesque. Therefore when the body-guard of His Excellency Li Hung-chang attempted the other day to indulge in such uncivilized practices in Shanghai, the foreign residents could not do less than offer a stout objection. The Grand Secretary, though belonging to a nation where such comedies constitute a part of sober every-day life, showed himself remarkably amenable to reason. He ordered his soldiers to fire no more small arms after sunset, that is to say between 7 p.m. and 7 a.m. But of course such a half-hearted concession to the laws of civilization was resolutely rejected. The Chairman of the Municipal Council, declining all compromise, addressed the following spirited letter to the Senior Consul:—

Shanghai, 7th June, 1883.
SIR,—I have the honour to acknowledge receipt of your letter of 6th inst., intimating that by order of the Taotai, the Mixed Court Magistrate had called on you and requested you to inform me that the soldiers in attendance on H.E. Li Hung-chang had received orders not to fire any more guns between 7 p.m. and 7 a.m., and that he at same time apologized for the disturbances that took place on the afternoon of the 5th inst.

From this I infer that the firing will not be discontinued between the hours of 7 a.m. and 7 p.m., but as the firing of guns in the streets of the Settlement, even during the day, is not only contrary to the Regulations, but likely to cause accidents and lead to further disturbances, the Council are desirous that you should communicate with the proper authorities with the view to having the firing discontinued altogether, and have requested me to write to you to that effect.

I have the honour to be,
&c., &c.

The Taotai, a timid man, whose conversion to sounder principles the Shanghai residents have still to accomplish, declined to forward this communication, and the Senior Consul accordingly addressed Li Hung-chang direct. Here is the Grand Secretary's answer:—

Shanghai, 14th June.
SIR,—I had the honour to receive your letter regarding the gun-firing which is a custom observed at the residence of an Imperial Chinese Emissary. It is stated by the Chairman of the Municipal

Council that according to an existing agreement even the highest foreign officials do not receive salutes, and it is requested by him to oblige the community by stopping the firing altogether.

I am of opinion that the (foreign) settlement, lying within the frontiers of the Chinese Empire, is not to be compared to a foreign place, and that I am at liberty to act as I please in this respect.

But as the salutes at my entering or leaving my residence are unimportant, and as I have now to fear that the community will be disturbed—which creates an uneasy feeling in me—I most willingly agree with the wishes of the community, and I shall give orders to have the salutes discontinued altogether.

I have, etc.,
Card of LI HUNG-CHANG.

It appears from this letter that Shanghai does not allow any nationals to employ gunpowder greetings within the confines of the Settlement. "Even the highest foreign officials do not receive salutes." If Li Hung-chang were not so very polite we might suspect him of sarcasm. As it is, we can only say that the sooner all the world follows Shanghai's example, the better.

We read that the Central Post Bureau is engaged in establishing seventy-one branch-offices throughout the Empire: that twenty-seven have been already completed, and that the remainder will be finished before next September, when the accounts for the 16th fiscal year of Meiji close. The Post Office has accomplished a great deal in Japan and its organization does much credit to the country. The delivery of letters at present in all the chief towns leaves nothing to be desired. Indeed, it would seem that the whole service is inspired with a desire to do well, and that from the Post-master-General down to the letter-carrier, who drags his little cart up hill and down hill at break-neck speed, there is a general consciousness of being under the eye of the public, and a prevailing anxiety to accomplish something worthy of Young Japan. None the less it would be idle to pretend that there is not room for improvement. For though the people who live on the main postal routes have nothing to complain of, the case is different with those in more remote districts. Thus while a letter posted in Fujisawa at noon is delivered in Tokijo the same evening, a letter posted at Yenosima, which is only an hour's walk from Fujisawa, takes sixty hours to reach the capital. This is a little out of due proportion. Possibly it will be one of the matters mended by the seventy-one branch-offices mentioned above. At all events it deserves looking after.

THE *North China Herald* writes thus:—"We hear from the best sources, which are remote and absolutely independent of each other, that the Chung-t'ang will not fight France. This is a plain statement which it is difficult to get over; for our sources of information are trustworthy, and we receive almost daily confirmation of the assurance. Yet military preparations are in active progress. Floating batteries are being hurriedly constructed, troops are being mobilised, and the Viceroy is strengthening his position every day. There are whispers in the air of another policy, which is at present being kept in the background. It is sufficiently clear that if the Viceroy does not fight France, France will not fight him; and the armaments and munitions

of war with which His Excellency is now fortifying himself may then possibly be put to some other and very unexpected use." There is nothing new about the suggestion this paragraph embodies. Rumours of a similar nature have long been finding their way across the water. Indeed, it is no longer any secret that the real cause of Japan's increased taxation and additional armaments is to be sought in an uneasy feeling created by whispers of China's hostile intentions. It is difficult to imagine such a picture as China impelled by a sudden vertigo to wreak armed revenge upon a neighbour whose chief fault is that she has distanced the Middle Kingdom in the race of progress. But stranger things than this have happened, and a nation cannot afford to entrust her safety to the keeping of probabilities. *Si vis pacem, para bellum.*

ACCORDING to M. Challemeil Lacour's latest announcement—made, however, prior to the disaster at Hanoi—France's present proceedings in Tonquin are simply "a demonstration to reassure the friends of the Republic and to coerce its adversaries into the performance of their duty." Whether, so far, it has had either the former effect or the latter they can judge best who have read the story of Commandant Rivière's disastrous "march out" on the 19th of May. But, in truth, M. Challemeil Lacour must have felt quite sure of the temper of his audience when he spoke to the Chamber of Deputies in one breath of "the open and disguised attacks of the Annamites," as well as of "the terrible vengeance" which, in the event of France's retreat from Tonquin would be wreaked on the populations which had shown sympathy for the foreigners, while in the next he declared that there is "nothing to conquer in the country, where the only enemies France has are the Annamite functionaries and the Black Flags." The possibility that China might prove a troublesome factor, he declined to contemplate. She is not a military empire, he said, and "it is not likely that her demonstrations will be more than platonic." Such utterances, as these, whether well or ill-founded, are certainly not calculated to smooth the path of diplomacy. They are as nothing, however, when compared with some other passages in M. Challemeil Lacour's speech. The plan to be pursued by France, he said, is "to establish her forces at a certain number of points of the country which are the most populated, and in such a manner as shall place the permanency of her occupation beyond a doubt." But, on the other hand, he explained that M. Bourrée had been recalled because the basis of his proposed treaty was in contradiction with the fundamental principle of French policy, the acknowledgment of the absolute independence of Annam." Certainly a new dictionary of diplomacy is required to reconcile these statements. An absolutely independent country in the permanent military occupation of a foreign power is a miracle to which the world is still strange. Many persons will be sufficiently sceptical to doubt its possibility, and many others will be disposed to

imagine that a second Tunisian farce is about to be acted in the Far East. At all events the solution of the difficulty does not promise to be so "prompt and facile" as M. Challemeil Lacour promised, neither is it reassuring to learn that France's resolution with regard to Tonquin has been "strengthened by considerations of general policy." So far as England is concerned, she can only gain by the peaceable extension of French influence in Indo-China, but the methods of extension at present adopted might be amended with considerable advantage.

Mr. A. R. COLQUHOUN, writing to the London Times on the subject of France and Tonquin, gives some interesting figures which show the real nature of M. Challemeil-Lacour's policy in the Indo-Chinese peninsula. It appears from his statement that the value of the trade which France is so anxious to protect and extend only amounts to £800,000, and of this only 21.5 per cent. is carried—or possibly carried—by French vessels, while nearly 60 per cent. is carried in English bottoms. Mr. Colquhoun consequently infers, and gives other arguments in support of his inference, that France's real object is not commerce, but conquest: she wants to occupy in eastern Indo-China the same position that England occupies in Western. If this estimate be correct, endless complications present themselves, and it is not impossible that the lever which is to overturn the Chinese empire found a fulcrum under the walls of Hanoi on the 19th of May. Mr. Colquhoun's letter is as follows:—

SIR,—According to the last Paris papers, alarm is being expressed by a certain section of the Press as to the result which French action in Tonquin may produce. It is feared that both China and Annam may resist the occupation of Tonquin. The English public seems to regard the French proceedings with apathy and with a feeling of simple curiosity—as a matter concerning the French alone. No greater mistake could be made. Should the French insist upon carrying out the annexation of Tonquin, France must eventually, and within a short time, come into collision with China. The effect which such a war would have upon all foreign relations, missionary and social, as well as upon commerce—especially that of this country—is worthy of close examination.

The annual import and export trade of China amounts to close upon £100,000,000, more than half of which is carried by British vessels. The trade of France with the ports of China and Indo-China is trifling; indeed, according to a statement made at the Académie des Sciences, it only amounted in 1881 to 165,000 tons, while our trade with China alone amounts to 22,000,000 tons. In Saigon the British tonnage was 179,534 and the French 13,614, out of a total of 290,440, excluding the Messageries steamers, which do not affect in any considerable degree the commerce of Saigon. From the outcry made as to the necessity for the protection and extension of French commerce in Tonquin, one would be led to expect in Haiphong, the principal port, a great volume of trade and a marked preponderance of French commerce. Statistics tell us, however, that the value of the trade does not exceed £800,000, and of this no less than 35 per cent. is carried by English vessels, 23.5 per cent. by Chinese (chiefly from Hongkong, and therefore British), and 20 per cent. by American, leaving only 21.5 per cent. for other nationalities. As the percentage of French trade with Shanghai only amounts to 3.64 per cent. of tonnage, and no French vessels call at Pakhoi, the port nearest to Haiphong, it is improbable that the French proportion of the 21.5 per cent. above-mentioned is considerable.

The fact is, as I pointed out some weeks ago in *The Times*, that the French action is not in the interests of trade extension, but to secure in Tonquin a northern base—Saigon being useless for the purpose, owing to the impracticability of the Mékong—for the acquisition of the whole of Indo-China up to our eastern frontier in British Burmah. As yet the popular cry is merely

"à Tonquin," but something more is intended by those who have the power to direct operations. M. Blancsbe, the Deputy of Cochinchina, is not the first Frenchman to indicate, though his language tells us with more directness than hitherto, what the French programme is, when he says:—"The mountains which separate the basin of the the Ménam from that of the Mékong divide this vast peninsula (of Indo-China) into two parts almost equal. All the western portion belongs, directly or indirectly, to England; the eastern portion must belong to France." M. Blancsbe proceeds to paint for his countrymen the touching picture of six millions of Tonquinese pining to give themselves and their fine country to France, and assures them in confident language that the idea of "an armed expedition, a campaign, an adventure" is preposterous, and that the French have only literally to appear in Tonquin for the country to be theirs.

There is a reverse to the medal, however. M. Dupuis, in the account of his adventurous exploration of the Songkoi, draws attention to the fact that the last Annamese town in Tonquin is Kouence, situated 115 miles below Lao-Kai, and that the country between these two places has remained independent of Annam ever since its conquest of Tonquin in 1802, although the mountain tribes inhabiting that region used to pay tribute to Tonquin before that year. It is worthy of notice that, though Garnier placed the boundary of Luang-Prabang, the northernmost Siamese tributary Shan State, on a line with the southern frontier of the Independent Shan States, De Carné, his political confidant, insisted that the territory of Luang-Prabang extended to Yunnan. It is evident that he desired it to be understood that the Shan country in the neighbourhood of the Songkoi, whose inhabitants are mentioned by Dupuis under the Shan names of Fai and Teen-Lao, belonged to the province of Luang-Prabang. Once established in Tonquin, the attempt of the French to open up the Songkoi will infallibly bring about disturbances among those tribes, which, no doubt, in time, will necessitate the occupation of the basin of the Mékong, including the Independent Shan States, as well as half of the kingdom of Siam lying south of these. This is the manner, there can be little doubt, in which the French programme for Indo-China is intended to be carried out.

The French seem to think that the mountain tribes of the region lying between Tonquin and China are of the same physique and character as the Tonquinese, whom they can, no doubt, easily subdue. The history of China teaches us a different lesson, however. In 1418 the Chinese took possession of Tonquin, but found it such a bed of thorns—not from the opposition encountered from the inhabitants of the plains, but from the harassing attacks of the two millions of hill people, living to the west of Tonquin—that they withdrew after ten years' occupation of that country and have never since attempted to subdue it, but have contented themselves with the tribute annually paid to China.

An important step in the French project has already been taken in the commencement of the first section, from Saigon to Pnom-Penh, the capital of Cambodia, of the Mékong Valley Railway, which is intended to unite Yunnan and Tonquin with French Cochinchina. The occupation of Tonquin will be the second move in the game. It seems certain that the French will have not only an "adventure" but one of a character with a very serious side to it. The French will have not only Annam, but probably China, to contend with in the first instance; and should they succeed in the occupation of Tonquin they will have between them and China a hardy, brave, and unsubdued hill people, who will wage a never-ceasing guerilla warfare upon them.

In the limited space of this letter I have indicated some of the important issues which are involved in the Tonquin expedition. I hope to bring the whole question of the interests of England and France in Indo-China fully before the public in the June number of one of the monthly reviews.

THE information furnished by the correspondent of the *Standard* in Madagascar conveys a new idea of Malagasy civilization. After toiling for a week up and down "rocky ridges covered with forests on the tops, which, running in seemingly endless succession due north and south, and at right angles to the path, render penetration into the interior very difficult," the correspondent came at last to the plateau of Imerina, the home of the Hovas, the ruling race of Madagascar. He describes the place as follows:—"Around us were numerous villages clustering on the hill

slopes. There were no trees, only rolling veldt, like that peculiar to South Africa. But the villages were not mere collections of bamboo-built huts, such as those to which we had hitherto been accustomed in Madagascar. Strong and substantially built houses of brick they were, not lacking in pretensions to architectural design, and superior in comfort and appearance to those which many a village in Britain and Ireland can boast of. And here, too, the townships had each its detached building, trim and neat, whose style of architecture at once indicated the other chapel. There were, moreover, indications of missionary work in the land. As we passed through the streets we could hear the hum of children busy at their lessons, and singing sometimes the morning hymn so well-known in many an English school. There could be no question that, so far as outward appearance went, the people of Imerina had reached a high level of civilization, and seemed in little need of protection from any European State. The capital of the Hovas is thus described:—The people were clustering along the footpaths on their way to church, or sitting on the grass outside waiting for the service to begin, as they do in villages at home. The women, who appeared to be in the majority, wore white cotton gowns, often neatly embroidered, and white, or black and white, striped lambas thrown gracefully over their shoulders. The men were clad also in cotton—white cotton pantaloons, cotton lambas, and straw hats, with broad black silk band. In the morning sun the play of colours over the landscape was peculiarly lovely. . . . It was difficult to imagine that this peaceful country, with its pretty cottages, its innumerable chapels whose bells were then calling the people to worship, and its troops of white-robed men and women answering the summons, was the barbarous Madagascar of twenty years ago. These reflections were somewhat rudely disturbed as our bearers entered the city. We had considered we had done with bad roads, with boulders, and with yawning fissures. But all these we encountered as we made our way up the main thoroughfare of Antananarivo. But the appearance of a substantial stone church with its bell clanging, and a clock in the steeple indicating the hour, with hand-bills on the opposite walls announcing sales by auction, reassured us that we had, indeed, reached the centre of Malagasy civilization. All this does not tally well with the stories told by French writers, who represent the Hovas as veritable barbarians, rulers who murder their subjects wholesale, and replace lawful trial by ordeals of the most inhuman nature. The correspondent of the *Standard* came to the conclusion that Sakalavas and Hovas alike are determined to resist French aggression to the bitter end; and as the forces at Queen Ranavalona's disposal amount to "twenty thousand well-drilled troops, partly armed with breech-loaders, besides a horde of fifty thousand spear-men," he is of opinion that, to make any real impression, an expedition of from ten to twenty thousand men would be necessary. He further

adds that. "the bombarding of Tamatave and Mojanga would not seriously affect the Hovas, but would merely have the effect of destroying foreign trade." Possibly that result may be exactly what the Hovas desire. If so, the latest telegrams announcing their failure to oppose the French Admiral may simply mean that they have retired into the interior and left him to follow over the "endless succession of rocky ridges," if he pleases.

Mr. W. A. WOOLLEY, late Acting Consul at Kobe during Mr. Aston's absence in Korea, has taken his departure for Hakodate, to be Acting Consul at that port during the absence of Mr. Enslic who goes home on leave.

We hear from Swatow that a sort of armistice has been declared for the present between the Mandarins and the German Vice-Consul. Advances as to further proceedings are daily awaited from Berlin, when the case will probably be resumed. The claim of Messrs. Dircks & Co., though not actively pressed at the present moment, still holds good, and we understand will shortly be re-argued in solemn conclave by representatives of both countries.

In the peroration of his speech before the Chamber of Deputies on May 15th, M. Challemeil Lacour said, and the statement was received with prolonged applause, that the operations in Tonquin are in accordance with the general policy of France. What that general policy is, we have no difficulty in divining, whether we look to Asia or to Africa for an explanation. In the former continent Tonquin, and in the latter, Madagascar and the Congo, seemed a very respectable list of outlets for that spirit of enterprise, which, as a French writer recently informed the world, has grown quite too large for European opportunities. Now, however, the list has to be supplemented by Bonny and Porto Novo. The first named place has been visited by the French frigate *Talligueur*, whose commander tried to induce the natives to enter into a treaty, and of the second, the following news is published:—The Commander of a French war-vessel in the Bight of Benin has been guilty of an act which may tend still further to aggravate the somewhat strained relations between this country and France. If there was any part of Western Africa which it might be thought the French annexation policy would leave untouched, it was the comparatively small extent of territory between the Gold Coast colony and Lagos. Yet into this tract French enterprise has penetrated, and that, too, in a spirit rarely to be found in a friendly nation. Near Porto Novo, and just outside our own possession of Badagry, a French force has landed and hoisted the tricolour. Judging from the report current at Cape Coast Castle, the specious pretext of a treaty with a savage potentate will be put forward in justification of this act of annexation. But our administration on the Gold Coast is little disposed to acquiesce in such an addition

to the French African possessions, which practically cuts our own colony in twain, and while Government officials have proceeded to Porto Novo to investigate the matter, her Majesty's ship *Stork* has been ordered to proceed from Cape Coast Castle to Lagos. It is a little difficult to see what England has to complain of if Frenchmen choose to make tricolour-hoisting expeditions to places which have hitherto escaped our own annexing mania. But that does not change the complexion of France's mood. She is apparently resolved to "go for" every spot on the surface of the earth capable of being employed as the basis of a colonial empire. Her conduct affords an interesting spectacle to onlookers, and one that ought to be particularly pleasing to Englishmen on account of the delicate flattery such imitation conveys. The only trouble is that the average Briton regards colonization as a business of which England has acquired the monopoly by right of prescription, and the average Briton is neither a very reasonable nor a very docile subject. If he learns to think that Frenchmen are encroaching on his domain, his own encroachments in the past on the domains of other people will render him all the more intolerant. It is not a perfectly reassuring outlook.

REFERRING the other day to a suggestion by a Russian paper that Irish immigration to Russia should be encouraged, we hazarded the opinion that the law-abiding classes in the United States would not be heart-broken, if a crowd of their Irish co-nationals, headed by O'Donovan Rossa, would make a peaceful exodus to Siberia or some more congenial climate. The *Spectator* of the 17th of May, analyzing respectable American opinion upon the Irish conspirators domiciled and harbored in the States, fully bears out our conjecture. It is clear, says the London weekly, that the proceedings of the Dynamiteurs are exciting the anger of Americans. "The Pennsylvanians have a terrible experience of Irish secret societies, the struggle with the Molly Maguires having been carried on the mining district of their own State, and consequently the State Senate has passed a Bill prohibiting the manufacture and sale of explosives under severe penalties. It has been sent down to the Lower House. General Grant, also, who represents an immense party, has made a speech directly menacing the Irish. He condemns 'adopted citizens of the Union' for refusing to feel the obligations placed upon them by their citizenship, and for claiming immunities not accorded to the native born, who, it must not be forgotten, by the latest census constitute 82 per cent. of the population of the Union. The greater journals are all favourable to extradition if murder is proved, and even General Butler, who has been elected Governor of Massachusetts by the Irish vote only, asks that the immigration of paupers shall be stopped. He does not venture in the face of public feeling to demand that the use of dynamite against the foreign friends of the Union shall be deemed praiseworthy, or even be protected. It is stated that the party of violence are convinced that they

have traitors in their midst, and are profoundly alarmed by the intimate knowledge which the British Government possesses of their plots. They suspect treachery, probably with justice, in very high quarters in their organisation." A correspondent in America of the *Western Daily News* confirms the two last sentences of the above quotation, and affirms that the Chief traitor is the arch villain and plotter, O'Donovan Rossa himself!

ACCORDING to the *Official Gazette*, the Mining Bureau at Kamaishi was closed on the 30th ultimo. The Kamaishi Mines have been a sad bungle, and we can well understand that the authorities feel disposed to abandon an enterprise which has cost so much and returned so little. But it is difficult to think that the scheme offers no prospect of profitable development. There is wisdom in a resolve not to throw good money after bad, and if it has been definitely ascertained that nothing can be made of the mines, then indeed to leave them alone altogether is the most sensible course. But foreign experts have given it as their opinion that the trouble had its source rather in the method of carrying out the project than in its original conception, and the public will scarcely be persuaded to believe that no method exists of recovering at least a fraction of the heavy sums which have been expended in the prefecture of Iwate.

FIGURES are sometimes startling, especially when they refer to matters which in themselves have no rational connection with arithmetic. Who would think of calculating, for example, how much young ladies in Japan spend in making cherries of their lips? The driest statistician in the universe could scarcely be accused of conceiving such a problem at the first blush. Nevertheless it is a problem of some importance, for if the *Jiyu Shimbun* may be credited, the yearly manufacture of rouge (*beni*) at Saikiyo and Osaka reaches a value of no less than 8 million *yen*. Is it possible to imagine money more utterly and hopelessly wasted? Nothing spoils the prettiness of the fair sex in Japan except their lavish use of *beni* and *oshiroi*, and they are not likely to mend their ways seeing that a brisk demand for this same rouge has sprung up in foreign countries. It has not yet appeared that Mrs. Spoonendyke uses cosmetics. When she begins to do so, Mr. S. will have a good many sweet things to say.

WHAT an outcry there would be from the foreign press in this neighbourhood if such a piece of legislation were enacted in Imperial Japan as has just been enacted in Republican France. For, at least, if *The Times'* correspondent in Paris is right, the Government of M. Jules Ferry has proposed an exceptionally severe law on seditious displays. To take part in an outdoor demonstration is made punishable with six months' imprisonment; while the sale, exhibition, or wearing of seditious emblems, the singing of seditious songs, or the utterance of seditious cries

will bring upon the offender from a fortnight's to two years' imprisonment. The offenders are, it is true, to be tried by a jury; but that is not much security in France. It is, probably necessary to prohibit mass "demonstrations," as, owing to the traditions of Paris, they are apt to end in a rush upon the Legislature or the Municipality, but songs, cries, and emblems might surely be let alone, or punished with fines only. At least that is the general opinion of Englishmen. The subject is hardly worth mentioning here, except as it might some time or other furnish an item for comment in the context of comparative legislation.

It is stated that seven cases of cholera have occurred in a village called Nakamura, in Sagami province, Kanagawa prefecture. Nakamura is a small village in the neighborhood of Ashi-no-yu (Hakone), a most unlikely place for the disease to break out. It appears, also, that no news of any such fact has reached the offices of the Prefecture, so that on the whole the rumour is probably false. We learn, however, on good authority that two cases were officially reported a few days ago as having occurred in Odawara, but the disease does not appear to be spreading.

IN H.B.M. Court on the 5th inst. His Honour delivered judgment in the case of Hirose Sima v. Blakeway, which was in favour of the plaintiff, who was awarded 1,000 *yen* damages. No costs, however, were allowed, as His Honour remarked that although the defendant was wrong in law, he had evidently acted in good faith all through the transaction. His Honour paid a high compliment to the counsel engaged in the case for the manner in which its intricacies had been laid before the Court.

THE new building on the East of the Hibiya Parade-ground in Tokiyo, euphemistically known as the Reception Hall (*Settai Kan*), but generally supposed to be nothing more or less than an official club, is to be opened, it is said, on the 19th instant. The Hall is a very handsome construction, in foreign style, and forms an imposing addition to the various buildings which are gradually springing up in that neighbourhood.

THE Maharajah of Johore, accompanied by the Honorable P. Le Poer Trench, returned from Nikkwo on Thursday afternoon. The party were most unfortunate in their weather, and in consequence shortened their trip. We believe that His Highness' stay in Japan will not be extended beyond the 15th instant.

It is rumoured that the Kiyodo Keiba Kwaisha (Union Race Club) has applied to the Government for permission to make a race course round the Shinobadzu Lake in Ueno Park. The suggestion is said to have emanated from General Ida, formerly His Majesty the Mikado's Representative in France, who pointed out that in Europe race-courses are generally in the

vicinity of public parks, and that if the example thus furnished were followed at Ueno, the result would be a success, financially and otherwise. We trust, however, that the scheme will find favour with the Government; for, though General Ida's idea about the position of European race-courses does not accord with our own recollections, Shinobadzu no Ike offers unique advantages for such a purpose.

THE *Official Gazette* (*Kampo*) has made its appearance. It is a well printed journal of 16 pages, filled chiefly with official notifications, rules, announcements, &c. The first number contains also a *resumé* of foreign news, and an article on agriculture and manufacture.

ONE of the most brilliant chapters in Justin McCarthy's *History of Our Own Times* is that which contains the story of the lorcha *Arrow* and the Canton complications of 1846-47. But it owes half its brilliancy to the glitter of errors. The Speech from the Throne on February 3rd, 1857, spoke of "insults to the British flag, and infractions of treaty rights, committed by the local Chinese authorities at Canton, and a pertinacious refusal of redress." Of these acts of violence, insults and infractions of treaty rights, Mr. McCarthy says that "the single victim was the lorcha *Arrow*." Had he, a member of parliament and a historian, taken the trouble to consult the blue books relating to the period of which he wrote, he would have found a despatch from Admiral Sir Michael Seymour containing these words:—"I concurred with Sir John Bowring that this was a fitting opportunity for requiring the fulfillment of long-evaded treaty obligations." According, then, to the principal officials on the spot, the *Arrow* complication was only an incident; only an opportunity for asserting violated rights: according to Mr. Justin McCarthy it was the sole and solitary question at issue. Setting so much store, however, by the lorcha *Arrow*, Mr. McCarthy might at least have learned its story correctly. Even this he found too troublesome. Before hostilities commenced, Governor Yeh, he tells us, sent back all the men taken from the *Arrow*. So true is this that one of the first acts of the British officials after the occupation of Canton was to institute a rigorous search for the men Yeh had *not* sent back. They were never found, and to this day nothing is known of their fate. The historian then goes on to explain that, if the British system of granting registers were permitted, "every pirate in the Canton River would have had nothing further to do than to hoist any old scrap of British bunting, and sail on defiant, under the very eyes of the Chinese authorities." Mr. McCarthy's ideas on the subject of ships' registers seem to be about as clear as those of Commissioner Yeh. He forgets, apparently, that certain conditions had to be complied with by vessels seeking registration in Hongkong; that such registration was distinctly provided for in the Supplemental Treaty of 1843; that the *Arrow* was owned by a British subject, and that, at the time of the outrage, her papers were in the British Consulate

at Canton. These are details to be sure, but they have their importance. We can very well imagine the sort of language Justin McCarthy would have used had he been an actor in the scenes he undertook to denounce.

From the monthly circular of the Silk Association of America we learn that the imports of Raw Silk at the ports of New York and San Francisco for the month of May last, were 2,666 bales, valued at \$1,488,700. The imports of Waste Silk and Pierced Cocoons for the same period at those ports were 71 packages, valued at \$34,650. The enormous extent of the Silk industry as well as its fluctuating character may be seen from the following figures, the value of silk manufactures imported into New York alone in the months of May during five years, namely: 1879, 1,352,389; 1880, 1,910,531; 1881, 1,807,777; 1882, 3,117,955; 1883, 1,681,988. Subjoined is a summary of entries of silk manufactures into the Empire City in May 1883:—Entered for consumption, \$847,900; entered for warehouse, \$834,088; total value landed in New York, \$1,681,988; withdrawn from warehouse, \$340,373; value placed on market, \$1,188,273.

The latest number of the *Maru Maru Chimbun* has a cartoon ridiculing the difference which is reported to have occurred between Messrs. Itagaki and Goto, the principal figures in the Liberal party. The scene is a theatre, where a conjuror is performing before an astonished audience whose physiognomies are apparently designed to resemble those of the queer creatures that Rip Von Winkle saw in Sleepy Hollow. The "illusionist," to use the modern jargon, is a tall, thin, lantern-jawed fellow, grinning horribly beneath his hawk-like nose. Standing erect upon the stage, he has just, as it seems, succeeded in dividing himself through the abdomen by means of a huge sword, held at hilt and point by either hand. The idea intended to be conveyed is that the upper part of the body is Mr. Itagaki: the lower, his whilom colleague, Mr. Goto. The text accompanying the caricature may be translated as follows:—

Stage Manager—We have the honor to introduce a wholly new illusion! The performer has learned his art in Europe!

Spectators—Indeed! It is the most splendid performance we ever saw!

Meanwhile the band plays:—*Teren teren teke teke!* which can be rendered, "A piece of conjuring played off upon the Liberals!"

In the same issue is another picture, one evidently intended to represent the trouble which has lately befallen the brokers on the Bourse. The idea delineated is a contest by night between *Daikoku* (the God of Wealth) and *Kaminari* (the Thunderbolt), the former divinity representing the brokers, and the latter a notorious gambler of Yokohama. With the distorted features of a rapacious demon, *Kaminari* has swooped upon and seized in harpy-like arms a plethoric money sack to which *Daikoku*, who is carrying it on his back, tenaciously clings.

Meanwhile dice, coins, and paper tokens are being scattered upon the ground through the open mouth of the bag which *Kaminari* professes to wish to tie up. The Dialogue between the two demons is as follows:—

Broker—We work in the dark to make money; but, you, Great Thunderbolt, burst in upon our privacy, and put us to much trouble and expense to conceal the matter.

Gambler—Pay me three hundred yen; and your secret is safe for me!

The allusion is to a current story to the effect that, while some respectable brokers were engaged in exchange transactions or gambling in a tea-house, one of the local professional sharpers broke in upon their conference and extorted three hundred yen as the price of his silence. It is matter of common report that the Stock-brokers are resorting to all kinds of subterfuges to avoid the regulation Bourse fees; and that, on the plea of conversation or convivial gatherings, they meet in the streets or the tea-houses near the Exchange, in order to "transact business"—otherwise to gamble in money or stocks.

In the *Independente* of Macao, according to the *China Mail*, there is little news from that sleepy, *fantan* playing, and anomalous little settlement. "No news" is the normal state of affairs there, except when a typhoon gives a temporary and unpleasant liveliness to the exile home of Camoens; and the Hongkong journal probably only mentions the negative fact as an introduction to the intelligence that the *Independente* publishes some extracts from Lisbon papers, complaining very bitterly that the English nation, especially the English Parliament, allowed, without remonstrance, Mr. Jacob Bright to make, on the 3rd April, in the House of Commons, a speech which the Lisbon papers regard as most insulting to Portugal and her people. Mr. Jacob Bright should, the Lisbon papers think, have been called to order. An instance is given of a Portuguese orator having been called to order in the Chamber of Lisbon when he was making an attack upon England. Major Quillinan, attached to the Portuguese Legation in London, is said to have strongly repudiated Mr. Jacob Bright's remarks in a letter addressed to an English paper. The fact is that on the date and in the august Assembly in question, Mr. Jacob Bright told the country some home truths on the subject of Portuguese rule in uncivilized countries that may well have proved unpalatable to the authorities and the press in Lisbon. The occasion was a motion by the speaker to the effect that, in the interests of civilization and commerce, it was not advisable that Her Majesty's Government should make any treaty sanctioning the annexation by any Power of territories on or adjacent to the Congo. Mr. Bright then proceeded to show that Portugal should be the last country entrusted with the custody of the gate of that great river. The experience traders had of Portuguese in Africa was that the latter ought not to have "another yard of territory." Under their management, there were passports, papers, fines, and fees, "and you could hardly look at a bale of goods in the Custom House without paying a fee to

somebody." Portuguese officials are, as a rule, of an inferior order; but beside this and other minor counts in Mr. Bright's indictment is the far graver one of a direct slave trade to the West Indies. "Apart from commerce, it was said, they would receive guarantees from Portugal respecting slavery and the slave trade. He could not help thinking that such guarantees would be a delusion.—(Hear.) He had an interview last Friday with Lord Mayo who had spent a great deal of time in South-West Africa, and he gave a very startling account of the way in which the Portuguese carried on the slave trade, particularly between Angola and the Island of St. Thomas. The slaves were carried out from the shore in lighters and then transferred to the Portuguese steamships and carried to St. Thomas, where the slaves were sold, the good-looking girls fetching a high price." Lord E. Fitzmaurice, "with all his official responsibility," as the *Saturday Review* says, was compelled to make the following admission:—

He would lay briefly before the House the statements made upon this painful subject by a gentleman whose name was familiar to many Honourable Members. Mr. David Hopkins, her Majesty's Consul at Loanda, in a despatch, dated May 1st, 1877, to the Governor-General of Angola, informed him of the abominable excesses practised by some Europeans on the Zaire. Mr. Hopkins especially denounced the assassination of about thirty negroes, including women and children, who, having been more or less justifiably accused of having taken part in the burning of the properties belonging to the Portuguese subject, Manoel Joaquim Oliveira, were, by the latter's orders, and with the connivance of other Europeans and some natives, among the former being a British subject, bound hand and foot and thrown into the river, some of them at Boma and others at Port Lenba. As a climax of monstrosity, the presumed accomplices or witnesses, the victims, as they were called, were put to torture by him. According to the information of Mr. Hopkins, similar atrocities were frequently perpetrated in the region under notice; and the same Consul specially named the Spanish subject José del Valle, better known as Don Pope, as the person who inflicted frequent cruelties on his black labourers, and who had even caused the death of some of them, whom he ordered to be drowned. Mr. Hopkins added that slavery was, in fact, reinstated on the Zaire; and that the black labourers in the service of Europeans were literally sold to these by the native chiefs.

It may be said, with truth, that here, in the remote East, we have no concern with the custodianship of an African River; but those who know Macao as a colony, with its systems of finance, treatment of the natives, and general government, and those who remember the infamies of the Macao coolie trade, will agree with us that Portugal is not the country to be trusted either for the purposes of colonization or the protection of inferior races.

THE *Nation* reminds us that M. Laboulaye, a distinguished jurist, the news of whose death has recently been received, was first made known to the American, and indeed the British, lay public during the Civil war, as one of the few writers of prominence in Europe who ventured to espouse the American cause when its prospects looked very dark. His books and articles, as well as those of Count Gasparin, were received during that period in the Northern States with an eagerness and welcome of which the generation which has since grown up remembers nothing, and perhaps would, on looking at them now, find it difficult to understand, in spite of the undeniable ability of nearly everything he wrote. The truth is that his forte there lay mainly in his perspicacity, and reputation secured in this way does not long survive

the realization of a man's predictions—things seem, as our contemporary remarks, so easy to foresee after they have come to pass. But his sagacity during the American war was really one of his highest titles to fame, in spite of the excellence of his general literary work, for it was proof of statesmanship. He understood the conflict as very few of his countrymen did, and foresaw its issue as still fewer of them, or even Englishmen, did. Mr. Edouard René Lefebvre Laboulaye was seventy-two years old when he died. He first distinguished himself as a jurisconsult in 1839, when he published his work, since accepted everywhere as a standard authority, on the "History of the Law relative to Landed Property in Europe," which was crowned by the Academy of Inscriptions and *Belles Lettres*. Among other of his publications, too numerous all to be mentioned here, was his famous "Inquiries into the Civil and Political Condition of Women from the time of the Romans to our Days," crowned by the Academy of Moral and Political Sciences. The deceased was a frequent and much regarded contributor to reviews and newspapers, and the author of some volumes of tales. He was an active as well as a theoretical politician; but it is as a legist that he has made his fame. Indeed, as is apparent from references made to him in the essays by French jurists, now in course of translation in the *Japan Weekly Mail*, traces of his work may be found in the two new Criminal Codes of the Empire of Japan.

THE Lyons *Express* publishes the analysis of the Bourrée treaty—that treaty which Mr. Challemel-Lacour has rejected. It is not, says the *Echo*, the *verbatim* text of the instrument, but a *résumé* which the *Express* professes to have procured from a trustworthy source. The following are the principal provisions:—

Art. 1.—The Chinese troops will evacuate the territories that they have occupied in Tonking, and will return to the provinces of Yunnan and Kwangsi. The French Government will declare that it does not pursue in Tonking any idea of conquest.

Art. 2.—The navigation of the Red River shall be free. The town of Luok shall be set apart for the establishment and working of Chinese Custom Houses.

Art. 3.—The two Governments charge themselves, each in its sphere of action, with ridding the country of the bands of malefactors that devastate it. In consequence, they trace a line of demarcation between the territories which will be submitted to the surveillance of the Chinese authorities.

Art. 4.—The line of demarcation once traced, the French and Chinese Governments engage themselves to maintain the *status quo* thus established, and to protect Tonking against every enterprise from without.

We are unaware whether any investigations are being made in the hospitals and elsewhere in Japan on the important, in these days of frequent accidents from misconception of signals, subject of color blindness. Many months ago, attention was directed to the matter, on the occasion, we believe, of a presumably good authority expressing a doubt that such an infirmity existed or could exist among Japanese, as he presumed that it never manifests itself among black-eyed people. Then at least one case, occurring in a student of painting and so discovered, was vouched for by a Japanese gentleman, but no further discussion ensued. Notwithstanding, the subject is of grave import-

ance here as elsewhere; and in the event of any medical men, Japanese or foreign, having devoted themselves to its investigation, we presume they will not fail to be interested in a paper dealing with the phenomena of Daltonism, recently read before the Physical Society. The author, Mr. H. R. Troop, showed that the hypothesis of three fundamental colour sensations was not the only one which satisfies the well-known equation of Maxwell: $X = vV + cC + uU$, where X is an unknown tint; V , vermilion; C , chrome yellow; U , ultramarine; and v, c, u , given qualities of the same. A recent case of colour blindness would indicate that there were two pairs of colour senses; and the author gave reasons for adding a fifth sense, namely that for white. During the discussion which ensued, an instance was given of an engineer who coloured his plans with brown when he meant to use green, thus mistaking the two tints. Mr. Lewis Wright drew attention to the fact that his own eyes varied in their colour sense from day to day, especially if he felt out of sorts, and one eye differed from the other in its power of distinguishing colours. He recommended a study of these small variations as likely to throw light on colour blindness. Professor Clifton, President of the Society, stated that he found great differences in the fitness of his students for optical experiments, some being unable to distinguish tints which others can, and some being incapable of distinguishing colours one day which they can do on another. He considered that only one in three students was fit for certain polarisation experiments.

SATURDAY the 2nd of June was what a San Francisco journal calls a "bonanza day" for the Federal Government. At the Custom-House in San Francisco the officials were kept busy receiving and counting the Customs revenue on the opium brought from China on the steamer City of Peking. Macondray & Co. alone paid in gold \$100,654.16 on some 410 boxes, each containing forty-one pounds of the drug. A consignment of opium to S. L. Jones & Co., on the same vessel, owed duties amounting to about \$160,000, and other consignees had about \$12,000 more. The duty is \$6 per pound. It would seem that the opium really belongs to Chinese merchants, as the duties are paid by them; though, as they are not allowed by law to import opium, it is consigned to other firms.

AMONG the telegraphic items received from San Francisco by the *City of Rio de Janeiro*, is one dated Guaymas, 12th June, announcing that "quite a party from New York and Philadelphia are expected here the coming week, with Con Cutler, who has sold his Nagasaki copper mine to them." At first glance this statement is a little astounding. "Con Cutler" is a name unknown in Nagasaki, where, furthermore, there are no copper mines, and where, if such treasures did exist, neither Mr. Con Cutler, who is presumably an American, nor any other

foreigner could own them. The enigma may be explained, however, when we know that Guaymas is a newly opened mining district in Southern California. The inference is that "Con" is a mining speculator, and that he has named one of his ventures after the pretty and historic capital of Hizen. It is to be hoped that the appellation may bring good fortune to those concerned in the enterprise.

IT is stated that the number of sheep on the stock farm in Shimosa, under the direct supervision of the Department of Agriculture and Commerce, now amounts to 4,824 head. The farm would seem to be getting on better than most persons suppose.

THREE seamen from the ship *Cyprus* were brought up before H.B.M.'s Consul yesterday for having overstepped their leave. They made a rambling statement about not having money to pay boat hire to the ship, bad provisions, etc. His Honour said he believed they only wanted to get their discharge, and sentenced them to have four days' pay stopped and to go on board at once, remarking that if they refused to return to duty the Captain would no doubt proceed against them as deserters, in which case he would have to inflict a more severe penalty.

ON the subject of the collision between the *Breconshire* and the light-ship *Kaisho Maru*, wherein the latter vessel was sunk on the night of the 16th-17th of May last, we read in the *Nichi Nichi Shimbun* that Captain Fletcher, the pilot of the former, has been examined before a Board consisting of Captain G. E. O. Ramsay, President, and Lieut. T. H. James, R.N., and Mr. A. F. Macnab, Assessors. A decision, sanctioned by the Minister of Agriculture and Commerce, was delivered on the 25th ultimo to the following effect:—

Taking into consideration the copy of the *Breconshire's* log, authenticated by H.B.M.'s Consul at Kobe, and the depositions of Mr. Fletcher and the captain of the light-ship and others, it is evident that Mr. Fletcher gave the order to "go ahead" immediately before and at the moment of striking the light. Indeed, after the captain had left the bridge, he ordered the steamer to be headed between the light-ship and the bar, he then acting for the captain. Although the accident was caused by his so heading the vessel, yet as a boat was then passing ahead from right to left, he was compelled to put his helm a-port, and could not take the proper measures to avoid the light-ship. Further, it appears, from the depositions, that the weather was very thick and cloudy, rendering it impossible to see objects clearly at any distance. Considering all the circumstances the Pilot is acquitted, and his certificate is returned to him with a caution to be more careful in future.

SO FAR as we have been able to learn, the opening of the railway from Tokiyo to Takahashi is not likely to come off before the 20th instant. The line is said to be completed, but some days will still be required to transfer the rolling stock from Shimbashi to the terminus at Uyeno.

WE beg to acknowledge the receipt from the Commissioner of the Imperial Mint of an English translation of the Coinage Regulations. A translation of these Regulations from the Japanese version appeared in the *Japan Weekly Mail* of the 2nd of June.

A FOREIGN LOAN FOR JAPAN.

"PAPER MONEY," said Mirabeau, "is the nursery of tyranny, corruption and delusion, a veritable orgy of authority and delirium." It is, indeed, to the history of France that they should go for instruction who imagine that tariffs, custom houses, official interference or any other partial palliatives can stave off the fatal effects of such a poison. What the bigotry of Louis XIV. and the shiftlessness of Louis XV could not do in nearly a century was accomplished in a few months by tampering with the currency. French industry collapsed. "Capitalists declined to embark their means in business, Enterprise received a mortal blow. Demand for labour was still further diminished. The business of France dwindled into a mere living from hand to month. With the masses of the people the purchase of every article of supply became a speculation, a speculation in which the professional speculator had an immense advantage over the buyer. Commerce was dead; betting took its place."

Japan, too, has had her bitter experience. What dimensions her foreign commerce might have attained ere this but for the insuperable impediment of a fiat currency, it were profitless now to discuss. The past is beyond reach. The country has suffered severely. It has lost the greater part of its gold and silver, and finds itself at last reduced to employ paper tokens without any basis of intrinsic value; finds itself imperatively required to be industrious, frugal, and economical, in face of an almost fatal obstacle to industry, frugality, and economy, an obstacle of which Webster has said that it "fosters the evil spirits of extravagance and speculation, and is the most effectual of all contrivances for cheating the labouring classes of mankind."

This evil of inconvertible paper has another troublesome feature: the period of its cure is also the period when the suffering and distress it produces are most keenly felt. It may be compared to a sloughing sore which, while gradually draining away the vital forces of its victim, causes him sharpest pain when the cautery is applied. The anguish and terror which a country endures when inflated prices begin to be punctured, and pecuniary obligations press with daily increasing weight, are matters of history. It was under the influence of these trials—trials "which any man of plain sense might have anticipated"—that the American House of Representatives in 1868 hastily rescinded the

Act of 1865 which had authorized the retirement of legal tenders: it was under the influence of these trials that, as the French "assignats poured from the Treasury in increasing volume, the cry of the scarcity of the circulating medium grew daily louder"—a cry soon to be followed by the terrible echo, "Bread or Blood": it was under the influence of these trials that the resumption of specie payments in Great Britain was charged with a long succession of commercial disasters, with the deep and settled industrial depression which characterized the years following 1819; and it is under the influence of these trials that both native and foreign critics in Japan are advocating a step which, if hastily or rashly taken, will prove more mischievous than anything that has gone before.

Among Japanese writers, the first, we believe, to recommend resumption by means of a foreign loan, has been the *Fiji Shimpō*, a journal whose utterances command attention on account not less of its editor's high reputation than of the wide-spread influence his opinions exercise. "The ills resulting from the circulation of fiat currency have reached their climax," says the *Fiji Shimpō*: "our people have sunk into a despondent condition and are environed by commercial anomalies." To continue such a system were little short of a "black crime." The best thing the Government can do is to "borrow silver abroad and resume specie payments without delay."

This course has already been urged by foreign writers whose recommendations receive much weight from Italy's recent example. Resort to a foreign loan for such a purpose may be called a modern expedient. It would not have been possible to France in 1796 or to England in 1819. Italy's action is without precedent and its results have still to be determined. But, whatever they may be, the pregnant fact remains that one of the leading Powers of Europe, after mature deliberation and recourse to the best financial advice, has not hesitated to become dependent upon foreign aid for the purpose of redeeming its promissory notes.

Assuming then—and the assumption is obviously justified—that such a proceeding is in no wise opposed to the principles of sound finance, let us reduce to comparable terms what Japan is asked to do by Mr. Fukuzawa's school, and what she is understood to be in process of doing of her own motion.

In 1881, when Italian financiers believed that the moment had arrived for returning to specie payments, Italy's fiduciary cur-

rency amounted to 940 millions of francs, State issues, and 810 millions of Bank issues, or 1,750 millions in all. At that time the Treasury possessed 100 million francs in specie, which had been set aside from the Customs dues, and the metallic reserves of the note-issuing Banks amounted to 250 millions. Thus, the specie immediately available was approximately one-fifth of the total note issues. Under these circumstances the Minister of Finance was authorized to contract, before December 31st, 1882, a loan of 644 millions of francs, 400 millions at least to be in gold. This loan having been successfully negotiated,¹ the total specie resources of the Government on April 1st, 1883,—when resumption became an accomplished fact—were 950 millions against 1,750 millions of note issues.

Now Japan's specie reserve may be set down to-day at twenty million dollars and her paper issues at 140 millions, the proportion being as 1 to 7. If then we accept the ratio practically established by Italian financiers, it would be necessary for the Government to borrow 56 millions of dollars. Since, however, the loan would take at least a year to negotiate, we may assume that in the interval the Treasury's reserves would have increased by 5 or 6 millions, so that the sum to be borrowed would not exceed 50 millions. Let us suppose that Japan obtains this at 7 per cent. interest, and that she agrees to pay it back in 20 years by regular annual instalments. The interest will, then, amount in the total to \$36,750,000, and the mean of her yearly payments would be \$4,337,500: six millions being the maximum and \$3,675,000, the minimum.

These figures, apart from the question of interest, may be regarded as a maximum. America resumed specie payments on a much smaller margin. On the 1st of January, 1879, the reserves of the Treasury and of the National Banks in the United States amounted to 197 millions of dollars, while the fiduciary issues were 700 millions. If this precedent be valid, Japan might undertake the task with 40 millions. But it must not be forgotten that in 1879 the premium on gold in the United States had fallen to a merely nominal amount and that in Italy's case it was only 11 per cent. In Japan the conditions of the problem are very different.

Ultimately, then, on the above hypothesis, to resume specie payments by means of a foreign loan would cost Japan about

(1) M. Magliani, in his financial statement on April 18th, told the Chamber of Deputies that despite the difficulties besetting the money market during the past two years, he had succeeded in obtaining, not 400 millions of gold, as originally proposed, but 500.

(1) White. (2) Walker.

37 million dollars in interest alone, which she would save by leaving her paper as it is.

Let us now examine the plan which the Government is understood to be pursuing. In the first place, according to the provisions of the new Banking Regulations, all the paper issues of the National Banks are to be exchanged for Treasury notes in the course of the next fifteen years. This operation will involve no fresh issues of *Kinsatsu*, so that it amounts virtually to a withdrawal of 35 millions (*yen*) from circulation. The bulk of the fiduciary currency will thus be reduced to a total very little in excess of 100 millions, which is believed to represent the minimum required for commercial purposes. The annual reductions under this head will be supplemented by further small withdrawals, provided for in the estimates. These, however, do not deserve much attention, as the yearly appropriations on account of currency redemption are now applied, not to the recall and destruction of *Kinsatsu*, but to the accumulation of a specie reserve. Of the methods employed to convert these appropriations of paper into specie, it is unnecessary to speak at present. Suffice it to say that, having regard to the additional taxes recently imposed on *saké*, malt, tobacco and patent medicines, it is expected that the annual increments of the specie reserve will amount to seven millions at least. Thus by 1887 the country will possess a specie reserve of more than 50 millions and a paper issue of about 125 millions. At these figures resumption will be possible without much risk.

In comparing this scheme with that of a foreign loan, the first point that suggests itself is one of time. Industry and commerce have suffered so much from the paper currency that the nation is naturally impatient for resumption. The writer in the *Fiji Shimpō* would have the Government proceed to the task without delay. Like many others who have discussed the subject, he seems to think that the passage from a fiat to a metallic currency may be effected in a few months. This is a strange misconception, more especially as the experience of the past year ought to have made men more or less familiar with the evils that are inseparable from a period of currency contraction. It cannot be too distinctly remembered that currency appreciation and a return to specie payments involve, in an inverse direction, all the inconveniences and disorders which attend currency depreciation. When the Bank of England finally resumed specie payments in 1819, the nominal premium on gold was less than 4 per cent, and the

operation of resumption was spread over three years, all reasonable precautions being taken to avoid disturbing the markets. Nevertheless the first effects of the measure were that the prices of the most important articles fell many degrees, bringing to distress, if not to ruin, large agricultural and manufacturing interests, while the burden of all fixed charges, private and public, was aggravated to an extent well nigh intolerable.⁴ Doubtless other and independent causes assisted to accentuate the trouble, but the experiences of America and France combine with those of England to show that the utmost circumspection is necessary in dealing with a nation's currency. It may reasonably be doubted whether the Government of this country has not already overstepped the limits of prudence in reducing the bulk of the circulating media.

Connected with the nature of Japan's fiat currency there are considerations which must not be omitted in examining this question. Her currency is not "saturated" with specie, as it would be had the issue of paper tokens been confined to notes of large dimensions. Copper coins excepted, the money in daily use is entirely paper. Now experience has shown, as indeed reflection plainly indicates, that notes of small denominations are the last to be presented for redemption. Such notes are held principally by the poorer classes who have neither knowledge nor opportunity to avail themselves of the facilities offered for exchange.⁵ The national revenues, however, would certainly be paid in paper if taxpayers found any sensible degree of economy in making use of it. And beyond question they would find it economical. For specie is of all commodities the slowest to follow a general movement of prices caused by the appreciation or depreciation of paper money. In other words, during the early years of resumption, the purchasing power of *Kinsatsu* would be less as regards specie than as regards any other com-

modity. The Government, then collecting its revenues chiefly in paper, would be obliged to export every year a considerable sum in specie to meet its engagements abroad, and might soon find itself seriously embarrassed by the task.

Whether a loan could be procured abroad on the terms mentioned above, or whether, indeed, it could be procured at all, is a question about which there will be differences of opinion. Japan's financial engagements have hitherto been fulfilled with scrupulous regularity, and her credit ought to be at least as good to-day as it was five years ago. But it would be idle to deny that there has grown up of late an undefined mistrust of her capacities and prospects. Something of this must be ascribed to the same evil which lies at the root of all her troubles. Vacillation and mismanagement have injured her reputation not less than they have crippled her resources. Something of it is also to be ascribed to the harsh criticism of which she has recently been the victim. The commercial paralysis of late years has elicited from its foreign victims utterances which, though not inexcusable, have unfortunately been calculated to aggravate the mischief they condemn. Those who, whether heedlessly or of design, spare so few pains to overthrow Japan's credit, to impugn the honesty of her rulers, and to disparage the efforts of her financiers, would do well to reflect that they are rendering it daily more difficult for her to emerge from the embarrassments into which, according to their showing, she has fallen. There seems, however, no valid reason to suppose that the money markets of the West are closed to her. She could probably get all the specie she wants on fairly easy terms, but it will be time enough for her to seek help abroad when she is quite convinced that the effort of resumption is not within the compass of her own unaided strength.

HER MAJESTY'S NEW REPRESENTATIVE IN CHINA.

IT was in thorough accord with the most honorable traditions of the British service that Sir THOMAS WADE should come forward to defend his absent colleague against the singularly unjust charges formulated by the *Pall Mall Gazette*. Accurate general statements are not to be expected in ephemeral articles, but the inaccuracy of the *Pall Mall Gazette* is something quite out of the common order. To describe Sir HARRY PARKES as "an official who brought two wars on China a quarter of a century ago," is to pass at once from the domain

(4) In this context it may be interesting to recall a passage of Sir James Graham's tract on *Coin and Currency*, published in 1846. "Whether we regard private debts or public burdens, the effects of the measure of 1819 have been to enact, that for every less sum owing a greater shall be paid; prices falling, but pecuniary engagements remaining undiminished, the farmer has no profit, the landlord no rent, the manufacturer no customer, the laborer no employment; a revolution of property and a derangement of the whole frame of society must necessarily ensue. . . . It has conferred on the fund-holder a benefit to the extent of the depreciation of the money which he advanced; in many cases this is equal to 50 per cent. But this rise of the fundholder is affected by ruin of the landlord. Estates which have been held from generation to generation in the same family are rapidly changing owners; and, as the country gentleman retires, the fund-holder advances. . . . Amidst the ruin of the farmer and the manufacturer, the distress of landlords, and the insurrections of a populace without bread and without employment, one class flourished and was triumphant: the assiduous and the tax-eater rejoiced in the increased value of money; in the sacrifice of productive industry to unproductive wealth, in the victory of the drones over the bees."

(5) When the Bank of England voluntarily undertook to redeem its paper in 1817, it confined its operations at first to one and two-pound notes. The result was virtually nil. The amount of cash paid out for redemption did not exceed £1,000,000. Encouraged by the result of this partial experiment, the Directors announced that they would pay gold for their notes of all denominations. The result was an immediate drain of more than £2,000,000, and a bill restraining further redemption.

of history into that of fiction. Sir THOMAS WADE'S refutation of such an error might have been couched in much stronger terms. But if a sense of justice forbade him to keep silence, diplomatic instinct dictated the form of his speech. He felt, and the public will cordially endorse his sentiment, that the dead past may be suffered to bury its dead; that "the disaccords of former years" consort ill with the altered conditions of the present. The chief features of the story he, therefore, leaves untouched, nor seeks to awaken any memories other than those essential to his immediate purpose.

Sir THOMAS WADE, too, when he writes of these matters, is in a measure writing his own biography. The part he played in the Canton troubles of 1856-7 was at least as prominent and responsible as that played by Sir HARRY PARKES. Indeed it is a singular and significant fact that the three principal actors on the early stage of China's foreign relations, the three chief representatives of British policy, were gentlemen of whose conspicuously philanthropic tendencies the world has agreed to entertain no doubt. That this is so in Sir THOMAS WADE'S case, it is unnecessary to remind those who have any knowledge of the local criticisms his official career evoked. Yet it was Mr. WADE who acted as Chinese Secretary all through the operations that led to the Treaty of Tientsin in 1858. He was senior to Mr. PARKES, had devoted a longer time to the study of Chinese, and was altogether in a position which enabled him to exercise a greater influence on the councils of his chiefs. One need not be surprised, therefore, to find him speaking of the quarrel between England and China as "a question upon which opinion is greatly divided." To do more than note the fact would be in some sort to pass judgment on himself. Sir JOHN BOWRING, again, was the intimate friend and fellow-thinker of RICHARD COBDEN. Even JUSTIN MCCARTHY, who into his tale of the Chinese war has imported all the bias of a political partisan, could only say of Sir JOHN that "nothing in all his previous habits of life, nothing in the associations and friendships by which he had long been surrounded, nothing in his studies or his writings warranted any one in expecting that when placed in a responsible position in China at a moment of great crisis, he would have taken on him to act a part which aroused such a controversy." The truth is that had choice been possible, Sir JOHN BOWRING would have preferred any other course. To adopt the rôle he felt constrained to adopt, in-

involved a cruel dislocation of his most cherished creeds and convictions. When he took the Oaths as Governor of Hongkong in April, 1854, he was all for the Chinese. Conciliation and patience, he thought, alone were needed to set matters right, to obtain rigid respect for treaty stipulations which had been persistently violated for twelve years. When he requested Admiral SEYMOUR, on the 22nd of October, 1856, to seize the defences of the city of Canton, he was still at heart the same Sir JOHN BOWRING: still anxious to treat the Chinese kindly; to humour their caprices and coax them out of their conservatism. But his convictions were never calculated to survive collision with such a phenomenal compound of astuteness and obtuseness as Commissioner YEH. They yielded to the shock, and Sir JOHN made a discovery which no conscientious official could have failed to make: he discovered that there is a limit beyond which leniency ceases to be kind and becomes culpable. Lord ELGIN acquired the same experience under somewhat similar circumstances. He had been chosen by the Tory Government as a man whose character and reputation were in themselves sufficient to enlist public opinion on behalf of any measures he might adopt. Lord PALMERSTON knew well that if the voice of the constituencies had vindicated his foreign policy, the necessity of appealing to that voice had immensely strengthened the hands of his opponents. It was essential that no fresh onset should be invited in the same quarter; and Lord ELGIN was, of all diplomatists, least likely to furnish another pretext to the "unholy coalition." In fact his appointment was Lord PALMERSTON'S method of stifling criticism. "You accuse me," the crafty statesman virtually told his enemies, "You accuse me of supporting violent and arbitrary agents abroad: you accuse me of sanctioning 'proceedings that cannot be justified on any principle either of law or reason.' My only answer is to send Lord ELGIN to China." To China, therefore, Lord ELGIN went, taking with him a host of gentle intentions and a profound sympathy for "the poor Chinese." Yet it was Lord ELGIN who ordered the bombardment and military occupation of Canton; it was Lord ELGIN who twice directed the assault on the Taku Forts; it was Lord ELGIN who led an English army to Peking, and it was Lord ELGIN who caused the Summer Palace to be burned to the ground. The most stubborn philanthropy could not resist such conditions as those which existed in China between 1856 and 1860.

The lorcha *Arrow* would scarcely have found a place in the pages of history had its fate come up for discussion at any other period of English home politics. But chance has a considerable share in determining what figures shall occupy the foreground of "the eternal landscape of the past." The lorcha *Arrow* was destined to be one of them. A powerful party in Parliament watching only for some battle-cry, however frivolous, found it in Chinese logic and Chinese morality—qualities which, in the mouths of such orators as COBDEN and GLADSTONE, could not fail to command respect and enlist enthusiasm. The lorcha *Arrow* was nothing more than an accidental spark that fired a long train of accumulated combustibles. To careful readers of history the marvel is, not that the explosion came, but that it was so long deferred. For fourteen years British officials in Canton had submitted to an unvarying system of contemptuous apathy. The Chinese had not absolutely torn up the Treaty of 1842, but they had simply blotted all traces of it out of their foreign relations. To remonstrance they opposed evasion; to complaint, disdain. There had been talk, over and over again, of compelling them to keep their promises. Sir SAMUEL BONHAM, in 1848, saw that some resort to force was inevitable, but before acting upon his convictions, he referred to England for instructions. He was told to wait a little longer. The Government did not want trouble, and China, after all, was a very large empire. So things drifted on, the Chinese every day becoming more persuaded that they could afford to despise us, and Sir JOHN BOWRING'S conciliatory policy helping to confirm the impression. Then came the affair of the lorcha *Arrow*. Registered in Hongkong as an English ship, and owned by a British subject, she was lying quietly one afternoon in the river opposite the British Consulate at Canton, when two Chinese boats full of armed men suddenly bore down upon her, carried off all her crew, with the exception of the master himself, hauled down the British ensign and danced upon it. Some excuse has been found for the Chinese in their want of familiarity with English colonial laws. For eighteen months they had refused to be persuaded that a ship with a Chinese crew could be anything but a Chinese ship, to whatever nationality her owner belonged and under whatever flag she sailed. The Governor and Legislative Council of Hongkong had not yet, however, seen reason to alter their views or their ordinances, when the master of the *Arrow* arrived at the British Consu-

late in Canton, breathless and wrathful, to complain of the outrage he had suffered. The Acting Consul, Mr. PARKES, lost no time in applying for the release of the kidnapped men. That was certainly the least he could do. But having done it, his responsibility ended. A few hours later, the daily steamer carried official intelligence of the whole incident to Hongkong, and the conduct of the affair thenceforth devolved entirely upon Sir JOHN BOWRING. Anybody possessing the most rudimentary knowledge of official routine will see that this must have been the case. Even "Sinensis," who would fain have it otherwise, is obliged to admit that to saddle an Acting Consul at Canton with the responsibility of a war the cause and course of which were from the first under the control of the Governor of Hongkong and the Admiral on the station, is a misapprehension only possible to "Chinese ignorance of foreign official relations." The lorch *Arrow*, too, very soon ceased to be a real factor of disturbance. She was merely the straw that broke the camel's back. Sir JOHN BOWRING concluded that the time had come when some understanding as to the fate of the treaties must be arrived at. He requested Commissioner YEH to grant him an interview. YEH peremptorily declined. Ignoring all the weightier sources of disagreement, he confined himself entirely to the lorch *Arrow*. The more the English Governor insisted, the less sign of yielding did the Chinese Governor display. YEH would grant no interview, would enter into no serious discussion, would adopt none of the courses generally pursued by civilized negotiators. China's policy was to keep the foreigner at arm's length, and that policy found an uncompromising exponent in the contumacious Commissioner at Canton. Sir JOHN BOWRING had the choice of two alternatives: to submit quietly, and thus practically surrender the treaty rights entrusted to his guardianship, or to force his way into Canton. He adopted the latter plan, maintaining, however, to the end, his friendly feelings towards the Chinese in general, though admitting that for such tenacious impracticability as that of Commissioner YEH, coercion was the sole resource. During the whole progress of these and subsequent proceedings we find Mr. PARKES performing always a subordinate, though an exceedingly useful, rôle. At one time he is warning the Chinese troops to refrain from hostilities; at another communicating to Commissioner YEH the demands of Sir JOHN BOWRING or Admiral SEYMOUR; at another penetrating into Canton to decipher

Chinese proclamations at the imminent risk of losing his head. As the only two Englishmen concerned in the negotiations who could speak Chinese, he and Mr. WADE may have occupied a very prominent place in the eyes of Commissioner YEH but to lay the responsibility of the war on their shoulders for that reason would be a ludicrous injustice.

As for the second war which Sir HARRY PARKES is, by the hypothesis of the *Pall Mall Gazette*, accredited with having brought about, the fact is that in all human probability it would never have occurred at all had his counsels been followed. His strong recommendation that the Taku Forts should not be surrendered until the ratifications of the Tientsin Treaty were completed, was not adopted by Lord ELGIN, who a year later had the chagrin of hearing that these very forts had opposed his brother's attempt to reach the Chinese capital in his capacity of Minister, and inflicted such loss on a British fleet that an armed invasion of China became necessary. Thus, not only was Sir HARRY PARKES two thousand miles away when Sir FREDERICK BRUCE presented himself at the mouth of the Peiho in 1859, but he had the melancholy satisfaction of knowing that the rejection of his advice was the indirect cause of the disasters which followed.

The history of those times remains to be written: it is only obscured by the lucubrations of such pens as that of "Sinensis." When an impartial historian is found, he will have a great deal to say on China's behalf. If in many of their dealings with foreigners, the Chinese ultimately laid aside all regard to law or equity, it cannot be forgotten that at the outset they believed themselves the objects of lawless intrusion and enterprise. Traditions, eminently respectable in their own eyes, received little if any respect at our hands. The whole principle of their civilization was opposed to everything we call civilized. But then it was their civilization, and as such they were bound to maintain and defend it. A recent writer has said, speaking of these very Chinese, that a belief in the perfection of their own systems was in itself evidence of ignorance and self-conceit. He fails to see, apparently, that the charge cuts both ways. Their self-complacence did not extend beyond a desire to be left in the peaceful enjoyment of their own creeds and customs: we went about endeavouring to force ours upon everybody. When it comes to a question of cold logic there can be no hesitation about the relative degrees of justification. But it is not, and never can be, a question of cold logic. British

civilization can only be divested of its aggressiveness at the cost of its vitality. We are accustomed to speak of the missionaries of the gospel; we should also speak of the missionaries of commerce. The latter are not less active than the former, and to restrain them effectually we must begin by changing their nature. So long as Englishmen remain what they are, they will be found introducing themselves into every region capable of profitable development, and creating responsibilities which their Government is finally compelled to assume. From an un-English point of view, the propensity is very ill-favoured and very inconvenient, but though it may be regulated, it cannot be wholly checked. The question between England and China twenty-five years ago was, not whether this or that colonial ordinance was right, or whether this or that official's conduct was arbitrary, but whether there was to be any permanently comfortable intercourse whatsoever between the two nations. China chose to regard herself as the only sovereign Power in the universe. She would have no accredited agent of any foreign State at her capital, nor treat with any other government on equal terms. This was the policy her officials were directed to carry out, and, in the hands of Commissioner YEH, it became a policy of not treating at all. His plan was to commit acts of violence and then decline to discuss them. Contemptuous inaccessibility: that was what peace-loving diplomats like Sir JOHN BOWRING and Lord ELGIN had to deal with, and the only pity is that the practical solution of the problem did not devolve directly upon Mr. COBDEN or Mr. SIDNEY HERBERT. China is very different now from what she was then, and it is perhaps a little difficult fully to realize her ancient mood, but a comparison of her progress between 1860 and 1880 with her absolute immobility between 1840 and 1860, is the best possible vindication of the policy which led to the Treaty of 1858 and the Convention of 1860. There are many pages which we would fain see expunged from the story of our relations with the East, but the education of nations does not differ much from that of children. If an appeal to reason is impossible, an appeal to the rod, however distasteful, becomes inevitable. Nothing is easier than to fit principles to practice in a parliamentary debate or a philanthropical treatise, but in the presence of a nation which declines to admit any principles outside its own traditions, refuses altogether to listen to what the world calls reason, and shuts its door in the face of its visitors, there is nothing left

for these latter except to obtain a hearing by force or take themselves away altogether. The Exeter Hall School would recommend the latter course, but even the Exeter Hall School must admit that the power of election did not rest with British agents in China twenty-seven years ago. It is interesting to speculate what the House of Commons would have said if a British Consul at Canton had refused to protect the British flag against Chinese truculence, or to guard British property against Chinese arbitrariness, and if a British Governor at Hongkong had consented to be denied so much as the satisfaction of a hearing when he remonstrated against a Chinese Commissioner's deliberate disregard of treaty obligations. We imagine that Lord ELGIN, Sir JOHN BOWRING, Sir THOMAS WADE, and Sir HARRY PARKES would be quite content to submit the part they played in Chinese affairs a quarter of a century ago to the verdict of a board of Chinese statesmen to-day.

GENERAL VAN BUREN AND THE "JAPAN MAIL."

ON the 16th and 23rd December last, Editorial Notes appeared in the columns of this paper, the first alluding to anonymous communications made to the local press, and the second discussing certain features of the American Civil Service, in terms to which Consul-General VAN BUREN took exception as being intended to reflect upon himself. On learning—from a letter addressed by the Consul-General to our local contemporaries—that such was the case, we published on the 10th of March an article explaining that "as a matter of fact, though of minor importance, the article in question was not written by the Editor of this journal, but that it certainly would not have found a place in our columns had we anticipated that any individual could allow himself to be induced to apply the illustrative characteristics of its condemnatory, rather than its laudatory, passages to himself." With this, however, General VAN BUREN was not satisfied; and as subsequent correspondence did not open up any prospect of an understanding, it was finally agreed that the matter in dispute should be submitted for arbitration to a former well known resident at Yokohama, in whom both General VAN BUREN and the editor of this journal reposed entire confidence. After careful consideration that gentleman decided that, having regard to the previous references admittedly made to General VAN BUREN in the columns of the *Japan Mail*, the General was justified in assuming

that certain portions at the end of the note in question were intended to refer to him, and that a further "amende" was due to him from the *Mail*. Under these circumstances the Editor of this paper desires frankly to express his regret for the annoyance to which General VAN BUREN has been subjected, and to disavow any injurious reflection on him which could possibly be deduced or implied from the note in question.

In explanation of the delay that has occurred in the publication of the present article, it should be said that the gentleman to whom this matter was referred is now resident in Shanghai, and that the draft of the article was sent to him for approval in the first instance.

THE FINANCIAL ESTIMATES FOR THE 16th FISCAL YEAR OF MEIJI—(1883).

NOTIFICATION No. 26.

To the Council of State, Departments, Senate, Cities and Prefectures.

It is hereby notified that the Estimates of the Revenue and Expenditure for the 16th fiscal year (1883-84) have been fixed as follows:—

SANJO SAN'YOSHI, Prime Minister.
5th June, the 16th year of Meiji (1883.)

PRELIMINARY REMARKS.

Before proceeding to specify the causes of the increase and decrease of the Revenue and Expenditure as compared with previous years, a few important points require explanation, namely:—The total Estimate of the Revenue for the current fiscal year is yen 75,606,059, showing an excess of yen 8,791,937 over that of last year. The causes which led to this augmentation are to be found in the proposed enlargement of the military organization and improvement in the internal administration, which undertakings have necessitated the establishment of fresh taxation and an increase in the amount of taxes already imposed. Among the latter the principal are the Patent Medicine Stamps (Notification No. 51), Dues payable by members of the Rice and Stock Exchanges (Notification No. 65), Tobacco Tax (Notification No. 63), and Saké Tax (Notification No. 61). The increase arising from the Saké and Tobacco taxes and that on the Rice and Stock Exchanges amounts to yen 7,820,000; whilst the surplus arising from the tax on Patent Medicines is yen 610,000; the receipts of the Postal and Railway Bureaux, and other undertakings under the management of the Public Works Department, are augmented by yen 2,710,000. Thus, although there is a decrease of yen 2,350,000 in the receipts of the mines belonging to the Public Works Department and the sale of the products of Hokkaido, the total increase is yen 8,791,937 as stated above. As regards the Expenditure, the total increase is yen 10,660,000. Of this, yen 4,830,000 are absorbed by the Army and Navy under the extension of the military system; such, for example, as the construction of new men-of-war and the increase in the number of recruits and so forth; yen 1,810,000 are appropriated for a supplementary reserve for warlike purposes; yen 4,020,000 for the extension of the Postal and Sanitary systems, construction and repair of river embankments, and other works of a similar nature in Cities and Prefectures. The expenses of the manufacture of paper money, those in connection with various industries belonging to the Public Works Department and other miscellaneous outlays, are decreased by yen 1,870,000. This sum, deducted from the total amount of the aggregate increase—yen 10,660,000—leaves a dif-

ference of yen 8,790,000, which is the net amount of the increase. With respect to the withdrawal of paper currency, the loan fund for starting industries, and expenses for supporting existing industries, it may be mentioned, as will be seen under each heading, that, though there may be some difference in the amounts, yet there is no change of system.

The following are the items which show an increase in the Revenue:—

LAND TAX:—There is a decrease of yen 26,000 and yen 17,000 in the tax on irrigated fields and the value of stamps on land certificates respectively, consequent upon the change in the classification of the farms. Against this decrease, however, has to be set an increase of yen 111,000, owing to a readjustment of the tax on reclaimed land, as well as on uplands, enclosures, woods and forests, and moors, together with an increase of over yen 16,000 from arrears of land-tax.

TAX ON SAKÉ:—The increase in this is due to the modification of, and addition to, the regulations for the tax on Saké, by Notification No. 61, enacted in the 15th year of Meiji (1882).

TAX ON TOBACCO:—Owing to the alteration of the original regulations for the Tobacco tax by Notification No 63 enacted in the same year.

STAMP TAX ON LEGAL DOCUMENTS, ETC:—The sale increases year by year.

POSTAGE STAMPS:—Though there is a decrease of yen 60,000 in the postal charges, owing to Notification No. 59, enacted in the 15th year of Meiji (1882), yet this is met by an increase of yen 450,000 consequent upon the increase in the amount of correspondence.

TAX ON RULED PAPER FOR JUDICIAL PROCEEDINGS:—The causes are similar to those stated under the heading of stamps on legal Documents.

TAX ON VEHICLES:—There is a constant increase in the number of vehicles.

TAX ON COMPANIES:—Although there has been a decrease of yen 77,000, owing to the closing of a few of the National Banks and an alteration in the amount of taxes on Rice and Stock Exchanges by Notifications Nos. 66 and 67, enacted in the 15th year of Meiji, yet there is an increase of yen 930,000 owing to the enactment of rules for the taxation of members of the Rice and Stock Exchanges, by Notification No. 65 in the same year, and of yen 130,000 owing to the prolongation of the term of business of the said institutions.

SHOOTING LICENCES:—This item shows an increase year by year.

HORSE AND CATTLE DEALERS' LICENCES:—This item increases yearly owing to the increase in the number of licences.

TAX ON PATENT MEDICINES:—This shows an increase, owing to the yearly augmenting number of dealers and the issue of Patent Medicine Stamps, according to Notification No 51 of the 15th year of Meiji.

MANUFACTURES UNDER THE AGRICULTURAL AND COMMERCIAL DEPARTMENT:—The transfer of the Mongame Sugar Factory to the Bureau for the control of the industries in Hokkaido (*Fimu Kwanri Kioku*) and the decline in price of the articles manufactured in the Aichi Weaving Establishment, have caused a decrease of yen 2,000. On the other hand, there is an increase of yen 20,000 in the receipts of the Woollen Factory at Senjiu.

RAILWAYS UNDER THE PUBLIC WORKS DEPARTMENT:—These augmenting to the increase in the number of passengers, conveyance of merchandise, and fall in the price of coal.

TELEGRAPHS UNDER THE PUBLIC WORKS DEPARTMENT:—Owing to the completion of the submarine cable between Hiradate and Hakodate, no further outlays are required.

MINES IN HIROSHIMA KEN:—A saving was effected owing to an alteration in the distribution of workmen's wages.

WOODS AND FORESTS:—This increase is owing to the sale of lumber to emigrants to Hokkaido.

SINKING FUND:—There is a reduction of yen 101,000 under this heading, but an apparent increase owing to the fact that "Miscellaneous Receipts" have been placed under another heading.

REPAYMENT OF SUNDRY LOANS:—Although there has been a decrease of yen 62,000 in the payment of miscellaneous advances and allowances made, yet there is an increase of yen 86,000 owing to the repayment this year of various other loans.

SALES OF GOVERNMENT PROPERTY:—This shows an increase, in consequence of the proceeds arising from the sale of articles produced by the industrial establishments under the Agricultural and Commercial Department and Public Works Department having been added to this item; the reason being that the expenses for the maintenance of those establishments were paid out of the Ordinary Expenditure. The increment is also partly due to an improvement in the price of lands sold by the Government.

Petty increases under three other items added to those under the above nineteen make a total of yen 11,148,658.

The following are the items showing a decrease in the Revenue:—

Tax on Koji (yeast used for brewing saké):—This shows a decrease as estimated from the actual amount produced last year.

Tax on products of HOKKAIDO:—This shows a decrease, owing to the general fall in the price of commodities, and the fact that those products which were formerly sold in Tokiyo, Osaka, and Tsuruga, are this year sold in Hokkaido in order to save the expenses of transportation.

CHEMICALS AND DRUGS UNDER THE HOME DEPARTMENT:—Decrease owing to the alteration in the system hitherto employed, and to the manufacture having been made independent of the expenses for supporting industries.

MINING UNDER THE PUBLIC WORKS DEPARTMENT:—There is an increase of yen 16,000 in consequence of metallurgic operations having been improved at Ikuno mine, the employment of improved machinery at Kasaka mine, and the increasing outturn of the Aburato mine. On the other hand, there has been a decrease of yen 323,000, as large expenses were incurred for repairing the mining machinery in the Sado, Ani, Inai, and Miike mines, and as the quality and prices of some of the ores have depreciated.

MINTING UNDER FINANCE DEPARTMENT:—Although the coinage fees and sale of hydrochloric acid have increased by yen 58,000, there is a decrease of yen 59,000 in the sale of sulphuric acid and carbolic acid. Expenses amounting to yen 32,000 were incurred for repairs to the Mint, its branches, and workshops.

RENT OF GOVERNMENT PROPERTY:—This decrease is due to the sale of lands.

REPAYMENT OF LOANS MADE TO IMPERIAL PRINCES AND FORMER HAN:—This item shows a decrease owing to the refund of a large portion of the loan.

REPAYMENT OF LOANS IN PROPORTION TO RICE PRODUCTION:—This decrease is due to the same cause as stated above.

MISCELLANEOUS RECEIPTS:—The increase under this heading is yen 24,000 arising from the fees paid for exemption from conscription and various receipts. But this increase is over-balanced by a decrease of yen 85,000 in attachments and fines since the enactment of the new Criminal Code. The receipt of yen 1,493,000, being the fund for the redemption of the national debts, has been entered under another special heading. Four other items, added to the above, make the total decrease yen 2,356,721. This, deducted from the increase in the Revenue, leaves a balance of yen 8,791,937, which is the net increase.

The following are the causes of the various increases in Expenditure:—

REDEMPTION OF DOMESTIC DEBT:—There is a decrease of yen 63,000 in the Pension Bonds for ex-Shinto priests. On the other hand, there is an increase of yen 550,000, in connection with the redemption of the Specie Bonds for exchange against paper currency, issued in the 14th year of Meiji (1881), whose term of redemption commences in this fiscal year, the Capitalised Pension Bonds, the redemption of which is to be concluded in the present year, and of Loans for Public Works which have been entered here in full.

REDEMPTION OF FOREIGN DEBT:—As the interest decreases the funds for the payment of the principal are increased.

REDEMPTION OF PAPER MONEY:—The sum allotted for the withdrawal of paper money during the present year according to the Scheme of Redemption, is yen 1,340,000, which is less by yen 160,000 than for last year. To this item, however,

is transferred, from the heading of the Loan for Industrial Purposes, the sum of yen 200,000 advanced for various industries.

CIVIL LIST AND APPANAGES OF THE IMPERIAL FAMILY:—Although the expenses of the Fire Brigade and the Nobles' Bureau, amounting to yen 22,000, have been transferred to the Imperial Household Department, yet there is an increase of yen 372,000 for the allowance to H.I.H. Prince Masu-no-miya and other items.

HOME DEPARTMENT:—The extension of provisions for sanitary measures involved large expenses.

WAR DEPARTMENT:—Owing to the enlargement of the military system.

IMPERIAL HOUSEHOLD DEPARTMENT:—The expenditure has been increased in consequence of the transfer of the expenses for the Fire Brigade and Nobles' Bureau.

SENATE:—Owing to the increase in the number of Senators.

LEGATIONS AND CONSULATES:—Owing to the despatch of a Minister Plenipotentiary and Envoy Extraordinary to Austria, and of officers to His Majesty's Legation in Korea.

CUSTOMS BUREAU:—Owing to the establishment of a branch of the Nagasaki Custom House at Karatsu.

POST OFFICE:—Owing to the extension of mail lines, and an increase in the number of collections and deliveries of letters.

BUREAU FOR ADMINISTERING THE HOKKAIDO INDUSTRIES:—Expenses—yen 132,000—for the Office for Encouragement of Industries in Hokkaido, Museum, Agricultural School, Breeding Farms, Brick Factory and Laboratory under the control of the Agricultural and Commercial Department, and expenses incurred for the support of the factories under the Public Works Department amounting to yen 47,000, have been transferred to this item. Again, the expenditure hitherto included under the separate heading of "Expenses for productive industries" (*sakugyo-hi*) has been included in the Ordinary Expenditure. The latter sum amounts to yen 490,000, of which, however, the receipts derived from the aforesaid industries, *vis.*, yen 330,000, are paid into the National Treasury, under the heading of Miscellaneous Receipts.

REPAIRS, CONSTRUCTION, AND ENGINEERING:—Although there has been a decrease of yen 59,000 in the expenses of dredging Nakamura River in the prefecture of Kanagawa, and of constructing drains in the Foreign Concession in Yokohama, and contribution toward the fund for making the Oyashiradz and Yoneyama roads, in the prefecture of Niigata; and a further decrease of yen 3,000 on public works in Okinawa *ken* (Riu Kiu Islands); yet all this is counterbalanced by an increase of yen 297,000 in the outlays for the reconstruction of dikes in the rivers Abukuma, Fuji, Shô, and Oi, and contributions toward the fund for making roads in Kiyoto, Hiogo, Fukushima, and Nagano Prefectures, and re-constructing dikes in Kumamoto Prefecture.

EXPENDITURE FOR FU AND KEN:—Although the expenses—yen 20,000—for transporting excisable goods from Okinawa Prefecture are transferred to the Revenue Bureau, and although there is a decrease of yen 73,000 in the expenses of relief and various expenses of the prefectures; according to the enactments of Notifications Nos. 49 and 50 in the 15th year of Meiji (1882), yet there has been an increase of yen 1,240,000 owing to the enforcement of the Patent Medicine Stamps Act and the levy of the tax on saké, tobacco, etc., as enacted by Notifications Nos. 49 and 50; and also owing to the transfer of salaries and travelling expenses of district and ward officers to the National Treasury; the establishment of a Conscription Section in every prefecture; the establishment of new prefectures in Toyama, Saga, and Miyasaki, and large subsidies for local expenditure in the three prefectures of Hokkaido.

EXPENDITURE FOR METROPOLITAN AND PROVINCIAL POLICE:—This item shows an increase of yen 28,000. Of this, yen 25,000 are absorbed by the provincial police; and yen 3,000 are required for police in Ogasawara-jima (Bonin Islands) and for the salaries of police inspectors in Nemuro Prefecture.

TOKIYO PENITENTIARY:—Owing to the decrease in receipts from criminal labour.

MIKE PENITENTIARY:—Owing to the construction of prison buildings.

KUCHI PENITENTIARY:—Owing to the same cause.

KABUTO PENITENTIARY:—Owing to the increase of criminals.

EXPENDITURE ON SHINTO SHRINES:—This item shows an increase on account of the four Shrines of Onomikado, Tokiwa, Toyosaka, and Amekuni having been promoted to be Special Shrines of the Government, and Tsuruga-oka and Hachiman Shrines, having been added to the National Shrines.

MISCELLANEOUS EXPENSES:—This item shows an increase, owing to the increase in the number of decorations and gratuities bestowed.

DOCKYARDS:—The increase in this is due to the extension of the works.

TELEGRAPHS UNDER THE PUBLIC WORKS DEPARTMENT:—This shows an increase consequent upon the construction of telegraph lines and offices.

SUPPLEMENTARY RESERVE FOR WARLIKE PURPOSES:—This is in connection with the proposed enlargement of military organization.

Three other items added to the above twenty-five, make the total increase of yen 10,666,335.

The following are the items showing a decrease in expenditure:—

INTEREST ON DOMESTIC DEBT:—Owing to the gradual redemption of the principal.

INTEREST ON FOREIGN DEBT:—Owing to the same cause.

GRATUITIES TO THE MILITARY:—This is due to the diminution in the number of recipients.

PENSIONS TO SHRINES AND TEMPLES:—Owing to gradual annual redemption.

HEREDITARY PENSIONS TO SHIZOKU OF OKINAWA KEN:—The decrease in this item is due to the enforcement of the law curtailing and confiscating pensions according to the custom of the late clan.

NAVY DEPARTMENT:—Although this item is increased by yen 250,000 owing to the extension of our military organization, yet, as the expenses for the construction of men-of-war have been placed under a separate heading, there is a decrease of yen 330,000.

AGRICULTURAL AND COMMERCIAL DEPARTMENT:—The alteration in the management of the breeding farm at Shimosa necessitated an increase of yen 35,000. But this is balanced by the decrease of yen 132,000, which sum has been excluded from the expenditure of the Office for encouragement of industries in Hokkaido, and transferred to the Bureau for the control of industries in Hokkaido.

PUBLIC WORKS DEPARTMENT:—The decrease here is owing to the same cause as that stated in the above item.

BUREAU OF INLAND REVENUE:—Although the expenditure was increased by yen 170,000, in consequence of the modification of the tax on saké, etc., and transfer, from the expenses of Cities and Prefectures, of the expenses for conveyance of taxes as collected in kind in Okinawa *ken*, yet there is a decrease of yen 227,000 owing to a change in the system of selling the products so collected.

REPAIRS AND CONSTRUCTION:—This item shows an increase of yen 5,000, owing to the repairs of many Shrines. On the other hand, there is a decrease of yen 11,000 owing to the completion of the Judicial Courts in Okinawa *ken*.

MIYAGI PENITENTIARY:—Owing to the completion of the workshops and store-rooms.

EXPENDITURE ON CRIMINALS IN GAOLS OF FU AND KEN:—This item shows a decrease owing to many of the prisoners having been transferred to local prisons.

MANUFACTURE OF GUNPOWDER UNDER NAVY DEPARTMENT:—Owing to the expenses having been paid out of funds remaining from last year.

MINES UNDER THE PUBLIC WORKS DEPARTMENT:—An increase of yen 50,000 has been caused by the exploration of coal measures in the Miike mine and employing boring apparatus there. On the other hand, there is a decrease of yen 202,000, owing to the Kamashii mine having been turned over to private persons.

MISCELLANEOUS EXPENSES:—Owing to the constant visits of His Majesty's men-of-war to Korean waters, this item was augmented by yen 103,000. But there is a decrease of yen 180,000 owing to the completion of the Accountant's Bureau, Auditor's Bureau, and Court Martial Bureau; and the fact that no expense was incurred in connection with the Marine Produce Exhibition.

TABLE II.—EXPENDITURE.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

JAPANESE LABORATORIES AND THE BRITISH CONSUL.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—Her Britannic Majesty's Consul at this port, Mr. Russell Robertson, has inserted, in his Annual Consular Trade Report for the year 1882, dated Kanagawa, June 19th, 1883, the following paragraph in regard to the Japanese Government Laboratories under the Central Sanitary Bureau of the Home Department:—

"Controversial matter can scarcely be introduced in a Trade Report, but I am constrained, at this point, to state that complaints have reached me of the manner in which the Japanese Government Laboratories are worked to the detriment of importers of Drugs, Medicines, and Chemicals. I am not imputing bad faith, but it has been urged upon me that the standard of purity sought to be imposed on these articles is too high when compared with that in force in most other countries, and manufacturers find it difficult to meet the Government requirements in this respect. Further, too, I hear complaints of delay at the Laboratories in examining and passing articles, before which they cannot be moved on to the market. Goods are kept sometimes as long as two or three weeks before the requisite stamp is affixed, thus causing a heavy loss in charges and interest, which generally falls on the foreign importer."

Although the British Consul states that he abstains from "imputing bad faith" and gives as his opinion, "that controversial matter can scarcely be introduced in a Trade Report," yet he does not hesitate to reproduce a complaint or complaints in an official report without first ascertaining at the proper quarters whether they are well founded or not. I regret that the British Consul did not address himself either to me or to the Central Sanitary Bureau for full information on the subject, before accepting for insertion in his Trade Report charges amounting to a grave accusation, and brought forward in a vague manner, by one or more of the British drug-merchants against the Government Laboratories.

Sentences like the above in the Consul's Report, may in Europe—where people do not know the details—possibly injure, in a very unjust manner, the reputation which these Laboratories have been at great pains to earn and which they have actually earned in Japan, during the number of years that they have been in fair working order, enjoying as they do the confidence of the public in this country. Thence it is that I cannot leave the Consul's statement uncontradicted, and that I request you to insert the following in your esteemed journal.

The points of complaint, according to the Consul's Report, are (1) the delay to which medicines are subjected during their inspection at the Government Laboratories, and (2) the high standard of purity adopted by the Laboratories.

First, with regard to delay: since the charge is not supported by any particular evidence, I can only say, generally, that more or less delay is inevitable, according to the time necessary for a full investigation and analysis of the substance under examination, and according to the pressure of other business. Without a proper and exact analysis, no fair judgment as to the quality

of a medicine can be given, and the British Consul is doubtless sufficiently acquainted with chemistry to understand that a public analyst requires time for forming his judgment. Moreover, it is not correct to say that medicines, brought by foreigners for analysis to the Laboratories, are kept there three weeks. As a rule, such is not the case. On the contrary, everything has been arranged in such a manner as to cause a minimum of delay. Delay, however, cannot be always avoided where an analysis bearing an official character is required. If Her Majesty's Consul will turn to chapter IV. of the General Regulations under the Customs' and Navigation Laws of the United States, Washington, Government Printing Office, 1874, Arts. 449, 450, 451, 454, 461, etc., he will find that, in all the sea-ports of the United States the same delay occurs in the case of drugs and medicines imported from other countries. An analyst is not a sorcerer. He must have time to carry out his investigations before he can give a judgment. Further, whilst in the United States the inspection is obligatory for any importer, it is not so in Japan, foreigners being still quite at liberty to bring their medicines for examination to the Laboratories or not.

As to the standard of purity adopted by the Laboratories, the Consul is evidently ill informed, I might almost say, ignorant, of the duties of the Government Laboratories, and it is to be regretted that he did not endeavour to inform himself at the proper quarters, before repeating a groundless complaint in an official Trade Report.

Had he done so, he would have learned that a Japanese Government Commission is at present engaged in compiling a national Japanese Pharmacopœia; that, until this Japanese Pharmacopœia is published and adopted as law, strict orders have been given by the Central Government to the Laboratories to follow the standard of strength and of purity laid down in the Pharmacopœia of the country from which the drug or medicine is derived. Thus, British medicines are judged according to the British Pharmacopœia, German drugs after the German Pharmacopœia, unless the label states that the medicines have been prepared according to any other Pharmacopœia, in which case that Pharmacopœia is taken as the standard. The Government Laboratories do not possess at present their own standard; they have to follow the standard of the nations from whence the drugs or medicines are imported.

If the British Consul will now turn to Art. 450 of the aforesaid United States Customs Regulations, he will find the following:—

"All imported drugs, medicines, and medicinal preparations are to be tested in reference to strength and purity by the standard established by the United States, Edinburgh, London, French, and German Pharmacopœias and dispensaries. If the articles in question be manufactured, produced, or prepared in England, Scotland, France, or Germany, and prove to conform in strength and purity to the Pharmacopœia and dispensary of the country of their origin, they are exempt from the penalties of the law; but if produced, manufactured, or prepared in any other country than those last mentioned, they must conform to the United States Pharmacopœia and dispensary."

I desire to direct attention to the difference between the order observed by the Japanese Government Laboratories and the law of the United States. That difference is simply this: that at present the Japanese Laboratories are more liberal than those of the United States, since they analyse any medicine and judge it according to the Pharmacopœia of the country where it is produced, even though that country be one of the

smaller States which in the United States have to follow the United States Pharmacopœia. If the standard is considered too high, manufacturers must not complain to the Consul in Japan; but they must apply to *their own Government* for a reduction, as the Japanese Laboratories invariably follow the tests prescribed by the Pharmacopœia of the country whence the drug is imported.

I cannot but confess myself at a loss to perceive on what principle the British Consul has consented to insert in his Trade Report vague complaints not supported by any evidence; and I trust that I have made it plain to him:—

1.—That unnecessary delay in investigating and analysing a drug or medicine does not take place at the Imperial Laboratories.

2.—That medicines have never been condemned at the Imperial Laboratories on grounds other than those furnished by the rules of standard strength and purity contained in the Pharmacopœia of the country where the medicine is produced or prepared.

I am, Sir, yours faithfully,

A. I. C. GEERTS.

Adviser to the Home Department Central Sanitary Bureau and Director of the Imperial Government Laboratory at Yokohama.

ASIATIC SOCIETY OF JAPAN.

The Annual General Meeting was held at the Chamber of Commerce Rooms, Tokiyo, on Wednesday, June 20th, 1883; the President, Sir Harry S. Parkes, in the Chair; the Rev. C. S. Eby, Corresponding Secretary, acting as Secretary in the absence of the Recording Secretary.

The Minutes of the preceding Meeting were taken as read.

The election of the following new members was announced:—N. F. Smith, Esq., A. G. Hare, Esq., His Highness Abubakar, Maharajah of Johore.

The Librarian handed in the following List of Donations and Exchanges for the year now closing:—

Okinawa ni Taisuru Hanashi, 2 vols., from Mr. N. Kanda.
Nordenskiöld's Umseglung Asiens und Europas, from the Author.
Produits de la Nature Japonais et Chinois, A. J. C. Geerts, from the Author.

A paper entitled "Equine Deities" was then read by F. W. EASTLAKE, Esq., who pointed out that the symbols and emblems now employed by many nations have completely lost their early significance. They represented in the first place some attribute of the Deity, or of the active and passive modifications of the All-pervading Spirit. Whereas a pure truth was originally suggested, the confusion of the attribute conveyed through the symbol,—an animal, bird, flower, etc.—with the individuality of the creature, became prevalent among the illiterate; the object of adoration became deified, while the attribute that revealed the Deity was lost sight of. Such was the case with the Ancient Egyptians, Greeks and Romans; such is to-day the universal mistake of Eastern poly-

theism. The earlier and purer religion was so completely forgotten, that all sorts of gross practices were indulged in under the pretence of honouring these deified symbols. With the growth of philosophy, the impurity and insignificance of certain symbolical deities became recognized; they ceased to be worshipped as beneficent, and were relegated to the infernal regions. Superstitious fears soon attributed the baneful influences abroad in nature to their agency, and finally humanity worshipped the evil it had conjured into existence, propitiating by sacrifices and oblations that which was believed to be endowed with the power to harm. Demonolatry became firmly established, although the rites of this devil-worship were horrid and cruel. In Europe, especially in Greece and Rome, these rites were abolished after the lapse of several centuries, but many of the ancient theories are still observed in Asia. These traces of ancient rites and forms of worship are of the first importance to the ethnologist, the historian, the sociologist; for in them we find obscure allusions to by-gone times and lost creeds, by the help of which we can trace the connection not only between the polytheistic codes of widely separated countries, but also the connection between the earliest races. The Chinese Tartarus is filled with hordes of weird, diabolical creatures, many of which are half human, half animal. Despite their multitude, we can gain but little actual information about them; Chinese literature, classical as well as modern, gives only confused and dissatisfactory data as to what they are or whence they came. Yet the rites of demonolatry are of very ancient origin, and were evidently observed during the Chow Dynasty (1122-255 B.C.). Among crowds of lesser demons, the "Four Assistants," Horse-face, Bull-head, Cock-head, and Duck-mouth, hold a very prominent position. They are infernal constables, inquisitors, and torturers, and followers of that curious pentad the "Five Rulers." Bull-head and Horse-face are highest in rank, and are worshipped in Fuhkien and Kwangtung as gods of vengeance. Horse-face is chief-torturer and head-constable. Great respect is paid to the horse throughout China, nearly every larger temple having a white horse, fully caparisoned, on either side of the principal entrance. Tombs and graves are often guarded by stone horses. The "Five Rulers" are worshipped in some of the southern provinces of Japan, but the "Four Assistants" are not known in this country. Horse-face, *Bo-to Kwan-non*, is known to the peasantry near Osaka as a god of divination. Sacred horses are kept in many of the temples, white or cream-coloured being preferred, as in China. What little is known about the horse-god of Japan, proves that he is one and the same with the Chinese deity. In India, the ass-headed deity Dussaira bears striking resemblance with the Ma-mien of China. He is a god with ten human heads and one ass-head, and his *fête* is celebrated once a year in every Indian province. A comparison of Dussaira, Ma-mien, and Ba-to Kwan-non shows a close and intimate connection between the three. The Buddhists have also legends of mystical horses, such as the noble Kantaka, the great white steed of Siddhartha; the *murga-rāja*, half lion, half horse; the Kësura, and others. The Mohammedans speak of the horse Borak which bore their prophet to the seventh heaven; Haizum, the winged steed of the angel Gabriel; and the wind horses of King Solomon. Passing by the deified horses of the Ancient Tartars, we find frequent mention of equine deities in remoter times. The Hivites worshipped an ass-headed god, Tartak

or Tarhak; the Sabacans venerated a deified horse, Yauk, as a symbol of the sun. The Tartak of the Hivites probably gave rise to the once wide-spread opinion that the Jews worshipped the head of an ass in secret; but a better explanation of the rumour is to be found in the fact that the Jews had one word for "ass" and a certain "dry-measure." It is not unlikely or improbable that an ass's head represented this measure, and as such it would have been preserved in the Holy City with other standard weights and measures. The Ophite sect of the Gnostics depicted one of the genii of the nether world as an ass-headed man, under the name of Onoel. In the Zend-Avesta frequent mention is made of horses sacred to the sun, and, according to Herodotus, the Massagetae and Scythians sacrificed horses to the great luminary. Set or Sutekh, a deity of the Ancient Egyptians, typified the destructive power of the sun's rays, and was imaged with the head of an ass. The Semitic Hykshos originally brought this deity into Egypt, but after their expulsion his cult was declared impious and denounced as heretical. Set under the form of Teb-ha, græcized Typhon, was later on worshipped by the Greeks as a symbol of the intense heat of the sun. There we touch upon the original signification of the ancient horse-gods, which were simply types of sun worship. Thus we have the golden stallions dedicated to Ra; Lampon, the fiery steed of the noon-tide sun; Abraxas and Phaëthon, the steeds of Aurora; the Scandinavian sun-horses Arvakur and Alsvidur; the sun-horses of the Druids and Ancient Teutons. Even Pegasus was originally known only as the bearer of Aurora, and of the Ægis of Zeus. The Centaur is the same symbol, partly humanised, as were also the equine Satyrs in the train of Bacchus. In the Orphic hymns we find a goddess Hippa, celebrated as the nurse of Bacchus, and the daughter of Ceres by Neptune was represented with the head of a horse. One of the most solemn forms of adjuration in use among the Scandinavians was swearing on the shoulder-blade of a horse, and when Tyndarus engaged the suitors of Helen to defend her, he is said to have made them swear by the same symbol. Having traced the equine deity so far, it seems natural to penetrate further into ancient records and half-forgotten legends. But we have already passed beyond the range of Semitic influence, great though it may have been upon Greece and other ultra-Asiatic nations. The myth is essentially the same whether in Scandinavia, Britain, or the home of the Teutons, and rests upon a train of thought not peculiar to these peoples alone, but to be found among nearly every ancient people—from the cold lands of the midnight sun to the equator, and from the hot-blooded Iberians to the philosophical Sons of Han.

The PRESIDENT remarked that Mr. Eastlake's paper was rich in suggestions on the general subject of mythology, and immediately interesting to ourselves as showing that Equine Deities who had occupied a prominent position in the mythical history of most nations were also known in Japan, and appeared in the celebrated form of the White Horse in their Buddhist temples. The study of mythical lore, which necessarily involved that of primitive religions, though not an attractive subject an account of the cloud of exaggerated fable that surrounded it, had, nevertheless, a very practical bearing, as apart from its ethnographic and historiographic value it served to illustrate that great struggle which has been going on through all time—the struggle of humanity after truth, and to show that, however widely separated the various

racers of the world have become both in thought and action, they have enough in common to attract mutual sympathy and to show the nearer connection they held with each other in early ages. The study of myths may be favorably pursued in Oriental countries, because there we find it in actual existence and growth. And if primitive belief recognised at the first that every created thing was an emanation of a supreme being, if allegories and symbols were originally used only as oracles of knowledge and to promote the worship of the Great Invisible through His Visible Works, then, although the practice had unfortunately led to the symbol usurping the place of the attribute, and to the creature being worshipped rather than the Creator, the original conception would still command itself to our respect, and possibly be found to furnish a means for recalling lost truth. Though the lateness of the hour prevented the discussion of Mr. Eastlake's paper on this occasion, he trusted that the subject would be referred to at subsequent meetings, and that the illustrations of it which were obtainable in Japan would be further examined. It remained for him to offer Mr. Eastlake a hearty vote of thanks on the part of the Society, and to express the hope that he would be encouraged to pursue his researches.

In reply to the President, Mr. EASTLAKE remarked that there was certainly much more that might be said on the same theme, but the result of all his investigations remained the same, viz., that the equine deity was a type of solar-worship. He regretted that he had not been able to investigate the Japanese myth, and especially the horse-headed god of Southern Japan, *Ba-to Kwan-non*, more thoroughly, and requested the members of the Society to forward him notes on the subject. Such notes or data would be all the more valuable, as very little could be gleaned from Japanese literature with regard to the equine god.

The PRESIDENT.—Mr. Eastlake's request will, I hope, be complied with by more than one member of the Society. The subject is one of importance, and it would be very interesting to trace further connection between the horse-god of Japan and those of China and Western Asia.

The SECRETARY then read the Annual Report of the Council for the session 1882-3, which was adopted without discussion.

The election of Officers and Members of Council was then proceeded with, with the following result:—

PRESIDENT:—Dr. Hepburn.

VICE-PRESIDENTS:—B. H. Chamberlain, Esq., (Tōkiyō). N. J. Hannen, Esq. (Yokohama).

CORRESPONDING SECRETARY:—Rev. C. S. Eby.

RECORDING SECRETARIES:—W. D. Cox, Esq. (Tōkiyō). C. H. Dallas, Esq. (Yokohama).

TREASURER:—J. M. Dixon, Esq.

LIBRARIAN:—J. McD. Gardiner, Esq.

COUNCILLORS:—E. Divers, Esq., M.D., Dr. A. J. C. Geertz, J. H. Gubbins, Esq., J. Hattori, Esq., A. G. S. Hawes, Esq., Rev. D. Macdonald, M.D., Rev. E. R. Miller, J. P. Mollison, Esq., Russell Robertson, Esq., W. J. S. Shand, Esq.

REPORT OF THE COUNCIL FOR THE SESSION 1882-3.

During the past session seven general meetings of the Society, at which seven papers were read, were held in Tōkiyō, besides two meetings at which three papers were read, held in Yokohama. A list of these papers will be found in Appendix A.

The revival of the Yokohama meetings, and the material increase in the number of Yokohama members is deserving of especial notice.

During the session thirty-six resident, and two non-resident, new members have been elected; on the other hand

three resident members have resigned. Several resident members who have recently left Japan have, in accordance with their own desire, been placed on the list of non-resident members, while others who have returned from abroad have again become resident members. The society now numbers 144 resident, 44 non-resident, and 12 honorary members, making a total of 200 names.

The balance of \$360.70 to the credit of the society which was reported at the last annual meeting, has enabled the council to print much more largely than in former years. They consider it a subject of congratulation that they have thus been able to include in the publications of this session such a valuable work as Mr. Chamberlain's translation of the "Kojiki,"—the most important monument of ancient Japanese literature, and the most authentic evidence of the origin of Japanese nationality. Its value as a translation is greatly increased by the admirable critical introduction which accompanies it, and on which the translator has expended very considerable research. The publication of the Society's latest Transactions (containing Vol. X., Pt. II. and Supplement, and Vol. XI., Pt. I. and II.) has been brought up to date, and the reprinting of Vol. I. and II. and Vol. III. Pt. I. and Appendix which was announced as about to be undertaken at the last annual meeting has also been completed. These various publications number altogether about 1,575—682,000 pages, and the cost of printing them has amounted to \$2,000. Notwithstanding this unusual expenditure, which on account of its manifest utility, will, the Council trusts, be approved by the Society, they are able to report an absence of debt, and that the available assets are more than sufficient to meet all outstanding liabilities.

As the usefulness of the Society, however, must mainly depend upon its ability to publish with promptitude the papers which it accepts, the Council should not omit to express the earnest hope that the continuous accession of new members will enable the Society to maintain its present state of efficiency in this respect, and to persevere in the republication of the Transactions which are nearly out of print and which have become well and favourably known in the literary and scientific world. It is greatly to be desired that the demand for the Transactions should be locally encouraged as the recovery of the printing expenditure must be in proportion to the extent of their sales. The nominal value of the stock of the Society's Transactions now on hand may be estimated at five thousand dollars (\$5,000), and back numbers are furnished to members at half price. It may not be generally known that the members may thus obtain complete sets of all the Transactions which now numbers eleven volumes, most of these containing several parts, for the moderate charge of \$19.00.

In Appendix B. will be found a list of additions to the library acquired by donation during the present year; a list of exchanges received from learned bodies in different parts of the world is given in Appendix C.; and a statement of the Transactions in stock in Appendix D.

During the past session the General Meetings in Tōkiyō have been held in the rooms of the Tōkiyō General Chamber of Commerce, which have been liberally placed at the disposal of the Society by that body. Of the Yokohama Meetings, one has been held at the rooms of the Chamber of Commerce, kindly lent for the occasion, and the other by the courtesy of the manager at the Grand Hotel.

It will be seen from the following statement of the accounts of the session, which takes no notice, it should be observed, of the nominal value of the Transactions in stock, that after fully providing for all the printing expenditure above named, there remains to the credit of the Society an estimated balance of \$36.63.

On the PRESIDENT inquiring whether there was any other business before the meeting, Mr. Dallas remarked that there yet remained the resolution of the meeting, he might almost say the resolution of the session, which was to pass a vote of thanks to the President on his retirement. Until he arrived in the room he had no idea of the pleasure in store for him in being invited to propose this resolution, and however feebly he might discharge the duty, he trusted that Sir Harry Parkes would understand that this was no mere formal resolution, but that the members of the Society, undemonstrative Anglo-Saxons as most of them were, desired to express warm gratitude for past favours, mingled with a keen sense of present loss in bidding farewell to one to whom they had been so long and so greatly indebted. To recapitulate all the advantages which they had derived from the President's connection with it, would be in a great measure to retrace the history of the Society itself; suffice it that, as shown by the report just read, the Society is now eminently successful, and this happy condition has been to a great extent achieved through the ever-ready kindness with which the President has brought to bear upon its affairs the vast and varied stores of his long experience. He hoped, whenever in some distant land Sir Harry might look back to his stay in this

country, that among the crowding memories the Asiatic Society of Japan would ever hold a place, and that he would recollect it as a great and prosperous Society, of which each individual member fully recognized that no small portion of its success was due to the unremitting patience, tact, and energy with which he had managed its concerns.

Mr. MILNE, who rose to second the resolution, said that he found it difficult to do more than echo the so ably expressed sentiments of the proposer, Mr. Dallas. Every one present knew Sir Harry, and they were acquainted with the work which he had done for the Society. So long as he (the speaker) had been acquainted with the Asiatic Society, Sir Harry had been its most prominent leader, and it was in great measure due to his exertions that it had attained its present important position. He, therefore, felt great pleasure in seconding the motion brought before the Meeting.

The VICE-PRESIDENT having briefly put to the Meeting the resolution, which was carried unanimously, the retiring President, in returning thanks, observed that he felt greatly embarrassed by the warmth of the compliments which had been paid him, as his share in the work of the Society had been limited to minor details, the labour of which had been equally shared by the other members of Council. Those compliments were doubtless influenced by kindly valedictory feelings, which often prompted friends to give to one who was about to leave them much more than was his due. It should be remembered that the success of the Society was mainly attributable to those members who had contributed valuable papers to its transactions, and who were therefore its chief supporters. He trusted that such members would long be preserved to them; for, though the field of research in this country was ripe for harvest, labourers were wanted to reap that harvest. He congratulated the Society on his being succeeded by the veteran Dr. Hepburn, in the chair which he was now compelled with regret to resign.

The Meeting was then adjourned.

GOVERNMENT NOTIFICATION.

The Privy Council has issued a Notification, No. 21, to the effect that the Press Regulations established in September of the 8th year of Meiji (1875) by Notification No. 135, are revised as follows:—

Article 1.—Any person intending to publish a book or map of his own compilation, or translations from foreign books or maps, must report the matter to the Home Department ten days prior to the date of such publication exclusive of the time which the report will take in reaching the Department.

Note.—The publication (not intended for sale) of hand-bills or the regulations of a company or a school, are exempt from this rule.

Article 28.—Any person desiring to publish pictures or engravings must forward a report to the Home Department to that effect. But copyright therein will not be granted.

Article 1.—(In the regulations for the punishment of offenders).—Those who publish pictures or engravings without duly forwarding a report to the Home Department, or pretend to have obtained copyrights, or neglect to present (to the Home Department) samples of what they have published, or sell their publications without paying for a license, are liable to be punished by confiscation of their printing apparatus, the books published, and

the money realized by the sale. This rule is also applicable to books or maps published and sold in contravention of the prohibition of the authorities.

Article 5.—In case translators of foreign works or compilers of maps or books offend the Newspaper Regulations in the 31st, 32nd, 34th, 37th, 38th, and 39th articles, their publishers will be regarded as guilty in the same degree as the translators and compilers, and be punished in conformity with the same Regulations. But the confiscation of a printing machine may only happen where the offence has to be dealt with according to the 2nd clause of Article 7.

Article 6.—Annulled.

SANJO SAN'EYOSHI, First Minister of State.
YAMADA AKIYOSHI, Home Minister.

By Imperial Order.

29th June, 16th year of Meiji.

SILK PRODUCERS & COMMISSION MERCHANTS.

We have received from the Silk Commission Merchants' Association the following copy of the by-laws recently agreed to between that corporation and the Producers:—

INTRODUCTION.

These rules have been framed for defining the relations in all transactions between the Silk Commission Merchants of Yokohama and the Silk Producers in the various provinces, thereby to promote their future benefit, to prevent all sorts of discord, to obviate any complication, and to encourage the trade by establishing a basis of mutual reliance. The undersigned therefore, having considered the various aspects of the laws and customs, both foreign and native, in the matter, have resolved upon the following rules:—

Article 1.—These by-laws shall be enforced on and after the 1st July, the 16th year of Meiji.

Article 2.—These by-laws shall be advertised in the journals in Yokohama and other districts for three days after their enforcement, and shall be posted in a prominent place in the shop of every commission merchant. Any modification of, and addition to, the rules hereafter to be made, shall be in accordance with the provisions of these rules.

Article 3.—After these measures are carried into effect, the silk owners (*i.e.* the silk producers) and any other persons who may deal with silk commission merchants, shall be considered as leaving agreed to these rules. In case, however, they raise objection, or desire on any other account to conduct business independent of these rules, certificates setting forth the facts shall be interchanged.

Article 4.—Correspondence, negotiations, and reports shall be conducted by post, telegraph, or personal interview, or by any other means suitable to the necessity of the occasion, with the other side or his representative, provided always the first party shall have testimony of his act, in which case he shall be deemed to have discharged his duties, even if a message should be lost or delayed on its way to the destination. Should he employ a servant in sending goods, letters, or funds, he shall be responsible for any accident to them on the way to their destination.

Article 5.—The business of the silk dealers is to sell silk according to the orders of the owners and to facilitate pecuniary operations for the latter on the security of their silk. Therefore, whenever goods are sent to commission merchants, the parcel shall be considered as entrusted to them for sale, and

for the pecuniary interest of the owner, no matter whether the latter has so instructed them or not, except in the event of any standing agreement. Nevertheless, whether the commission merchants comply or not with the request of the consignors, shall be at the discretion of the former.

Article 6.—After sending goods to the commission merchants, the owner cannot retake possession except after payment of warehouse rent, commission, and any previous debts owing by him.

Article 7.—When the commission merchant receives goods on which an advance has already been made, he shall, on their receipt, repay the money to the party who advanced it, or shall make an agreement to repay it, and shall receive the certificate of hypothecation from such party. The instrument must be preserved as a voucher to be shown when settling accounts with the owner. The commission merchant can then claim, against the owner of the goods, any right set forth in the Bill of Exchange and Promissory Note Regulations, and in these rules.

Article 8.—When a commission merchant shall lend money on security of goods not yet received, he shall take from the owner a certificate to that effect, or adopt such other means as may prove the fact. In such case, he can claim all such rights against the goods as are defined in Article 130 of these rules.

Article 9.—Sales of silk may be entrusted to the commission merchant in two ways, namely, unconditionally and conditionally. The former system implies the sale of goods at the discretion of the commission merchant, without any order from the owner as to price, method, time, etc. In this case, the commission merchant is bound to exercise considerable discretion in effecting the sale, at the most favorable opportunity, as his responsibility is great. The second system implies sales conducted in accordance with orders from the owner of the goods as to price, time, etc. In this case, the owner must take a memorandum from the commission merchant stating that the sale is to be conditional: otherwise it shall be considered unconditional. Even in case of unconditional sales, the commission merchant may send a telegram or letter in order to ask the views of the owner on the selling price. But such action shall not change the nature of the transaction from unconditional to conditional.

Article 10.—Prior to exchanging the silver received in payment for goods, against *kinsatsu*, the commission merchant must apply for instruction from the owner of the goods. If the latter does not give any orders within two weeks, then the dealer can effect the exchange of silver into paper money at his own discretion, and deduct from the amount any advance previously made.

Article 11.—When goods, whether on conditional or unconditional sale, prove insufficient to repay advances, in consequence of the depreciation in the value of silk, the commission merchant can claim the balance in silk or money.

Article 12.—In case payment of the money or consignment of silk to make good the deficiency, is delayed for seven days after the expiration of the allotted term, or if the owner becomes bankrupt, the commission merchant can sell off the goods and employ the proceeds according to these rules.

Article 13.—The commission merchant is authorized to demand the payment of such sums as are mentioned below for charges, etc. He has also the privilege to apply the proceeds for settling any

account he may have with the owner before any other creditor. If there be any surplus, it shall be handed to the owner of the goods: in case of deficiency, the commission merchant can demand the payment or can enter it to the owner's debit according to his own convenience.

The following are the scale of charges:—

(1)—Interest on the advances made fixed monthly by the dealers in Yokohama. (2)—Commission on the sale of goods. This is fixed at 11 per m. of the price. (3)—Postages, telegraph fees, messengers' wages, and the price of the legal stamps used. Those only, however, can be charged which were actually defrayed on account of the owner. (4)—Previous loans and interest to date. (N.B.—In case such loans have no connection with the goods sent at the time, but are really due on account of some previous transactions in silk, the dealer can deduct both principle and interest of such loans from the sales.)

Article 14.—The dealer is empowered to sell the goods entrusted to him in his own name or to pledge them, and to receive the price or the money borrowed on their security. Should, therefore, the owner wish to receive the price direct from the buyer, the dealer may object. The commission merchant is not responsible for any unavoidable accident that may befall the goods, nor for robbery against which due precautions have been taken.

Article 15.—As harmony between dealers and owners must greatly depend upon mutual good feeling, each party may relinquish some portion of the rights conferred upon them by these rules in their original transactions; but such action shall not prejudice the practical application of these rules at any later period.

Article 16.—As these rules have been established merely with regard to the general manner of conducting transactions, any unforeseen occurrence shall be dealt with in accordance with old-established custom.

In proof of our concurrence in the above rules, we have hereunto appended our names and affixed our seals.

(Signatures and Seals.)

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, JUNE 29TH, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokiyo, Japan.

REMARKS.

Heavy line represents barometer.
 Light continuous line—maximum and minimum thermometers.
 ————— represents velocity of wind.
 ————— percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in inches. † Direction of Wind. ‡ Weather.

Maximum velocity of wind 31.7 miles per hour on Saturday at 3 p.m.

The highest reading of the barometer for the week was 30.96 inches on Friday at 9.27 p.m., and the lowest was 30.711 inches on Sunday at 6 p.m.

The highest temperature for the week was 86.5 on Saturday, and the lowest was 63.8 both on Monday and Wednesday. The maximum and minimum for the corresponding week of last year were 83.9 and 62.2 respectively.

The total amount of rain for the week was 2.590 inches, against 0.797 inches for the corresponding week of last year.

SHIPPING.

FREIGHTS.

During the week the German barque *Valparaiso* accepted a home charter, loading here and at Kobe; the *Hindoo* sailed for Nagasaki "seeking." The American ship *Grecian* is expected to get away on Wednesday next for San Francisco. For New York, via ports, and Suez Canal, the steamship *Harter* sailed on the 3rd instant, leaving the berth occupied by the *Yorkshire*, *Ehrenfels*, and *Ascalon*. For London the steamship *Benledi* is advertised with dispatch this month. Coastwise nothing is doing, and rates are quite nominal.

ARRIVALS.

Annie H. Smith, American ship, 1,502, R. B. Brown, 29th June.—New York 14th February; Kerosene and General.—China and Japan Trading Co.

Ascalon, British steamer, 1,524, Geo. Dinsdale, 1st July.—Hongkong via Kobe, Ballast.—C. Illies & Co.

Kumamoto Maru, Japanese steamer, 1,240, Drummond, 1st July.—Hongkong 23rd June via Kobe, Mails and General.—Mitsu Bishi M. S. S. Co.

Takachi Maru, Japanese steamer, 1,407, C. Nye, 1st July.—Nagata 25th June, General.—Mitsu Bishi M. S. S. Co.

Wakanoura Maru, Japanese steamer, 1,342, A. F. Christensen, 1st July.—Kobe 29th June, General.—Mitsu Bishi M. S. S. Co.

Yorkshire, British steamer, 1,425, Arnold, 1st July.—Kobe 29th June, General.—Smith, Baker & Co.

Zambesi, British steamer, 1,540, L. H. Moule, 2nd July.—Hongkong, 23rd June via Nagasaki and Kobe, Mails and General.—P. & O. S. N. Co.

City of Rio de Janeiro, American steamer, 3,548, W. B. Seabury, 2nd July.—Hongkong 26th June, Mails and General.—P. M. S. S. Co.

Taganoura Maru, Japanese steamer, 448, Matsumoto, 2nd July.—Yokkaichi, General.—Mitsu Bishi M. S. S. Co.

City of Peking, American steamer, 3,129, Friel, 4th July.—San Francisco 14th June, Mails and General.—P. M. S. S. Co.

Nagoya Maru, Japanese steamer, 1,015, J. Wynn, 4th July.—Shanghai and ports, Mails and General.—Mitsu Bishi M. S. S. Co.

Kworio Maru, Japanese steamer, 617, G. Withers, 5th July.—Yokkaichi, General.—Mitsu Bishi M. S. S. Co.

Niigata Maru, Japanese steamer, 1,097, Hubbard, 5th July.—Hakodate 3rd and Oginohama 4th July, General.—Mitsu Bishi M. S. S. Co.

St. David, American ship, 1,535, W. Wallace Frost, 5th July.—New York 26th February, Oil, &c.—J. D. Carroll & Co.

Oxfordshire, British steamer, 998, Jones, 6th July.—Hongkong 29th June, General.—Smith, Baker & Co.

Seirio Maru, Japanese steamer, 459, 6th July.—Kobe, General.—Mitsu Bishi M. S. S. Co.

Taganoura Maru, Japanese steamer, 448, Matsumoto, 7th July.—Yokkaichi, General.—Mitsu Bishi M. S. S. Co.

Mensaleh, French steamer, 1,276, B. Blanc, 7th July.—Hongkong, 1st July, Mails, Treasure, and General.—Messageries Maritimes Co.

DEPARTURES.

Godavery, French steamer, Du Temple, 1st July.—Hongkong Mails and General.—Messageries Maritimes Co.

Hindoo, German bark, 540, Matthiessen, 2nd July.—Nagasaki, Ballast.—Captain.

Wakanoura Maru, Japanese steamer, 1,342, A. F. Christensen, 2nd June.—Kobe, Mails and General.—Mitsu Bishi M. S. S. Co.

Hiogo Maru, Japanese steamer, 896, R. N. Walker, 3rd July.—Hakodate, General.—Mitsu Bishi M. S. S. Co.

Taganoura Maru, Japanese steamer, 448, Matsumoto, 3rd June.—Yokkaichi, General.—Mitsu Bishi M. S. S. Co.

Harter, British steamer, 1,196, Grandin, 4th July.—New York via ports and Suez Canal, Tea and General.—Smith, Baker & Co.

Tokio Maru, Japanese steamer, 1,146, R. Swain, 5th July.—Shanghai and ports, Mails and General.—Mitsu Bishi M. S. S. Co.

City of Rio de Janeiro, American steamer, 3,548, W. B. Seabury, 6th July.—San Francisco, Mails and General.—P. M. S. S. Co.

Kworio Maru, Japanese steamer, 617, G. Withers, 6th July.—Yokkaichi, General.—Mitsu Bishi M. S. S. Co.

Tsuruga Maru, Japanese steamer, 517, Dithlefsen, 6th July.—Kobe, General.—Mitsu Bishi M. S. S. Co.

Kiushin Maru, Japanese steamer, 690, Franck, 6th July.—Sendai, &c., General.—Mitsu Bishi M. S. S. Co.

Kumamoto Maru, Japanese steamer, 1,240, Drummond, 6th July.—Hongkong via Kobe General.—Mitsu Bishi M. S. S. Co.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Wakanoura Maru*, from Kobe:—General Kuroda, Messrs. F. W. Foster, N. F. Avery, and 5 Japanese in cabin; and 60 Japanese in steerage.

Per British steamer *Zambesi*, from Hongkong via Nagasaki and Kobe:—Rev. H. Geyer, Captain and Mrs. Gelston and son, Miss Leslie, Messrs. Van de Putte, de Russett, C. Lamb, M. Ginsburg, D. MacLaren, and J. Blackmore in cabin; and 4 Chinese and 10 Japanese in steerage.

Per American steamer *City of Rio de Janeiro*, from Hongkong:—For San Francisco: Messrs. J. H. Booth and Allan W. Dow in cabin; and 102 Chinese in steerage. For London: Captain W. M. Deane in cabin.

Per American steamer *City of Peking*, from San Francisco:—Miss Spencer and Mr. Tanabe in cabin; and 2 Europeans in steerage. For Hongkong: Mr. and Mrs. C. C. Taylor, and child in cabin; and 129 Chinese in steerage.

Per Japanese steamer *Nagoya Maru*, from Shanghai and ports:—Governor Iwamura, Miss Parkes and European maid, Miss Mabel Parkes, Rev. and Mrs. Hopper, Rev. W. W. Curtis, Dr. A. A. Austin, U.S.N., Dr. Dickson, Messrs. E. F. Alford, and servant, J. H. Pauline, and servant, E. Major, Marcus Mess, D. Marcus, and J. Wakai in cabin; and 2 Europeans, 3 Chinese, and 190 Japanese in steerage.

Per Japanese steamer *Kworio Maru*, from Yokkaichi:—1 European in cabin; and 17 Japanese in steerage.

Per Japanese steamer *Niigata Maru*, from Hakodate via Oginohama:—111 Japanese.

Per French steamer *Mensaleh*, from Hongkong: 4 Europeans in steerage.

DEPARTED.

Per French steamer *Godavery*, for Hongkong:—Messrs. A. Mingard and C. Repp in cabin.

Per Japanese steamer *Hiogo Maru*, for Hakodate:—Mr. J. Wolley in cabin.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Mrs. J. A. Weed, Messrs. J. A. L. Waddell, S. C. Michaelson, O. Smith, J. Donald, Nakagawa, Yamanaka, Hamada, Hisamatsu, Asano, Ikeda, Asano, Isahaya, and Asai in cabin.

Per American steamer *City of Rio de Janeiro*, for San Francisco:—Mr. and Mrs. Noel Smith, Captain and Mrs. H. B. Murray and maid, Messrs. H. Hoerringhaus, F. W. Foster, and N. F. Avery in cabin; Mr. Buns and 2 daughters, Mrs. E. A. Abbott, Messrs. G. Sigot, A. S. Tibbey, N. Uketaka, S. Mihara, and 95 Chinese in steerage. For New York: H. E. Von Heydebrand-Lassa, Count de Mailly-Nesle, General Van Bernuth, Dr. A. A. Austin, U.S.N., Rev. W. W. Curtis, Rev. A. Geyer, Messrs. E. Gore Langton, Sugent, and Wm. Oothout in cabin. For Hamburg: Messrs. Carl Von Weijhe, and Wilhelm Klas in cabin. For Liverpool: Dr. H. Bradford, Messrs. A. W. W. Brown, E. F. Alford, and A. Ewbank in cabin. For London: Captain Wm. M. Deane and Mr. W. G. Van de Poll in cabin.

REPORTS.

The American ship *Annie H. Smith*, Captain R. B. Brown, reports having experienced moderate winds throughout the passage.

The Japanese steamer *Wakanoura Maru*, Captain A. F. Christensen, reports leaving Kobe on the 29th instant, at 6 p.m. with moderate southerly winds and rain throughout the passage. Arrived at Yokohama on the 1st July, at 4.20 a.m.

The British steamer *Yorkshire*, Captain Arnold reports leaving Kobe on the 29th June, at 5 p.m. moderate S.E. winds and heavy rain throughout the passage. Arrived in port on the 1st instant, at 10.50 a.m.

The American steamer *City of Rio de Janeiro*, Captain W. B. Seabury, reports having left Hongkong June 26th, at 3 p.m., and experienced moderate weather with S.W. winds during the most part of the passage.

The American steamer *City of Peking*, Captain Friel, reports having experienced moderate to fresh north-westerly winds on the first part of voyage after leaving port, and on the latter fair weather with south-easterly winds.

LATEST COMMERCIAL.

IMPORTS.

The past week has seen but a small business in Varns, at about previous prices, while there has been a little more doing in Shirtings, but values have not improved. In other articles transactions are on a very trifling scale, the Goods in which an advance has been established being Crape Mousselines de Laine. The Metal Market is very quiet, the sale at auction of damaged cargo noticed last week having fully supplied buyer's requirements.

KEROSENE.

Business during the past week has been restricted to the sale of 9,000 cases and deliveries to 15,000. The *Annie H. Smith* and *St. David* have arrived with 103,110 cases, making present stock no less than about 665,000 cases sold and unsold oil. The Market remains depressed at the following nominal quotations:—

| | PER CASE. |
|----------|-----------|
| Devoe - | \$1.65 |
| Comet - | 1.57 |
| Stella - | 1.45 |

SUGAR.

There has not been much business during the interval, but the transactions that have been put through have been effected at fully the rates given below, and the Market leaves off firm. Brown Formosas, have an upward tendency, and most of the operations of the week have been at enhanced prices.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$8.50 to 9.00 |
| White, No. 2 - | 8.00 to 8.50 |
| White, No. 3 - | 7.25 to 8.00 |
| White, No. 4 - | 6.25 to 6.75 |
| White, No. 5 - | 5.25 to 5.50 |
| Brown Formosa - | 4.95 to 5.00 |

EXPORTS.

SILK.

Season 1882-1883 finished on the 30th ultimo with a total export of 28,734 bales against 21,776 bales to same date last year—an increase of about 33 per cent. The weight of these 28,734 bales is returned in the Customs as 26,412 piculs, thus giving each bale an average weight of about 92 catties. This is the largest export ever known since Japan was opened to foreign trade, and

there is no doubt that the Silk-producing capacity of the country is capable of much greater things yet. A noticeable feature in the figures for the season just closed is the increase to the United States, 9,589 bales against 7,022 bales, about 36½ per cent. The Silk-industry in the States has obtained a gigantic growth in the course of a few years. The export from this for season 1876-1877 (that marvellous year of mad excitement in Silk generally) was but 150 bales. Season 1883-1884—New Hanks first appeared on the 24th ultimo, when \$5.40 was paid for ordinary Maibash first arrivals white color grading 2½ to 3. A week later similar Silk was settled at \$5.05, and during the present week prices have further receded till \$4.75 was touched for this class. From that point the Market has hardened slightly in the absence of supplies, but the interior Markets are reported to be lower both in Maibash and Shinshui; arrivals will now come down more freely, and there is no reason to anticipate high prices here. In Filatures but little has yet been done. The parcel of "Bushu" 14-16 which first arrived (and for which \$7.00 was asked) has been taken at \$6.35: some "Koshu" grading about 1½ have found buyers at \$6.20, and further arrivals are expected daily. Settlements for the week are returned as 200 piculs. Export by the *City of Rio de Janeiro* was 118 bales, and the *Zambesi*, leaving this afternoon, should take a fair quantity.

| | QUOTATIONS. |
|------------------------------|----------------|
| Hanks—No. 2½ - | \$4.85 to 4.90 |
| Hanks—No. 3 - | 4.60 to 4.70 |
| Hanks—No. 3½ - | 4.40 to 4.50 |
| Filatures—No. 1, 14-16 dr. - | 6.25 to 6.35 |

TEA.

The Market during the past week has been exceedingly quiet; some little buying was done in the early part of the interval, but at the close there is little of animation, owing to the continued unfavorable advices from New York. Settlements since our last weekly issue are only 6,170 piculs, consisting of the following grades, viz:—Common 85, Good Common 815, Medium 1,355, Good Medium 2,320, Fine 700, Finest 550, Choice 140, and Choicest 15 piculs. The cargo despatched by the steamship *Benevue* on the 30th June, comprised 633,196 lbs. Tea for New York. The P.M. steamer *City of Tokio* is advertised to sail from here on the 20th instant, taking Tea to 2½ cents per lb. gross to the Eastern States and Canada and 2 cents per lb. gross to San Francisco. The steamships *Yorkshire*, *Ascalon*, and *Ehrenfels* are on the berth for New York, via ports. Rates of freight are 60 shillings per ton of 40 cubic feet. The American ship *Grecian* will probably leave on the 11th instant, for San Francisco.

| | QUOTATIONS. |
|---------------|--------------|
| Common - | \$12 & under |
| Good Common - | 13 to 15 |
| Medium - | 16 to 17 |
| Good Medium - | 19 to 21 |
| Fine - | 22 to 24 |
| Finest - | 25 to 27 |
| Choice - | 29 to 31 |
| Choicest - | 33 & up'ds |

EXCHANGE.

The business done during the week has been small, and rates close steady at the following quotations:—

| | |
|-------------------------------------------|-------------|
| Sterling—Bank Bills on demand - | 3/8 |
| Sterling—Bank 4 months' sight - | 3/8 |
| Sterling—Private 4 months' sight - | 3/8 |
| Sterling—Private 6 months' sight - | 3/9 |
| Sterling—Bank sight - | 4/6 |
| On Paris—Private 6 months' sight - | 4/74 |
| On Hongkong—Bank sight - | 11 0/0 dis. |
| On Hongkong—Private 10 days' sight - | 11 0/0 dis. |
| On Shanghai—Bank sight - | 73 |
| On Shanghai—Private 10 days' sight - | 73 |
| On New York—Bank Bills on demand - | 88½ |
| On New York—Private 30 days' sight - | 88½ |
| On San Francisco—Bank Bills on demand - | 88½ |
| On San Francisco—Private 30 days' sight - | 89 |

KINSATSU QUOTATIONS.

The following table shows the rate of the day, and the fluctuation during the past week:—

| | |
|---------------------|------|
| Monday, July 2nd | 127½ |
| Tuesday, July 3rd | 127½ |
| Wednesday, July 4th | 127 |
| Thursday, July 5th | 127½ |
| Friday, July 6th | 126½ |
| Saturday, June 30th | 127½ |

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c., is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER;

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

For the excellence of our Manufactures, we have received following AWARDS:—

Vienna Exhibition, 1873, Diploma of Merit.
South African Exhibition, 1877, Gold Medal.
Paris Exhibition, 1878, Gold Medal.*
Sydney Exhibition, 1879, First-class Diploma.
Melbourne Exhibition, 1881, First-class Award.

* The ONLY ONE awarded to any Tin Plate Manufacturer.

Sole Export Agent—BROOKER, DORE & Co.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 14TH, 1883.

BIRTH.

On the 12th July, at No. 155, Settlement, Yokohama, the wife of FREDERICK ELLWOOD WHITE of a Son.

NOTES OF THE WEEK.

DEFINITE news with regard to the Annamese complication has been anxiously expected from Shanghai during the week, but it would appear that no settlement has yet been approached. M. Tricou is understood to have been pursuing a new scheme of diplomacy which his countrymen euphemistically term "inflexibility," but of which the public is somewhat slow to discern the merits. Meanwhile, the scene of discussion has been changed to Tientsin, and as a telegram has been received announcing England's willingness to mediate in conjunction with the other European Powers, it is hoped that the issue will be removed beyond the reach of "inflexible" diplomacy.

A RETURN of Japanese trade with Korea during 1882 has been published, showing that the total value of the export and import trades for the period was 1,889,499 *yen* against 2,258,053 *yen*

for 1881. The decrease (368,554 *yen*) is attributed entirely to the effects of the *éméute* at Sôul last summer. The Japanese merchants settled in Korea have apparently suffered from over-trading not less than foreigners in Japan, but, wiser than the latter, they last year adopted a resolution not to sell their goods below certain fixed prices, and the result of the combination is said to have been entirely successful. Their experience shows also another point in common with that of Westerners in this country, namely, the obstacles caused by official interference. For a long time the supplies of ox-hides and rice were entirely withheld from the export market owing to this cause. A stable medium of exchange, too, seems to be much wanted. The fluctuations in the value of Korean copper coins expressed in terms of Japanese money amounted to as much as 50 per cent. during the twelve months. The recommendations made by the Japanese Government with regard to a new coinage on the occasion of the Treaty of Chemulpho last autumn do not appear to have been fully adopted yet.

THE weather during the week was singularly cool. Heavy rain fell on Sunday and Monday, and the rivers about Tokiyo became so full that it was found necessary to postpone the annual festival which had been announced to come off at Riyogoku bridge on the 14th instant. Floods are reported from various provinces, and it is feared that the outlay in connection with dykes or river-banks will be unusually heavy this season.

A TROOP of Japanese female actresses performed the play of the Forty-seven Ronins at the Gaiety Theatre on Tuesday, Wednesday, and Thursday. The acting was spirited and good, but the smallness of the stage seriously marred the effect. This was the first venture of the sort made in Yokohama, and considering the season, the performances drew capital audiences. The troop purposes visiting India.

THE *Official Gazette* has contradicted a statement which appeared in one of the local papers of Hongkong, to the effect that a number of Japanese officers are conducting a secret reconnaissance in China.

Two serious accidents were reported from the provinces during the week: the first an explosion of gunpowder in a wagon belonging to the Artillery of the Kumamoto Garrison. The men were returning to barracks after a march-out

when the explosion occurred, and three soldiers were severely injured. The second accident was the burning of the goal at Hiroshima, on which occasion 61 of the prisoners are said to have lost their lives, and 156 to have been more or less badly hurt.

THE withdrawal of the Japanese troops from Korea is officially announced. Since the *éméute* at Sôul last summer Korea seems to have reconciled herself completely to foreign intercourse, and no troubles whatsoever between the natives and the Japanese settlers have been reported. The King has published a proclamation enjoining his people to behave civilly towards foreign visitors, and imposing the penalty of decapitation upon those who neglect the order. The monarch is doubtless quite sincere in his desire to secure a polite reception for Western travellers, but it is worthy of note that he does not say a word about the advantages Korea is likely to derive from foreign intercourse. The tone of the proclamation suggests nothing but apprehension lest the Koreans, by provoking quarrels through ignorance or mischief, should expose their country to the terrors of foreign vengeance.

THE various Government offices commenced their Summer routine on the 16th instant, and the Capital put on that appearance of lethargy which always distinguishes it during the months of July and August. Although up to the present cholera has not made its appearance, the season in other respects appears to be abnormally unhealthy, and many cases of illness are reported. Sir Harry Parkes has gone to Hakone for change of air; His Excellency Inouye has been laid up with a severe cold and the malady of His Excellency Iwakura does not show any signs of improvement.

NOTES.

THAT extraordinary political document, the American Chinese Immigration treaty, result of a concession contemptuously made by Li Hung-chang and the T'sung-li Yamèn to the United States triumvirate, at a moment when no one knew how soon the Muscovite might be thundering at the gates of Peking, at least provides that the territory of the Republic shall be open to Chinamen visiting it for purposes of "trade, study and travel." In point of fact the flagrant repudiation of the doctrine pompously announced in the Burlingame convention, that "it is the right of every man to change his

home and his allegiance," was intended to apply only to the "coolie class," whose competition in the labor market, frugality, and segregation, are an enduring reproach to the white "workmen" of the States, who have, unfortunately for the country of their adoption, a powerful influence in its political destinies. The new law was never—far from it—intended to affect celestial of a higher grade, tourists of any kind, people possessed of capital to buy or articles to sell, and gentlemen residing in the country to learn Western languages and science. But zealous or bungling officials can pervert the best intentions of the legislator. A striking instance has just occurred in New York, where the Reverend Dr. Abelshin, the Secretary of the Right Rev. Simon Valeniesi, Bishop of Poleopolis, who arrived in New York from Brazil on the 7th of June, was refused permission to land by a Customs officer. The reverend gentleman is a native of China; and the official claimed that under the restriction act he had no right to land on American soil. Here we have the extraordinary case of a Catholic clergyman, Secretary of a high dignitary of his Church, refused permission, in direct contravention of the Angell-Swift-Trescott arrangement, to set his foot on the free ground of the United States. Presumably, Dr. Abelshin did not propose to rival the exploits of Terry or Pat with the pick, or in front of a gorgeous bar, or in Ward or State politics, to say nothing of schemes for assassinating a Prince or Prime Minister, or for blowing up a whole city with dynamite, and so forth. Presumably the reverend gentleman intended to accompany his superior in "travel"—perhaps in "study:" possibly he may have thought even of worshipping with Terry and Pat before a common altar, and bringing them to a more faithful observance and more righteous interpretation of the mysteries of their common faith. But he was prevented, like the commonest "coolie," from leaving his ship by Custom House officials, who by the way are, with the Police of New York, principally recruited from that nationality which, in America, is the bitterest foe and maligner of the Mongolian. The matter was referred to Washington, where Assistant Secretary French said that, of course, if any such detention had been made, it was clearly illegal and unjust. The department had issued instructions in regard to Chinese passing through the country, but in this case the law did not apply at all, because the man was not of the class affected by it. He could scarcely believe it possible that anybody at the New York Custom-House could have for a moment thought such a course justifiable. Secretary Folger said no report had been made of the case to the Department. As we fail to find in more recent despatches any further allusion to the affair, we can only conclude that this victim of cruel prejudice, illegally carried into action, was immediately released by order of the Secretary of State with suitable apologies to himself and his superior for the insult of his detention. Probably no more will be heard of the matter; as, though Dr. Abelshin has a clear

case at law against the Customs authorities in New York for illegal detention, it is not the custom of Roman Catholic clergymen to seek redress in civil courts, or to parade their wrongs before the world. It is too much to hope that the Dogberries who confined him to his ship have been punished by dismissal.

INASMUCH as considerable quantities of tea are shipped from this port for direct transport, by rail from San Francisco to Chicago, it is of interest to learn that, in view of the recent decision by analysts that much of the staple sent hence is so grievously "manipulated" as to be unfit for human consumption, the Central authorities have ordered samples of the consignments for the City of Hogs to be sent to New York from San Francisco for inspection before the parcels are forwarded to their destination. A telegram dated Chicago, June 8th, is as follows:—

The report from Washington that the Secretary of the Treasury had ordered that samples of tea arriving in San Francisco for Chicago merchants should be sent to New York for inspection before the tea is delivered here has caused some talk among those most interested as to the reason for such order, and the influence it would have on the tea trade in this city.

"If the report, as published, should prove true that samples of all teas arriving in San Francisco, consigned to Chicago, should be sent to New York for inspection before the tea is delivered here, would it in any way be detrimental to the tea trade in this city?" was asked of Mr. J. W. Doane, one of the heaviest importers to-day.

"That would depend a good deal on how it was done. If the samples were sent to New York ahead of the arrival of the tea and examined there without loss of time, so as to allow the tea to be delivered here immediately on the arrival of such an order, it would not make any difference; but, if any delay was caused in the delivery of tea on the arrival, then it would be injurious to the interests of the tea trade. We don't want to have any time lost in the delivery of tea on its arrival." The gentleman also stated that the only excuse that could be offered was the fact that no tea inspectors had been appointed for Chicago.

"Are the tea interests in this city not of such importance as to warrant the appointment of an inspector for this place in any case?"

"Oh, yes; the tea interests of this city are the largest in the country. Recent statistics show that far more tea arrives at San Francisco for distribution at Chicago than arrives at New York. The amount of business done is large enough to have an inspector here, and that one has not been appointed is only because, as I have already said, no inconvenience has thus far been experienced under the present arrangements. Should it be necessary to have an inspector here, one will be appointed."

Mr. Spalding, Collector of Customs, declined to converse upon the subject.

SATURDAY'S *Mainichi Shimbun* contained a paragraph to the effect that, in spite of the dangerous nature of Mr. Iwakura's illness, His Excellency devotes most serious attention to the business of the nation. The report adds that, a few days ago, the suffering statesman called one of his attendants to his bed-side, and bitterly deplored his inability, in the present impaired state of his health, to carry into execution two important political measures. The *Mainichi* supposes one of these to be the proposed extension of the military system; the second it does not pretend to guess.

THE Official Statement of the "Cash Assets" of the United States Government on the 1st of June has been published. These assets consist of Gold and Silver coin and bullion, minor coin, and negotiable paper. There are some liabilities against this sum, which cut down the total very materially. All the paper assets are simply promises to pay something, and thus are liabilities.

The amount of specie in Government vaults on the 1st June, separated from the other assets, is as follows:—

| | |
|------------------------|--------------|
| Gold coin | 8136,734,116 |
| Gold bullion | 57,177,027 |
| Standard Dollars | 108,808,977 |
| Fractional Silver coin | 38,303,196 |
| Silver bullion | 4,157,218 |
| Minor coin | 557,355 |
| Total specie | 8335,226,759 |
| Other assets | 89,063,163 |
| Total assets | 8424,309,923 |

Even the above specie does not all belong to the Government. A large amount belongs to private individuals who are using the certificates instead of the coin. The Treasurer's account shows the following certificates issued and on hand:—

| | | |
|---------|-------------|-------------|
| | Gold. | Silver. |
| Issued | 883,400,940 | 80,035,331 |
| On hand | 23,869,000 | 8,599,940 |
| Totals | 859,531,940 | 879,777,291 |

These totals are liabilities against the Gold coin and Standard Dollars on hand. Despite the large and constant drains on the Government's supply of specie, the quantity now on hand is much larger than it was a year ago. The totals compare as follows:—

| | |
|-----------------------|--------------|
| Specie June 1, 1883 | 8335,226,759 |
| Specie June 1, 1882 | 879,777,291 |
| Increase for the year | 84,453,777 |

This is an important gain in view of the light of imports of specie from foreign countries during the past twelve months. This increase is apporportioned as follows:—

| | |
|------------------------|-------------|
| Increase in Gold | 839,334,497 |
| Increase in Silver | 85,303,701 |
| Increase in minor coin | 105,519 |
| Total | 844,531,777 |

The increment is due to withdrawals from American banks and the issue of Government certificates therefor. The Gold certificates in use show an increase of \$54,539,000 over the amount in use a year ago, while the increase in Silver certificates in use is \$22,500,000 for the same interval. While, therefore, the Government has more Gold in its vaults than it had a year ago, the supply which it owns is less, as follows:—

| | | |
|-----------------|---------------|---------------|
| | 1882. | 1883. |
| Gold on hand | \$455,985,546 | \$493,319,413 |
| Certificates | 5,075,500 | 59,591,940 |
| Government Gold | \$461,061,046 | \$553,711,353 |

The result shows a net loss of \$15,000,000 in Government Gold. During the same interval there has been a net gain of \$2,598,910 in Government Silver and \$105,519 in minor coin.

LIEUTENANT BELION, of the French Navy, arrived in Marseilles from Singapore on the 11th of May last in the M. M. steamer *Sindh*. This officer, it may be remembered, is chief of the mission charged with making a preliminary report upon cutting a canal through the Isthmus of Kraw. Associated with him are six scientists, who have returned to Europe with him after a joint sojourn of six months in the Malayan Peninsula. All these gentlemen assert that the construction of a flush canal across the Isthmus does not offer any serious difficulties to modern engineering.

SOME correspondence has been conducted, and does not appear to be terminated, between the Hongkong Government and the Colonial Office on the subject of the liability of the Colony to pay to the Imperial Post Office a contribution

on account of loss sustained by the latter in its service to and from the Eastern British dependencies on the new contract with the P. & O. Company which came into force on the 1st of February, 1880. The history of the question, as stated by Mr. Lister, the Hongkong Postmaster-General, who, in a masterly document addressed to the Colonial Secretary, objects most strenuously on behalf of the colonists to the extra impost is this:—Up to 1877, Hongkong contributed nothing towards the heavy Imperial loss on the P. & O. contract (£211,000 in the year, India contributing £107,500). The postage of a half ounce, or at one period even of a quarter ounce, letter for the United Kingdom was at different times 1s. 4d., 1s. 3d., 1s. 2d. (or 1s. by the slow Southampton route) high rates, which gave rise to repeated complaints and which may be said to have formed a standing grievance. In 1877 these rates were re-adjusted on a 6d. basis, the Colony becoming responsible for half the *additional* loss thus caused, which half was then estimated at £3,150 a year. As a matter of fact it has not yet reached that sum, even with a further re-adjustment of postage on a 5d. unit. The last annual amount paid (1879-80) was £2,828. The Imperial Treasury, having sanctioned a new contract with the P. & O. Company, by which the mails have been somewhat accelerated, proposes that this payment of about £3,000 a year should be merged in a larger one of more than £12,000. The Secretary of State agrees that the Colony should pay something, but he considers £12,000 out of the question, and suggests £6,000, or about double what is paid at present, the old payment to cease. After detailing the changes which have resulted from the entry of Hongkong into the Postal Union, Mr. Lister finds that four courses are open to the Colony, namely: (a) to ask for a re-consideration of the question by the Imperial Government; (b) to pay the £6,000 asked for by the Secretary of State and accept the loss on the Postal Service; (c) to pay the £6,000 and revert to the old 1s. 3d. (30 cents) rate of Postage to the United Kingdom only by both British and French packets in order to raise the sum required; (d) to decline either to despatch or to receive mails by the P. & O. packets. The last two alternatives are dismissed as impracticable, for reasons detailed at length; and the disadvantages of the San Francisco route, as regards Hongkong, are also indicated. The gist of the Postmaster's counsel is that, if Hongkong pays even the £6,000 to which the Secretary of State has modified his heavy demand, the result will be that the Colonial Post-office will be taking a great deal of trouble and going to a good deal of expense to conduct postal business on the coast of China simply for the pleasure of doing it. These postal duties in China were unwillingly undertaken by the Colony entirely in deference to the views of the Home Government, and "have been carried out as well as, in the face of local difficulties, they possibly could be. It may be questioned whether the Colony should be rewarded by a demand for three per cent. of its entire revenue (for that is

what £6,000 a year amounts to) entailing complete extinction of the modest revenue on its local postal business." The London Post Office, which is making an increasing profit of over £3,000,000 annually (after defraying the losses to which Hongkong is asked to contribute) "can afford to be more generous than that." In fine, Mr. Lister thinks that, were these details fully explained, a contribution of £3,000, or £3,500 a year, fixed, and irrespective of accounts, would be accepted as a discharge of all claims.

• • •

On the subject of the total discontinuance of any subsidy to the P. & O. Company for the conveyance of mails to Shanghai—it is known that the line now receives no grant for its Japan traffic—the Hongkong Postmaster says:—

And though, as Lord Kimberley points out, there are numerous private steamers, by which mails might be forwarded, the discontinuance of the P. & O. service would practically throw the whole correspondence into the French Mail. However much the postage were lowered, next to nothing would be sent by slower steamers. The French Mail would take four hours to sort. I do not suppose the French Post Office would ever consent to its being sorted on board. If it were so sorted (which may be regarded as out of the question) the expense would be very great, at least three times that of our present marine sorting. A fortnightly mail no doubt sufficed for the wants of Hongkong at one time, but the objections I have pointed out above are so strong that I do not see my way to recommending any attempt to recur to it.

• • •

The resolutions passed by the Hongkong Chamber of Commerce on the subject will be of interest to those in Japan who forward bulky packets of correspondence to Europe by the Hongkong route. They are to the effect:—

1.—That the surplus revenue derived from the Post Office in Hongkong, notwithstanding that the rates of postage are higher than those charged by the French Post Office in Shanghai on correspondence by Messageries boats, being only \$3,000 annually, it is manifestly impossible for the Post Office to bear the increased burthen which the proposed impost would throw upon it.

2.—That the question is now agitated among the mercantile community as to the policy of subsidising any line of steamers between this Colony and Europe, considering the numerous means of direct and speedy steam communication now available.

3.—That in the event of any further payment being required from the Colony towards the cost of subsidy, the means could only be obtained either by an increase of the rates of postage, or from some other branch of the revenue such as stamps, which would enhance the taxation on trade, already too onerous, and the Chamber protests in the strongest manner against the prospective payment on account of the mails. As regards any increase in the rates of postage, the Committee would observe that such a measure would be most impolitic and unjust, and one not likely to have a successful result in augmenting the postal revenue. British mail steamers are exposed to competition from numerous foreign lines of steam communication which would be glad to carry the letters of this Colony for half the rates now charged, and were an increase resolved upon there would be nothing to prevent the public sending their correspondence by private steamers to Saigon to be posted there for Europe, a course which would deprive the Colonial Government entirely of the revenue derived from the French mail service. The Committee also desire to point out that in the statement showing the division of cost and apportionment of the loss on the service, the share falling to Hongkong and Shanghai is set down as £30,068, which amount the Chamber submit should be deducted from £360,000, and the balance charged rateably against this Colony.

The Japanese Government Telegraph Department has been informed that the telegraph line between Canton and Kowloon has been completed and is now open for traffic. It will be remembered that the British authorities refused to allow a cable to be laid across Hongkong Harbour from the Kowloon shore, so that messages to or from the Crown Colony have to be carried across in a steam launch. We understand that a boat for this service will run over six times daily, but beside this there are

ferry boats constantly running, and most of the firms in Hongkong who will use the line possess steam launches of their own, so that the Colony will not suffer much through the action of the Government in the matter of delay, although a station in the Queen's-road would be much more convenient.

A most determined suicide was effected on the 9th inst. on the Yokohama-Tokyo line by a man at Tsurumi Station. The train, which does not stop at the station mentioned, approached at its usual speed, when a Japanese, who was standing on the end of the station down-line platform flung himself across the rails in front of the engine. Instantaneous death, of course, followed the act. A Chinaman, who attempted suicide the same day by jumping into the Creek, was not successful in his endeavour, as his friends followed him into the water, and, after a considerable chase, fished him out. He is reported to be a lunatic who has tried to obtain his quietus in a similar manner on two or three previous occasions.

A VERNACULAR journal states that the trial of the persons concerned in the murder of Shimidzu, a servant in the employ of Mr. John Pitman, who was assassinated in Tokyo on the 29th of March, 1881, by a comrade under circumstances of peculiar atrocity, has been at length concluded. The accessories have been condemned to imprisonment for periods varying from five to seven years. Sentence will be passed upon the actual murderer shortly.

On the 24th of May, H.E. Hachisuka, ex-Daimio of Awa, was received by the President of the French Republic, to whom he presented the letters of recall of his predecessor, General Ida, and his own credentials as Envoy Extraordinary and Minister Plenipotentiary to the French Government.

PROBABLY by way of a grim joke, the veracious *Choya Shimibun* affirms that the Shimonoseki Indemnity refunded by America is to be applied to the construction of a strong fort to command the famous entrance to the Inland Sea.

THE Hongkong journals produce, without special comment, the telegram we published on Monday morning with regard to the rumoured dead-lock between Li Hung-chang and M. Tricou. Of course such a meagre statement as that the latter has behaved rudely to the former leaves the details a matter of conjecture. Our contemporary the *Echo du Japon* finds the report quite incredible—does not hesitate indeed to describe it as "*certainement inexact*"—and suggests, as a probable explanation, that M. Tricou, "*conformément aux instructions du gouvernement français, s'est montré inflexible.*" Rudeness and inflexibility may bear a close resemblance to each other under certain circumstances. For example, if a man were to thrust his fist into one's face and persist in keeping it there, he would be both rude and inflexible. We

do not suppose for a moment that M. Tricou has been trying conclusions of this nature with the Grand Secretary, but we frankly confess that the purely diplomatic aspect of the negotiations to be conducted at Shanghai by the special envoy of the Republic never appeared to us very rosy. M. Tricou may possibly have found the astute old Celestial statesman too much for him, both morally and physically, and under the irritating consciousness of incapacity—comparative, of course—may have been betrayed into some of those exhibitions of feeling which used to be included among the most efficient methods of carrying on discussions with Orientals. We are unwilling to admit this hypothesis, but it is quite as reasonable as to suppose that Li Hung-chang has telegraphed to Paris an accusation of rudeness against an official who was only displaying "inflexibility." Li Hung-chang is a very tolerable judge of what is, and what is not, permissible in diplomatic intercourse, and his judgment is based upon a range of experiences to which even M. Tricou must bow. These, however, are pure conjectures. We shall be very glad to learn that they are entirely erroneous.

THE condition of the Kerosene Oil market in Japan is becoming a curious and interesting study. According to statistics there were in stock on July 4th:—

at Yokohama—in the Government Godowns. 581,600 cases.
at Kobe—in General Godowns. 584,700 cases.

making a total of.....1,166,300 cases.

while there are en route from America,
about.....800,000 cases.
and loading on June the 1st, about.....440,070 cases.

making a grand total of...2,406,300 cases.

The whole of this is likely to be in Yokohama and Kobe within the next six months, less what may be consumed in the interim. The consumption at the two places during the second half of 1882 was 990,000 cases. If the same rate holds this year, there would remain in stock, on December 31st, 1,591,300 cases. But the rate of consumption now is much lower than that for the corresponding period of 1882, owing probably to general poverty and forced economy, so that stocks at the end of the year are likely to be seventeen or eighteen hundred thousand cases, that is to say, a whole twelvemonth's supply. It is a little difficult to understand what kerosene importers propose to themselves when they proceed after this guise. The prospect of a higher duty to be imposed when the new tariff comes into force may be producing some effect; or, which seems more likely, traders may be influenced by apprehensions of a change of standard. A possible rise of prices in America is also suggested as an explanation, but in that case it would appear more rational to keep the oil there.

THE *Hongkong Daily Press* is at some pains to convict this journal of geographical ignorance. Our colonial contemporary's text is the following paragraph which he extracts from our columns:—"It is patent that the enforcement of the Treaty Articles is not the final object of France, but rather the annexation of Annam.

The ultimate purpose of the invasion is to bring a French colony into immediate proximity to the famous but little known south-western provinces of China." In these words the *Daily Press* professes to discover evidence that the difference between Tonquin and Annam is not recognized by the *Japan Mail*, and accordingly proceeds to explain that the former country, "interposes between China and Annam, so that to get within reach of China's southern provinces Tonquin, not Annam, must be annexed. It would be ungrateful to disparage this valuable information, but we may be permitted to point out that, in predicting the annexation of Annam, we spoke of France's "final," as distinguished from her immediate, action. At the outset her attention was nominally directed to Tonquin, but we believed, and time has proved the correctness of our forecast, that her aggression would ultimately be extended to Annam itself, and that by this acquisition the chain of her colonial possessions in the Indo-Chinese peninsula would be brought into immediate proximity with the south-western provinces of China. We trust that this explanation will prove satisfactory to the *Hongkong Daily Press*.

AMID all the talk we hear of bank failures, it is pleasant to learn, on the authority of a Japanese journal, that the 35th National Bank has succeeded in realizing a profit of over thirty per cent. on its capital during the first half of the current year. It appears that the Bank has issued notes to the amount of yen 300,000, and that the deposits it holds from the Government and the people are yen 230,000 and yen 300,000 respectively. This Bank has its head office in Shidzuoka, and its capital, according to official returns, is only 100,000 yen, so that its note issues ought not to exceed 80,000. We suspect that the *Choya Shimbun*, from which the above details are extracted, did not apply the co-efficient for rumour before publishing them.

THE *Yiyu Shimbun* says that the nobles (*kwasoku*) in Tokiyo take a keen interest in the study of law, and propound to their legal advisers a number of hypothetical cases, both civil and criminal, which they have themselves considered judicially. The conjecture of our vernacular contemporary is that many of the nobles will ultimately be appointed to the office of judge. It would be difficult to conceive anything more unlikely.

IN H.B.M. Court on the 10th inst. W. Gibbon, a seaman, unemployed, was charged before Mr. R. Robertson, Assistant Judge, with stealing a coat from the premises on No. 42, of Mr. Lunberg, a hotel keeper.—The proprietor deposed that the prisoner had been lodging in his house, whence several articles had recently been missed.—One of the boarders in the house swore that his coat, that produced in Court, had been stolen from the sitting-room, where he had left it hanging after dinner in the middle of the day. Subsequently he traced the garment to a place where it had been sold in Honmura.—A

Japanese woman, keeping a store in Honmura, testified that she had bought the coat (in question) three days ago from the prisoner, paying him two yen for it, after some bargaining: that shortly afterwards the prisoner returned and desired to repurchase the article for three yen; but that meanwhile she had sold it to another shopkeeper, and promised to recover it, which she did later. The prisoner had said that he would return to redeem it; but failed to do so. Shortly after his departure, Lunberg came to witness's shop, and claimed the coat, which she then had recovered, as having been stolen from his house.—The prisoner, in defence, stoutly maintained that a companion and fellow lodger offis (one Malony) sold the coat. The Court gave the prisoner the benefit of the doubt and dismissed the case.

Chuzo Oridzu, a Japanese jinrikisha drawer, charged Mr. Bachelor, with assaulting him on the 11th of June.—Prosecutor, who claimed yen 3.62 for medical attendance, loss of time and jinriki-hire, deposed that he had conveyed a gentleman from the hotel to Takashima-cho and back on the day in question. The gentleman on alighting directed the boy in attendance to pay witness twenty sen. This was done; but witness demanded ten sen more. The boy did not answer but shut the door. After waiting for some time witness opened the door and asked for more money, when his fare came out, took a ten sen note from him and gave him a few sen in copper. Then Mr. Bachelor came and hit him on the head with a billiard cue.—Mr. Bachelor, by the evidence of the gentleman whom the prosecutor had carried, proved that the latter behaved very rudely in the house, throwing the money on the floor.—Mr. H. L. Cook, living opposite, deposed that he had seen the jinrikisha coolie strike the defendant, in his own vestibule, on the leg with the seat of his chair, bruising him badly. He did not see Bachelor strike the prosecutor.—The Japanese bar-tender at No. 53 deposed that he had paid twenty cents to the prosecutor, who then came two or three times into the house and spoke very loudly.—Mr. Bachelor himself stated that he only went to the door to remonstrate with the prosecutor and induce him to leave, when he was struck violently over the knee with a seat by the jinrikisha coolie, whom he then struck with a billiard-cue which he held in his hand.—The charge was dismissed.

CHINA'S suzerain rights over this country or that are becoming a barren topic of discussion. They were never real rights according to any dictionary of practical terms, and China herself has always refused to acknowledge them when the acknowledgment promised to involve any embarrassment. Our correspondent "F.E." takes some trouble to show that the mere payment of tribute does not imply vassalage or dependency, but his contention is scarcely necessary, inasmuch as we have the declaration of China herself that no political signification attaches to the ceremony. She has never, she recently explained, required or exacted the pay-

ment of tribute. It has always been a purely voluntary affair, followed by a return, on China's part, of larger but still insignificant gifts, and to be construed simply as an interchange of neighbourly courtesies. But it is plain that the import of such a rite must depend in a great measure on concomitant circumstances. For though in itself it constitutes no international link of appreciable strength, it may formerly have been accompanied, in particular cases, by overt acts of tutelage or interference amply sufficient to establish a relationship of suzerain and vassal. But upon these points we are plainly incompetent to speak in the absence of historical evidence. Whatever China's valid titles may be, they are so mixed up with romantic and baseless pretensions that no substantial value attaches to any of them. Her fitful attempts to assert them can only have the result of leading her into profligate contentions. For some years past her conduct has resembled that of the barbarian pugilist described in the *Philippics*, who guards the place where he has received a blow, but never seems to have any idea beforehand on what part of his body the next visitation will alight. If China would emerge from her dignified taciturnity, and give the world some distinct definition of her intentions as a suzerain, and some intelligible catalogue of her supposed vassals, she would find her policy immensely simplified. But, like the barbarian boxer, her attention only exhibits local animation. Disturbed by an unpleasant apparition in Korea, she asserts herself there with spasmodic energy, having over and over again denied in the past her own title to interfere. Similarly, brought face to face with French aggression in Tonquin, she revives her obsolete pretensions and founds them on authorities borrowed from the age of myths. The fact is that in some respects she is still the "huge mummy empire by the hands of custom wrapped in swathing bands." Not yet roused to complete vitality, she is living half in the traditions of the past, half in the realities of the present. Setting aside, however, all these complications of suzerain and vassal, there remains, as we have before pointed out, the solid fact that China has an undeniable right to concern herself about what takes place on her own borders. Still more is she justified in exercising that right when access to her own territory, by a new and hitherto forbidden route, is among the principal objects of the power which is about to establish itself on her frontier. It does, indeed, appear from Mr. Colquhoun's recently published narrative, that the approach to Yunnan by the Red River is a much more difficult task than Garnier imagined. The river is only navigable as far as Manhao, a village which is separated from the plateau on the east of Yunnan by a range of hills 6,000 feet high. The plateau itself, known as the Men-tsu plain, is 3,500 feet above the level of Manhao, and offers very little inducement to explorers, being "only a shade more fertile than the black and hilly north" of the province. All the wealth of Yunnan—wealth which "has been a tradition since the days of the great Venetian, San Marco"—is in the

southern and western plateaux and valleys, that is to say, in the part nearest to British Burmah. French projects in this direction are, therefore, likely to be disappointed, but they nevertheless exist, and offer a most substantial reason for Chinese interference. There is much seeming validity in the argument that China has put herself out of court by not interfering before, but what shall be said of France in this context? Has she acted worthily and justly in usurping the protectorate of a Chinese tributary—never mind how much or how little the latter term signifies—without holding any official communication whatever on the subject with the Court at Peking? What has she been doing during the nine years that have elapsed since she forced Tonquin to sign away its independence? One imagines that a small fraction of the time would have sufficed to come to an understanding with China, who can truly say that, if she has been slow in entering a protest, France has been slower still in consulting the wishes and claims of a friendly empire.

Whatever may have been the nature of China's title as a suzerain in former times, the document which the Annamese tribute-bearing mission of 1880 presented to the occupant of the Dragon Throne, shows that the relation of vassalage is distinctly recognized by the Tu-duc himself. That document appeared in the *Peking Gazette* of December, 1880, and has been translated by Professor Douglas:—

THE KING OF ANNAM TO THE EMPEROR OF CHINA.

Now, as I look up and see on the northern horizon a mounting light, the south must send its golden gifts of happy omen. Over the countless ridges of a thousand hills for thousands of *le* we hold faithful course, our heads, like the sunflower, still turned to the sun of our Lord. Reverently I send this letter of congratulation; prostrate, I think, at this happy time, when the sky is unclouded, when the remotest domains of ocean have learnt the softening influence of a common language, how that "the southern land of fire," too, though remote, should send their rightful offerings. As I reverently spread these before me and kindle incense, I fly in spirit to the heavenly portals. I think, in all lowliness, of your Majesty as of a sun shining incessantly along a pathway whose brightness increases ever; as of a Sovereign filling the first place under heaven and upholding the teaching of the *Ch'ien Ch'iu* that unity is of more worth than aught else; as of one who by love to the vassal princes and tenderness to those from afar fulfils the nine rules of the *Chung Yung*; as of him who has received the divine commission to govern the nine regions; as of one "who displays his virtues until they permeate all quarters of the kingdom;" as of a leader who is a fair sight for his people; and as of a king who is an all-pervading influence. I, your vassal, in the torrid heat of the south, was long since enrolled among the tributary States, and have held myself in all reverence, ever obedient to my duty. Now that the frontier pest is laid (i.e. the rebellion under Le Yang-ts'ai), and the general assemblage of princes is at hand; now that no waves are raging on the sea of Chow, and the auspicious gifts of every clime are collected at the Palace of Yu; I, your vassal, relying on your kindness, hasten to do my duty as befits my station. I am about to send my Envoy with my offerings, and it seems as though myself were about to gaze on the heavenly countenance; so do I rejoice in the rising light of sun and moon and breath of strife put down for ever. May I be enabled to receive your favours without end by walking in the same path, and transgressing never; unworthy to glance at heaven or to gaze at the Holy Man, I await your answer in most earnest expectation. Besides this letter I have entrusted to my Envoy a list of the tribute offerings to be given to your Majesty.

The *St. James's Budget*, which republishes this translation, says:—"If we are to take this document as fair evidence, we hardly see how the contention can be maintained that China has, properly speaking, nothing to do with French proceedings in Tonquin. It may be true that the Court of Peking ought not to have any con-

cern with the affairs of the peninsula; but it is pretty plain that they themselves and the other parties most interested think they have such concern." When the truth of all this complication is known, it will doubtless be found that the Tu-duc signed away his independence in 1874, under the duress of internal trouble not less than of French aggression, and that he was no sooner relieved of the former, than he cast about for means to be relieved of the latter also, finding them, as he thought, in a return to the allegiance his ancestors acknowledged. If this be so, he reckoned without his host, so far as China is concerned, for though in appearance she resumed her functions of tutelage, one of the first uses she made of them was to consent to the partition of her new vassal.

The vernacular journals state that apprehensions are entertained lest the Sumida river should rise to such a height as to cause serious damage. A difference of level amounting to three feet was noted on Monday afternoon. There does not, however, appear to be any reason for alarm. The river at Kawasaki, though it threatened on Sunday evening to become inconveniently full, has since then fallen considerably.

The *Echo du Japon* complains that certain Yokohama journals, among others the *Japan Mail*, declare that France is marked by the finger of God, and that her destruction is certain. Surely our contemporary is labouring under some misapprehension. We can thoroughly sympathise with the indignation he feels as a Frenchman when he peruses some of the comments his country's Oriental policy has elicited, but between senseless ebullitions of British jealousy and criticism, honest at least in intention, there is a wide difference. The notion that France's national existence is likely to be imperilled by any difficulties she has to encounter at this end of the world is not to be entertained for a moment. Once, indeed, in speaking of the events occurring in Indo-China we used the expression, *quem deus vult perdere prius dementat*, but it had reference, as our contemporary can easily satisfy himself, solely to the fiasco at Hanoi on May 19th—a fiasco which really suggested dementia and which had nothing in common with French military traditions except the indomitable gallantry of its victims. Even granting the truth of everything that has been said about the difficulties of a campaign in Annam, the pluck and prowess of the Black Flags and that indeterminate factor, China's military strength, we imagine that France can afford to regard the prospect with perfect equanimity. As to the lack of generosity and delicacy with which our contemporary charges us for referring to the disastrous war of 1870 and asserting that France is seeking to recover in the Orient the prestige she lost twelve years ago, we can only reply by referring him to M. Challemel-Lacour, who stated himself in his speech before the Chamber that it is necessary to remove from the minds of Oriental nations certain false impressions as to France's position created by the war of 1870.

If the French Minister for Foreign Affairs chooses to recall these souvenirs, and refer to them the policy his Government is now pursuing in the East, the *Echo du Japon* need not be surprised that we accept his explanation. For the rest our contemporary could not fall into any graver error than to suppose that Englishmen find any satisfaction in the retrospect to which he alludes or wish France any thing but a happy exit from the troubles she is preparing for herself all over the world.

THE duties of an official in Korea have more thorns than roses about them. There the chain of responsibility seems to be absolutely inelastic. Subordinates are required to carry out systems with the preparation of which they have had nothing to do, and if they fail, disgrace is inevitable. A case in point is furnished by a riot reported to have occurred on the 14th of last month at a place called (according to Japanese reading) Tongnai. Some three hundred inhabitants marched to the residence of the Governor and presented a petition having reference to questions of registration. The Governor attempted to remonstrate with the rabble, but they declined discussion and proceeded at once to destroy his house, so that at last he was glad to escape with his life. On reporting the matter he was immediately deprived of his office. He had failed to keep the people quiet, and thereby proved himself incompetent to govern. Such a system certainly has some hardships, but it has also many merits.

WE have not heard much about the tariff lately—a matter not to afford one much regret, as we incline to think with a New York journalist that there is something about the tariff, as about horse-dealing, which seems injurious to the morality of even the best men who engage in the discussion of it, the reason being the same in both cases. Horse-dealing tempts men into fraud and deception because the facts of a horse's condition are so difficult to discover. This is simply another way of saying that the prospect of impunity promotes lying, as well as other vices. The facts of any tariff controversy are very hard to get at, and are really within the reach only of a few, and the mere collection of them requires a good deal of skill and acumen. Consequently, the public is rarely in a position to judge which side has the true and trustworthy facts, and is apt to be bewildered rather than enlightened by the controversy. "We do not mean to say that the free-traders are in this matter above reproach, but we do mean to say that it is seldom that they have a personal interest in the result. Most English manufacturers are free-traders, it is true, but the great bulk of free-traders everywhere are persons whose interest in free trade is simply that of the great body of consumers. They want simply to escape taxation, while the leading protectionists expect to put some of the taxes in their own pockets, and have on their hands the arduous job of persuading the tax-payers that this will be a good thing for them also, and that the higher their taxes are the better off they

will be. The protectionist temptation, therefore, to tell lies is much stronger than the free-trade temptation, and it is consequently not discriminating unfairly to say that more protectionists than free-traders succumb to it. The protectionists are, in fact, very much in this matter in the position of the man who is trying to sell the horse, and the free-traders in that of the man who proposes to buy him. In all such cases the vendor undoubtedly makes grosser departures from accuracy in praising the animal than the vendee in running him down; and it was, in fact, to stimulate the vendee's vigilance that the common law laid down the great and familiar rule of *caveat emptor*."

THE *Rising Sun and Nagasaki Express* of the 7th instant contains what appears to be a very fair, and is certainly a very temperate, article on the subject of the police case in which Mr. Arthur Norman was defendant. Our readers will remember that at the date of our last advices Mr. Norman had entered a protest against the order served on him over the signature of H.M.'s Consul. It now appears that Mr. Norman was subsequently requested to attend at the Consulate on the following morning, and that the Consul then pointed out to him the grave responsibilities he had incurred. Mr. Norman, however, failed to perceive this aspect of the affair, and the upshot of the whole matter was that his protest was returned to him with a short covering letter from the Consular Assistant. There the trouble is understood to have ended. The *Nagasaki Express*, in reviewing the circumstances, says in the first place, that the original summons was uncalled for, and suggests that the Consul's proper course would have been to "intimate to the police that they had no right to enter foreign premises, at the same time advising them to apply again to the proprietor in person." Our contemporary appears to forget that before issuing the summons the Consul sought to procure an interview with Mr. Norman, and that the latter, "for private reasons" declined to accede. It is a fair presumption that had this interview taken place, the whole complication would have been easily and satisfactorily avoided. Failing an interview, and having regard to the complaint lodged by the police, it is difficult to see what course other than the issue of a summons was open to H.M.'s Consul. But when we come to consider the order subsequently served on Mr. Norman, we are obliged to confess that its wording leaves something to be desired. Its terms were needlessly harsh, and it moreover committed the error of prejudging the merits of any subsequent acts of obstruction. These, however, are mere incidents. The main question at issue is, whether or no the Japanese police have the right to visit foreigners' houses for the purpose of registering their native servants. It is a question surrounded by susceptibilities and prejudices which are well worthy to be treated with all consideration. Yet it seems to us that the solution is furnished by the suggestions of common sense. There are in this country certain foreign settlements the municipal government of which devolves

upon the Japanese authorities, who are held responsible for the security of life and property there. Among the measures most essential to the efficiency of that government the Japanese give a very high place to the registration of the foreign resident's native *employés*. Whether they are right or wrong in this matter it is unnecessary to discuss. The responsibility rests with them and, as a necessary consequence, so also does the right to determine how their duties shall be carried out. In order to register our servants, the police must visit our houses, and it follows plainly that if we deny them ingress, we virtually deprive them of the power to carry out functions which, by our own consent, have been delegated to them. Nothing could be more unjust than to find fault with the inefficiency of their municipal government so long as they are forbidden to take measures essential, in their opinion, to efficiency.

• • •

This is the common sense view of the question. It might also be argued from another stand-point. The Japanese might maintain that they have a right to govern their own subjects in their own way, and that registration is a part of their system of government. Instead of sending the police to glean particulars from house to house, they might simply issue a notification ordering that all Japanese who reside in the Foreign Settlements shall enter their names in the local registers, and that, failing compliance, they shall be arrested and imprisoned. This would be highly inconvenient under certain contingencies, but would it be illegal? The fact is that the Japanese show much forbearance in these matters. They might give us a great deal of trouble and annoyance if they were a little more in earnest.

THE *North China Daily News* publishes without comment the telegram said to have been received by the Marquis Tseng to the effect that M. Tricou had behaved so rudely to Li Hung-chang that negotiations were at a standstill. This telegram was dated London, June 30th, and we learn in effect from the Shanghai journals that a dead-lock did really exist at that date. M. Tricou appears to have persisted in maintaining the ludicrous position that China has nothing whatsoever to do with the Annamese trouble, and that under these circumstances negotiations were quite superfluous. Such a contention must have proved no less exasperating than it was senseless. If France truly believed that China had no concern in the business, her action in sending a special envoy to proclaim the fact was a little inexplicable. Li Hung-chang at all events appears to have made up his mind as to the uselessness of remaining at Shanghai for the purpose of holding a discussion upon which the other side declined to enter. He declared his intention of returning to Peking, and on the 30th of June speculation was rife in Shanghai as to whether M. Tricou would follow him thither "to continue refusing to discuss." On the 3rd of July, however,

the *North China Daily News* published the following:—

We are happy to be able to announce that during the last forty-eight hours the negotiations between Mr. Tricou and Li Chung-t'ang have been placed on a friendlier footing, and that there is some prospect, now, of the difficulty being amicably settled very shortly. This is, we believe, due in some measure to the more conciliatory bearing of the French Minister,—a change which appears to have been cordially responded to by Li. The probable terms of the agreement now pending have not transpired; but there seems little doubt that they will practically include an acknowledgment of French rights in the Peninsula of Annam, and a settlement of the frontier-question which shall be equitable towards both Powers. The demand for an indemnity is understood to have been dropped. Under these circumstances, it is quite uncertain when the Chung-t'ang will go north. The departure of the Hon. Russell Young, who was booked to leave for Tientsin on Saturday, was also suddenly postponed at a late hour that night. Mr. Young will, however, leave for the north as soon as ever the dispute is definitely settled. We need only add that, as the Chung-t'ang has been in daily telegraphic communication with Prince Kung throughout the progress of negotiations, it may be understood that whatever arrangement he comes to with the Minister for France will be accepted by the Government of China.

By the light of these statements there is fair reason to conclude that the outcome of His Excellency Li's telegram to Paris was not without good effect on M. Tricou's attitude. If it be true that the French envoy declined to enter into any discussion with the Grand Secretary and persisted in maintaining that France's proceedings in Tonquin did not in any way concern the Middle Kingdom, there was ample justification for Li Hung-chang's announcement to Marquis Tseng. We can imagine nothing ruder than such a fashion of diplomacy. Persisted in, it could only force China to fight, and that, we presume, was not the purpose of M. Tricou's mission. It is most welcome news to learn that, in spite of such eccentricities, peace is not likely to be imperilled. The intelligence, published by the *Tokyo Official Gazette*, that H.E. Li left Shanghai on the 5th instant for Tientsin, suggests the idea that a definite settlement has been virtually concluded.

THE proprietor, editor, and foreman of the *Choya Shimbum* have been sentenced to two months' imprisonment with hard labour and to a fine of fifteen yen, in accordance with article 141 of the Penal Code. Their crime was the publication of libellous statements with regard to the conduct of the Prefect of Saitama, the proximate cause of complaint being, as usual, alleged insufficiency of the Central Government's contributions to local expenditure. Japanese who so bitterly resent the necessity of paying for the maintenance of roads, dykes, and so forth, may be interested to learn that, while their local taxation for these purposes does not amount to one-fifth of the State's revenue, it amounts in England to something like five-eighths.

THE *Temps* recently undertook, as the telegraph has informed us, to interpret the purpose of M. de Giers' mission. He was instructed to let the Powers know that Russia would be obliged to seek in Armenia an equivalent for the occupation of Egypt by Great Britain. "England," added the French journal, "by taking possession of Egypt has re-opened the Eastern question." To this proposition emphatic assent is given by *l'Italie*. Whether or no M. de Giers has made any such declaration, it is certain, the latter journal thinks, that should Russia seize Armenia

in spite of the Treaty of Berlin, she will find her warrant in England's Egyptian policy. From the moment that the integrity of the Ottoman Empire ceased to be respected on the banks of the Nile by the Power most interested in preserving it, there was no apparent reason why Russia's hands should not be free in Asia. She signed the Treaty of Berlin under duress and in spite of the obstacles it offered to her political plans. The same treaty, on the contrary, was in England's favor, inasmuch as it guaranteed Turkey against all foreign aggression. Nevertheless, England has been the first to violate it, and if her example is followed by Russia or any other State, Great Britain will only reap as she has sowed. Indeed, *l'Italie* thinks that all the Powers may proceed to tear up the Treaty if they please.

England has authorized them, and knowing the false position in which she has placed herself—powerless, moreover, to stave off the consequences of the unhappy example she has set, her only object at present is to withdraw her signature with what dignity she may. Hence it is that Lord Dufferin was recently charged to remonstrate with the Sultan on the subject of his failure to carry out in Armenia the reforms to which he pledged himself by the Treaty of Berlin. England knows that the Porte cannot possibly carry out these reforms, and for the rest, the fate of the Armenians gives her very little concern. Whether they are happy or unhappy does not affect her commercial well-being. Lord Dufferin's remonstrances, therefore, are simply intended to serve as a plea in reserve. The day that Russia lays hands on Armenia, and the Sultan applies to Great Britain for assistance, the English Cabinet will be in a position to tell him that he has only himself to blame for his misfortune, and that his failure to carry out the promised reforms has relieved England of all obligation to aid him. "And now," *l'Italie* concludes, "when will Russia, perfectly cognizant as she is of England's little game, and reassured in that direction, lay hands upon Turkish Armenia? It is somewhat difficult to say, but the moment is probably not far removed. Lord Dufferin's recent action at Constantinople proves it. We may therefore expect to see the everlasting Eastern question reopened again before long. Russia's advance in Asia will probably be the signal for an Austrian movement towards Salonica. In prospect of which eventualities, no doubt, M. de Bismarck has taken his precautions in central Europe."

It is a wholesome thing to hear what other people think of us, and to contrast it with what we think of ourselves. With the latter intent take this clause from Lord Dufferin's celebrated report:—"A succession of unexpected events over which we have had no control, and which we had done our best to avert, has compelled us to enter Egypt single-handed, to occupy its capital and principal towns with an English force, and to undertake the restoration of a settled government." Or take again the following sentences from Mr. F. W. Rowsell's essay in the *Nineteenth Century* for June:—"With the ex-

press consent of most of the European Powers, and with the quasi-acquiescence of France, England decided to restore order in the valley of the Nile. * * * Nothing could have been more hearty or more thorough than the acceptance by nearly all the Great Powers of the *fait accompli* of the English occupation, or the recognition by them of the rights correlative to the occupation. Germany, Austria, and Russia may be said to have agreed in advance to that scheme of reorganization which the English, in the exercise of their discretion, and in actual possession of the country, should deem best. Italy, if at first less ungrudging than the other three, ended by frankly accepting the position.—Which of the above verdicts will history accept?

THE *Choya Shimbum* states that the malady from which Mr. Iwakura is suffering has taken a favorable turn, and that His Excellency has so far recovered his strength that he is no longer confined to bed. We sincerely trust that this news may prove correct. Our private information is of a less hopeful character.

THE *Hiogo News* of the 7th of July contains a full report of the launch of the *Shima Maru* from the yard of the Imperial Government Works at Hiogo. The vessel is described as a handsome screw steamer, built to the order of the Union Shipping Company, with special regard to the requirements of the coasting trade, and complying with all the conditions of registration in the second class of the Tokiyo Marine Insurance Company, equivalent to 12 years A1, at Lloyd's. It is confidently expected that the *Shima Maru* will have good speed and carry a cargo far exceeding her registered tonnage. The vessel's dimensions are:—length 160 ft., beam 23½ ft., depth 14 ft. 10 in., displacement 800 tons. The engines have been made in the works, and are quite ready to be placed in position: the cabins are to be fitted for the accommodation of forty saloon passengers, and the corresponding proportion of travellers by second class and steerage. His Excellency Takayuki Sasaki presided at the ceremony, which was made an occasion for the display of that genial hospitality in dispensing which Japanese are only rivalled by the French. Mr. Matsuda, the Director of the Works, received the guests, among whom were Madame Sasaki, H.E. Tateno, Governor of Osaka, Mr. Yendo, Commissioner of the Imperial Mint, and the principal local officials, together with many foreigners. Madame Sasaki christened the vessel, which was launched without any hitch or delay at flood-tide. At the collation which followed, the Minister for Public Works made a short speech congratulating the Company upon the acquisition of so fine a steamer, and the management of the works upon its success in building it, the latter meed of praise being gracefully acknowledged by Mr. Matsuda.

THE "Battle of the Standards" seems destined to be everlasting. Mr. Goschen has sounded the note of attack once more in England, and

the echoes make themselves audible even at his end of the world. The subject is bewildering. A large number of the arguments used by monometallists seem to tell equally in favour of bimetalism and *vice versa*. One thing only appears to be certain—that the ranks of the bimetalists are not thinning. Mr. Goschen is an advocate of the single standard, yet he has to admit himself that his conclusions are of a nature to assist bimetalism, and where conclusions lead the way, convictions are likely to follow ere long. The London *Economist*, indeed, undertakes to show that his figures are in error to the extent of sixty millions sterling, but whether or no this correction be correct, the bearing of Mr. Goschen's contention is not altered. To deny that Germany, Italy, and the United States by demonetizing silver have withdrawn two hundred million sovereigns from the customary channels, and to admit that they have withdrawn 139 millions, looks very like straining at a gnat and swallowing a camel. The line of reasoning adopted by our correspondent "T.W." whose letter we print elsewhere, is, however, not directly connected with the bimetallic nightmare of a gold famine. What "T.W." undertakes to show is that a country may be very happy and very prosperous without depriving silver of the function it has so long performed. This is a proposition which monometallists themselves have no difficulty in admitting. Professor Jevons says:—"Asia and Russia seem likely to uphold silver against the rest of the world adopting gold. In such a result there seems to be nothing to regret;" and Chevalier says:—"On ne voit donc pas de raison pour que, systématiquement, tous les peuples civilisés se mettent à répudier l'un des deux métaux précieux, et à réserver absolument l'attribution monétaire pour l'autre. Les diverses nations ou pour mieux dire, les différents groupes d'états, pourront être conduits, par des raisons qui leur seront propres, les uns à préférer l'or, les autres à préférer l'argent." Whether the balance of advantage would ultimately be on the side of the silver-using countries is another question. Certain consequences, however, may be predicted with tolerable assurance. Seyd has estimated that the stock of gold and silver now current as coin or existing as bullion is 6,750 millions of dollars, of which 3,750 millions are in silver. Of the latter sum 2,500 millions, approximately, have been thrown out of use among Western nations by the adoption of the single gold standard. In other words, 38 per cent. of the total stock of specie in the world has been placed at the disposal of silver-using countries in addition to the stocks previously in their possession. It is plain that the effect of this is virtually to establish monometallism everywhere, because payments will always be made in the cheapest possible money, and silver having become by the hypothesis cheaper than gold, the latter is entirely driven out of circulation in countries where the former continues to be legal tender. Such countries are then using a depreciated and depreciating currency. They have an abundance of

cheap silver at command: prices rise, industry is stimulated, and all the phenomena generally associated with a plentiful stock of circulating media are experienced. Among these phenomena activity of the export and import trades must be numbered. The former, because silver, having a greater value in such countries than elsewhere, will find its way to them in exchange for their productions: the latter, because the stocks of gold which such countries possess are driven out of local use, and, finding their way to gold-standard nations, come back in the form of commodities. During the early years, then, of the demonetization of silver in the West, the bimetallic nations of the East ought to profit largely. They exchange the products of their own industry for coin which bears a greater value among themselves than elsewhere, and they purchase the products of other peoples' industry with coin which bears a greater value elsewhere than among themselves. This theoretical analysis is exactly borne out by the practical results to which "T.W." directs attention. India suffers in her foreign payments, but she reaps a more than equivalent advantage in the stimulus imparted to her foreign trade by the influx of silver seeking employment. There is no reason to doubt that Japan would have been similarly fortunate but for local causes. She has lost her silver now, and will have some trouble to recover it, but the difficulty would certainly be greater were the monometallic fancy less universal. Should she elect, for example, to enter Western markets as a borrower, and consent to receive the amount of her loan in silver, she might look forward to discharging her debt at an advantage of from 15 to 25 per cent. when silver is restored to its former rank, as it probably will be sooner or later. In other words, every ounce of gold borrowed to-day would bring in 18½ ounces of silver, whereas a debt of one ounce of gold contracted to-day may be payable ten years hence with 15½ ounces of silver. These are interesting facts, and the evidence adduced by our correspondent, as well as his valuable deductions, are well worthy of attention.

LATER intelligence shows that the Shanghai journals were premature in their announcement of an amicable understanding having been arrived at between Li Hung-chang and M. Tricou. The departure of the former for Tientsin was not in consequence of a settlement, but rather because of the apparently profitless difficulties created on the French side. A correspondent, indeed, goes so far as to say that M. Tricou was left at Shanghai *à bouche ouverte*, and truly we can well imagine that such was the case. Anything is credible in the sequel of a story prefaced by such a grotesque species of diplomacy as that commonly attributed to the Representative of the Republic. If M. Tricou went to China purely with the object of denying that there was any reason for his visit, it must be confessed that he gave himself a great deal of unnecessary trouble. The fact is, however, that rumour has been making too free

with the conduct of the Special Envoy. The first *canard* was that when he enquired whether Li Hung-chang was possessed of the necessary credentials, the old statesman smilingly explained that in China the Chung-t'ang does not need credentials; that, in short, his habit is to confer, not to receive, them. The latest addition is that at most of the interviews M. Tricou modelled his attitude on lines furnished by Egyptian or Persian experiences, treating the Grand Secretary much as though he were a petty Turkish Pasha. Whatever these rumours may be worth, it appears certain at all events that geniality was not a prominent feature of the conferences, and that Li Hung-chang, finding it impossible to come to terms with such an impracticable controversialist, declined to continue the discussion and referred him to the T'sung-li Yamèn at Peking, whither M. Tricou is said to have proceeded. The outlook would be hopeless enough but for a statement that England has consented to invite the other European Powers to mediate between France and China, with a view to obtaining some modification of the former's policy, which does not seem to meet with very general approval.

THE Opposition journals continue to publish rumours of intended changes in the new Penal Codes, which, they say, were put into operation with undue haste for the sake of facilitating treaty revision. It is not impossible that experience may have demonstrated the advisability of some modifications, or even that the Senate, as report goes, has memorialized the Cabinet on the subject, but that any important alterations are likely to be sanctioned seems most improbable. The *Choya Shimbun*, from which we extract this rumour, seems to have very loose ideas on the subject of penal legislation; so loose that one is inclined to doubt whether the scope and importance of a penal code are appreciated at all by the Tokiyo journal.

It is stated that the number of British subjects in Madagascar, including emigrants from India, exceeds the number of French in the proportion of five to one; that of the island's foreign commerce England's share is four times as great as France's, and that the progress in civilization made by the Malagassies during the past fifty years is almost entirely due to the efforts of the missionaries aided by English energy and English money. It will therefore be seen that Great Britain has a very material interest in the violent measures to which France thinks it necessary to resort there.

THE attitude assumed by Germany towards France at the present juncture is exciting much comment. At the very moment when the colonial policy instituted by the Government of the Republic is provoking elsewhere opposition more or less violent, Germany alone is showing herself favorable to that policy, is encouraging France and even giving her to understand that she may count on support if necessary. Of course the vulgar interpretation of this attitude is

that Germany is only too glad to see the Ministers of the Republic plunge their country into Oriental adventures, and that she will be quite happy so long as their attention is diverted from the recovery of Alsace and Lorraine to the creation of an Indo-Chinese empire. A still more sinister suggestion is that Prince Bismarck's design is to let France entangle herself completely in financial difficulties and military expeditions to distant lands, and then attack her at the moment when she has her hands full elsewhere and when the sympathies of other European Powers have been alienated by her foreign aggressions. But this is too vulgar a scheme for such a statesman as Bismarck. Even supposing all these favorable conditions attained, France is not to be crushed, nor will Europe ever consent to her effacement from its map. The most reasonable hypothesis is that Germany's policy is one of honest conciliation. She wants to show that, in the midst of all the hostile clamour raised by other nations, she alone desires to preserve an amicable mien; to let France know that whether Tunis, Egypt, Tonquin, or Madagascar be in question, the Cabinet at Berlin may be counted on not only as a friend but, if need be, as a partisan. This was the plan pursued by Prince Bismarck towards Austria after Sadowa, and it may very well be his plan towards France now that the memory of Sedan is twelve years old.

A TERRIBLE story comes by telegram from Hiroshima. It is to the effect that on the night of the 3rd instant, at about 10 o'clock, a fire broke out at the goal and spread with such rapidity that all the buildings from the 1st to the 12th ward were destroyed in a very short space of time. In each ward from 30 to 80 criminals are confined, and it is stated that the occupants of the 4th and 5th wards, sixty-one persons in all, were burned to death, while 156 prisoners were more or less severely injured. One hundred and twenty escaped, but of these fifteen were recaptured the same night. We trust that the details of this affair have been more than usually exaggerated.

OWING to the condition of the River Sumida which is still considerably swollen by the recent rains, it has been found necessary to postpone the fête at Riyogoku Bridge. Instead of taking place to-night, as originally intended, it is now announced for the evening of the 21st instant.

WE published a telegram yesterday which announced that the Premier, in reply to a question in the House, stated "that it had been decided to disallow the annexation of New Guinea, as there was no reason to fear that it would be annexed by other Powers." We also published in the same issue the explanation given in a despatch from Brisbane of the reasons for the annexation by Queensland. The *Java Bode*, in a recent number, gives expression to the Dutch view on the subject, and says that its only inconvenience to the Dutch authorities is that thereby, in a second island within the Archipelago, a *condominium* is called into

being, that is, two powers will hold sway in the island, with the result that disputes and differences will inevitably arise between them, to end generally in the disadvantage of the weaker power; hence formerly it was the aim of Dutch statesmen to avoid such joint domination, this being particularly their object in the treaty of 1824. The *Bode* points out that the inconvenience of *condominium* is exemplified on a small scale in Sarawak, and that it might have been avoided in New Guinea had Holland also annexed in time the S.E. portion of that island, but she never having laid claim to S.E. New Guinea, Queensland had every right to annex it, as will be seen from the following extract:—

"The annexation effected by the Government of Queensland is a peaceable, lawful, and justifiable measure. Of the numerous and manifold acts with which the European powers in this century of rapine and violence have exercised rapacious sovereignty either at home or in the tropics, this acquisition of territory is certainly one of the most harmless. Not a single treaty is broken by it either in spirit or letter. Hence this formal taking possession is far more straightforward and rightful than the annexation of North Borneo under the guise of a charter to a trading company. Nor a single interest is injured by it save perhaps that of the savage inhabitants. But as it forms no part of the colonial policy of Christian powers—much less that of Mahomedan and Buddhist ones—to pay any attention to such trifles as the desires or interests of a few savages, convinced as the whites are that their coming is in itself a blessing—we will no further enlarge on it. The claims or rights of other civilised nations—the uncivilised, as has been said, not being taken into account—are not at all curtailed thereby. In short, the affair is fully in order, and there is no reason for us to raise an alarm. John Bull puts another piece of land into his roomy pockets, and we have nothing more to do than compliment him sincerely on this fresh proof of his enterprise, his practical forethought, and his insatiable hunger for land."

MOST of our readers have probably read the translation of the Japanese tragedy "Chiu-shingura, or Forty-seven Ronins," published some years ago by Mr. F. V. Dickins; and a good many others have doubtless witnessed performances of the tragedy at a Japanese theatre either in Tokiyo or Yokohama. There are altogether eleven acts, which occupy nearly the whole of three evenings. Naturally one grows somewhat tired of so long a performance, and perhaps still more wearied by the continual "tum, tum, tum" of the drums and the feeble wail of the flute, which compose a Japanese orchestra. The tragedy has just been performed in the Gaiety Theatre by a troupe of *Geisha* under the management of Mr. Asai Toshichi and Mr. F. A. Cope; and we must congratulate the promoters upon the excellent manner in which everything was carried through. The Gaiety Theatre is particularly ill-adapted for any performance of this kind; and there is not sufficient room be-

hind the scenes to accommodate the numerous actresses required; but in spite of these defects the play went through three nights without any hitch, and drew full houses. The *hara-kiri* in the sixth act was particularly well performed; and the whole of the ninth act was a full success. The decapitation of Kono Kotsukenosuke was a perfect triumph. The *Nô* dance had to be omitted on account of the crowded state of the stage and green-rooms, but we understand that a special performance of this beautiful ballet will be given next week, combined with an acrobatic and slight-of-hand exhibition.

THE British steamer *Chinkiang*, Captain Orr, arrived here yesterday from Shanghai, having made a rapid passage. The *Chinkiang* is one of the regular line of Messrs. Siemssen and Co. of Hongkong running between Canton and Shanghai, and brings the cargo of the *Ningpo*, Captain Cass, belonging to the same line, originally intended for this port, the latter vessel having encountered very bad weather, having had her decks swept and received other damage, and put into Shanghai in a disabled condition.

THE steamer *Scotia* has arrived at Nagasaki from the Thames, having on board a telegraph cable which she will at once proceed to lay between Nagasaki and Vladivostock. We understand that another steamer is now on the way from London with a cable for the Nagasaki-Shanghai section. When the laying of these two new cables shall have been completed, a duplicate line will exist over the entire distance from Hongkong to Vladivostock (*via* Amoy, Foochow, Shanghai, and Nagasaki), and naturally the liability to temporary interruption of communication, which has hitherto been a source of trouble to the mercantile community, will be to a considerable extent removed.

A GERMAN paper hears from Sierra Leone that in Tyamah, in the Mendi country, a great prosecution was being conducted against more than a hundred natives, who are accused of cannibalism. A belief obtains among the natives that those inculpated had changed themselves by means of witchcraft into leopards or tigers, or that they had at least covered themselves with the skins of such beasts, and, thus disguised, attacked and killed harmless travellers outside the town. All the Kings and Chiefs of the neighbouring states attended the proceedings, which, it is expected, will take four weeks to complete. The penalty for cannibalism in that region is roasting alive.

THE withdrawal of Japanese troops from Korea is now officially announced. The first company is already under orders. It is to be hoped that the Chinese Authorities will lose no time in taking a similar step.

TRAVELLERS to and through the United States by the few next outgoing mails, may find it of interest to learn that a great Exposition is to be held in Louisville, Kentucky, commencing on the 1st of August, and remaining open for

one hundred days thenceforward. A special feature will be the Tobacco Section, Louisville being the centre of a vast belt of country devoted to the culture of the weed. The display will include both the leaf and the manufactured article, and will be on a scale of considerable magnitude.

Now that the weather appears to have assumed a certain degree of settled brightness, the following comparative tables of temperature and rainfall for the last ten weeks and the corresponding period last year may be interesting:—

| WEEK ENDING. | TEMPERATURE. | | 1883. | | 1882. | |
|-----------------|--------------|-------|-------|-------|-------|------|
| | Max. | Min. | Max. | Min. | Max. | Min. |
| May 5..... | 74.2 | 45.0 | 74.7 | 44.0 | 74.9 | 44.2 |
| 12..... | 65.5 | 40.0 | 74.9 | 44.2 | 76.4 | 50.0 |
| 19..... | 76.6 | 48.7 | 76.4 | 50.0 | 81.1 | 54.5 |

It will be observed that there has been very little corresponding variation in the temperature for the two periods; but that the actual rainfall during the ten weeks has been much less this year than last. Nevertheless, the total fall since the beginning of 1883 has been more than eight inches in excess of that of the same period in 1882. The figures are:—inches 30.98 (for 1883), 22.74 (for 1882). Subjoined is a comparative table for the rainfall between January and April in the two years:—

| WEEK ENDING. | RAINFALL (IN INCHES). | | 1883. | | 1882. | |

It is announced that Mr. Vidal, a French missionary to Samoa, has discovered the remains of de Langle and other members of the Lapérouse expedition of 1787. Jean Francois de Galaup,

Count de Lapérouse, one of the most distinguished navigators of that age of seamen—the latter half of last century, and one of England's most gallant foes in Atlantic, Indian, and Pacific waters, was born near Albi, in Languedoc, now in the department of Tarn, in 1741. He early attained the rank of Captain in the French Navy; and was sent, in 1782, to destroy the British forts and settlements in Hudson's Bay. In this expedition he showed a remarkable power of contending with difficulties, and accomplished his object, notwithstanding the storminess of the sea and the ice in which it abounded. He signaled himself also by his humanity towards the occupants of the forts which he had razed. He was chosen to command an expedition of discovery sent out by the French Government, and sailed in August, 1785, with two ships, visited the North-west coast of America, explored the North-eastern coast of Asia, and made important discoveries in that region, although he failed to achieve that object of so many expeditions, the North-west passage. In February, 1788, he anchored in Botany Bay, after which no trace of him was obtained, although the French Government offered a reward of fr. 10,000 for information, and sent out an expedition under D'Entrecasteaux, in 1791, to search for him, until, in 1826, the captain of an English vessel (Captain Dillon) found on the island Tucopia, to the North of the New Hebrides, a number of things which had belonged to Lapérouse's ship, and which had been obtained from the inhabitants of Mallicollo, one of the New Hebrides. Investigation being made by the East India Company, which sent Captain Dillon for this purpose, and, subsequently, by the French Government, which despatched an expedition under Dumont d'Urville, eye-witnesses were found of the destruction of two French ships on the coast of Mallicollo; and five French cannons and other remains of the squadron were found there. It was fully ascertained that both of Lapérouse's ships had been wrecked in a storm on a coral reef, and that all on board had perished. Dumont d'Urville erected a simple monument, with a brief inscription, in memory of his ill-fated countrymen. The account of the gallant and unfortunate explorer's voyages, published under the title of *Voyage autour du Monde* (4 vols., Paris, 1794, with atlas), was prepared, by order of the French Government, from the journals which were sent home by Lapérouse from Kamschatka; but the collections and note-books of the naturalists who accompanied the expedition, perished along with themselves. It is, probably, too much to hope, that, among the relics now reported to have been retrieved in the Samoan, or "Navigators," Islands (which lie some twenty degrees to the East and South-east of the New Hebrides, in 14 S. 171 W.), any decipherable record of Lapérouse's last voyage will have survived wreck and tempest, and barter among savages during well-nigh a century.

We are credibly informed that the Admiralty has received orders to reinforce Her Majesty's fleet in Chinese waters by two ironclads.

JAPANESE FINANCE.

TO people who have been brought up under representative institutions and accustomed to know the minutiae of every administrative measure undertaken by their Governments, the obscurity in which Japanese affairs are enveloped suggests uncomfortable suspicions. We have frequently pointed out that for the sake of its own credit the Government would do well to court greater publicity, but at the same time when we come to consider how that result is to be attained, we are obliged to confess some perplexity. Take, for example, the question of finance, and examine, for purposes of comparison, the manner in which money is voted and the public accounts checked and audited in England, where, until 1824, those curious willow sticks, called exchequer tallies, with their variously shaped notches, constituted an important aid to financial accuracy. In the first place, each item of the annual expenditure is sanctioned by a parliamentary vote, and after the amounts have been approved, they are embodied in a bill, known as the Appropriation Bill, the passing of which generally takes precedence of all the other business of the session. Then, at the close of the year, the accounts are submitted to a special Audit Department, and the Auditor General writes a report to Parliament, calling attention to any expenditure which is not strictly sanctioned by vote, or for which there is no sufficient voucher, or which, in fact, is in any way irregular. This report is then referred, by the House of Commons, to a Special Committee of Accounts, upon which the Secretary of the Treasury is always nominated and some member of great weight is selected as Chairman. The Committee considers the Auditor's report, hearing also the views of the Department concerned, as to any item of expenditure which has been criticized. The House of Commons is then advised as to what should be done in the matter. In Japan a similar routine is followed, but the Council of State and the Privy Council take the place of the House of Commons, and there is, of course, no Special Committee of Accounts, the business of examination being confined to the Board of Audit (*Ku-waikei-kensa-in*). Yet the estimates and final accounts are submitted to a scrutiny sufficiently thorough to justify confidence, if only the scrutineers were not confined to the members of a virtually irresponsible bureaucracy. There is the trouble, and we see no hope of remedy so long as Japanese political institutions retain their present form.

Above all, even if the public were willing to accept the accuracy of the figures put

before them in the ordinary annual routine, there would still remain the mysteries of financial management, treasury reserves and currency issues. How are men to learn what is happening in these matters, or having learned, how is their faith to be enlisted? When Mr. Okuma wished to give a public assurance that the vaults of the Okurasho contained so and so many millions of gold and silver, he invited General Grant and a number of the Foreign residents to inspect the treasure boxes. The result of the manœuvre was ridicule. Some time ago the present administration also resorted to a similar expedient, but Japanese only were invited to the inspection. The result was mutual congratulation. So far as foreigners are concerned, however, confidence has still to be won, and we doubt whether it will ever be won until the people of Japan are admitted to a share in the management of their own affairs.

To particularize. There are two questions demanding explicit replies:—first, if the bulk of the currency has been reduced, how has the operation been affected; and, secondly, if the Treasury's specie reserve has increased, whence have the gold and silver been procured?

With regard to the former point, it is stated that the *Kinsatsu* issued in excess of 140 millions, were chiefly loans in connection with schemes of industrial and commercial development. Of these the greater part has been recalled, either directly, or by realizing the securities lodged with the Treasury. The latter operation involved the sale of a considerable quantity of public loan-bonds, and this species of investment proved so popular that the Government was able to resort to it largely without disturbing the market. It has been objected by some writers that such a measure is merely to exchange one form of liability for another, and that by selling loan-bonds the Government adds to its burden the interest on the bonds. All this is true enough, but no valid case is thereby made out against the operation. That the paper currency is redundant admits of no question. Equally certain is it that to proceed to immediate resumption with silver at such a premium as it attained last year, or even at the premium now quoted, would be a species of insanity. Some method of reducing the number of circulating *Kinsatsu* had to be employed, and we do not see that any sounder method could be devised than the sale of loan-bonds, whose redemption adds little to the already existing responsibilities of the State. By destroying the bonds, the Minister of Finance might gradually have withdrawn the *Kinsatsu* appropriated

for their redemption in the yearly estimates, but the resulting effect on the paper currency would have been infinitesimal. His object was to reduce the bulk of the nation's circulating credit by substituting for a portion of it bonds bearing a moderate interest and redeemable over a lengthy period. If the expediency of such a policy needs confirmation, we may refer to that episode in the financial history of the United States, when Congress incurred the ridicule of the world by refusing to employ this very resource. "The present paper money of the United States," says Professor Walker, "was first issued in 1862, as a measure of resource, the recognized alternative being the selling of Government bonds below par in gold. The choice was admittedly in the power of the Government; but the Committee of Ways and Means objected. * * * Such absolute silliness takes the whole narrative out of the domain of serious history. When men, speaking for the legislature of thirty millions of people, can declare a forced circulation of paper preferable to the sale of six per cent bonds below par in gold, what but financial folly in action can be expected? * * * And so 'in the vigour of a nation not yet taxed a single dollar for the cost of this war,' the Congress of the United States chose to inaugurate a period of forced circulation, rather than sell its six per cent bonds below par, though at the time the ordinary rate of commercial interest in most of the towns and cities of the land exceeded six per cent. What loss of wealth, not to be computed except by thousands of millions; what injury to national reputation and to private character, were involved in this measure!" We may assume that what would have been sound finance in America twenty-two years ago, is not altogether unwise in Japan to-day.

With regard, in the second place, to the means adopted to increase the Treasury's specie reserve, it is plain that one of two courses must be followed: the Government must enter either the exchange market directly as purchasers of silver with *Kinsatsu*, or the market for commodities as purchasers of produce to be exchanged for specie abroad. The former plan has nothing to recommend it but its simplicity, and opposed to this one recommendation are several fatal objections. For, first, the operation of exchanging from seven to ten millions of Treasury paper annually for silver could not fail to cause a large depreciation in the value of the former. Such a process would be far more mischievous than the issue of inconvertible notes to a similar amount through the ordinary chan-

nels. It would cut in both directions, both in reducing the circulation of specie and in augmenting that of paper; while, further, its whole effects would be brought to bear directly upon the most sensitive point of the system, the exchange market. All this is too evident to require demonstration.

Next, the immediate result of such a financial policy would be to resuscitate those gambling speculations which are mainly responsible for the disastrous fluctuations of *Kinsatsu* in the past. Nine-tenths of the "bearing and bulling" that took place upon the Bourse in former days were indirectly caused by the Finance Minister's fitful interferences. It was a game of pull and push between the Treasury and private speculators. The latter knew that, if they could sufficiently "bear" exchange, the former would come forward to "bull" it, and so the sec-saw went on, paralyzing legitimate commerce and costing the nation tens of millions. Fortunately the Treasury has at length been persuaded to abstain from these ill-judged operations, and the consequence is a currency comparatively free from fluctuations. If, however, the Government were now to appear as periodical purchasers of silver in large quantities with their own paper, who can doubt that the old trouble would be in great part revived, and that with a diminishing demand for labour and a perpetuated paralysis of enterprise, we should see the business of the country dwindle into a mere living from hand to mouth?

Having regard to these considerations and admitting the imperative necessity of procuring specie to achieve resumption of specie payments, the only apparent alternative is that the Government should convert its paper into silver through the medium of exported commodities. This device has been violently denounced, and will continue to be violently denounced, by those upon whose province it intrudes. The staple formula, "official interference with trade," can always be invoked as an accuser, and will command a hostile verdict so long as men persist in denying that a country's first duty is to itself. It may be presumed that the Japanese Government has no special desire to engage in commercial enterprises; but the force of circumstances is often more imperative than abstract principles or general predilections. Japan has been drained of her specie, and she must recover a portion of it before she can escape from the curse of an inconvertible currency. It will not do for her to wait until things right themselves. "If all nations used specie," says Sumner in the *History of American Currency*, "or even paper and specie in

only due proportion, it would be as impossible for one nation to be drained of specie, as for New York harbor to be drained of water by the tide. * * * If therefore there is an outflow of gold, serious and long continued, accompanied by an unfavorable exchange, it is a sign that there is an inferior currency behind the gold which is displacing it. The surplus of imports of goods above exports of goods is nothing but the return payment for this export of gold, and is not a cause, but a consequence. If, finally, we want to turn this tide and produce an influx, there is only one way to do it, and that is simply to remove the inferior currency. As for waiting for the balance of trade to turn and bring gold into a country which has a depreciated paper currency, one might as well take one's stand at the foot of a hill and wait for it to change its declivity before climbing it." The Government cannot buy specie in the country for the obvious reason—other objections apart—that it is not there to be bought, or is only there in quantities barely sufficient for the demands of a stunted and crippled commerce. So surely as silver comes into Japan in return for her exported commodities, so surely is it driven out again by the depreciated currency, side by side with which it cannot exist. Nothing remains, then, but to sell Japanese produce abroad, and put the specie thus obtained into the Treasury vaults until it accumulates sufficiently to permit a return to specie payments. Instead of burning* the *Kinsatsu* annually set aside for purposes of currency redemption, the Government presumably invests them in produce for exportation. Doubtless transactions conducted in this manner do not show a maximum of profit. Speaking generally, their results will not bear comparison with those obtained by private operators who follow the ordinary routes of trade. But even if loss were incurred in every instance the total outcome would be incomparably less injurious than the depreciation and fluctuations of the currency which would be caused by direct operations in the specie market. The Government and the people are one. Any attempt to separate their interests is extravagant. It matters nothing to the producers whether they receive the value of their commodities from the agents of the Treasury or from the middlemen of the open ports. In either case they receive

* The periodical burnings of a paper money which are still reported as taking place at the Currency Bureau, have to do only with old notes against which new have been issued. Ill-informed persons imagine that because large quantities of *Kinsatsu* have been printed during recent years at the *Insatsu Kiyoku*, corresponding additions must have been made to the bulk of the currency. Such does not seem to be the case. The Currency Bureau has confined its operations to providing new-pattern notes for exchange against those that were worn out or of obsolete design.

notes—probably a greater number in the former case. Specie does not find its way into the provinces. The provincials have no use for it, and if by any chance it comes into their hands, they must either part with it at a loss or hoard it. The gist of the objection to official trading is that it diminishes the bulk of the trade by stifling private enterprise. The fact in Japan's case is that, though imports have fallen off partly under the influence of these operations, exports have increased to such an extent that the bulk of the foreign commerce is greater than before. It cannot be questioned that imports have suffered. A portion of the silver which would have been applied to their purchase has been locked up in the Treasury. Exports, on the other hand, have been stimulated, and by her exports alone can Japan obtain the means of reverting to a specie circulation, unless indeed she has recourse to foreign aid, an alternative which does not find a place in this discussion. We do not say that the course she has elected to pursue is not open to any objections, but we do most certainly think that the balance of advantage is in its favour.

THE NAGASAKI POLICE CASE.

SOME curiosity has been excited by a newspaper report of certain proceedings in Her Majesty's Court at Nagasaki. The story is detailed in the *Rising Sun* and *Nagasaki Express*, but is naturally received with some reserve, inasmuch as the manager of that journal was the alleged victim of the proceedings in question. It appears that for five years past the Japanese police have been in the habit of visiting the residences of foreigners in the settlement of Nagasaki for the purpose of registering the native servants—a most excellent custom, and one which foreigners for their own sakes ought to facilitate as far as possible. One day, however, there appeared in the columns of the *Nagasaki Express* an article calling attention to this habit, and stating that the police had in several cases exceeded the bounds of legitimate enquiry by touching upon subjects which had reference entirely to private affairs. On what evidence this statement was based, the *Nagasaki Express* did not concern itself to explain, but it is plain that information of such a nature could only be furnished by the parties registered, and it is also plain that, if information so furnished be regarded as a valid reason for obstructing the police, any native *employé* has it in his power to escape registration by trumping up a pretty little version

of the questions put to him by prying inspectors. The grievance, indeed, seems very childish, and reminds one forcibly of the days when foreigners professed to believe that the chief employment of the Japanese Government was to conduct a wholesale system of espionage over the doings and sayings of every Western merchant and shopkeeper in the country. For our own part, we should be quite content to let the police authorities obtain whatever information they desire as to our domestic and private concerns, provided only they will give themselves the trouble to register our Japanese *employés* and ensure our servants' quarters against being converted into a refuge for thieves or a receptacle for stolen goods. Be this as it may, however, the article in the *Nagasaki Express* either inspired the manager of that journal to assert the proud privileges of his hearth and home, or was inspired by him as a preface to such assertion; for almost immediately afterwards the said manager, Mr. ARTHUR NORMAN, did proceed to inform the police when they visited his house that questions of an irrelevant nature had, he learned, been put to his servants on a previous occasion, and that he had accordingly "concluded to object to their visiting his residence during his absence." He went on to say, however, that "any reasonable information they required, respecting the native occupants of his house, could be obtained on application at his office during business hours." By what process it could be obtained, he does not appear to have explained, but we may presume that his intention was to parade all his Japanese servants, &c., at his office for examination. Otherwise one is at a loss to conceive how the entries in the register could be made. Even on this hypothesis they must have assumed a very perfunctory character. Nevertheless his objection having been "respectfully, but firmly, maintained"—we trust Mr. ARTHUR NORMAN will pardon us if we say that at the first blush this item of the tale irresistibly recalls the evidence given in the celebrated case of William and the hammock—the police left the premises "entirely of their own free will"—which we presume means that they were not violently ejected—and lodged a complaint with the Acting Consul. "Four hours afterwards came a request from the latter for an interview, which, for private reasons, was declined." Mr. ARTHUR NORMAN is evidently a gentleman who sets great store by privacy. The foible seems a little out of place in a newspaper manager, but in this particular instance he was obviously bent upon forcing

the Consul to resort to legal proceedings. He obtained his desire, in the shape of a summons to appear before Her Majesty's Court and answer to a charge of "unlawfully and wilfully interfering and obstructing a public functionary, to wit, a peace officer, in the due execution of his duties." The prosecution, however, having failed to show that any violence had been employed by the defendant, the Court inflicted no penalty, informing Mr. ARTHUR NORMAN, however, that "the bounds of leniency had already been overstepped and that any further acts of lawlessness would most certainly entail the full penalty of the law." An order was also made out empowering the Japanese police to enter defendant's premises, the result being that they came the next morning provided with the following document:—

"IN HER BRITANNIC MAJESTY'S COURT AT NAGASAKI.

Tuesday, the 26th day of June, 1883.

"ORDER.

"Nomaguchi Kenichi, Superintendent of Police, at Nagasaki, having made a complaint, that Arthur Norman (herein-after called the defendant), on the 21st day of June, 1883, at Nagasaki, did unlawfully and wilfully obstruct Matsuzaki Koreuji, a public functionary, to wit, a peace officer, acting under his orders, in the due execution of his duty, and the defendant having appeared, and on hearing the matter of the complaint, it is this day adjudged and ordered by this Court, that the defendant do wholly cease and abstain from resisting, obstructing, or in any manner opposing, or interfering with, the said Matsuzaki Koreuji, or other peace officer, acting in the due execution of his duty, under the orders of the said Nomaguchi Kenichi. And if, on a copy of this order being served on the defendant, either personally or by leaving it for him at his last or usual place of abode, he neglects or refuses to obey this order, then it is adjudged that the defendant, for such his disobedience, be imprisoned in Her Majesty's Consulate prison, at Nagasaki, there to be kept for the space of three months, unless the said order be sooner obeyed.

(Signed)

J. C. HALL,

H.B.M.'s Acting Consul, Nagasaki.

True Copy.

HENRY A. C. BONAR,

Clerk of the Court."

Curiously enough, though perhaps not inconveniently, Mr. ARTHUR NORMAN'S Japanese servants were absent at the time of this second visit, so that, as the *Nagasaki Express* puts it, "the matter could not be fully gone into." The persecuted Englishman subsequently lodged a protest, *pro aris et focis*, with Her Majesty's Consul, and there the matter rests, so far as we know. It seems pretty plain, however, that the whole case is not before the public, and we are prepared to learn that the action of Her Majesty's Consul was by no means so arbitrary as the account published by the defendant would imply. Having regard, however, to the wording alone of the order issued by the Consul, it is difficult to avoid a conviction that some indiscretion has been committed. We pass by the obvious discrepancy between the defendant's

account of his acquittal and the Consul's recorded admonition that he is to "wholly cease and abstain from resisting, obstructing, or in any manner opposing, or interfering with, the police agents in the due execution of their duty." No such order could have been penned unless the evidence had been deemed sufficient to prove that some improper resistance or obstruction was really offered. But whatever the nature of the difficulties encountered by the police, the issue of a general warrant empowering Japanese officers of the peace, or any other officers of the peace, to enter the house of a British subject at their convenience, and there conduct arbitrary investigations, would obviously be *ultra vires*. It seems to us, however, that the Consul's order will not bear this construction. It simply enjoins Mr. ARTHUR NORMAN to abstain from resisting or obstructing the police in the due execution of their duty, and warns him that if he does not so abstain *after a copy of the order has been served on him*, he will subject himself to a certain penalty. In future the Consul proposes, it would seem, to secure Mr. NORMAN's good behaviour by a special arrangement. Whenever the police pay him a domiciliary visit, they will be obliged to show the Consul's authority and will further be accompanied by a Consular Constable. This, the simple import of the text of the order, is confirmed by the method which the police pursued in carrying it out. The story told by the defendant goes to show that the original charge against him was dismissed, but that the Consul nevertheless issued an order by the terms of which improper conduct on the defendant's part is implied, if not actually expressed. The fact seems to be that the Consul, though satisfied as to the reality of the act of obstruction, did not deem it of a sufficiently aggravated nature to demand punitive measures, but did deem it necessary to secure the police against a repetition of similar interference. What is certain is that the whole case is not before the public. It is not even known whether Mr. NORMAN'S residence is within or without the limits of the Foreign Settlement. The name of the street, Makugaye-cho, seems to point to the Japanese town, and if this be so, the complexion of the affair is much altered. Under all the circumstances, therefore, it will be wise to suspend judgment and not accept an *ex parte* statement as evidence of arbitrary conduct on the part of an official so deservedly esteemed as Mr. J. C. HALL.

THE "NIL" CLAIM.

WE do not remember that there ever came up for hearing in H.B.M.'s Court for Japan a case involving stranger issues than that of HIROSE-SHIMA *r.* GEORGE BLAKEWAY. In 1878 Mr. ED. SCHNELL, a Dutch subject, purchased the hull and cargo of the M. M. Steamer *Nil*, which had been wrecked several years previously off the coast of Idzu, in Japanese waters. SCHNELL seems to have paid \$730 for this chattel, which was then lying in thirty fathoms of water. Shortly afterwards, being about to leave Japan for good, he transferred the property to a Japanese woman, HIROSE-SHIMA, who had lived with him for 20 years. In order to give to the transfer the colour of a sale, he supplemented his documents of title, when handing them over to HIROSE, by a receipt for \$1,000, said to have been paid by her as the price of the wreck, though no money really passed between the two, SCHNELL'S object being to make some provision for HIROSE and her children during his absence from Japan. Neither he nor she, however, remembered the necessity of registering the transfer at the Dutch Consulate. HIROSE subsequently visited the scene of the wreck, and made arrangements for salvage operations, which were carried on during several months. It does not appear that she had any difficulty with the local authorities, who evidently recognizing the validity of her title, allowed her to deal with the wreck as he pleased. Ultimately, however, finding that as a woman it was impossible for her to conduct such business satisfactorily, she returned to Yokohama, and during 1880-81, tried to dispose of the wreck, obtaining more than one offer, the highest of which was 1,500 *yen*. Meanwhile, in September, 1881, a Japanese, by name TSUNEMATSU, went to the Dutch Consul and offered to purchase the wreck. It is not known what induced TSUNEMATSU to take this course. The most trivial enquiry ought to have informed him that salvage operations had been carried on for a considerable time in HIROSE-SHIMA'S name, and that she was consequently the proper person to be addressed. However this may be, to the Dutch Consul he went, and the Consul, ignorant of HIROSE'S title, which had not been registered, sent for Mr. BLAKEWAY, whom he knew to be acting generally for SCHNELL. BLAKEWAY then learned for the first time that the wreck of the *Nil* had been SCHNELL'S property. Needless to say he was quite ignorant of its transfer to HIROSE. Anxious, however, to realize everything he could

on SCHNELL'S account, BLAKEWAY expressed his willingness to treat with TSUNEMATSU, but having some doubts as to his title to represent SCHNELL in this particular instance, sought the Consul's advice. The latter accordingly proceeded to inspect the power of attorney which BLAKEWAY held from SCHNELL, and which, being in Dutch, was quite unintelligible to its holder. What opinion the Consul expressed as the exact scope of the document, it does not clearly appear, but as a matter of fact he attached his seal to a deed of sale by which BLAKEWAY there and then transferred the hull of the *Nil* to TSUNEMATSU in consideration of a payment of 100 *yen*. Thus a chattel for which HIROSE had been offered 1,500 *yen*, passed, without her knowledge, into the possession of TSUNEMATSU for 100 *yen*, the Dutch Consul himself being a party to the transfer. TSUNEMATSU lost no time in taking possession of his property. He had persuaded BLAKEWAY that the barnacles clinging to the hull of the wrecked vessel were his main object in purchasing her, and he began to fish for them at once. HIROSE, learning what had happened, hastened to the Consul and to BLAKEWAY, who were both astounded to find that they had been disposing of another person's property. BLAKEWAY immediately tried to remedy his error. He entered into negotiations with TSUNEMATSU in the first place directly, and afterwards through a Japanese attorney, SHIMIDZU. The latter, a gentleman whose practices ultimately landed him in goal to the great benefit of public security, undertook to recover the *Nil* for the sum of 150 *yen*, which he received and made away with. Nothing was now left for HIROSE except a recourse to law. She cited TSUNEMATSU before the Yokohama Saibansho, and among other evidence handed in a declaration made by BLAKEWAY to the effect that he, BLAKEWAY, had exceeded his powers in entering into an agreement for the sale of the wreck. The Court, however, gave judgment for TSUNEMATSU, basing its verdict upon the ground that the Dutch Consul's stamp must be held conclusive proof of the validity of TSUNEMATSU'S purchase. The Saibansho, in short, interpreted the Consul's stamp to mean that BLAKEWAY'S title to dispose of the chattel in question had been acquired with full satisfaction of the provisions of Dutch law. It is difficult to see how any other decision could have been arrived at. The case was now carried to the Court of Appeal in Tokiyo, where, however, the judgment of the Saibansho was confirmed. The Bench of Japanese Judges were un-

animously of opinion that the act of sale was definitely legalized by the stamp of the Dutch Consulate, and that whatever efforts BLAKEWAY might make to cancel the sale or whatever declarations he might formulate as to his original lack of power to conclude it, were matters which did not at all affect TSUNEMATSU'S right of possession.

HIROSE was now placed in a peculiar position. Owing to an error confessedly committed by BLAKEWAY and the Dutch Consul, she had been virtually robbed of a valuable chattel and further put to an expense of some 300 *yen* in seeking to recover it. She had learned also that it was not within the competence of the Japanese Courts to remedy the error, and nothing remained for her but to put up with her losses or to seek redress against their real author in an English Court. She ought to have felt some reluctance about adopting the latter alternative, inasmuch as it involved proceeding against a man who, to assist her in her former suit, had furnished evidence which could now be used with fatal effect against himself. But it does not appear that she even communicated with him or asked him to settle the matter. At the same time it was certainly not in accordance with any principle of Justice that TSUNEMATSU should profit to her cost by BLAKEWAY'S error.

A suit was therefore commenced in H.B.M.'s Court. At first sight the case presented some extraordinary aspects. An English Judge was required to determine the validity of a sale of Japanese property to a Japanese by a British subject acting under the authority of a Dutch Consul and under the provisions of Dutch law. It naturally appears that a Dutch Court is the proper authority to decide such an issue. One imagines that to a Dutch Court alone appertains the function of adjudicating upon issues connected with the uses of a Dutch power of attorney. Judge HANNEN, however, disposed of this complication after a fashion based on a very broad principle. He said, in effect, that under whatever law an Englishman acts, he is answerable to the laws of his own country for his wrong doing. The chattels in dispute had never come within the jurisdiction of the British Court, but that did not incapacitate the latter from taking cognizance of their improper alienation by a British subject. Doubtless in this instance there had been no *mala fides* on Mr. BLAKEWAY'S part, but there might have been, in which event nobody could doubt the right of the British authorities to interfere. Another question raised was that the plaintiff, HIROSE, was estopped by the judgments of the Japanese

Courts from alleging anything inconsistent with any finding of fact or law in those judgments. This contention also was dismissed by the Judge on the ground that such estoppel must be mutual; or, in other words, that BLAKEWAY, not having been a party in the original litigation, could not be bound by its results. The case being thus left to stand on its own merits, was decided in HIROSE'S favour, and there can be very little doubt as to the justice of the verdict. The woman had suffered a serious wrong at BLAKEWAY'S hands and her own Courts were incompetent to afford redress. Indeed, one is constrained to think that her appeal to them was singularly ill-advised. Unless the Dutch Consul was prepared to come forward and swear that he had committed an error in stamping the deed of sale, the Japanese Courts could not possibly deny the title conferred by the stamp. Judge HANNEN seems to have recognised this when he refused to grant the costs of the action in the Japanese Courts on the grounds that it was not a natural result of BLAKEWAY'S wrongful act.

What seems most strange in the proceedings is the fact that the part played by the Dutch Consul was scarcely alluded to. Judge HANNEN said in his judgment that had BLAKEWAY "procured a translation of his power of attorney he would have seen that it did not authorize him to sell the wreck even if the latter had still belonged to SCHNELL." Yet BLAKEWAY swore that "if he had not had an interview with Mr. SCRIBE, the Dutch Consul, he would certainly not have made the sale to TSUNEMATSU." These two statements, placed side by side, amount to this: that according to English law the Dutch power of attorney did not authorize BLAKEWAY to sell the wreck, but according to Dutch law, as interpreted by the Dutch Consul, it did authorize him. Considered by the light of these facts the functions of an agent become somewhat complicated. By what law is he to be guided? Unless the Dutch Consul committed a grave blunder, it is plain that BLAKEWAY was in a manner bound to act as he did. For if, doubting the scope of his powers, he had refused to sell the wreck and thus lost the chance of selling—HIROSE'S title apart—he would have been answerable to SCHNELL for the loss, and a claim set up by the latter must have received the support of the Dutch Consul. Judge HANNEN said "it was not convenient for a Consul-General to give evidence in Court;" but surely if a British subject is to be punished by a British Court for action taken under a Dutch power of attorney and endorsed by a Dutch Consul,

the evidence of that Consul becomes of serious importance. BLAKEWAY being unable to read his power of attorney and not having it translated, accepted the verdict of the Consul, who did read it, as to the scope of the functions it contemplated. The Consul read it wrongly and BLAKEWAY suffered, the conclusion being that if the consequences of the affair were distributed in just proportion to its causes, Mr. SCHNELL'S unfortunate agent would have come in for a very much smaller share.

THE HONGKONG LIBEL CASE.

TO treat the opinions of a controversial opponent with the same respect that one demands for one's own, seems to be amongst the very highest achievements of human forbearance. Few writers are capable of the effort, and fewer still give themselves any honest trouble to cultivate the capacity. A libel case recently tried before the Supreme Court in Hongkong illustrates this remark. The *Rising Sun and Nagasaki Express* had criticized in tolerably unpolished terms an order of Admiral WILLES directing that Her Majesty's ships should not remain in Nagasaki longer than was absolutely necessary. Admiral WILLES is presumably more competent to estimate the exigencies of the service than the editor of the *Nagasaki Express*, and for the rest there are many excellent reasons which in the eyes of every commanding officer render Nagasaki a most undesirable station. Due allowance, however, has to be made for the local patriotism of the *Nagasaki Express*, and when that journal declared that the gallant Admiral ought to be shelved at once for failing to appreciate the advantages of so charming a station, its utterances were strictly within the legal rights of every free citizen to make himself ridiculous if he pleases. The *China Mail*, however, took the Nagasaki critic severely to task for his remarks, stating, amongst other things, that "it is a mean and cowardly proceeding, of which amateur journalists are frequently guilty, to make vituperative and senseless remarks concerning persons who do not act exactly in accordance with their wishes." Out of this fragment of ethical philosophy the editor of the *Hongkong Telegraph* manufactured a cap for himself, and having put it on, proceeded to speak as follows:—

Who it may be asked is the mighty professional authority of the *China Mail*? We answer, a person named Bulgin, whose journalistic experiences prior to coming to China were confined to Police reporting for a low class paper called the *Clerkenwell News*. This genius, after proving an utter failure on the *China Mail*, successively tried Shanghai and Yokohama with equally indifferent results. Mr. Bulgin is at present wielding the scissors and paste brush for the *Fish Wrapper*, during the temporary absence of Mr. Murray Bain, and he would be wise to confine him-

self to the use of these necessary adjuncts of journalistic success. There cannot be the slightest justification for the sneering impertinence of a shallow-pated puppy whose cheek is his strongest point.

This was more than Mr. BULGIN could endure. He instituted legal proceedings against Mr. FRASER-SMITH, claiming damages to the extent of \$1,000. Mr. FRASER-SMITH, thereupon published an explanation to the effect that his knowledge of Mr. BULGIN'S early journalistic experiences was derived from the statements of that gentleman himself; that his estimate of the success Mr. BULGIN had achieved on the *China Mail* was founded on the verdict of the proprietor of that journal; that for using the epithet "shallow-pated puppy" he frankly apologised, and that "wild horses could not drag" the rest of his opinions out of him. Still Mr. BULGIN was not satisfied. A summons was served upon Mr. FRASER-SMITH, who now wrote to Mr. BULGIN'S counsel desiring him to convey to his client expressions of "regret that anything so personally offensive should have appeared in the *Telegraph*," and offering to make the *amende honorable* if Mr. BULGIN would indicate the objectionable portions of the paragraph in question. This, too, failed to bring about an arrangement, and the case came on for trial in the Supreme Court. There could be very little doubt that Mr. FRASER-SMITH had offended against the laws, so that the question of degree alone had to be considered. The prosecution endeavoured to show that the account given of Mr. BULGIN'S journalistic experiences was intended to describe him as "a man of low character and vulgar associations," and that in recommending him to confine himself to the use of the scissors and paste-brush, the object was to throw doubt on his competence to perform the duties of an editor. One is obliged to confess that these constructions seem a little strained. To assert that a man began life by "reporting for a low-class paper called the *Clerkenwell News*," does not sound to ordinary intelligence like an accusation of "low character and vulgar associations," and to tell a writer that the scissors and paste-brush become him better than the pen, would be generally construed as a justifiable, though not very graceful, comparison between his own literary productions and those of other people. But there can be no doubt that Mr. FRASER-SMITH'S paragraph had more colour than accuracy about it. Mr. BULGIN'S journalistic experiences before coming to China had not been confined to the *Clerkenwell News*, though it appeared in evidence that he had been on the staff of that newspaper, under its alias of *Daily Chronicle*, during the two years which immediately preceded his departure

for the East. It also appeared that, according to his own account, he had been engaged in various journalistic enterprises for 15½ years between the ages of 18 and 32, an arithmetical puzzle which he seemed disposed to solve by clipping a year and a half off his scholastic career. But Mr. BULGIN'S general accuracy was not conspicuously vindicated on this occasion, as will be seen from the following report of his cross-examination:—

Mr. Fraser-Smith—Now when you wrote—"It is a mean and cowardly proceeding of which amateur journalists are frequently guilty, to make vituperative and senseless remarks concerning persons who do not act exactly in accordance with their wishes"—to whom did you allude?

Witness—The Editor of the *Rising Sun and Nagasaki Express*.

Mr. Fraser-Smith—Is the editor of the *Nagasaki Rising Sun* an amateur journalist?

Witness—I believe so; the probabilities are—

Mr. Fraser-Smith—Never mind what the probabilities are; on what grounds do you base this slanderous, scandalous, and insulting utterance?

Witness—I believe the editor of the *Rising Sun* is an amateur journalist.

Mr. Fraser-Smith—What are your reasons for believing that?—what is the editor's name?

Witness—I believe his name is Gribble, or something like that; that was the name of the editor when I was in Japan.

Mr. Fraser-Smith—Tell us on what grounds you style this gentleman an amateur journalist?

Witness—I know something about him; from what I heard in Japan I believe him to be an amateur journalist.

Mr. Fraser-Smith—Now tell me, when you wrote this did you not mean it to apply to me?

Witness—I cannot say at this date what was passing through my mind when I wrote the paragraph.

Mr. Fraser-Smith—Please to answer my question?

Witness—I don't think you were in my mind at the time; I did not intend to apply it to you that I am aware of.

Mr. Fraser-Smith—Now, are you not aware that the manager and editor of the *Rising Sun* is a gentleman named Norman, who has probably been connected with journalism more years than you have lived? Give us some reasonable grounds for your alluding to this editor so offensively as an amateur journalist?

Witness—It was from my impressions. I had very little information about him.

Mr. Fraser-Smith—As a matter of fact you know nothing whatever about him!

Witness—My impression was that it was the same gentleman who edited the paper when I was in Japan.

This is bad enough, but it becomes much worse when we remember that neither at the time of Mr. BULGIN'S visit to Japan nor at any other time was Mr. GRIBBLE editor of the *Rising Sun and Nagasaki Express*. Thus Mr. BULGIN, on the strength of an "impression" which was totally erroneous, did not hesitate to charge with "mean and cowardly proceedings" a gentleman who had not the remotest connection with the object of his criticism. Such reckless exhibitions are fortunately rare. The Judge, in summing up, said that "it seemed to him that a great deal of what Mr. FRASER-SMITH had said would have been very good pleading in the mouth of Mr. GRIBBLE, but it did not lay in Mr. FRASER-SMITH to turn round and make this attack on Mr. BULGIN for the remark the latter had made on Mr. GRIBBLE." The fact is that Mr. BULGIN seems to have followed the example of the infuriate Scotchman who "just stood in the middle of the road and swore at large." It did not matter to him who might be the editor of the Nagasaki journal. He had his own impressions, and that was enough. Still,

Mr. FRASER-SMITH had no business to call him "a shallow-pated puppy," or to make erroneous statements about his past career. The jury took this view and awarded the plaintiff \$100 damages, a finding on which the latter has some reason to congratulate himself. It is to be regretted, however, that he did not come into Court with cleaner hands, for his attack on the editor of the *Nagasaki Express*, as explained by himself, was absolutely unwarranted. For the rest, it may perhaps be permissible to suggest that the species of journalistic eloquence which came up for consideration before the Supreme Court in Hongkong is not less insulting to the general public than to those against whom it is specially directed. Near the outskirts of civilization there do indeed exist communities whose susceptibilities are less keen than their desire to be diverted, and who prefer personalities and scurrilities to work modelled on the strict lines of courtesy and fairness. Unless the community of Hongkong belongs to this category, it has reason to complain of such displays as those under consideration; reason the more valid in that their authors have proved themselves capable of efforts worthy to be placed on an altogether different plane.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

SILVER MONEY GOOD MONEY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The error of calculation which you recently fastened upon your correspondent X. is not, I think, the only one in his interesting letter. It would not be difficult to show that the idea of a foreign loan for the improvement of the currency has more considerations in its favor, and fewer against it, than have hitherto been set forth.

But what I wish to impress upon your readers is that a currency of Silver, or of notes convertible into Silver, is just now the very best currency this country could have.

There is no question of the present time so eminently practical as the "Silver question." The demonetization of that metal affects every interest. Falling prices, bad trade, and general social disorder are, incontestably, more directly due to that cause than to any other that can be mentioned, and every one feels these effects. It will be a fortunate thing for the world when this question is taken out of the hands of theorists and doctrinaires, and thoroughly studied by practical men. For until that is done the question will probably remain open and present evils will steadily grow in magnitude. Bimetallists have much impaired the strength of their arguments by dwelling on the necessity of an "international money." It sounds very serious to say that international balances of trade can only be paid by means of such a money, and many persons besides Professor Walker and

Senator Webster have been misled by this plausible phrase. But the fact is that anything that creditors value will pay such balances, and they are continually paid without the use of "international money." Russia, for example, has had Silver alone for her standard of value since 1839, and of late has practically used a depreciated paper money. Yet she has had no serious difficulty in paying her debts to foreigners. When they require Gold she buys what is necessary, giving her hemp, tallow, etc., in exchange. The United States between 1862 and 1879 did likewise. An universally current money is Utopian. But, if it were practicable, its main advantage would lie in facilitating calculations of exchange, not in paying international balances.

It is wholly erroneous and misleading to say that Silver is now depreciated in the sense of being worth less in commodities generally than it was before Germany demonetized it. It is worth less in Gold; and people who owe Gold, and have only Silver to pay with, are in trouble on this account. But in other respects the value of Silver is greater, rather than less, than it was ten years ago, Nature's laws being more powerful than German edicts or than the blind greed of the creditor classes in Europe and America.

You and your correspondent appear to agree that a Silver standard of value lacks the essential element of stability. But any one who will take the trouble to investigate the facts as to the rate of production and the steadiness of value of Silver will discover that it is a much more stable metal than Gold, and that the fluctuations in its Gold price, which have lately so much disturbed the world, are due, not to any real decline in its value, but solely to the appreciation of Gold in consequence of the obstinate determination of certain nations to use Gold alone for money—and to the resulting struggle for the possession of that metal.

The effects of this madness are becoming so distressing in all Western countries, that the re-monetization of Silver is probably, as you say, only a question of time.

Meanwhile, since it is now in debate whether Japan should engage in the general scramble for Gold, or be content with Silver, let us see what has happened to the nation which uses more Silver than any other, and which adheres to Silver money when Europe discards it.

It is a fashion of the day to compassionate India for her sufferings under a Silver currency; and certainly it is hard on the people of India that they should have to pay 25 per cent. extra interest on the National Debt of £85,000,000 merely because their Government contracted that debt in Gold, and because gold has now risen that much in value. And the prospect of having to pay even a greater premium on the principal by and by cannot be a pleasant one.

But, apart from this hardship, which has been imposed upon her by England, it is in evidence that India has made a clear and great gain by reason of the expulsion of Silver from Europe and its consequent abundance in Asia. The necessity of finding a market for the discarded money of the West has created a demand for Indian products which would otherwise not have appeared, and this demand has so raised the prices of those products throughout India, without materially raising the cost of production, that the Indian people are now on the high road to prosperity.

Mr. Chapman, of the Indian Finance Department, indicates this pretty clearly in a memorandum which appears in the report of the Monetary Conference of 1881. It seems to have been mainly

intended to show how India suffered by Silver depreciation; but to my view it proves both that India does *not* suffer, and that Silver has *not* depreciated. It comprises an official return of the prices of certain "typical" Indian products in April 1876 (when the decline of Silver had just begun to influence Indian prices) and in December 1879 (when the price of Silver in London had steadied and even risen a little), and it gives the following figures of Calcutta prices:—

| COMMODITIES. | IN APRIL 1876. Rs. As. | IN DEC. 1879. Rs. As. | ADVANCE. Rs. As. |
|--------------------|---------------------------|--------------------------|---------------------|
| Patna Hides | 72.0 | 125.0 | 53.0 |
| Picked Jute | 24.0 | 31.0 | 7.0 |
| Fine Linseed | 3.12½ | 5.1 | 1.4½ |
| Ballam Rice | 2.7 | 3.3 | 0.11 |
| Doodah Wheat | 2.8 | 3.10 | 1.3 |
| Saltpetre | 5.6 | 6.11 | 1.5 |

The average *advance* on these staples was 39 per cent. in these three years, most of which must have been clear gain to the Indian producer, and this gain was reduced by the fall of prices in Europe during the same time. It was therefore a *net* gain, resulting solely from cheap Silver.

If any doubt could be entertained on this point it would be dissipated by some other figures, from the same authority, showing the Silver prices in Calcutta during the same interval of certain "typical" articles imported from Europe. Here are the figures:—

| ARTICLES. | IN APRIL 1876. Rs. As. | IN DEC. 1879. Rs. As. | DECLINE. Rs. As. |
|---------------------------|---------------------------|--------------------------|---------------------|
| Gray Shirtings 8½ lb. ... | 5.0 | 4.17 | 0.5 |
| Turkey Red Yarns 40s ... | 1.8 | 1.3½ | 0.4½ |
| Copper Sheathing | 39.4 | 32.13 | 6.8 |
| Spelter | 10.13 | 8.1 | 5.12 |
| Iron bars | 3.11 | 3.1 | 0.10 |

Showing an average *decline* on these staples of 16 per cent.

While, then, certain typical Indian products brought 39 per cent. more in Silver in 1879 than in 1876, the corresponding foreign articles were at the same time obtainable at 16 per cent less in the same currency and market.

People who thus sell their products for more than formerly, and buy their imports for less, do not seem to need the pity which is ordinarily expressed for them by those who imagine Silver money ruinous to India. But the poor toilers in England, who, that Silver may be excluded from Europe, and Gold reign supreme, have to sell their own productions at miserable prices, appear to me much more deserving of sympathy.

As the causes which produced these effects in India between 1876 and 1879, have operated pretty steadily ever since, a comparison of prices for the later years would no doubt show still more striking results of the same character. I cannot at the moment support this assumption by reference to statistics, but that it is entirely reasonable may be inferred from what Major Baring had lately to say about the wheat trade of India. He shows that the export of wheat from India (mostly to Europe) rose from 1½ millions of cwts. in 1874 to nearly 20 millions of cwts. in 1882. He says, moreover, that this enormous supply of wheat is no new product, that India always had plenty of wheat to sell, and that she only waited till she could get a fair price for it.

The *Economist*, from whose pages I borrow these figures, suggests that she now enjoys this "fair price" and fine business mainly because transportation has become much cheaper, both by land and sea. And no doubt increased facilities of that kind have assisted India's wheat trade, though it may be noted that similar facilities have similarly assisted her American and Russian competitors.

The *Economist*, being doggedly for Gold money at any cost, of course makes no account

of cheap Silver as a cause of this extraordinary development of the wheat trade, and no doubt honestly pities the poor Indians who are supposed to groan under their burden of depreciated Rupees. But it is at least remarkable that all this wonderful expansion of Indian trade coincides with the expulsion of Silver from Europe, and Mr. Chapman's figures show plainly enough that the Indians had stronger inducement than cheap freights to sell their wheat. Their groans, too, are strangely inaudible.

[What unprejudiced mind, looking clearly at the case, can doubt that this wheat trade owes its existence and continuance to India's adherence to Silver money, and that people who enjoy such a trade, and at the same time get their imported goods cheaper than ever, are to be envied for their good fortune?

For my part, I think that not only the Indian people, but all the Orientals using Silver money, have made great gains by remaining indifferent to the Gold monometallic madness which has prevailed in Europe; and that an analysis of the trade of China and Japan, making due allowance for local disturbances, would show similar results.

You will not be surprised, therefore, that I am sceptical as to the advantages of a Gold standard for Japan. It seems to me that the only advantage Gold monometallism has for any country is for the creditor classes of that country, and that even that advantage cannot last long, though it works infinite misery among the poor while it does last.

For Japan, Silver money is good enough. I go even further, and assert that not only for Japan, but for every other industrial nation, it is better money than Gold money.

I cannot but regard it as both a great mistake and a grave misfortune that my own country, having not long ago to choose what metallic money should replace its paper currency, chose Gold instead of Silver. The majority of the American people have repented of this choice, and are anxious to have Silver rehabilitated in their currency. But they have so tied themselves to the skirts of Europe in this matter that they find it difficult now to act independently. If they could abandon Gold to European fanaticism, and content themselves with Silver, they would probably find the same advantages in doing so that the Eastern nations, who have clung to Silver, have enjoyed, and are still enjoying. And it is extremely probable that they would have supplied Europe with the wheat now taken from India.

No doubt any nation now electing for Silver as its standard of value will ultimately be more or less affected by the decline of prices which is taking place in Europe. But only its foreign trade can be so affected, and this is but a minor matter for most nations. It is especially so in Japan, and therefore need not be taken into account. Even in respect of foreign trade however, the evil can be but slight, and it may carry much compensation. The example of India is in point. If the Japanese can afford to have metal money at all, let them boldly adopt Silver, and get all they can of it while it is obtainable cheaply. The time may soon arrive when all they have of it will be worth 25 per cent. more in the European markets than it is worth now. A good stock of it will then prove a very pleasant possession.

In the meantime the European distaste for Silver enables them to sell their Silk and Tea for increasing sums in that metal, and to buy what Imports they need very cheaply. Exports increase, Imports diminish, and the desired Silver flows in to

settle the balance. Of the financial storms which are gathering in the West they hear only the distant mutterings, and can be indifferent to them if they choose.

Bye and bye, when the Western nations shall have adapted their affairs to a contracted volume of metallic money; when all the suffering and sadness of that agonizing process (which creditors now view with such light-heartedness) shall have passed; and when the "adjustment" (sardonic term!) shall have been completed, those nations will become again good customers for Japanese products, and bring in payment for them whatever Japan shall prefer to take. If they have no Silver of their own they will buy it of those who have it; or they will bring directly to Japan Woolens, Cottons, and Iron at such cheap costs that the Japanese will be tempted to accept these commodities instead of money. Let the Silver-using nations rejoice in their opportunity, sell freely at good prices, buy cheaply, and procure the precious metal by all fair means, while it is to be had for so little. The superior intelligence and energy of the West may possibly deprive them of some part of their advantage after a while. But for the present the harvest is theirs if they know how to gather it.

It is not they who need our compassion for their monetary errors, but we who need theirs. T.W. Yokohama, July 1st, 1883.

FRANCE AND CHINA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—You have already referred to Mr. Boulger's interesting and able article on "France and China" in the May number of the *Nineteenth Century*; yet there are some salient points of interest which still deserve to be noticed. It is remarkable that English writers in the East take, on the whole, a very different view from that of Mr. Boulger, who certainly did not consult popular opinion when he wrote. In fact, those best acquainted with China and her foreign policy argue from an opposite standpoint, and arrive at conclusions which are in the main at variance with those of Mr. D. C. Boulger.

"The French," he remarks, "have absolutely not shown the slightest desire to respect Chinese susceptibilities in the matter . . . and Chinese acquiescence in any form in the plans of our neighbours is henceforth an utter impossibility." That is to say, he thoroughly coincides with the opinion of M. Dupuis that "there can be no doubt as to the reality of China's suzerain rights over Annam." Putting aside for the moment the intimate connection of China with Annam as proved by the history of the past few centuries, the immediate title of the Empire to the suzerainty of Cochin-china rests upon the tribute sent by her so-called vassals to Peking. The Tribute Embassy entered China and visited Peking in 1876, or two years after the famous Treaty in which Annam announced her independence of every foreign Power. Mr. Boulger lays especial stress upon this fact as a proof of the soundness of China's suzerain rights, and, from a European point of view, no one would think of questioning a suzerainty based upon similar international relations. We have, however, not only to do with a nation notoriously lax in its external relations, but also with people who regard the paying of tribute merely as a matter of respect or esteem, or as the acknowledgement of a lesser state of the greatness and power of another. A glance at the past history of Southern and Western Asiatic nations will readily convince any one of the

truth of this statement. The rising power of any one state was soon acknowledged by neighbouring and less powerful rulers, who made haste to send embassies and tribute, not only as a guarantee of their good faith, but also with the intention of making 'friends at court.' Conquered states, it is true, were forced to pay tribute to their vanquishers; but voluntary tribute was rarely, if ever, a token of submission, nor did it give the greater power suzerain rights over the smaller. When Gyges, King of Lydia, sent an embassy with rich presents to the Assyrian monarch, he stated his intention to link his fortunes with those of Assyria,—but as an independent sovereign, whose power was absolute within the borders of Lydia and who could form or annul treaties with other states at pleasure. Again, when the mountain-tribes of the Manni, a war-like and hardy people, sent tribute-bearing embassies to the princes in the lowlands, they did it simply in a spirit of friendship without disclaiming one jot of their national independence. Nor did Arungzebe claim suzerain rights when the hill-tribes of Northern Indian and Afghanistan sent him droves of sheep and oxen, rich stuffs from their looms, and precious stones. In fact, the history of Asia west and east, down to the present day, does not offer any single instance where the simple passing of tribute between two states constituted *per se* the suzerainty of the one and the dependency of the other. This is notably the case with China, for the historical works compiled by her own learned men plainly show that many states were accustomed at one time or another to send tribute to the capital; but no mention was ever made of suzerain rights based upon this fact. Indeed, it was often customary for China to send rich gifts in return for 'tribute' received. When the Sultan of Malacca complained of the inroads of the Portuguese into his territory and solicited the aid of the then Emperor of China, he sent a large 'tribute' (according to the Chinese chroniclers); and the result of this policy was the expulsion of the Portuguese Embassy under Pires, who was subsequently massacred with his suite at Canton.

On the other hand, China has been for some centuries past in the habit of claiming a fictitious suzerainty over tributary states. The Manchus well know the slight tenure they have upon the allegiance of the vanquished Mongolians and take every opportunity to pose as conquerors and mighty potentates before their impatient subjects. If the importance of the Dragon Throne can be augmented by an increase in the number of tributary states, then by all means add a unit or so. The method is simple: a few 'strokes of the pencil, a few seals, and a document is ready by virtue of which another jewel is added to the imperial tiara. France and Italy have already appeared among the list of tributary states, and England and America may quite as readily become so. But China is just as lax in claiming the suzerainty over adjacent countries as she is eager to wield the sceptre over distant ones. Was Corea ever a dependency of the Celestial Empire? She is nominally, if not confessedly so, at present. But when the Korean King signed the Treaty with Japan he acted as a free and independent monarch, "on the strength, doubtless, of the repeated and distinct assurances of Corea's independence given by Prince Kung." China's suzerain rights over Corea, in the European interpretation of the term, are as fictitious as her claim upon Annam, or her would-be control of the Loochoos. Yet with all the bluster and bravado, China is as conscious of her illegitimacy of her suzerainty as are the very coun-

tries themselves. The King of Corea and the Tuduc of Annam may find it convenient for the present to acknowledge their vassalage and swear allegiance to the Dragon Throne, but the Treaty with Japan and the Franco-Annamese Treaty of 1874 sufficiently prove how much their vaunted allegiance is to be depended upon. "With regard to the never-failing assertion, in history-books," says the *North-China Daily News*, "that China has always been the suzerain of Annam, it is permissible to hint that in all probability Annam is by no means the only country which has been thus honoured. Although Chinese statesmen have grown wiser of late years, the fact remains that 'history' might with equal force be appealed to in order to prove the subjection of far more countries than China, for many centuries of her existence, had ever so much as heard of. In truth, it would be decidedly impolitic for foreign nations to regard with any seriousness the description applied to them in the annals of the Chinese Empire."

A final, and very cogent, proof of the independence of Annam is found in the fact that for nine years China has not protested against the Treaty of 1874. "The Chinese," Mr. Boulger contends, "were neither directly nor indirectly a consenting party to that Treaty. They were ignorant of its stipulations, until the French began in the early part of last year to give them effect." I have emphasized the statement of China's supposititious ignorance of the Treaty, for I cannot readily understand why such a careful writer as Mr. Boulger should have been so pronouncedly at fault. The Treaty of 1874 appeared in print, was published and widely-disseminated throughout the coast-ports of China as early as 1880, and in 1881 we find it printed at length in the *Chronicle and Directory of China and Japan*. Surely so important a Treaty must have been known to China even before its public appearance in print, especially if the relations between the Empire and Annam were really as intimate as they are stated to have been. But even if China was kept in ignorance of the exact stipulations for a few years, she certainly was aware, not only of the existence of the Treaty, but of its fullest import, in 1880. It would be absurd to contend that because the printed form appeared in the English language the Chinese were unable to appreciate its exact meaning, for not only do many of the high officials thoroughly understand English, but they also employ foreigners in the capacity of secretaries and translators who would speedily bring so important a document to their notice. Another writer, who seems to have appreciated this fact, excuses China's inactivity by stating that "at that time China was too much occupied with her own affairs to enquire into the matters going on in her Tributary State," and "that there was unfortunately no Chinese representative at Paris to bring the matter to the notice of the French Government,"—excuses, which the *Daily News* very properly stigmatizes as 'shabby.'

Taking all these matters into consideration, it would be far more logical and sensible to say at once that China's suzerainty over Annam is purely fictitious, without the slightest actual foundation. If China goes to war with France, which for her own sake I sincerely hope will not occur, she cannot commence hostilities under the ostensible excuse of protecting her vassals. China might reasonably have done so nine years ago, but now it is too late. When the French wrested three provinces from the King of Annam, China should have intervened in behalf of her own interests quite as much as in behalf of the alleged tributary state. The Tuduc

may find it very convenient to remember his one-time allegiance to the Empire and let bygones be bygones now that foreign troops and foreign gunboats are about to wrest the whole of Annam from his grasp. And China may feel equally disposed to resent the claims of the French by sending troops to the said Annam, declaring to the world, with a sort of maternal pathos, that she cannot see a tributary state of hers overrun by barbarian hordes without interfering. Indeed, says Mr. Boulger, "we may feel reasonably certain that the Annamese have not ventured to show their antipathy to the French so plainly, without some definite assurance of support from China; and we may see in the boldness of the Tuduc and his people the conviction that support will be neither half-hearted nor in vain."

And the conclusion of the whole matter? Yün-nan, in a word. China is decidedly averse to having a European power for a neighbour, for experience has taught her that such a propinquity is not desirable for the development and success of her plans. If the respective representatives of France and China can come to terms with regard to a neutral zone between French-Annam and South-western China, we need not fear the consequences of a severe and prolonged war. The suzerainty of Annam will be forgotten as quickly as it was called into existence, and China's unfortunate 'vassals' will be left to shift for themselves.

Yours, &c.,

F. E.

GOVERNMENT NOTIFICATION No. 23.

It is hereby notified that the Railway Regulations issued in May in the 5th year of Meiji (1872) by Notification No. 146, and another issued in March in the 6th year of Meiji (1873) by Notification No. 101, defining punishments to be inflicted upon offenders against the regulations, may henceforth be applied on railways constructed by private individuals.

10th July, 16th year of Meiji.

By Imperial order,

(Signed) SANJO SANETOSHI, Prime Minister.
YAMAGATA ARITOMO,
President of the Council of State.

TRANSLATIONS FROM NATIVE JOURNALS.

COMMERCIAL AFFAIRS IN TOKIYO AND YOKOHAMA.

(Translated from the *Hochi Shimbun*.)

Trade remains quite as stagnant as it was last year, and, if anything, sinks deeper in depression, presenting a truly melancholy aspect. Public attention is directed to the commercial condition of both the metropolis and the provinces. Thus, it behoves us to furnish our readers with commercial reports. Yokohama is not only closely allied commercially with Tokiyo, but is the emporium of foreign trade. So we will first give some details of the market in the former port.

Existing foreign commerce, in the gross, is profitable neither to natives nor aliens. Among other of our imports, British woven goods, such as camlets, cloth, and so on, are quite out of sale. Satin is sold at reasonable prices. Other fabrics have fallen twenty or thirty per cent in value, and still continue to lie in the godowns of foreign merchants. Such unsaleable wares have acquired the

general name of "godown merchandise." Next, we have to mention French coloured muslin, which has fallen in value about fifty per cent. as compared with what was imported two or three years ago.

The depression in this trade is partly due to the Kiyoto manufactures of imitation goods, which are pronounced of very superior quality. Drugs have shared a similar fate. Iodide of potassium, which used to vary in value only between three to five dollars is now sold at \$1.59, while quinine formerly worth three dollars (per ounce) will not realize more than \$1.90. Santonine has depreciated twenty-two per cent. Depression is also noticeable in the iron trade, wherein, on the average, prices have fallen twenty per cent.

Again, while umbrella frames have fallen from \$2 to \$1.80, \$1.50, and \$1.40 (per doz.) yet there is no demand for them. Nails, sometime since quoted at seven dollars, are hardly saleable at \$4.70. Some settlements are made of Manchester cotton fabrics, but only at ten per cent. discount as compared with previous years. German muslin shows no remarkable depreciation, but settlements are confined to insignificant quantities. And, as stagnation of trade does not only prevail in our Empire, but also in foreign countries, it cannot fail to produce a pernicious effect upon our export trade. In previous years, the wages of tea-firers were not less than sixty *tempo* per day at the commencement of the new tea season. At present there are only four tea-preparing establishments (where firers are employed) the firms at No. 1 and No. 106 having dismissed their workpeople, and arranged to conduct the operation by means of machinery. Thus, their firers have been obliged to seek employment in the other four manufactories, with the result that their wages have been reduced to eighteen *tempo* per day. Furthermore, the success of silk rearing in Europe, and the abundance of the staple in the English, French, and American markets, have affected the export of our production, while the demand for our waste silk has almost entirely ceased. No merchant dares to touch it unless it is offered for sale at less than seventy dollars, against \$140, which was the price in January this year. Hemp that was saleable at sixty dollars in the beginning of the year, has fallen in value to twenty-four dollars. This depreciation is ascribed to the export of spurious qualities by foreign merchants in Yokohama, who have thus injured the reputation of the fibre in Europe and America. Depression and lethargy is likewise the condition of the trade in porcelain and lacquer wares. In short, all exports have "gone to rest." There were lately some transactions in old curios during the sojourn of Mr. Bing, a wealthy merchant from Paris; but since his return to his own country this trade has presented almost insurmountable embarrassments to those dealers who conduct their affairs with a small capital. Owing to so general a stagnation of trade in Yokohama, inevitably checking the circulation of money, most of the foreign merchants in the settlement appear to have been constrained to relinquish business; and it is said that some of them have even returned to their homes. Nine out of ten actions brought before the Yokohama *Saibansho* are claims for the restitution of money lent; while the Police Courts are chiefly engaged in the investigation of thefts. The number of native and foreign merchantmen at anchor is only three and fifteen respectively; there being so little cargo, coolies working on the *hatoba* are deprived of the means of living, and are compelled by their extreme poverty to sell their wives and

daughters into secret prostitution. To avoid police surveillance, they rent houses in the foreign settlement, especially in China town, where domiciliary visitation is beyond the scope of the police authorities. Visitors to the taverns in the settlement do not exceed six or seven a day, and there is a consequent deterioration in the style of cookery which cannot fail to diminish their custom. In China town, a peculiar kind of gambling called "Che Hah" finds great favour with those who, having been reduced to extreme poverty, risk their last cash in hope to acquire large profits. Of late, however, the police succeeded in arresting about thirty of these gamblers, and punished them, thus effectually checking the play, which is now confined to the Chinese. Further, the original projector of the game has found it impossible to make any profits by his transactions, and so has abandoned it.

Since taxes were levied on the Bourse, trade in silver has almost come to an end, brokers have ceased to assemble there. Some twenty or thirty of them, however, congregate at the corner of the street in which the Bourse stands, at nine o'clock in the morning every day, and carry on business in a mysterious manner with empty pockets. Restaurant keepers and *jinrikisha* coolies in the neighbourhood of the Bourse, whose livelihood depends upon the patronage of the brokers, have been obliged to give up their trades. Private Bazaars have also proved unsuccessful, and three of them were closed, leaving only one, known by the name of Fuchikutei, open. The Bazaar in the Public Garden, supported by the Kanagawa *Kencho*, appears to prosper in some respects. Visitors to this institution during last month numbered 1,117, while the value of articles sold amounted to yen 905.29.

Notwithstanding the dullness of trade, various primary schools in Yokohama are comparatively prosperous, due probably to the fact that the people have become aware of the necessity of educating their children. At present there are 853 scholars in the Yokohama, 608 in the Yoshida, 542 in the Oimatsu, 230 in the Uetsuda, 410 in the Tobe, 373 in the Kotobuki, and 590 in the Moto-machi, schools, respectively.

Let us now consider the commercial condition of Tokiyo. Stagnation in the circulation of money, as well as the fall in the price of commodities, has contributed to that depression of trade from which the city and provinces are alike suffering. In previous years, however, there was a reaction from tradal depression in the provinces during the spring, and this did not fail to bring some prosperity to Tokiyo. But, this year, matters present a different feature. Whilst the spring has already passed, and summer, a season in which merchants generally settle their accounts for the preceding half-year, is about to wane, the market of Tokiyo remains just as dull and desolate as is usually the case in the autumn season.

As regards agriculturists, depreciation in the value of rice has deterred them from circulating money or purchasing their necessities. Moreover, as they are now busily engaged in silk producing, and in planting out rice sprouts, none of them attempt to come to Tokiyo for business. In these circumstances, most of the wholesale merchants at Yokoyama-cho, Tokiyo, whose welfare depends to a considerable extent upon the patronage of provincial dealers, have been obliged to hold their goods in their shops, without customers, while, also, the value of their stock has fallen since last year. They have tried to sell at original cost, but cannot find even then as many buyers as they expected.

They have suspended the purchase of merchandize; but, considering that mere retention of capital is by no means conducive to profit, have determined to buy public-loan bonds. Even such traders as are still inclined to conform to the old calendar, and are yet perfectly unfamiliar with the nature of these bonds, have been induced to invest their capital in them. Therefore, the manufacturers of combs, hair ornaments, toilet articles, and *fukuro-mono* (purses, tobacco pouches, and sundry articles of similar kind, in leather, silk, cotton, &c.) who are in many respects dependent upon the merchants, have become unable to maintain their families on account of the fact that they are scarcely required to work for one week in a month, owing to the great decrease in the demand for the products of their industry. Many of them have been obliged to desert their occupations and seek for new employment. The inn-keepers of Koami-cho, Kofuna-cho, and the neighbourhood of Nihonbashi, whose business is chiefly to provide lodging for steamship passengers from the neighbouring prefectures, used formerly to receive at least twenty-five or twenty-six visitors daily, but of late the number has decreased by more than fifty per cent. Unable to maintain their trade, they have dismissed their waiters and waitresses, and disposed themselves to gain barely enough to buy bread for their families.

The number of passengers who lodged at Bakuro-cho from January to May this year was only 225,756, against 513,200 in the corresponding period of last year, showing a decrease of 287,400. From these figures alone, the poverty of the provinces and the stagnation of trade in Tokiyo can easily be perceived.

Notwithstanding the present dullness of trade, there is a remarkable increase in the manufacture of silk and cotton fabrics, while the demand remains just the same as before. The excessive quantity of these fabrics, as well as the competition among manufacturers to produce them in such a manner as to secure only superficial beauty, has not failed to injure their reputation. Money being scarce and the demand having decreased, the wholesale merchants were obliged to lower the value of their fabrics by 40.5 per cent. Accordingly those who have held their goods since last year, must incur some loss if they attempt to sell; and so they have not only determined to suspend the purchase of goods, but also postponed the sale of their stocks. These circumstances have led to the curtailment of the transactions of retail dealers, who appear to earn barely enough for their subsistence. They complain of the daily diminution of their capital. The Joshiu silk fabrics and Nambu crape, which were before saleable at eleven or twelve yen for two pieces, have fallen in value to eight yen. Yet there are, proportionately, very few customers. At the commencement of the sale of summer stuffs this year, presents were offered as usual to purchasers; but the customers, having become familiar with the fact that the value of the present so offered was added to the price of the cloth, ceased to buy as they had generally done before in proportion to the amount of the presents. The merchants, therefore, could only sell their stock at a disadvantage. Thus the best Awa *chijimi* (ribbed cloth) became purchaseable for sixty-seven or sixty-eight sen per *tan*, while summer cloths mixed with foreign yarn do not cost more than fifty or sixty sen a piece. Shops where these cloths are sold so cheaply can be seen everywhere in the street, but most of the visitors simply examine the stuff and leave, showing in many cases an inability to buy,

although they earnestly wish to purchase. This is probably due to the emptiness of their purses. The depreciation is also noticeable in the price of the Yechigo *chijimi*, which was generally brought from the producing districts and sold direct to the customers. Last year, the choicest was quoted at seven yen, but this year it cannot realize more than four yen. The trade in foreign woven goods has been inactive since last summer, and even the wholesale merchants at Horidome and Omonodori could send but insignificant parcels of goods to their provincial customers for use this summer. On the whole, there are few or no transactions in woven manufactures. Moreover, the fall in the value of silver has affected their original price, and the merchants appear to be unwilling to dispose of their goods, even though there may be a demand for large quantities. They seem to have determined to wait until the exchange rate of silver shows an upward tendency. Of late, lastings and white merinos were sold in somewhat large quantities, and this tended to enhance their value, but not to any considerable extent. Previously, dyers at Honjo found themselves busy in the middle of every year, but seeing that the reverse is the case this summer, they are obliged to discharge their workmen. Dyes and paints have fallen about thirty per cent. in value, but are still unsaleable. The workmen, whose subsistence depends upon their employment by dyers, have been utterly deprived of their livelihood. Imported *komomono* or fine wares have also fallen in value about thirty per cent., yet the demand for them appears to have entirely ceased. Lamps have also met a similar fate. The depreciation in their value, however, is not due to the decrease of customers, but must be traced to the fact that, while there is an abundant supply of glass lamps, more convenient and cheaper ones—that is, tin lamps—have found their way into the market and attained the greatest favour. Notwithstanding the stagnation of all sorts of trade, the manufacture of vehicles has been so successful that all the wheelwrights in the capital have found it necessary to increase their staff of workmen and carry on their industry by day and night. There is a brisk demand for *jinrikishas* in the capital as well as in the provinces. Those which are lacquered in black and provided with curtains are in greatest demand. Travellers have begun to show a strong inclination to employ new *jinrikishas* in preference to those constructed in the old style. Fashion, therefore, tends to replace the latter, gradually, by newly-built vehicles. Moreover, large orders have been received from China and Korea. If this kind of carriage-building is to increase in the present proportion, it may reasonably be expected that the number of *jinrikisha* coolies will soon exceed that of the customers who hire them. Even at present there are many of these coolies who cannot find a single customer during the whole day. This state of affairs is by no means traceable to the decrease of travellers in carriages; but it appears, that as the *jinrikisha* fares have not been reduced in proportion to the fall in the price of commodities, omnibuses are taken in preference. Since the opening of the tramway, one year has elapsed, and the conveniences afforded by it have been candidly acknowledged by the public; but passengers being extremely few on all its sections, with the exception of the division between Nihonbashi and Kiyobashi, the receipts are not sufficient to cover the expenditure. Nevertheless, it is expected that the business of the Tramway Company will soon prosper should steps be taken to reduce

the passenger fares as far as possible, and compete with omnibuses. Surely a time will come when tram-cars will be seen running in all directions in the capital. It is a matter of regret that the road in Asakusa being narrow, only one line could be laid along the greater portion of it, and that, therefore, the cars have to stop at short distances, wasting much valuable time on each occasion. Taking these circumstances into consideration, not a few passengers are induced to take the omnibus in spite of its perils and its dirt. The three companies at Yorodsu-yobashi—the *Kaiseisha*, *Keihokusha*, and *Kounsha*—facilitate provincial communication by running omnibuses regularly between Tokiyo-Nakasendo, and Koshu, but accidents are reported to have frequently happened to these vehicles. Of late, too, omnibuses compete with *jirikishas*, and having reduced their fares, appear to have secured the public patronage. Nevertheless, the dullness of trade has curtailed the number of passengers; and, consequently, one of the omnibus companies has been unable to continue business, while the remaining two are said to dispatch carriages not more frequently than five or six times during a day and night, and then are seldom filled with passengers. Such a state of things is likely to bring loss to the two companies. By the way, there is also a regular omnibus service between Tokiyo and Yashiu, undertaken by Tedrukaya at Hirokoji, Asakusa. To afford passengers greater facilities, an agency has been established at Bakurocho, and the line has been extended from Utsu-no-miya to Shirakawa and Nikkwo.

As for the pawnbrokers, it is found that the deposit of pledges has considerably increased since the year before last, while in most cases they were not redeemed. Those who possess only small godowns have not only found themselves perplexed for storage room, but also in want of funds for the further reception of deposits; and in some cases they have been obliged to decline them altogether. Sometimes pledges have been redeemed, but only such as were of the best class, inferior articles remaining all the time in the godowns without being withdrawn. The brokers did not neglect to issue a notice on the expiry of the term of deposit, but could not even renew the interest on the loan, and have at last found that some portion of their pledges represent interest exceeding the principal advanced on them. For their part, pawners came to think that it would be far better far them to buy new clothes—the prices of which have considerably fallen and still tend to fall—than to redeem their old ones. According to the regulations, the pawners are deprived of a right to redeem their deposits in case they fail to pay interest when due on the loan, and the articles pawned become then the property of the brokers. But in most cases, the intimacy between brokers and pawners prevents the former from exercising this privilege: they feel obliged to hold the deposits even without due interest being paid on them. Thus it happens that principal and interest together exceed the value of the articles pawned, when payment is deferred. Most of the pawners this year appear to have determined to let their articles go unredeemed; but the brokers, considering that they are likely to sustain loss by the transfer of these articles to their possession, have asked the pawners to arrange for redemption at the amount advanced, the claim for interest being abandoned. In short, the pawnbrokers are so placed as to have to transact their business without profit. It is true that last year stagnation of trade was complained of everywhere, but it seems that it was not so serious as it is this

year. Last summer even the lower classes of the people were able to redeem their deposits from pawnbrokers. Being unable to do so this year, they have managed to provide for their summer requirements, such as mosquito-nets, on hire at the rate of sixty *sen* a month. From these circumstances, we can easily perceive the general stagnation in the circulation of money. Money-lenders not only demand high interest, but have ceased to lend at all without security. Hence the people below the middle class are unable to obtain money in any other way than by pawning their property. This accounts for the briskness of pawnbroking business. But considered in regard to profit, that same occupation is not exhilarating, and the brokers have now found it necessary to abandon their calling. Of late, however, the ceremony of *cha-no-yu* has begun to find favour with the people, and the articles employed in its practice have risen in value; but, nevertheless, curio dealers and old clothes merchants suffer seriously from want of customers. There are many visitors to the old clothes markets at Yanagiwara and Hisamatsu-cho, but proportionately there are very few transactions. Again, auctions which were held simultaneously in several streets of the capital, have now almost entirely ceased.

While the value of all commodities has fallen, public loan bonds have considerably risen in price. It is worthy of notice that the value of landed property has fallen to a considerable extent. Ground known as *menuki* in the capital, which was formerly saleable at twenty-five *yen* per *tsubo*, now hardly realizes seventeen *yen*, and its value still tends downwards.

Such depreciation, however, is not so remarkable in rural districts, owing, presumably, to the fact that the maintenance of landed property there does not require such heavy expenses as are needed in the metropolis, where the owners have not only to pay a high tax, but have also to bear several miscellaneous expenses. Precise calculation shows that their annual profit does not exceed five per cent. If they do not dispose of their property, it is simply because they bear in mind that it was bequeathed to them by their ancestors who must have spent an enormous amount of labour in acquiring it. Yet considering that they may avoid several inconveniences by the sale of their landed property, they have arranged to convert their possessions into public loan bonds, which they recognize as more profitable and safe to keep. Such is probably the legitimate cause of the recent rise in the value of these bonds. Therefore, a greater amount of money can be borrowed on the security of bonds than on landed property, which, it seems, cannot command a loan exceeding one-fourth of its actual value. Such being the case with even large securities, the difficulty of obtaining small amounts, below five *yen*, without any security, may be easily perceived. There are many capitalists who hang out a sign-board bearing the inscription of "Loan Office;" but in case money is borrowed from them, they demand high fees and interest, and deduct these beforehand from the sum lent, while they compel their debtors to mention only the legal amount of interest in their acknowledgments. The loans thus issued not only bear an exorbitant rate of interest, but as the period of redemption is generally as short as possible, the debtors are liable to become insolvent, in which case the creditors fly to a court of justice to recover their money. Inhumanity and harshness is the characteristic of modern money-lenders. Therefore their money is only borrowed in case of the

utmost necessity or when it is to be invested in a speculative enterprise in which the debtor enthusiastically hopes for success. The poorer classes of the community whose subsistence depends upon the daily profit of their small trade, and who are liable to lose their capital in case of sudden illness or rainy weather, being without the credit necessary to borrow money, mortgage even articles they have obtained on hire. In short, all trades which benefit the poorer people are at an utter standstill. There are many persons at Yamanote who hire out male and female dresses. These are principally serviceable to petty officers who do not possess more than one suit of foreign clothes in which they attend their respective Government Departments. But as the demand for these articles is very small, the trade is by no means profitable.

Our readers may have plainly perceived from previous statements that every trade in the capital has sunk into lethargy while the people appear to have lost all activity and pass their days in hopeless lamentation. Not only do they hesitate to enter into any transactions but they direct their best attention to household economy. Consequently labourers and artisans have been deprived of the means of living and repent their former improvidence. Carpenters, foremost among artisans, have long expected that the depreciation in the value of timber would induce wealthy citizens to repair or rebuild their houses, and that there will be a brisk demand for labour. But the reverse is the case. Since the end of last year no big fire has occurred in the capital, and the demand for carpentry has utterly ceased, except for the repair of shutters and windows, to prevent the rain from being blown in by wind. There is little or no work for the carpenters requiring more than ten consecutive days to complete. The result is that wages have fallen to forty-five *sen* a day, exclusive of board. Most joiners are obliged to spend their time in leisure, with the exception of some who are specially favoured by their patrons. Conscious that their tools would otherwise go rusty judicious workmen make small boxes when there is no demand for their labour. As regards masons, a depreciation is also noticeable in their wages, generally the highest paid of any artisans. At present they cannot earn more than seventy *sen* a day, and yet there is no work for bodies of men. Roof-makers are paid *sen* 90 to *yen* 1.20 per *tsubo*, but it is said that they can scarcely make any profit in roofing new houses. Tin roofing appears to be in vogue within the limits of the "fire protection line," the cost being *yen* 2.40 per *tsubo*. The attractive appearance and durability of this style of roofing has induced the people to change their old roofs. Roof-makers of the old stamp have nearly all lost their means of living. Plasterers are as busy as ever, in some respects, because since the fire protection limits were traced in the capital, citizens have been obliged to rebuild their houses in the old godown style, or at least to plaster the outer surfaces of their dwellings so as to accommodate them to the prescribed regulations. The wages of plasterers, therefore, have risen to sixty *sen* per day, while even hod-carriers are paid thirty *sen*. Tile manufacturers, painters, and other artisans working in tin and lacquer, who are more or less connected with the plasterers, are able to dispose of their work in spite of the stagnation of all other trades. As the Government Departments, however, have stopped the construction of large buildings, and as the merchants desire to buy old tiles, which are generally cheap and strong, in preference to new, the manufacturers at Komme, Nakanogo, Hoshiba, and Imado have all but no sale for their

products. Mechanics who used to work for orders from rural districts, sent to their patrons among the merchants, are also workless and penniless, or must toil for absurdly low wages. In the days of their prosperity, they used to engage a number of workmen; but as the merchants who were wont to purchase their products, have now determined to economise in all respects, their work has become utterly fruitless. Skilled workmen are no longer employed, and all work done is merely superficial. Loss of credit follows. The fall in the price of rice has deterred the agricultural class from purchasing any other than absolute necessities. The demand for the stock possessed by wholesale merchants has entirely ceased. Goods stored since last year remain unsold. Occasionally, orders are received for manufactures of new fashion, but only to an insignificant extent. In such cases, naturally, mechanics have more or less work, although it be barely sufficient to maintain them. Although they demand increased wages for the maintenance of their families, they find that they work for nearly nothing. Reduced to extreme poverty, they malingering and decline to work for their customary patrons the merchants, and take low wages from casual employers. They manage to live from hand to mouth. Meanwhile the demand for their labour diminishes; and they are obliged to abandon their trade and seek some other means of supporting their families. Many of them have established themselves as provision dealers. Among other instances, we may mention that of Yorodsu at Ikenohata, Shitaya, who was formerly a famous jeweller, but abandoned his occupation and become a dumpling (*dango*) dealer. Trade is stagnant.

Vicissitudes are in the order of nature; yet we cannot but lament this unprecedented depression in trade. Notwithstanding, there is a brisk demand for fencing masks, gauntlets, and bamboo swords, police and soldiery having taken to the old style of fencing as a good physical exercise. Manufactories of fencing gear, with big sign-boards designed to attract the notice of the passers-by, can be seen in most streets. Impoverished *shisoku* and old umbrellas frame makers, are chiefly engaged in this trade. Their work is carried on day and night, and yet the makers are insufficient to produce enough to satisfy the popular demand. Side by side with this extensive trade the consumption of ink, paper, and pencils has considerably increased. The last mentioned article is in greatest favour. A pencil factory at Yushima, known by the name of Shinseido, employs at present more than two hundred workmen, and finds that even these are insufficient to meet the demand.

TRADE REPORT FOR FUSAN FOR 1882.

(Translated from the *Fiyu Shimbuu*.)

The principal events that took place during the year under review were:—(1) the rebellion in Sōul; (2) the extraordinary rise in value of Korean money; and (3) the extraordinary fall in price of rice and other cereals. To point out the cases that led to the stagnation of trade, we must search among the events of the year (1882). In the first place, we find that Korean officers have indirectly prohibited the natives from selling ox-hides to Japanese merchants. Secondly, the export of rice and other cereals has fallen off to a considerable extent, in consequence of a poor harvest having been anticipated, as drought prevailed throughout the neighbourhood of the settlement. Occasionally, however, the natives brought the merchandize to

exchange for Japanese commodities, thus evading the restriction. Under these circumstances, all trade was confined to barter and the settlers suffered severely. They are not, however, entirely free from blame, for they brought about the ruin by too keen a competition to sell goods. The services of brokers had been done away with, causing great difficulty among them, and irregular fluctuations in the prices of all commodities. The Chamber of Commerce held several meetings and strove to eradicate the evil by enacting by-laws; but in vain. This state of affairs gave encouragement to some dishonest native traders to bring inferior stuff to the market. Indeed, they have made profits at the expense of the Japanese traders. Consequently, commerce was impeded and the market was in a desolate condition. The news of the outrages in Sōul considerably added to the stagnation. Rumors of a disquieting nature were circulated. Koreans ceased to visit the settlement; and the brokers and those living by their daily labour were reduced to a most miserable condition. The Eastern Honganji had to distribute a quantity of rice among these poor men. Japanese residents in Inchōn and the interior of Korea bought native coins to a considerable amount, which was doubtless required to defray the various expenses incurred in consequence of threatened hostilities. Fortunately, however, toward the middle of September, the dark clouds passed away: tranquillity was restored between Korea and Japan, and commerce rapidly revived. The cotton crop was exceedingly abundant, and the staple was exported in large quantities. Besides this, the Japanese Consul brought the impropriety of official interference to the notice of the Korean Government, and succeeded in removing this obstacle to trade. Thus, ox-hides and rice began to appear in the market in as large quantities as before. The natives recognized the convenience of exchanging raw cotton for shirtings, which gave a great impetus to the importation of the latter article. Native money became very scarce and rose in value to about *yen* 4.70 per *kwamme*. At one time it threatened to rise to as much as *yen* 5. The competition among the Japanese merchants themselves, which proved so disastrous a few months previously, was about to be repeated and would have brought trade to a standstill, but for the exertions of the Chamber of Commerce, which passed resolutions binding all Japanese merchants not to sell merchandize under a certain fixed price. In this way, they were enabled to protect themselves from ruin and to keep commerce in a prosperous condition. The brokers and those living by daily work have been likewise benefited. On the other hand, the export houses have met with losses owing to the low prices prevailing at home; and at end of the year complaints were heard. There is not any considerable falling off to be observed in the amount of the exports and imports, and, on the whole, had it not been for the paralyzing effects of the disturbance at Sōul, the year (1882) would have ranked among flourishing seasons. But it must be remembered, that although there is not much decrease in the total amount of trade, the profits made by the Japanese merchants are meagre as compared with those of preceding years. This is simply due to over-trading.

Exports are confined to the natural productions, since there are no artificial or manufactured articles in the country. Of imports, European articles occupy the larger portion. Treaties having been concluded between Korea and Occidental

nations and China, we cannot venture an opinion as to whether commerce will be benefited or otherwise till things speak for themselves. Having thus briefly referred to the condition of trade, let us proceed to compare the returns for 1882 with those for 1881, and ascertain to what extent trade has declined. Here is the table:—

| | 1882. | 1881. |
|---------------|----------------------|----------------------|
| Imports..... | <i>yen</i> 784,189 | <i>yen</i> 1,100,195 |
| Decrease..... | | <i>yen</i> 316,006 |
| Exports..... | <i>yen</i> 1,105,310 | <i>yen</i> 1,157,858 |
| Decrease..... | | <i>yen</i> 52,548 |

Thus, we find a decrease of *yen* 368,554 in the total amount of exports and imports. This is directly traceable to the rebellion, in consequence of which business was suspended for seventy or eighty days. The most important points which deserve our consideration in the present report is the increase of the import of European goods, and decrease of that of Japanese articles, as can be seen from the following table:—

JAPANESE PRODUCTS.

| | 1882. | 1881. |
|---------------|--------------------|-------------------|
| Imports..... | <i>yen</i> 128,774 | <i>yen</i> 54,315 |
| Decrease..... | | <i>yen</i> 74,459 |

FOREIGN PRODUCTS.

| | 1882. | 1881. |
|---------------|--------------------|--------------------|
| Exports..... | <i>yen</i> 962,608 | <i>yen</i> 730,874 |
| Increase..... | | <i>yen</i> 231,824 |

On comparing the rate of Korean money that ruled in 1881 with that of 1882, we find that, whilst in the former year the highest quotation was *yen* 3.15 for 1 *kwamme* and the lowest *yen* 2.73, in the latter year it was *yen* 4.70.

This extraordinary rise was due to the excess of exports over imports. When a large sale is effected, there is abundance of native coin in the hands of Japanese merchants. As Japanese merchants have encountered numerous disadvantages from such irregular fluctuations in the value of Korean money, it is to be earnestly hoped that the Korean Government may be persuaded to put a large quantity of silver and copper coin in circulation.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, JULY 6TH, 1883.

Observatory of Daigaku, Moto-Fuji-cho, Hongō, Tokyō, Japan.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
— represents velocity of wind.
— percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 35.8 miles per hour on Monday at 3 p.m.
The highest reading of the barometer for the week was 29.66 inches on Friday at 10 a.m., and the lowest was 29.44 inches on Monday at 10 a.m.
The highest temperature for the week was 82.0 on Thursday, and the lowest was 59.3 on Monday. The maximum and minimum for the corresponding week of last year were 82.9 and 63.3 respectively.
The total amount of rain for the week was 5.754 inches, against 5.585 inches for the corresponding week of last year.

LATEST SHIPPING.

FREIGHTS.

During the past week shipping business has been absolutely stagnant; several ships offered for coast employment, willing to accept exceedingly low rates, but without resulting engagement. Next week should, however, show some slight improvement, inasmuch as there will then be actual business on offer, but rates can hardly be expected to be higher than at present nominally ruling. The American ship *Grecian* has not yet sailed for San Francisco, but is said to be leaving in a day or two. For New York the steamships *Yorkshire*, *Ehrenfels*, and *Ascalon* are all loading with quick dispatch. For London the *Benledi* holds the berth, while for Havre and Hamburg, the German barque *Valparaiso* and the steamer *Feronia* are both loading.

ARRIVALS.

Gembu Maru, Japanese steamer, 670, F. J. Brown, 7th July,—Fushiki 30th June, Shimonoseki 2nd and Kobe 5th July, General.—Kiyodo Unyu Kwaisha.

Wakanoura Maru, Japanese steamer, 1,342, A. F. Christensen, 8th July,—Kobe, General.—Mitsu Bishi M. S.S. Co.
Benledi, British steamer, 1,000, J. Ross, 9th July,—Nagasaki 5th July, Coal.—Mourilyan, Heilmann & Co.
Ferdinand, German bark, 416, Westergard, 9th July,—Takao 22nd June, Sugar.—H. MacArthur.
Feronia, German steamer, 1,115, F. Nagel, 9th July,—Hongkong, General.—Simon, Evers & Co.
Kworio Maru, Japanese steamer, 617, G. Withers, 9th July,—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.
Richmond, American flagship, 14 guns, 300 men, 2,700, Captain J. S. Skerrett, U.S.N., 9th July,—Nagasaki 5th July.
Ehrenfels, German steamer, 1,588, Fischer, 10th July,—Hongkong, 4th July, Mails and General.—Adamson, Bell & Co.
Sumanoura Maru, Japanese barque, 925, Spiegelthal, 10th July,—Nagasaki, Coals.—Mitsu Bishi M. S.S. Co.
Taganoura Maru, Japanese steamer, 448, Matsmoto, 11th July,—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.
Tsuruga Maru, Japanese steamer, 880, Dithlefsen, 11th July,—Kobe 9th July, General.—Mitsu Bishi M. S.S. Co.
Takasago Maru, Japanese steamer, 1,230, C. Young, 12th July,—Shanghai and ports, Mails and General.—Mitsu Bishi M. S.S. Co.
Chinkiang, British steamer, 799, S. M. Orr, 13th July,—Shanghai 8th July, General.—C. Illies & Co.

DEPARTURES.

Zambesi, British steamer, 1,540, L. H. Moule, 7th July,—Hongkong via Nagasaki and Kobe, Mails and General.—P. & O. S. N. Co.
City of Peking, American steamer, 3,129, Friel, 8th July,—Hongkong Mails and General.—P. M. S.S. Co.
Gembu Maru, Japanese steamer, 670, F. J. Brown, 8th July,—Yokkaichi, General.—Kiyodo Unyu Kwaisha.
Niigata Maru, Japanese steamer, 1,097, Hubbard, 9th July,—Hakodate, General.—Mitsu Bishi M. S.S. Co.
Wakanoura Maru, Japanese steamer, 1,342, A. F. Christensen, 9th July,—Kobe, General.—Mitsu Bishi M. S.S. Co.
Nagaya Maru, Japanese steamer, 1,015, J. Wynn, 11th July,—Shanghai and ports, Mails and General.—Mitsu Bishi M. S.S. Co.
Taganoura Maru, Japanese steamer, 448, Matsmoto, 11th July,—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.
Toyoshima Maru, Japanese steamer, 597, Franck, 11th July,—Hakodate, Mails and General.—Mitsu Bishi M. S.S. Co.
Wandering Minstrel, British barque, 363, Seivewright, 12th July,—Nagasaki, Ballast.—Captain.

Evangelina, British 3-masted schooner, 345, Bell, 14th July,—Takao 25th June, Sugar.—Chinese.
Kworio Maru, Japanese steamer, 617, G. Withers, 13th July,—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.

PASSENGERS.

ARRIVED.

Per British steamer *Benledi*, from Nagasaki:—Mr. and Mrs. Drewell, 2 children and servant.
Per Japanese steamer *Kworio Maru*, from Yokkaichi:—127 Japanese in steerage.
Per Japanese steamer *Taganoura Maru*, from Yokkaichi:—73 Japanese.
Per Japanese steamer *Tsuruga Maru*, from Kobe:—76 Japanese.
Per Japanese steamer *Takasago Maru*, from Shanghai and ports:—His Excellency and Mrs. Sasaki, Mr. and Mrs. Suyenobu, Mrs. Sekigawa, Messrs. A. Barnard, Percy Holt, W. C. Ward, S. Samuel, Otani, Yoshiwara, Tanabe, Kawashima, Taguchi, Kawasaki, Okamoto, Nakajima, Oka, Idzumi, Kikuchi, Kawanabe, Fujii, Kitsuki, Sonoda, Ishiware, Choyen, Tona, S. Fujii, Yoshi-

wara, and Yamamura in cabin; and 1 European, 8 Chinese, and 192 Japanese in steerage.

DEPARTED.

Per British steamer *Zambesi*, for Hongkong via Kobe and Nagasaki:—Mr. and Mrs. Durani, Mrs. Anderson, Miss Wynn, Rev. R. W. Smart, Surgeon S. A. Crick, A.M.D., Messrs. J. N. Paulin and servant, W. R. Bennett, A. Barnard, Hake, A. H. Groom, and Blackmore, in cabin; and 14 Japanese in steerage.

Per Japanese steamer *Nagaya Maru*, for Shanghai and ports:—Dr. and Mrs. C. Gattoche, Mr. and Mrs. Oshima, Mr. and Mrs. Komochi, Mrs. Arishima, Colonel Nagaya, Colonel Saito, Dr. R. Rathgen, Messrs. J. Rickett, W. S. Robilliard, O. Korschelt, F. D. Cheshire, W. Drummond, J. Potter, Iwasa, Wada, Okamoto, Kato, Nakamikado, Matsumura, and Okura in cabin.

REPORTS.

The Japanese steamer *Gembu Maru*, Captain F. J. Brown, reports having left Fushiki on the 30th June, at 4.30 a.m., and experienced light winds and cloudy weather on the West Coast; arrived at Shimonoseki on the 2nd July, at 9.30 a.m. Left Shimonoseki on the same day, at 3.30 p.m. and arrived at Kobe on the following day, at 5.20 p.m.; fine weather through the Inland Sea. Left Kobe on the 5th July, at 9.30 p.m. and arrived at Yokohama on the 7th July, at noon; light winds and overcast with occasional showers throughout the passage from Kobe.

The British steamer *Benledi*, Captain J. Ross, reports leaving Nagasaki with light winds and cloudy weather on the first part of the voyage, and on the latter part, strong winds and thick, rainy weather.

VESSELS ON THE BERTH.

Ascalon, for New York via ports—Quick Despatch.—C. Illies & Co.
Benledi, for London via ports—22nd July.—Mourilyan, Heilmann & Co.
City of Tokio, for San Francisco—20th July.—P. M. S.S. Co.
Ehrenfels, for New York via ports—6th July.—Adamson, Bell & Co.
Feronia, for Havre and Hamburg via ports—July Despatch.—Simon, Evers & Co.
Grecian, for San Francisco—11th July.—Frazier & Co.
John C. Munro, for Victoria, V.I.—Middle of July.—Corney & Co.
Takasago Maru, for Shanghai and ports—18th July, at 6 p.m.—Mitsu Bishi M. S.S. Co.
Yorkshire, for New York via Suez Canal—Quick Despatch.—Smith, Baker & Co.

SHIPPING IN YOKOHAMA.

STEAMERS.

Ascalon, British steamer, 1,523, Geo. Dinsdale, 1st July,—Hongkong via Kobe, Ballast.—C. Illies & Co.
Benledi, British steamer, 1,000, J. Ross, 9th July,—Nagasaki 5th July, Coal.—Mourilyan, Heilmann & Co.

Feronia, German steamer, 1,115, F. Nagel, 9th July,—Hongkong, General.—Simon, Evers & Co.
Mensaleh, French steamer, 1,276, B. Blanc, 7th July,—Hongkong 1st July, Mails, Treasure, and General.—Messageries Maritimes Co.
Oxfordshire, British steamer, 998, Jones, 6th July,—Hongkong 29th June, General.—Smith, Baker & Co.
Yorkshire, British steamer, 1,425, Arnold, 1st July,—Kobe 29th June, General.—Smith, Baker & Co.

LATEST COMMERCIAL.

IMPORTS.

During the week there has been rather more doing in Yarns, some 1,200 bales being reported sold, and prices all round are a trifle firmer. In Shirtings, there have been but few transactions at about same prices. Other Goods call for no special remarks, and Metals are very quiet.

COTTON YARNS.

| | PER PICUL. |
|-----------------------------------|------------------|
| Nos. 16 to 24, Common to Medium - | \$25.25 to 28.50 |
| Nos. 16 to 24, Good to Best - | 29.25 to 30.60 |
| Bombay, No. 20, Good to Best - | 25.50 to 28.25 |

| Round and square up to ½ inch - | 2.80 to 3.00 |
| Nailrod, assorted - | 2.25 to 2.50 |
| Nailrod, small size - | 2.85 to 3.10 |

KEROSENE.

The Market continued its downward course until the 9th instant, when sales of Devoe were made at \$1.65 and Comet at \$1.55. After this an improvement set in and the same brands realized \$1.69 and \$1.62 respectively. Total sales during the week amount to 65,000 and deliveries to 23,000 cases. The deliveries begin to show the usual increase at this season of the year, but there would appear to be no grounds for any advance in prices. Stocks consist of about 642,000 cases sold and unsold oil. Holders now ask for:—

| | PER CASE. |
|----------|-----------|
| Devoe - | \$1.70 |
| Comet - | 1.65 |
| Stella - | 1.61 |

SUGAR.

The Market is strong for all grades, and Browns are held for higher rates. Buyers offer 4.90 to 4.95 per picul, but holders demand 5.00 to 5.25. The Stock on hand is quite 35,000 piculs. For White Sugar, of which there is a large Stock, there is a good demand at the quotations given below:—

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$8.50 to 9.00 |
| White, No. 2 - | 8.00 to 8.50 |
| White, No. 3 - | 7.25 to 8.00 |
| White, No. 4 - | 6.25 to 6.75 |
| White, No. 5 - | 5.25 to 5.50 |
| Brown Formosa - | 4.95 to 5.00 |

EXPORTS.

SILK.

Hanks.—There has been more passing during the week, and prices have hardened to about \$10 above the lowest point. This has reacted on the interior markets and prices there (which had declined in sympathy with quotations here), have again advanced one or two momme.

Filatures.—These kinds are at present in small supply those which have arrived are Good Medium Bushiu and Koshiu sorts about 12/14/16 deniers: other and finer kinds will be on the market in the course of a week or so.

Settlements for the week are returned as 300 piculs, including a little old silk. Export to date is 343 bales, against 543 at same date last year, while the Messageries steamer leaving to-morrow will take a fair shipment. The market at closing is a shade weaker.

| | QUOTATIONS. |
|---------------------------------|--------------|
| Hanks—No. 2½ - | \$490 to 495 |
| Hanks—No. 3 - | 470 to 480 |
| Hanks—No. 3½ - | 450 to 460 |
| Filatures—No. 1, 14/16 denier - | 630 to 640 |
| Filatures—No. 1½ - | 620 to 630 |

TEA.

There is little or no change to report in the position of our Market for the past week, buyers have shown little disposition to purchase, and business in consequence has been limited. Settlements since our last weekly report are only 3,865 piculs, principally composed of Good Medium to Fine sorts. Settlements here and at Kobe are 152,465 piculs, against 166,780 piculs at the corresponding date in 1882. The following are the shipments of Tea to the United States and Canada since the 7th instant:—The steamship *Harter*, sailed on the 4th July, took 816,122 lbs. Tea, viz: 502,076 lbs. for New York, and 314,046 lbs. for Canada. The steamship *City of Rio de Janeiro*, sailed on the 6th July, took 528,655 lbs. Tea, viz: 136,888 lbs. for New York, 81,295 lbs. for Chicago, 24,190 lbs. for Buffalo, 15,155 lbs. for Saint Paul, 1,500 lbs. for Salt Lake City, 180,725 lbs. for San Francisco, and 88,902 lbs. for Canada. The steamships *Yorkshire* and *Arcticon* will probably sail on the 18th instant, and *Ehrenfels* on or about the 19th instant. Rates of freight are 45 shillings per ton of 40 cubic feet. The American ship *Grecian* will not sail for San Francisco before Tuesday next.

| | QUOTATIONS. |
|---------------|--------------|
| Common - | \$12 & under |
| Good Common - | 13 to 15 |
| Medium - | 16 to 17 |
| Good Medium - | 18 to 20 |
| Fine - | 22 to 24 |
| Finest - | 25 to 27 |
| Choice - | 28 to 31 |
| Choicest - | 33 & up'ds |

EXCHANGE.

The amount of business transacted during the week has been small, and rates show a further decline on those ruling at the date of our last issue.

| | |
|-------------------------------------------|--------------|
| Sterling—Bank Bills on demand - | 3/7½ |
| Sterling—Bank 4 months' sight - | 3/8½ |
| Sterling—Private 4 months' sight - | 3/8½ |

| On San Francisco—Private 30 days' sight - | 89 |

KINSATSU QUOTATIONS.

The following table shows the rate of the day, and the fluctuation during the past week:—

| | |
|----------------------------|------|
| Monday, July 9th | 127 |
| Tuesday, July 10th | 127½ |
| Wednesday, July 11th | 127½ |
| Thursday, July 12th | 126½ |
| Friday, July 13th | 125½ |
| Saturday, July 14th | 124½ |

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c., is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

For the excellence of our Manufactures, we have received following AWARDS:—

Vienna Exhibition, 1873, Diploma of Merit.
South African Exhibition, 1877, Gold Medal.

Paris Exhibition, 1878, Gold Medal.*

Sydney Exhibition, 1879, First-class Diploma.
Melbourne Exhibition, 1881, First-class Award.

* The ONLY ONE awarded to any Tin Plate Manufacturer.

Celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia, and all other colours, of the finest quality only.

**ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.**

**ATKINSON'S CHOICE PERFUMES FOR
THE HANDKERCHIEF.**

White Rose, Frangipanna, Ylang-ylang, Staphanotis, Opopanax, Jockey Club, Ess Bouquet, Trevel, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other colours, of the finest quality only.

ATKINSON'S FLORIDA WATER,

a most fragrant Perfume distilled from the choicest Essences

ATKINSON'S QUININE HAIR LOTION,

a very refreshing Wash which stimulates the skin to a healthy action and promotes the growth of the hair.

**ATKINSON'S
ETHEREAL ESSENCE OF LAVENDER,**

a powerful Perfume distilled from the finest flowers.

ATKINSON'S WHITE ROSE TOILET VINEGAR,

a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,

and other specialities and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

**J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.**

PRICE LIST FREE ON APPLICATION.

CAUTION.—Beware. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 21ST, 1883.

WEEKLY NOTES.

FROM Korea comes news that General Foote, the United States Envoy, is gradually providing himself with a habitation at Soul. It appears that the General has to have all his furniture made by native carpenters who are, of course, entirely new to the work. He is not, however, overwhelmed with diplomatic business. American interests exist as yet only on paper. He has lost the services of Mr. Saito, of the Japanese Foreign Office, whose stay in Korea or rather the duration of his absence from Tokijo, was limited by mutual agreement to three months. On the whole it is as well, perhaps, that no attempt has been made to alter this arrangement as the presence of a Japanese official on General Foote's Staff, though perfectly natural at first, was open to misinterpretation so soon as it assumed a character other than temporary. There is an honest desire on Japan's part to avoid anything calculated to wound Chinese susceptibilities; and we believe we may say with confidence that whatever policy China may deem it most conducive to her interests to pursue in Korea will meet with no opposition from Japan.

HIS EXCELLENCY IWAKURA, Third Minister of State, expired at his residence in Tokijo on Friday the 20th instant at 7.30 a.m. His Excellency had been ailing for some months, but his malady did not exhibit any alarming symptoms until his visit to Kiyoto in the month of June. There he became completely prostrated, and his condition excited so much apprehension that the Emperor despatched his own physicians, Drs. Ito and Baelz, to attend the sick man. His Excellency Inouye, Minister for Foreign Affairs, happened to be in Kiyoto at the time, and remained with Mr. Iwakura until a temporary improvement in the latter's condition enabled him to return to Tokijo on the 28th of June. It was, however, fully recognised that any hope of ultimate recovery was idle. His Excellency gradually sank, and although the people's desire put the most sanguine interpretation upon every rumour of returning convalescence, his friends and colleagues knew well that another prominent figure was about to pass away from the stage of Japanese history. Yet to the very last the public refused to be persuaded that such a calamity was imminent, and from day to day the vernacular journals kept hope alive by stories of improved bulletins, some even going so far as to represent the Minister taking part again in State affairs. But this was never to be. Not, indeed until a few hours before life was extinct did the untiring brain cease to busy itself with the problems which had occupied it for so many years, and it is said that the thought of the dying statesman found expression in counsels which his colleagues are not likely to forget. But beyond this the rumours of his temporary resurrections of duty were simply echoes of a popular faith inspired by the memory of his indefatigable life. His persistent labours had become such an intimate part of the national vitality and had occupied so large a space in the field of public vision, that like those luminous appearances of which astronomers tell us, their image remained visible after the reality had ceased to exist. If anything were wanting to mark the high place he held in his Sovereign's esteem, it was furnished by the circumstances of the last visit he received from the Emperor, who, learning on Thursday morning that the end was imminent, hastened to the dying man's side without awaiting the attendance of his ordinary escort. It were idle to attempt any estimate of the loss which his country suffers by the decease of this remarkable man. To those who survive him it will at least be some consolation to remember that he lived to see his country arrive within appreciable distance of the place it had been his constant aim to win for her in the comity of nations.

MUCH uncertainty appears to exist in Europe with regard to the real intentions of France in Indo-China. The Paris Correspondent of the *Pall Mall Budget* emphatically contradicts the idea that France has any design of seizing upon Tonquin and Madagascar. He says that the perils of such proceedings "are now too evident for any government that would face them to live a week." "Had it not been," he proceeds, "that Commander Riviere and his little force were beleaguered at Hanoi, no credit would ever have been voted;" and there were "infinite negotiations in the lobbies and beating about bushes" before Ministers thought it safe to ask for it. There is an old saying in Japan about the ease with which things are overlooked which lie in the shadow at the base of the lamp. Something of the sort seems applicable to people at this end of the world, for certainly the notion that Commander Riviere was beleaguered at Hanoi never occurred to anybody out here. Neither did we imagine that France meant peace or that the French Cabinet had entered into a secret agreement "that when the ill-fated and gallant naval officer was released from his perilous situation, some kind of an arrangement should be made with Annam which would enable the French expeditionary force to come away with dignity." All we can say is that if France is really imbued with these pacific purposes, she is most unfortunate in her choice of officials to represent her policy. We find it difficult to conceive M. Tricou carrying an olive-branch. Nature may have fitted him for such a rôle, but if so he has done himself much violence since his visit to China. Meanwhile Lord Randolph Churchill has been proposing to save five millions a year by reducing the army, and the opponents of the measure seek to silence him by speaking of "a Franco-Chinese war looming on the Eastern horizon." What may be the connection between a Franco-Chinese war and the strength of the English army, one is puzzled at first sight to discover, but there is comfort in the thought that the English people are likely to take a lively interest in the progress of events out here. We may possibly learn before long that French doings in Madagascar are not so simple as they seem. The bombardment of Tomatave appears to have been about as unnecessary and reckless a performance as need be; and it is doubtful whether a good many English subjects did not fall under the French fire. There is a rumour, too, that Admiral Pierre has been ordering all the Consuls in Madagascar to haul down their flags and that England wants to

know the reason why. There is further a story which, though obviously of no real significance, plays the part of the proverbial straw to the wind of public opinion in consequence of the interpretation put upon it. The captain of a French cruiser has been claiming a right to land and fish on some little rocky islets known as the Echrhon, which lie between France and Jersey, and have been regarded as a dependency of the latter for six hundred years. Of course it is not to be supposed that captains of cruisers are commissioned by the French Government to act as exponents of its new colonial policy, or that under any circumstances they would be directed to prosecute their aggressions on British territory in the British channel. But the fact that these extravagant hypotheses actually find supporters, shows what uneasy feelings have been excited by France's sudden mania for spreading herself abroad. China may take the Echrhon Isles if she is in need of a precedent and ask how it is that British dependencies are protected even against foreign fish-stealers, while Chinese tributaries are themselves stolen with impunity.

THE third annual report of the Banking Bureau for the period 30th June, 1880, to 30th June, 1881, shows that the numbers of banks and branches throughout Japan, the Specie Bank excepted, was 255 at the latter date, with an aggregate capital of 43,216,100 yen, a note issue of 34,385,153 yen, and a reserve fund of only 2,185,382 yen. The profits realized were over 16 per cent., and the dividends declared over 13 per cent., of the capital. The Specie Bank was less fortunate. With a capital of 3 millions, a reserve of 23,900 and a note issue of 302,920, its aggregate profits were less than 11 per cent., and its declared dividends less than 5 per cent., of its capital. It is worthy of mark that, while the banks issuing inconvertible paper succeeded in getting into circulation notes to the value of nearly 80 per cent. of their total capital, the Specie Bank, issuing convertible paper, only found demand for notes to the amount of 10 per cent. of its capital. The total value of the financial operations conducted by the banks throughout Japan during the period under review, was nearly 21 times their aggregate capital. The report brings out the extraordinary fact that, owing to the abnormal ebb and flow of money caused by currency fluctuations, rates of interest, for temporary loans, varying from 35 to 55 per cent. are frequently charged and readily paid. Trade saddled with such burdens as these can scarcely hope for a vigorous growth.

No details are yet known of the disaster in the Hiroshima gaol, where upwards of sixty persons lost their lives in a conflagration. One of the vernacular journals—the *Choya Shimbu*—has commented on the occurrence in terms which suggest a desire to fix the whole responsibility of the misfortune on the prison authorities and to enlist popular sympathy on account of prisoners generally. It would not be right to assume that the motive of such criticism is anything but

humane, yet the principal impression it creates is one of regret that its author has not cared to furnish some evidence of the grave charges he formulates. The public is only too ready to believe everything that points to official mismanagement, and those who are shrewd enough to appreciate this credulity can trade on it to the full extent of their fancy, even as the *Contemporary Review* is at present assisting Prince Krapotkin to trade. On the other hand, it is a reasonable hypothesis that due precautions were not taken to guard against such a cruel catastrophe as that which occurred at Hiroshima on the 3rd instant. The *Choya Shimbu* points out that the 35th Article of the Prison Regulations provides that in cases where a prison is in imminent danger from fire or other cases all those confined there shall be temporarily liberated except such as are awaiting trial. The prisoners at Hiroshima belonged chiefly to the latter category, and the *Choya* calls attention to the anomalous nature of a rule which discriminates in favour of condemned criminals. We have not the Prison Regulations before us, and are, therefore, unable to say whether this version is correct, but it seems most unlikely that any such irrational distinction should exist. That there is room for improvement in the treatment of prisoners cannot be denied, judging, at least, from a Western standpoint. Not the smallest of existing abuses is the fashion of conducting persons under police escort through the streets. That a man who has not yet undergone trial and who may consequently be entirely innocent of the crime laid to his charge, should be led along the public thoroughfares with a rope attached to his waist, is a cruel and unjust system. Among those witnessing these performances there may be many competent to distinguish the *hon-nawa*—which by its attachment to the breast and shoulders, marks the convicted criminal—from the *koshi-nawa*—which by its attachment to the girdle alone, marks the prisoner not yet tried—but whether these subtle shades of difference satisfy the principles of personal liberty, or violate the fundamental doctrine of civilized law, which assumes every man innocent until his guilt is proved, is a question there cannot be much difficulty in answering. The friends of progress in Japan will do well to consider whether some immediate reform is not here called for.

THE trial of the Fukushima prisoners, who stand charged with conspiring against the peace of the realm, was commenced at the Extraordinary Court in Tokiyo on the 19th instant. The prisoners are six in all, namely, one *Shizoku* of Tokiyo, by name Hanaka, and five *Heimin* of Fukushima. The combination is curious. Hitherto we have had no instances of political conspiracies in which persons of the *Heimin* class were concerned, and the general impression is that the Fukushima suspects will appear to have been more misled than misleading. The trial is conducted with open doors and large crowds assemble daily to listen to the proceed-

ings. The reports furnished by the vernacular press are very full and accurate. It appears that up to the present the examination of the *Shizoku*, Mr. Hanaka, has occupied the attention of the Court. The prisoner, who confessed his guilt before the Police Tribunals in Fukushima, now maintains his innocence, and declares in open Court that his previous confession was extorted from him under pressure of the barbarous treatment he received at the hands of the police. Exposure to the inclemency of the season (mid-winter) and actual personal violence are the abuses of which he complains. These were substantially the grounds of complaint advanced several months ago and published by the vernacular journals, some of which by their intemperate comments incurred the displeasure of the law. It is well that the truth of these complaints should at length be openly investigated, and the public will doubtless follow with much curiosity the course of this the first really important trial which has ever been conducted with open doors in Japan.

THE departure of Sir Harry Parkes for Peking is fixed for the end—probably about the 20th—of August. Sir Harry's health has been slightly impaired of late, and in accordance with the counsels of his medical advisers he has started on a trip to Hakodate. His successor, the Honorable F. Plunkett, is expected to arrive in Japan about the middle of September.

THE want of regular steam communication to the open ports of Korea is beginning to attract attention. The *Yiji Shimo* comments on the condition of Japanese settlers at Inchon in forcible terms. Inchon was opened to foreign (Japanese) commerce at the beginning of this year, and there are now about 150 Japanese residing there. It appears, however, that these unfortunate pioneers of commerce are entirely dependent upon chance or good luck for the means of communicating with their native land. The difficulties of navigation are such that small vessels cannot venture to visit the place except during the summer and the trade is not sufficiently extensive to attract steamers of any considerable size. The consequence is that the settlers are exposed to sufferings which the Tokiyo journal describes with much vividness, urging the Government to grant a subsidy to some shipping company so that regular communication, even at long intervals, may be established. The suggestion seems very just, and we make no doubt that it will receive favorable consideration at the hands of the authorities.

NOTES.

THE following notice has been posted at the office of the Telegraph Section of the Public Works Department:—"In consequence of a strike existing among the staff of the Western Union Telegraph Company, traffic arrangements in the United States are utterly disorganized.

Telegrams for places in the United States, other than New York city, can only be accepted at the risk and responsibility of the sender."

We have received from Consul-General Scribe a letter with reference to our comments on the case of *Hiroshima v. Blakeway*, recently tried in H.B.M.'s Court for Japan. Mr. Scribe makes it quite plain that our deductions with reference to his official action in the matter of the sale of the *Ni* to Tsunematsu, were entirely erroneous. So far from advising the sale, he had no knowledge of it until after its conclusion. It is scarcely necessary to say that those deductions were directly based upon the published reports of the evidence given in Court. Beyond that evidence we could not travel, and with our present knowledge of the facts, we cannot but reiterate our previously expressed regret that the testimony stopped where it did. It is clear that the responsibility which we, in common with many of our fellow-residents, believed to attach to the Consul-General, has no foundation whatsoever. We are precluded from publishing Mr. Scribe's letter, as it contains matter which could not fail to affect the issue of the appeal now proceeding—an appeal of which we had no anticipation when we permitted ourselves to discuss the case in our issue of the 13th instant.

An article which we reproduce elsewhere from the *Nichi Nichi Shimbun* on the subject of the tobacco tax, illustrates the anomalies with which Japan has to contend in consequence of her disability to exercise the right of all independent countries—control her own tariff. Our readers are aware that the Japanese Government, confronted by the necessity of augmenting the income of the Treasury, imposed, last year, heavy additional taxes on *saké* and tobacco. It was thought, at the time, that this step, so far at least as tobacco was concerned, was ill-considered. In Japan the use of the fragrant weed is almost universal, so much so, indeed, that it may claim to be included among the daily necessities of the lower classes. To tax it, therefore, seemed much the same as to tax bread or salt. These criticisms, however, were confined to foreigners. Among the Japanese, though growers of the leaf raised their voices here and there, the majority of the nation appeared to think that tobacco belongs to the category of luxuries and that, in any readjustment of taxation, it might properly be saddled with a heavy charge. But what of tobacco in the form of cigars and cigarettes? That used by the pipe-smoking section of the people had nothing to fear from foreign competition, inasmuch as the imported weed is quite unsuited to this purpose. The taste for cigars and cigarettes, however, had largely developed, and the manufacture of the latter especially promised to become a flourishing industry. To levy an increased tax upon these without altering the tariff for imported cigarettes, would have been to confer on the latter an unfair advantage, and in all probability to annihilate a new Japanese industry. On the other hand, to tax tobacco in

the cut or leaf form, and let cigars and cigarettes escape, would virtually amount to imposing a fresh burden on the lower orders and letting the upper go scot-free. Yet the Japanese Government seems to have preferred the latter course to the former. They had to choose between doing an injustice to their own people or still further diminishing the meagre list of Japanese industries. It would be difficult to say one word in favour of the system which involves them in such dilemmas. Imagine how European financiers would fare if they were required to regulate internal taxes without touching external tariffs. Under such circumstances national revenues could only be rendered elastic at the risk of seriously disturbing commercial interests. It is well to remember when we find fault with the condition of Japanese finance that her difficulties are not a little increased by the unjust and arbitrary restrictions Western Powers have imposed upon her.

It is now announced that the opening ceremony of the Tokiyo-Takahashi Railway will be performed on the 25th instant, but whether or no this is another false alarm, we are not in a position to say. At one time we hear the delay attributed to want of forethought in not moving the rolling-stock from Shimbashi, where it lay for months, to Ueno where it might have lain equally well; at another, we are told that difficulties have occurred with the road itself. The truth is, we believe, that newsmongers have been amusing themselves by arbitrarily fixing days for the opening of the line and that hitherto their predictions have been erroneous. We shall believe that the date has been really determined when we see some announcement from the Directors themselves.

ANOTHER fire is reported to have occurred at the prison in the new Prefecture of Toyama, where convicts awaiting trial were confined. The instances of conflagrations in goals are becoming curiously frequent. It seems difficult to doubt that they are the work of incendiaries. The authorities will probably find at last that if prison regulations are to be modelled after European types, something more substantial than wood will have to be employed as a building material.

THE *Hochi Shimbun* states that paper money to the amount of *yen* 238,000 was destroyed in the compound of the Printing Bureau on Friday. We believe that the notes thus destroyed from time to time do not represent so much paper withdrawn from circulation, but are merely *kinsatsu* worn out or of old type.

THE American expedition which left New York on the 2nd of March last for the Caroline Islands, for the purpose of observing the solar eclipse which was visible in the South Pacific on the 6th of May, arrived in San Francisco *en route* to New York on the 11th of last month. The results of their investigations are highly satisfactory; and the brief history of their trip as given in the *Bulletin* is very interesting.

Caroline Island, the station where their observations were made, is a small coral island some seven by two miles in size, situated about four hundred miles north of Tahiti. The expedition reached its destination on April 21st, in ample time to erect all the necessary buildings for the accommodation of the instruments and the observers. Fortunately, the island contained two or three small frame houses which were left in good repair by the factor of the American Guano Company, and these were utilized as dwellings by the American astronomers, by the English party which accompanied them, as well as by the French astronomers who arrived at the Island a few days later. During the stay of the scientists, the climate was very uncertain. Nearly every day there were violent rain storms, and on the morning of May 6th, the very day of the eclipse, no less than three showers fell; but by great good fortune the sky was very favorable during the whole period required for the investigations. Perfectly successful observations were obtained by the three parties. The chief work accomplished consisted, first, in the proof of the non-existence of a planet, interior to Mercury. This result, while it is not of as much popular interest as the discovery of a new member of the solar system, is, from a scientific point of view, quite as important. Full spectroscopic observations were made by several observers. The conclusion drawn by the American spectroscopists is that the solar corona is, in great part, a phenomenon of diffraction. The French party also made spectroscopic observations which are not yet published. The English party photographed the spectrum; and their results cannot be stated until after their pictures are examined in London. Most of the work done is of such a nature as not to admit of popular statement; but is regarded as entirely satisfactory by the astronomers themselves. Our San Francisco contemporary remarks that, "it is also a source of satisfaction that the long journey of 16,000 miles has not been undertaken for no end. Americans may also be glad that it was in the power of the United States expedition to offer to the Royal Society of London the opportunity to send two observers from England. These gentlemen joined the expedition at Callao, and are returning to London *via* San Francisco. The French party will probably arrive in San Francisco shortly, on board the French man-of-war *L'Eclair*." Immediately on his arrival in California the Chief of the American expedition sent an official telegram to Princeton. It runs thus:—

To Professor C. A. Young, Princeton, N. J.:—American Eclipse expedition arrived at San Francisco June 11th. Holden reports no Vulcan as bright as 5th magnitude. Hastings' observations prove the corona to be largely a phenomenon of diffraction by the great change in length of 1,474 on east and west sides of the sun. No dark lines in corona but D. Full observations with grating spectroscope, prismatic telescope, and integrating spectroscope by Rockwell, Upton, and Brown. Contacts by Preston. English and French parties successful.—E. S. HOLDEN.

Appended are the names of the members of the three parties:—American Party: Messrs. Edward S. Holden, Director of the Washburn Observatory, Madison, Wis., Chief of Party; Charles S. Hastings, Professor of Physics in the Johns-Hopkins University, Baltimore, Md.; Charles H. Rockwell, Tarrytown, N.Y.; E. D. Preston, Aid

U.S. Coast and Geodetic Survey, Washington, D.C.; Winslow Upton, U.S. Signal Office, Washington, D.C.; Ensign S. J. Brown, U.S.N., U.S. Naval Observatory, Washington, D.C. (To this contingent has to be added four volunteer observers from the U.S.S. *Hartford*, which vessel conveyed the expedition from Callao to its destination).—English Party: Messrs. H. A. Lawrence and C. Ray Woods, of the South Kensington Museum.—French Party: M. Ganssen, Director of the Solar Observatory of Mendon, Chief of Party; M. Trovelot, Assistant, Mendon Observatory; M. Pasteur, Photographer, Mendon Observatory; M. Tacchini, Director of the Observatory at Rome; M. Pallisa of the Imperial Observatory at Vienna. The last two named are invited guests.

THE similarity of customs in different countries and at long intervals of time is sometimes very remarkable. Dr. G. Ebers tells us that within the memory of living men there existed at Cairo, among the various guilds and trades of the town, a guild of thieves who had their recognised president, or *schecho*, like all the rest. To this president people often went to recover stolen goods and bring the thieves to justice, if necessary, and they generally succeeded with his help. Dr. Ebers compares this with a habit which prevailed in Sicily centuries ago, and which is thus described by Diodorus:—"It was ordained that those who practised the avocation of thief should inscribe their names with the president of the thieves. If they had stolen anything, they had at once to confess what they had done and show their booty. The robbed person was then required to send to this president a written statement of all the things he had missed, and mention place, day, and hour of their disappearance. In this way everything was easily found, and the robbed person received the lost property on paying a fourth of it. As it was impossible to prevent theft entirely, the lawgiver thus invented a means of getting back what was stolen in return for a certain redemption money, which was willingly paid." The laws never went so far as this in Japan, but up to ten years ago the thieves in Tokiyo had a chief (*Kashira*) who might generally be counted on to give effective assistance towards the recovery of stolen property. Of course open communication with this individual was confined to the lower orders of the people. His existence was not avowedly recognised by the *Samurai*, who nevertheless often had vicarious recourse to his aid. So, too, the criminals in the goals elected themselves a King and obeyed him with the utmost fidelity during the term of their incarceration. Old residents of Tokiyo recount wonderful stories of the immunity enjoyed by thieves in former times. Many of the professional pickpockets were known by sight to the tradesfolk of the district, under whose very eyes they plied their calling, secured against exposure by the vengeance their comrades never failed to wreak on an informer. The Japanese, indeed, are the most law-abiding people in the universe, and yet, strange to say, their con-

fidence in the efficiency of the laws is practically of the weakest description. They will often consent to be made the victims of injustice or wrong rather than appeal to the authorities for protection, being deterred by a vague apprehension of retaliation or annoyance. Probably this is a habit of mind bequeathed to them from feudal times, when the authorities were almost inaccessible, and Justice was so ill administered that its dictates could never be foreseen. At any rate it is only within the past few years that the profession of thieving ceased to receive a very considerable share of tolerance, if not deference.

BROADLY speaking, it is no doubt correct to say that Japan has adopted Western inventions and scientific appliances with avidity; that she has shown a desire for change which is abnormal, and a disposition to destroy her charts and sail away into unsurveyed seas, while China remains pretty much where she always was. She is now, with some exceptions, what she was twenty, two hundred, perhaps two thousand years ago, while a new Japan has been created in fifteen years. All this, we say, is true, but it is not the whole truth. China also has had her changes; not indeed so marked or rapid, not so much in the nature of a *volte-face* on all her past as those of her neighbour. The radical difference between the two countries in this respect we take to be this: that, while Japan loves change for the sake of change, China dislikes it, and will only adopt it when it is clearly demonstrated to her that change is absolutely necessary. To the Japanese change appears to be a delightful excitement, to the Chinese a distasteful necessity; to the former whatever is must be wrong, to the latter whatever is, is right. As a consequence of this difference between the two peoples, when China once makes a step forward it is generally after much deliberation, and is never retraced. Japan is constantly undertaking new schemes with little care or thought for the morrow, but with the applause of injudicious foreign friends. In a short time she discovers that she has underrated the expense or exaggerated the results, and her projects are straightway abandoned as rapidly and thoughtlessly as they were commenced. Swift suggested as a suitable subject for a philosophical writer a history of human projects which were never carried out; the historian of modern Japan finds these at every turn. Where, for example, are the results of the great surveys, trigonometrical and others, which were commenced in Yezo and the main island about ten years ago? A large, expensive, but highly competent foreign staff was engaged, and worked for a few years; but suddenly the whole Survey Department was swept away, and the valuable instruments are, or were recently, lying rusting in a warehouse in Tokiyo. The same story may be told of scores of other scientific or educational undertakings in Japan. —*Nature*.

Le Temps contains some interesting correspondence from Haiphong, dated April 6th. "In replacing," says the correspondent "the former

Governor of Hanoi by the Governor of Song-lai, an official so good-natured that when two of our soldiers collided against his palanquin of malice prepense, he humbly begged their pardons, the Tuduc took care to have in the former place a man whom he knew to be capable of surrendering it to him treacherously." What a curious state of affairs this sentence reveals! It is the same old story; lawless arbitrariness on one side, and on the other, patience, which if it suffers itself to be at all disturbed, becomes a pretext for fresh aggression. One does not know which to admire, the discipline of the French soldiers who made a plaything of the Governor and his palanquin, or the prudence of that unfortunate dignitary. The story, however, goes on to say that, after the dismantling of the citadel of Hanoi, the French Commandant had not been permitted to dislodge the high Annamese mandarins, nor even to substitute the French flag for that of Annam, which continued floating over the tower constructed in the interior of the fortification. The only concession he could obtain, and that not without many protestations from the Court of Hué, was that the right to occupy the royal pagoda. Accordingly, during the night of March 23rd, the treacherous governor left the citadel with his followers, choosing for his point of exit the Eastern Gate, the passage of which had been from the first forbidden to the Europeans. If any other proof were needed of the perfidious rascality of this Annamese savage it is furnished, we are naively informed, by the fact that he peremptorily refused to permit the French to slaughter buffaloes, though at the Chinese New Year he freely granted leave to all Asiatics asking for it. Three days after the Governor's retreat, the citadel had to suffer an attack well planned and all but successful. It appears that the royal pagoda, occupied by the French troops, is flanked by two large towers of observation which completely command it. The scheme of the Annamese troops was to get possession of these towers from whence they would have been able to shoot down, at their leisure, the occupants of the pagoda, which is open on all sides. A little more dash and pluck would have enabled them to carry through this design, but vigilance saved the French from a disaster which their forethought does not seem to have provided against. On the day following this abortive attack, Commandant de Vilers learned from his outposts that the enemy had not abandoned their positions and that they seemed to contemplate defending them obstinately. He accordingly resolved to make an offensive reconnaissance. The troops employed were two companies of marine infantry and one of blue-jackets from the *Lopard*. Crossing the river, they soon found themselves on the right of the Annamese position, and at a distance of about a *kilometre* the fire of the Asiatics' artillery obliged them to deploy into skirmishing order. Presently the signal for the assault sounded, and soldiers and sailors, forgetting danger in their ardour of emulation, rushed forward to the counter-scarp of the ditch which surrounded the village

of Giacuc, where the Annamites were entrenched "They had traversed," says their historian, "a distance of 300 *mètres* under a hail of shot and shell." To cross the ditch, leap from the embrasures, overthrow the *chevaux de frise*, and chase the enemy through the village at the point of the bayonet, was the business of a few minutes. When they had time to examine the entrenchments, they found a work upon which weeks of labour had been expended and which was "all but impregnable." The *spolia opima* were six field-pieces, two guns of position, a black flag, sundry rifles and revolvers with marks of Potsdam and Birmingham manufacturers, powder-flasks, cartridges, &c., "showing how easily the Annamites supply themselves with munitions of war at Hongkong and elsewhere." Five men wounded represented the total loss of the assailants in these operations. Meanwhile the main body of the French forces, under Commandant Rivière, had taken Nam-dinh, and the two following orders of the day were subsequently issued by that officer:—

Nam-Dinh, le 27 mars 1883.

Soldats et marins,
Vous venez de montrer, à la prise de la citadelle de Nam-Dinh, le même entrain, la même valeur, le même dévouement qu'à la prise de la citadelle d'Hanoi (25 avril 1882). Je vous confonds les uns et les autres, les anciens comme les nouveaux, dans cet éloge, que votre brave colonel, béni à votre tête, vous décerne comme moi.
La patrie, qui vous suit de cœur dans les pays lointains où nous sommes, tressaillera bientôt d'émotion et d'orgueil en apprenant ce que vous avez fait.
Vive la France!

Hanoi, le 2 avril 1883.

Soldats et marins, pendant que vos camarades prenaient la citadelle de Nam-Dinh, vous repoussiez ici les troupes annamites et les Drapeaux noirs, qui attaquaient la pagode et qui se disposaient à investir Hanoi.
Vous faisiez plus, vous rejetiez ces troupes sur leurs villages de la rive gauche et vous les leur enleviez.
A Hanoi et à Nam-Dinh, vous étiez dignes les uns des autres; vous avez tous montré la vaillance, le discipline et l'élan qui font que le soldat est fier de lui-même et que le pays est fier de lui. Vous avez bien agi.
Vive la France!

SPEAKING of the unfortunate Commandant Rivière, who fell at Hanoi on May 19th, *Figaro* says that on the day before he set out for Toulon he came to the office of that journal to say good-bye to a member of the staff with whom he was very intimate. His friend thought him looking somewhat pale, and after a short conversation, shook him by the hand, saying:—"Good luck, *mon commandant*, you will come home with the stars of an admiral." Rivière's answer was:—"Good-bye, my dear friend. Remember me. We shall not see each other again. I do not know whether I shall ever be an admiral, but I know well that I shall not come back to France."

BEYOND the lamentable shooting of one Frenchman by another in a street of Haiphong, and the publication of General Bouet's proclamations as Commander-in-Chief of the French forces in Tonquin, there is no news of importance from that neighborhood. General Bouet's first manifest is to his army, and is dated "Hanoi, June 27, 1883." It runs thus:—

The General commanding in Tonquin to Officers, non-commissioned Officers, soldiers and marines of the expeditionary corps.—An official telegram addressed to the Governor of Cochinchina, dated 27th May, announces that the Chambers have unanimously voted the credits in relation to Tonquin and that France will avenge her brave sons.—A telegram of the following day nominates me to the supreme command in Tonquin. Behold me in the midst of you ready

to lead you anywhere that the exigencies of the patriotic mission which has been entrusted to us by the Government of the Republic may require of your discipline and courage. The new chiefs who come to lead you are known to you;—you will follow them with devotion and constancy and allow no reverse to tarnish the reputation of our arms. Pillage is dishonourable to any army; continue then to respect the property and the religion of the peaceable inhabitants of the country.

The second document is addressed to "the inhabitants of Tonquin." It states:—

The treaty of the 15th March, 1874, imposes on France the obligation of furnishing the necessary forces to insure the peace and tranquillity of the country.

The bands of brigands, vagabonds, without nationality, who live only by pillage and the exactions which have long troubled your tranquillity, have prevented you from reaping from this beautiful country all the riches which nature has bestowed upon it.

The Annamite authorities were pledged to maintain order and to protect the commerce of the Red River.

So long as France was able to hope that these authorities would fulfil this obligation she has done all that was possible to demonstrate the peaceable character of her designs.

To-day she can no longer abstain; her countrymen are menaced, her soldiers are murdered from ambushes constructed by the foreign brigands who have penetrated into the country. It is against them that the campaign is opened to-day, her only aim is to drive them back to the mountains from whence they came to plunder you. Those who are taken will be hung and their bodies will be given to the vultures. Numbers of troops have arrived, others are *en route* and will soon be among you; render them your assistance on their march and you will be bountifully indemnified. The flag of France is the symbol of justice, humanity and liberty. Come and find under its shadow the protection and peace which you have needed so long. A great people loyally offer you the hand, respond to its appeal and new and happy fortunes will henceforth open to you.

Le Gen. de Brigades Com. Supr. in Tonquin.
(Sgd.) BOUET.

THE *Nichi Nichi Shimbu* complains that the supply of native juriconsults in Japan is neither in proportion to the advance of society in other respects nor to the public demand for legal advice and assistance. One would be inclined to hope that the *Nichi Nichi Shimbu's* complaint is well founded. It tells that the Law Section of the Tokio Daigaku, whence the country looks for its supply of legists only gives diplomas to six or seven graduates a year: that the curriculum is too long—a fact which, combined with the comparatively heavy expense of tuition and residence, is deterrent. Hence the Educational Department has established a special Section in the University where a course of English, French, German, and Japanese law can be completed in four year's study.

JUDGMENT in the *Cyprus* case was delivered on Monday by His Honour as follows:—"The evidence adduced by the plaintiffs has in my opinion failed to support their claim as appearing on the summons, namely that, during the voyage of the *Cyprus* from Middlesbro' to Yokohama the provisions and water as supplied by the defendant were bad in quality and unfit for use, and that during the voyage the allowance of provisions and water to the plaintiffs was improperly reduced. The only point on which I have had some doubt, is as to whether the plaintiffs received, when in Hongkong, such a proportion of the quality of fresh meat delivered on board during the vessel's stay there as should have fallen to the share of the men when the requirements of the messes aft had been satisfied, but the defendant is entitled to the full advantage to be derived from the fact that, during the vessel's lengthened stay in Hongkong, no complaint, in the sense that the

word must be regarded when read with the Merchant Shipping Act, was made as to an insufficiency of provisions, and although I do not go the length of saying that the men were precluded on arrival at Yokohama from making a complaint in respect of the alleged insufficiency of fresh provisions supplied at Hongkong, yet the fact that no complaint involving an enquiry of any kind was made, cannot but tell unfavourably against the present claims of the plaintiffs. This summons is therefore dismissed in respect of each of the eight men whose claims have been embodied in the one summons, and in so dismissing it I have concluded to make no order as to costs."

A TELEGRAM dated Paris June 25th, to the *Indépendant de Saigon*, states that Marquis Ts'eng has left Paris for London, presumably for the purpose of soliciting the good offices of the British Government in endeavoring to effect an amicable settlement of the Tonquin difficulty. The *Indépendant* of the 26th of June announces that an energetic protest against the idea of separating Tonquin from Cochinchina, intended to be sent to the members of the French Parliament, was lying for signature at the Hotel de l'Univers, Saigon, on that date. The *Indépendant* of the 30th says it learns from a purely private source that it is not the intention of the French Ministry to definitely separate Tonquin from Cochinchina.

THE practice of over-insuring ships, so as to make a gain of their loss, is not an iniquity of modern date. In the seventh volume of his "English Garner," Mr. Arber has just reprinted Robert Lyde's remarkable narrative, published in 1693, of his "retaking of a ship, called *The Friend's Adventure*, of Topsham, from the French, where one Englishman and a boy set upon seven Frenchmen, killed two of them, took the other five prisoners, and brought the ship and them safe to England." Lyde, naturally thinking that this exploit would be acceptable to his employers, upon bringing the ship home sent a man "to ride to Exeter with a letter to the owners of the ship. But they gave him but a French half-crown and a shilling for carrying the news to them—eleven miles; for they did not much regard the news, having insured £560 upon the ship, and two men since appraised her but at £170." They subsequently sent him to sea again; but, meeting with contrary winds, he put back into port, thus narrowly escaping capture by a French privateer. "My owners hearing thereof, and that I was in safety, were very angry with me, and huffed at me because I did not stay to be a prey to the enemy." Various legal proceedings ensued with reference to salvage, the result of which is thus tersely summed up by poor Lyde:—"And so I ended my law and the greatest part of my money together."

THE Peking correspondent of the *North China Daily News*, writing apparently about the 20th of June, says that frequent meetings of the Fo-

reign Office Ministers seem to be taking place—presumably on the Tonquin question. “The Chinese papers are being eagerly asked for. The value of a native press is now felt. The Peking or Court *Gazette* does not condescend to take notice of such trifling affairs. The impression prevailing here” (in Peking) “seems to be that war with France is inevitable.” The writer adds, that the Committee appointed to report on the Anti-opium Memorial to the Chinese Government has met and has resolved to proceed. No action, however, beyond receiving suggestions for such a report or memorial will be taken before the autumn. The single members of the Customs office staff have lately moved into their new and commodious premises close to the Inspectorate. The head-office of this important branch of revenue presents now an imposing appearance. The Inspector-General is in the centre, and the offices, dwelling-houses of the officials, gas-works, and stables are all round. It is quite certain that the arsenal works near Sanchia-tien are to be carried on effectively. In the Shen-chi-ying, in the city, all manner of foreign machinery is stored, and it was at the suggestion of Li Hung-chang, it is said, that the Seventh Prince is going ahead with these works, with the view of utilising the machinery in hand.

THE *Mainichi* and *Hochi Shimbun* both announce that His Excellency Inouye is happily and steadily convalescent. He is reported by the former journal to have returned one of Mr. Iwakura's visits on the 14th instant: the latter sheet says that he has greatly benefited by the course of sea-bathing that he is taking in pursuance of the advice of Mr. Ito. We read also that Mr. Iwakura Tomonori, grandson of the Minister has been promoted to *Kwasoku* rank.

AN Indian paper contains the following:—A discovery of an extraordinary and very interesting description was recently made in connection with the cutting of the Twantay Canal, British Burmah, in the labourers having hit upon a subterranean wreck of a vessel. Twantay is a station about twelve miles distant from Rangoon, and the canal is a navigation-cut undertaken for the purpose of facilitating communication between Rangoon and Bassein and other stations. The cutting was commenced in January, 1882, and finished in March, 1883, all work being suspended during the monsoon months. The task was one attended with considerable difficulty in consequence of the country through which the canal passes being almost totally devoid of trees, and its water supply very poor. The canal is eight miles in length, and the engineer engaged in the operation was Mr. O. G. Smart, who was specially selected for the work on account of his known capabilities in managing and organising large bodies of workmen. The stem was the first part of the vessel struck; when this happened the Superintending Engineer suspended the original work in hand for a while and directed himself to having the whole wreck dug up. The vessel was found to be across the canal cutting, was eight feet

below the surface of the ground, and appeared to have sustained some damage previous to its having become a subterranean wreck. It measures one hundred and fifteen feet in length, and is supposed to have been of about two hundred and fifty tons burden. The stem has been deposited in the Phayre Museum, Rangoon. The vessel is presumed to be a Portuguese one of the 16th century. Seven sketches showing different views of the wreck have been sent to the *Graphic* and *Illustrated London News*.

THE accusations preferred against England's integrity in connection with her Egyptian policy would be humiliating if they were credible. Lying before us as we write is a letter from the Egyptian correspondent of an Italian journal, who draws a tolerably vivid picture of the motives underlying British conduct on the banks of the Nile. Speaking of the report that Lord Dufferin thinks Egypt ought to abandon the Soudan, Sennaar, Hordofan and Darfour, he says that the purpose of this act is purely selfish. Taking advantage of Egyptian helplessness, England proposes that the Khedive should surrender these splendid provinces, her design being to divert from Cairo the exportation of the valuable products of the Upper Nile, and turn them towards the Sonakins-Berbes railway, for the construction of which a British company is now seeking a concession. The writer then goes on to say that the foreign commerce of Egypt has fallen into a pitiable condition, owing to the impossibility of struggling against the industry of the English merchants who inundate the country with their goods, these entering free of duty while those of other nations have to pay a heavy import tax. The way this is managed is ingenious. Great Britain has obtained from the Khedive a remission of all import duties upon articles required for the use of her army or navy. All British merchants, therefore, engaged in the Egyptian trade, call themselves purveyors to the army or navy, and as all the Inspectors of Customs are Englishmen, it follows at once that British goods enter duty free. To this very trustworthy story the writer adds a rider, that the same, or pretty nearly the same, state of affairs exists in all the colonies where Great Britain has the preponderance. This is a subtle slanderer, but, fortunately for the reputation he seeks to overthrow, *dat deus immitti cornua curia bovi*.

THE London police recently found a woman known as “Maria, the flower-seller” lying dead on the floor of a common lodging house, in Brick Lane, Spitalfields, perfectly naked. At the inquest it was given in evidence that there were living in that one house at least fifty women, besides men and children, and that they were all looked after by one night-watchman, who was described as “a wretched looking object.” This attracted public attention once more to a subject which has been much considered during the past thirty years, the dwellings of the poor. Mr. George Howell,

writing under that title in the *Nineteenth Century* for June, gives a most disheartening account of the failure that has attended the working of the various Acts passed from time to time with the view of providing habitable habitations for the lower classes of the London population. The testimony of Dr. Farr, as well as the investigations conducted by Select Committees of the House of Commons and by charitable organizations, goes to show that in many of the districts described as sanitary, there are “narrow streets and courts down which no wind blows and upon which the sun seldom shines; in which the dwellings are tenanted, from cellar to garret, with a teeming mass of sickly, decrepit, diseased, and poverty-stricken humanity.” In nothing has Herbert Spencer's plea for the entire spontaneity of reform been better illustrated than in the story of this failure. It is now 33 years since he wrote as follows:—“The metropolitan Association for Improving the Dwellings of the Labouring Classes is doing all that is possible in the matter. It is endeavouring to show that, under judicious management, the building of salubrious habitations for the poor becomes a profitable employment of capital. If it shows this, it will do all that needs to be done; for capital will quickly flow into investments offering good returns. If it does not show this, then not all the Acts of Parliament that can be passed between now and doomsday will improve matters one jot.” As a matter of fact where Acts of Parliament have utterly failed, private effort has signally succeeded. Witness the case of the Peabody Trust, by means of which excellent accommodation, fulfilling all the requirements of cleanliness and comfort, is now provided for 14,604 persons in 7,829 rooms, and the returns all round show a net profit of 3½ to 3 per cent. on the capital expended—£970,500—the property being, in all cases, freehold.

Bad as things are in England, however, France appears to have a much more shocking record. There it has been officially ascertained that there are no less than two hundred thousand houses without the most rudimentary window! It is difficult to conceive anything more suggestive of filth and abomination. Yet in many cases these houses are better suited to their purpose than they would be if the sunshine and the air had free ingress. The intention is that it should be always night within. For the bedrooms are never unoccupied. No sooner do the night-lodgers leave than the day-lodgers enter. Thus, while a squad of masons are snoring, another squad of miserable night-birds wait to take their places; to creep into the warm lairs vacated by the *lassinaries*, as the first occupants are called. The Government, it would seem, has at length decided that such a state of affairs demands remedy. The windowless houses are to be pulled down or otherwise dealt with. So it was that officialdom set to work in London. Large spaces were cleared, the inhabitants ousted, their dwellings demolished, and there the matter ended. In a great number of instances “no steps whatever were taken towards providing

accommodation for the families displaced." It is to be hoped that the Municipality of Paris will succeed better.

CAREFUL enquiries disclose the agreeable fact that the rumours of cholera which on Monday reached us from Hongkong, were much exaggerated. It appears that by latest advices only one case had occurred there, and the Japanese local authorities have not yet recognised the necessity of adopting precautionary measures. We are, however, assured that everything is in train to institute medical inspection at a moment's notice, and that the state of affairs is watched with the utmost care. Most sincerely it is to be hoped that we shall escape this year without a visit from the terrible epidemic. At all events, we may fairly rely on the vigilance of those upon whom the most important duty of prevention devolves.

It is not pleasant to learn that insanity in the United Kingdom is increasing in a marked manner. In 1860 there were sixty-five thousand lunatics in Great Britain and Ireland, being at the rate of 2,326 per million inhabitants, while in 1880 there were a hundred and twelve thousand, being 3,217 per million inhabitants. Contrary to what is generally supposed, the proportion of insane persons among the working classes is much greater than among the middle and upper classes, the rates being 3,490 and 2,670 per million, respectively. Cases of hereditary insanity are 9 per cent. of the whole. England has a good record in this matter, the figures for other countries being, France 24, Germany 25, the United States 27 and Scotland 49 per cent. Spain and Italy, however, are much better off, and this is attributed to the fact that intermarriages between relations are much scarcer there than in England. The curiously high figure for Scotland is said to be due, in great part, to a habit of the Highland women doing field labour during pregnancy. It appears, too, that drink generally is not the cause of so much insanity as popular report says. Cheap and abundant wine is accompanied by comparative immunity from insanity and idiocy. It is where wine is discarded for stronger stimulants that a disordered intellect becomes common. This is proved by the case of France, where the consumption of spirits, owing to the introduction of absinthe, increased from 33 gallons per 100 persons in the decade 1841-50, to 52 gallons in the decade 1861-70, and the percentages of insane from drink during the same periods were 7.83 and 14.78 respectively.

It is worth Japan's while to observe that over-study produces 11 per cent. of the total insanity in the United States. "Even in ordinary boarding schools the number of boys that now wear glasses tells of extra brain pressure, and leads us to anticipate that the next generation of Englishmen will pay the penalty of the forcing system." We wonder whether the same cause has anything to do with the extraordinary love of glasses recently developed by Japan. At any

rate it may be confidently asserted that if the effects of excessive application are likely to produce such serious results in England, the danger is incalculably greater in the case of Japanese students, who, to a much more reckless expenditure of brain-fibre, add an almost total neglect of physical exercise and a comparative lack of generous diet.

The general increase of suicide is not less remarkable than that of insanity, though England is better off in this respect than other countries, as the following table will show* :—

| | YEARS AVERAGE | | RATIO TO MILLIONS | |
|----------------------|---------------|----------|-------------------|----------|
| | NUMBER. | | INHABITANTS. | |
| | 1851-60. | 1871-77. | 1851-60. | 1871-77. |
| England | 1,167 | 1,614 | 65 | 67 |
| France | 3,821 | 5,400 | 105 | 156 |
| Germany | 3,819 | 6,478 | 129 | 159 |
| Austria | 1,302 | 3,392 | 45 | 96 |
| Italy | 728 | 995 | 31 | 37 |
| Belgium | 189 | 380 | 46 | 71 |
| Sweden and Norway .. | 351 | 465 | 76 | 81 |

With regard to the causes of suicide, the French classification is generally accepted, namely :— 34 per cent. from insanity, 15 per cent. drink, 23 per cent. grief, and 28 per cent. various causes. Among miscellaneous causes is included "the loss of those religious feelings which contribute to the strength and endurance of the mind," and "this also helps to explain the gradual rise of the rate in France and Germany." "The wear and tear of town life" is also another powerful promoter of brain disease. Suicide is twice as common in cities as in the country, and commonest of all in Paris. These are the comparative figures per million inhabitants for the various capitals :—

| | | | |
|----------------|-----|----------------------|-----|
| Naples | 34 | St. Petersburg | 206 |
| Rome | 74 | Dresden | 129 |
| London | 87 | Brussels | 271 |
| Genoa | 135 | Vienna | 267 |
| New York | 141 | Copenhagen | 303 |
| Berlin | 170 | Stockholm | 354 |
| Florence | 186 | Paris | 403 |

Contrary to what one might expect, the period when suicides are most common is summer; spring comes next, while in autumn and winter the disease is least prevalent. It is the old story. The "chanting of the brooding bee" and the "green that wraps the grave," do not lose their charms even when the life we were given to enjoy them becomes intolerable.

THE *Jiyu Shimbu*, having stoutly resisted the imposition of an increased tax upon medicines and drugs, now informs us that since the tax has become a *fait accompli* several mercantile firms in Toyama, Yetchiu, have been obliged to discontinue their trade, and that two or three become bankrupt every day. What an exceedingly capricious business the sale of drugs must be in Japan. In Tokiyo we see a regiment of men and women engaged from month's end to month's end advertising some patent pills which must, by this time, be quite as celebrated in Japan as Holloway's boluses are in Europe, though their sale seems to be equally apocryphal. From the provinces, on the other hand, we hear of commercial prosperity wrecked on a tax which, after all, scarcely makes any appreciable difference in the price of these nostrums. Let us

* We take this table as well as our facts from Mr. M. G. Mulhall's essay in the last *Contemporary Review*.

hope that the tales of trouble and penury which reach us through the columns of the vernacular press are not more worthy of credence than the history of the Toyama apothecaries.

THE following statement, which we extract from *Bradstreet's Journal* of June 2nd, contains a new dilemma for bimetallicists :—

From the annual report of the British Mint it appears that no new gold coin was struck in London last year. The same is true of the year before, and yet the supply received from the Australian mints was not much beyond the average amount received in recent years. The relatively small supply of new gold coins received from the home mint is ascribed chiefly to diminished requirements of the internal trade of the country. Mr. Fremantle, the deputy master, gives some tables of the silver coin transactions of the mint which are not without interest. They show, among other things, that during 1882 there was so great a scarcity of silver coin that it was not possible to take back from the circulation anything like the usual proportion of worn-out coin. During last year there was a very large demand for new silver coin from the colonies. Not less than 4,400,375 were sent to them in 1882, the average amount between 1872 and 1882, inclusive, having been only £1,772,216 per annum. The demand came chiefly from the West Indies, and it has continued to be unusually large since the beginning of the present year. A distinct advance in the direction of simplicity and convenience has been made by the adoption of the decimal system of notation in transactions between the mint and the Bank of England. This system has long been in use in the branch mints at Sydney and Melbourne.

The chief prop and buttress of bimetallicism is a supposed insufficiency of gold. The large demands made upon it by the demonetization of silver have created, we are told, something very like a gold famine. Yet here we learn, on the evidence of the Master of the Royal Mint, that, so far from any deficiency being perceptible, the stock of sovereigns already coined does not even require the ordinary annual additions. The requirements of the internal trade of the country are not growing but diminishing. It will be interesting to hear how this somewhat troublesome fact is disposed of by the advocates of a double standard.

In the last number of the *Maru Maru Shimbu* are a skit and cartoon on the *mal-entendu* between France and China on the subject of Annam. A Chinese peddler is portrayed on a visit to a Zoological garden. A bear has seized him by the cue; a fox mumbles his hand; while some beast of feline race, leopard or lion, holds him by the foot. Apocryphal as the Japanese comic journals are, this legend is easy of interpretation, hardly requiring the explanation that the caricaturist vouchsafes :—"Help! Help!!" while a stern voice comforts him from the sky with the aphorism, "The weak is rent by the strong: the world is but a concourse of beasts: Look out for yourself!"

WE are now in possession of some further details with regard to the steamer *Scotia*, which we recently reported as having arrived at Nagasaki with the new telegraph cable to duplicate the Great Northern Telegraph Company's existing line between Nagasaki and Vladivostock. The cable on board, of which there are about 1,200 miles, was manufactured by the Telegraph Construction and Maintenance Company of London, to which the *Scotia* belongs, and is covered with an outer sheathing of homogeneous steel strand wire with a breaking strain of eight tons. The electricians and officers and crew of the

Scotia number all told 150, and the expedition is under the charge of Mr. London, of the Telegraph Construction and Maintenance Company, and the work of laying the cable will be commenced immediately, if, indeed, a start has not already been made. We wish complete success to the undertaking. In connection with the visit of the *Scotia* to these waters, it may be remarked that she has a deeper draught than any other steamer that has ever passed through the Suez canal. The *Scotia* is a twin-screw steamer of 2,931 tons register; length, 379 feet; beam, 47.8 feet; and depth of hold, 37.7 feet. Her horse-power is 550, nominal. She was built in Glasgow in 1862, and engined by Laird Brothers, of Birkenhead.

Writing under the novel sounding title of "the manufacture of public opinion," Mr. Blanchard Jerrold gives some strange and interesting facts with regard to the activity of political thought in England. He tells us that there are at present upwards of one hundred Houses of Commons flourishing in various part of the United Kingdom; that the majority of them are modelled on the House of Commons at Westminster; that they have their speakers, prime ministers, and chancellors of the exchequer, and that they "observe with solemnity the forms of the parent assembly; in some cases even to the robing of the dignitary who presides over the proceedings." The total number of members in these mock assemblies is 35,000; while "from a return of 59 Houses taken last year, it appears that in 26, having 11,051 members, the Conservatives were in power, and in 33, with 10,344 members, the Liberals were in power." Mr. Blanchard Jerrold says of these Houses:—"They are not composed exclusively of young men, nor of uneducated men. Clergymen, Justices of the peace, well-known political figures, persons of local influence, the richer local tradesmen, grave city merchants, are among the prominent amateur legislators, who go through the forms of parliamentary life, dispute questions of procedure, draw up bills, put questions, take and give up office, and, in short, carry out with the utmost gravity the duties and incur the responsibilities of a mimic parliamentary career."

L'Italie publishes a curious story which, it appears, would not have come to light but for some obstinate enquires preferred by Deputy Divichles in the Prussian Chamber. The scene is laid at Buchewald, a little place on the frontiers of Bohemia. The pastor of the village employed a peasant girl, fourteen years old, to look after his children, paying her two marks a month. It appears, however, that the child's sense of hunger was stronger than her moral principles, for finding herself in want of bread she stole sundry petty sums from the pastor's wife, amounting in all to ten marks. Subsequently she confessed her fault and the money was restored by her parents. There it was supposed the matter had terminated. Everybody was satisfied, except Justice, who, in the form of Baron de Rotenhan, district judge, made her

appearance upon the scene and summoned the girl and her parents to appear before him. They obeyed, and were informed that as the pastor declined to press the charge, the Baron had taken the case into his own hands. From the hall of judgment they were conducted to the Castle of Buchewald, where they found certain rustics of the neighbourhood assembled, one of them carrying a horse-whip. The girl was ordered to place herself across a chair and otherwise prepare herself: which done, the Baron, in a tone of command, cried "ten strokes." The parish messenger was the executioner, but as he hesitated to begin, the Baron, snatched the whip from him and delivered a violent cut by way of example, after which the flogging proceeded merrily. Efforts were subsequently made to hush up the affair, but it was gradually bruited abroad, questions were asked in the Chamber, an enquiry was ordered, and the Baron had to pay a fine of 110 marks. The Public Prosecutor wanted to have him imprisoned for eight months, but the Court decided that eleven marks per stroke plus the costs of the proceedings would meet the merits of the case.

We shall scarcely be wrong if we say that public opinion is not quite satisfied about the finding in H.B.M.'s Court for Japan in the case of the British ship *Cyprus*. The simplest version of the trial is that eight men swore one thing, six men and a woman swore another, and judgment was in favour of the seven. Moreover, if we eliminate two witnesses, the captain and the cook, it appears that the rest of the testimony for the winning side was neither very direct nor very convincing. The eight plaintiffs deposed on oath that on the voyage from Middlesboro' to Hongkong their food was bad, the beef stinking, the pork sour, and the water foul. One man said he was almost starved; another that after supper he felt as if he had had no supper at all; a third, that the beef and pork served out to him were "rotten and stinking," so that he had to throw his share overboard; a fourth that the tea and coffee made him sick; and a fifth, that although the meat was sometimes red and sometimes green, he had to eat it now and then, he was so hungry. This was all pitiable enough, and when we add to it the fact that the *Cyprus* took 162 days to reach Hongkong; that she had to spend 140 days in Hongkong to repair the damage incurred *en route*, and that she was 23 days between Hongkong and Yokohama, it is not difficult to comprehend what the crew may have suffered. For the defence, however, it was deposed that on the voyage out everybody had as much as he wanted, and that there was no difference between the provisions and water served out to the men and those used at the messes aft. There was, however, a very marked difference in the effects of the diet in the two cases, for while the diners in the cuddy looked sleek and well-nourished, the fore-castle hands were quite the reverse. There is, of course, much difficulty in arriving at the precise truth in a case of this sort. The balance of probability

is against a shipmaster starving his crew. Apart from the dictates of humanity, which indeed are not supposed to be very potent in the merchant service, the extreme unwisdom of such a policy makes it unlikely. Even commanders whose instincts and traditions betray them into needless exhibitions of brutality—kunkle-duster-and-marlin-spike disciplinarians—are generally considerate of their men's stomachs. They are so far consistent that they recognise the impotence of physical cruelty to wring work out of a starved victim. Still less, then, should suspicion of such a nature attach to the Captain of the *Cyprus*, whom report credits with a tendency to the very opposite methods. But life on board ship is in some respects a mystery. Of late years the public has been astonished by such extraordinary and hitherto unimagined revelations that no man is any longer rash enough to say, this thing cannot be or that is impossible. We can even imagine an accidental and coincident unanimity of chicane inducing eight men, Swedes, Finns, Frenchmen and Englishmen, to prefer a common complaint in almost identical terms against their fare. But the thing is not likely. It requires a stretch of credulity. Some collateral evidence was much to be desired, and none was forthcoming. It was clearly shown that while in Hongkong 27 lbs. of fresh meat came on board every day, of which 16 or 17 went to the fore-castle mess, being at the rate of about 1 lb. per man, a fair, though not by any means a liberal, allowance. The men swore that it was insufficient, and that some of them occasionally had no more than one to two mouthfuls. If this, were really so, the meat must have been exceptionally bad. On the whole, however, we cannot doubt that the Court was right in giving the 'Captain the benefit of the doubt. The trouble is that there should have been any doubt at all. It is not pleasant to think of these eight men going back to their ship possibly to scanty food and brutal treatment. They will not have much opportunity to complain when the *Cyprus* gets into "blue water." A seaman's life is hard enough already, without the deliberate addition of such contingencies. Reading the report of the proceedings in Her Majesty's Court, we cannot but regret that no enquiry was instituted into the condition of the provisions remaining on board the ship. The testimony thus obtained would have been well nigh conclusive. The Acting Judge attached much importance to the fact that the men made no complaint, properly so called, until their arrival in Hongkong. Their silence was certainly significant, in the abstract, but in the case of the *Cyprus*, something like moral helplessness seems to have been a characteristic of the crew. They paid a sort of blundering deference to the traditional impropriety of "making a noise on board ship" and it was only when they came to the port of discharge that they ventured to speak. Even then they do not appear to have originally contemplated preferring any claim. All they wanted was to get away from the *Cyprus*, and the reiteration of this simple desire had something almost plaintive about it.

The only redeeming feature of the affair is that they were thoroughly well represented. Their Counsel, Mr. Lowder, conducted the case with an amount of painstaking ability that did much credit to his philanthropy. All the more reason, however, is there to regret the abortive ending, which leaves in the public mind an uncomfortable doubt how far the law may be disposed to sacrifice its office of protector to its functions as a supporter of discipline.

A TELEGRAM has been received announcing that the British Government has agreed with M. de Lesseps for the construction of a second Suez Canal parallel with the one now in existence, England paying three millions sterling towards the cost. The action of Her Majesty's Ministers in this instance is in curious contrast with the opposition offered by the Palmerston Cabinet to the original scheme. The effect of a second canal will be to enable ships to pass the isthmus in from 24 to 30 hours. The limit of cost is placed at about eight millions sterling, so that five millions will remain to be subscribed by the general public. Doubtless the greater portion will be taken up in England.

Miss BIRD, travelling on unbeaten tracks, managed to make her journey very interesting. If, however, the novelty of her route had anything to do with the popularity she acquired for it, even better fortune is in store for her friend—we had almost said, her imitator—Miss Gordon-Cumming, who made the crematories of Japan an object of research. Her investigations have enabled her to contribute to the pages of the *Contemporary Review* for June a very practical dissertation upon the relative advantages and disadvantages of being eaten slowly by worms or consumed rapidly by fire. The room for discussion upon this point is gradually narrowing. The only sound argument of which the advocates of cremation have hitherto failed to deprive their adversaries is that burial *à la Européenne* provides a valuable fertilizer for the soil. Even about this contention, however, there is a logical difficulty. Dead people are not interred in vineyards and corn-fields, as they ought to be if there were any honest desire to recuperate the earth with the products of decomposition. So soon, on the other hand, as sentiment is imported into the controversy there are numerous and weighty reasons to be found on the side of old fashions. Many persons, for instance, may, and do, object to burning, on the ground that something of the sort is supposed to go on in the other world and that a practical anticipation of the threatened process is sacrilegious. Others, again, and they are not a few, conceive that the calcination of the bones offers an indefinite impediment to a successful resurrection. These good people decline to apply their analysis to the case of the martyrs, or else get over the stumbling block by claiming a subtle distinction between death by fire and fire after death. Many, too, there are in whose eyes the body is never truly inanimate. Even after the breath of life is gone out of the nostrils, the clay still remains heir to

all the associations and sympathies that grew up about it in its sentient days. Such persons think with Cicero, *supremus ille dies non nostri extinctionem sed commutationem offert loci*; and it seems to them a terrible thing to convert into a handful of white ashes the "fleshy tabernacle" in which the spirit, perhaps, has still an interest. Finally, there are those whose affections are outraged by the notion of cremation; who would strew flowers, rather than light flames, about the mortal remains of the departed.

Lay her ! the earth ;
And from her fair, unpolluted flesh,
May violets spring !

Who is so hard-headed and phlegmatic that he can refuse to respect these feelings? After all, we are only human. We cannot afford to substitute philosophy for memory; to be entirely practical in the presence of irremediable loss; to say with Eloise:—

O death, all eloquent ! You only prove
What dust we doat on, when 'tis man we love.

Even Miss Gordon-Cumming, completely as she professes to have divested herself of prejudice and sternly as she condemns our preference for "the horrid process of decomposition, whereby the innocent dead so often endanger the health and safety of the living," confesses to have felt "something like a shock" when she learned some details of the artificial fashions of treating the dead in the United States, and heard that "the frivolities of dress are never more carefully considered than in the solemn presence of Azrael." She does not perceive that it is a development of this very feeling about the "solemn presence of Azrael," and so forth, that renders cremation intolerable to half the world. That the general principles she advocates will meet with widespread support sooner or later, we cannot for a moment doubt. The pity is that when writing of Japan and holding up Japanese mortuary customs as examples worthy of imitation, she did not care to furnish herself with accurate information. She tells us, for example, that there are about half a dozen crematories scattered over the principal suburbs of Tokiyo, whereas, in reality, there are only two—one at Senji beyond Asakusa, and the other at Kirigaya beyond Meguro. Both are at about the same distance, five miles, from the centre of the city, *i.e.*, Nihonbashi. This, however, is a trifle. Where she is most misleading is in her assertion that people in Japan have "the option of disposing of their dead in such manner as each may prefer." This used to be the case, indeed, before the Restoration, but since 1879 cremation has been compulsory for all interments within the limits of the great cities. If people wish to carry anything more than the ashes of their dead to the grave, they must choose the latter in some of the suburban cemeteries far away from street life. Cremation is also compulsory in the case of persons dying of certain epidemic diseases, as, for example, cholera. This, it seems to us, is the true principle upon which such questions ought to be regulated. Let people dispose of their dead as they please so long as the public health is in no way

endangered by the process, but where there is any possibility of imperilling the safety of the living, let the purification of fire be necessarily employed.

THE COUNT OF CHAMBOZ and Duke of Bordeaux, head of the elder branch of the Bourbon family, whose death we chronicled in yesterday's telegrams, was born in Paris on September 29th, 1820, and died on the 2nd or 3rd instant. He was the son of the Duke de Berri (Prince Charles Ferdinand d'Artois) who was assassinated on the steps of the Paris Opera House in March, 1820, six months before the birth of his son. The Prince, really *jure divino* titular King of France, just deceased, had for mother the famous Duchess de Berri, Princess of the Two Sicilies. When only ten years of age, during the revolution of 1830, the "Child of miracle" was proclaimed King, by his cousin Charles the Tenth, who desired to abdicate in his favor, under the title of Henry V.; but was driven out of France by the revolutionary party. He then travelled in England and on the Continent. In 1843 he was a prominent figure in London, living in Belgrave Square, and receiving in kingly state the homage of his legitimist compatriots, Fitz-James, Berryer, and notably Chateaubriand, who brought from the Jordan the water in which the "King" was baptized. His subsequent story, in most respects melancholy like that of the rest of his family, "whose members forget nothing and learn nothing" is well known. He married in 1846 Princess Maria Theresa, eldest daughter of the Duke of Modena. After the disaster of Sedan, he issued from the Swiss frontier a proclamation to the French nation, dated October 9, 1870, promising to expel the foreigner from his territory, would his people rally round him to the true national government, having right as its foundation and honesty as its principle. In January, 1871, he addressed another proclamation, this time to the Sovereigns of Europe, protesting against the bombardment of Paris. He appears to have been principally responsible for the failure of fusion between his own House and the Orleanist Princes—an union which, if effected, might, and probably would have, made of France a constitutional monarchy. His devotion to Rome, his sombre character, his staunch adherence to the royalist principles which proved the downfall of royalty in France, were all against him and fatal to any chance of his restoration. As he himself said "his personality was nothing to him, his principle was everything." He has died childless, and the next legitimate aspirants to the throne of the Capets are the Orleanist Princes.

THE ironclad corvette *Ting Yuen* went on a trial trip at Stettin on the 5th ult., and something over 15 knots was got out of her. It is stated that some anxiety exists at the Chinese Legation in Berlin about getting the ship into Chinese waters. It has hitherto been understood that the vessel would be taken to China by German officers, and a crew of Chinese already partly assembled at Stettin for that purpose, supplemented by

some men of H.I.G.M.'s Navy coming out as reliefs for others on the China station. We now learn from a telegram dated Stettin, June 24th, that the German Government have refused to allow their nationals to go in the ship. The Chinese have been calculating on the possession of the *Ting Yuen* in view of possible contingencies, and they will doubtless experience much disappointment at the dilemma in which they now find themselves placed by the loss of the promised German assistance in navigation. Had she been a Japanese vessel, it is not too much to say that no European beyond the usual local pilot would have been required.

IN more than one place now in the Settlement tea is being "fired" by foreign firms in pans rotated by machinery. The public has had no opportunity of inspecting the devices employed; but there can be, *prima facie*, little doubt that the apparatus, besides saving labor, has an immense advantage in the point of cleanliness over the ordinary fashion of hand manipulation by sweaty "coolies," women, and children. However, the foreign consuming, principally American, public, has to decide the result between the two processes.

THE *Foochow Herald* regrets to learn that cholera is rife amongst the Chinese, and that a considerable number in the city have succumbed. Our contemporary adds:—"Considering the large amount of immature fruit at the present time being vended, the prevalence of the disease is hardly surprising. The recent high price of rice has probably induced the poorer classes to make fruit a substitute for their staple diet; but we hope that the reduced price of the latter may occasion the Chinese to abstain from indulging too freely in a commodity which, although temporarily quenching their thirst, jeopardises their lives."

A SERIOUS charge is preferred by the *Yiyu Shimbun* against the promoters of the emigration for unemployed *shiseku* of Fukuoka Ken to Yezo. The story is that, of yen 12,000 borrowed, the greater part has been appropriated by speculators, and that the persons intended to be benefited are in a starving condition in the northern island. So destitute indeed is said to be their state that subscriptions are asked for among their countrymen for their relief.

THE following vessels have passed Anger for Japan:—On the 18th June, the American ship *Wildwood* for Nagasaki; on the 20th, the American ship *Stillwater*, and on the 23rd, the British barque *Furness Abbey*, both for this port.

THE *Shanghai Courier* gives currency to a rumour which, it says, prevails amongst the Chinese to the effect that the Viceroy of the various provinces are to be changed, nearly all round. Li Hung-chang will resume his former post as Viceroy of Chili; the present Viceroy of Chili will be Viceroy of Kwang-tung and

Kwangsi; the present Viceroy of the Two Kwang Viceroy of Fohkien and Chekiang; the present Viceroy of the latter provinces Viceroy of Hupeh and Honan, *vice* the present Viceroy dismissed.

WE learn that Mr. Louis Wertheimer has been nominated by the Japanese Government to the post of Assistant Commissioner for Japan at the approaching Boston Exhibition. The selection is excellent. Mr. Wertheimer's long residence in Japan, his intimate knowledge of the Japanese language and his patient researches into Japanese art are qualities not often found in those upon whom the representation of Japanese interests in foreign countries devolves.

THE *Mainichi Shimbun* states that the health of His Excellency Iwakura, Third Minister of State, is daily improving; that on the 16th instant he conferred with several Privy Councillors and Senators, and that he afterwards entertained them at dinner. We fear that this story must be received with great reserve. His Excellency is by no means in a condition to engage in conferences or entertain his colleagues at dinner.

AN extra to the *Official Gazette* of yesterday announces that the resignation of H.E. Iwakura, the Second Minister of State, has been accepted by the Government, and that he will hereafter be called by the title of ex-Second Minister of State. We learn also that His Excellency's condition is very precarious, and that little hope of his recovery is entertained. He was visited yesterday by His Majesty the Emperor in person.

TWO cases of cholera are reported from Takata, Yatsushiro, in Yamanashi Prefecture. It is curious how many rumours of this nature appear in the columns of the vernacular press. Either the epidemic has little tendency to spread, this season, or every case attended by anything resembling choleraic symptoms is recklessly set down as cholera.

THE 14th July *fête* was celebrated by a promenade concert and display of pyrotechnics in the charming grounds of the French Mountain. The services of the Kiododan band having been secured, a very pleasant evening was spent by guests of all nationalities.

IF the *Choya Shimbun* may be believed, a very useful precaution has been taken by the Customs Department, to wit, that certificates shall be furnished to lightermen of established good repute. Without such credentials no boatmen shall be allowed to enter the sheds of the Customs House.

ISOLATED cases of cholera are reported from various districts. One in Nihonbashi-Ku is said to have been almost instantaneously fatal. Another, in Idzu, was also mortal.

CURRENCY INFLATION.

A WELL known American financier once observed that the only way to accomplish the resumption of specie payments is to resume. Amid the mass of confused controversy stirred up by the condition of Japan's inconvertible currency, one's mind recurs to such an axiom with a sense of relief. If only Japan could proceed at once to resumption and put an end to all this doubt and disaster, what a benefit it would be to the nation at large, and what a comfort to those who are responsible for the country's solvency!

Meanwhile, of all that has been said and written on the subject, how much stands to-day beyond the reach of question or dispute? A month ago we should have answered, without hesitation:—the imperative necessity of restoring the convertibility of *Kinsatsu*. But even that simple creed is now assailed. We find a writer maintaining that what the country wants is, not a metallic currency, but more paper. Our correspondent "X." thinks that the notes at present in circulation are not sufficient to develop the industrial capabilities of the nation. He would double the bulk of the currency, and in order to get the additional paper into circulation, he suggests that it should be devoted to employing labour on extensive public works. It must be confessed that this theory has many plausible aspects. Everybody admits that the country is impecunious, and that one of two steps only is possible,—reduction of expenditure or increase of income. The former does not appear feasible. In fact a nation cannot always choose how much or how little it will spend. A thousand uncontrollable circumstances may force its hand, as is the case with Japan at present. To secure herself against possibly fatal disaster from without, she has to make some temporary sacrifice—has to impose heavier burdens on her people at a time when their strength is already taxed severely. Her natural course, then, is to develop her sources of revenue, and beyond doubt the first step in that direction must be the improvement of facilities of transport. If more *Kinsatsu* are to be issued, surely they could not be issued for a more legitimate purpose than the construction of roads and railways.

We find this plan advocated in one form or another on all sides. Thus a second writer, though holding views diametrically opposed to those of "X." in the matter of a return to hard money, sees a panacea in increased facilities of marine transport. He would encourage the export of rice by

permitting its carriage from closed ports in foreign bottoms. Of the two schemes that of "X." seems the more rational. He, at least, recognises that specie can never circulate side by side with depreciated paper. If one tradal channel brings the former into the country, another will carry it away again, unless exceptional measures are employed to keep it there. "As for waiting," says the *History of American Finance*, "for the balance of trade to turn and bring gold into a country which has a depreciated paper currency, one might as well take one's stand at the foot of a hill and wait for it to change into a declivity before climbing it." The balance of trade has not really turned in Japan's case. The excess of exports shown by trade returns during the past eighteen months, is the outcome, directly or indirectly, of the present Administration's financial programme—directly, because a large proportion of that excess was officially stimulated: indirectly, because here as elsewhere, currency restriction has impaired the nation's purchasing power. The Government, in short, is endeavouring to bring about what all its critics recommend; with this added advantage, that the silver thus procured is kept in the Treasury until the time when it can be trusted to remain in circulation. The doctrine advanced by "X." leaves these fundamental principles of economy unassailed. He does not contemplate such a phenomenon as the spontaneous replacement of paper by silver. In adopting measures to stimulate commerce, resumption of specie payments ought not, he thinks, to be an object. The best money for Japan, according to him, is the money she already possesses. She only wants some more of it.

HERBERT SPENCER, in his catalogue of gigantic popular delusions, gives a prominent place to the notion that monetary facilities can be increased by additional issues of inconvertible notes. The value of paper money depends chiefly upon its functions; or, in other words, upon the limitation of its quantity relatively to the demand for it. This is a truth which receives the endorsement of all economists. Our correspondent cites the experiences of the United States in support of his contrary doctrine. Let the report of the United States Monetary Commission of 1877 answer him:—

The aggregate of the money value which can exist in any country is limited and fixed automatically by its environments. It bears a sure relation, however indeterminate, to the population, wealth, and exchanges of such country, as modified by the character and habits of the people, their modes of transacting business, the rapidity with which their exchanges are effected, and many other considerations. • • • The aggregate of the money value can only be increased by an increase or diminution of the productive forces and wealth which it measures and which govern it. The increase or decrease of the number of the units of money can have no

effect upon the aggregate of the money value, but the number of such units simply determines the fractional part of the whole value belonging to each unit.

That the volume of *Kinsatsu* already in circulation exceeds the national requirements, or, to speak more accurately, exceeds the functions which the nation consents to impose upon them, is incontrovertibly proved by their depreciation. Yet "X." advocates the issue of 150 millions more. He refers American prosperity to an abundance of green-backs, which abundance he regards as a synonym for "cheap money." Here, however, he is at issue with the most prominent American financiers. Professor FRANCIS WALKER, writing on this very subject, in 1878, says:—

Let us hope that the losses and sufferings to which the people of the United States have been subjected during the past sixteen years will at last bring about some good result by enlightening the public mind as to the nature and the laws of money, and by firmly establishing certain principles at once of public faith and public policy from which no contemplation of present advantage nor even the stress of warlike exigency shall ever again be able to move the nation.

Professor FRANCIS BOWEN, writing in 1870, that is to say, writing in the very midst of the period to which "X." refers, says:—

During the last eight years, the United States have been trying experiments in the management of the currency. The trial has cost the country much; we have not yet recovered from its consequences, and probably it will yet be long before we shall cease to feel them.

Mr. G. M. WESTON, writing in 1882, says:—

I dedicate this book to you • • • in the hope that • • • you will be stimulated • • • to do your part in resisting the mischiefs of a fluctuating currency, which is the most insidious and wide-reaching evil afflicting mankind, and from which the United States have suffered more during this century than any other country.

Such unequivocal statements as these refuse to be reconciled with our correspondent's theory. We quote them in preference to any detailed exposition of the causes which underlie the effects they describe. Japan has already lost tens of millions by unsound finance, by dealing in an unsteady money, which is synonymous with a dishonest money. We do not pretend that there are any scientific objections to paper money. The objections to it are political, but as such, they are fatal in this country's case. The people have no securities whatsoever against over-issue. Never yet has any government successfully withstood the temptation. Least of all can the effort be expected of a bureaucratic and practically irresponsible Government. "The prudence and self-restraint of years count for nothing, or count for but little, against any new onset of popular passion, or in the face of a sudden exigency of the Government. A single weak, or reckless, administration, one day of commercial panic, a mere rumour of invasion, may hurl trade and production down the abyss. Not only does the danger of over-issue never cease to menace a community having such money in circulation, but the moment an over-issue in fact occurs, the impulse to

excess acquires violence by indulgence."* It is not necessary, we presume, to explain why over-issue and consequent fluctuations are fatal to national prosperity. "X." is evidently no stranger to their injurious influence. But he maintains that the volume of *Kinsatsu* in circulation may be doubled without danger of depreciation or fluctuation, provided only gambling on 'Change be stopped. Does he seriously believe that that is possible? The United States once tried the experiment. On the 17th of June, 1864, Congress passed a bill constituting it an offence punishable with fine or imprisonment to make any bargains relative to the purchase of gold except on terms of immediate delivery and cash payments. "The statute," as BOWEN well says, "merely added to the premium on gold the cost of insurance against the heavy penalty that might be incurred by speculating on its price; it raised this premium 33 per cent. in just five days. The oscillations then continuing more wildly than ever, the law had to be repealed in three weeks after its enactment." Our correspondent appears to think that gambling in *Kinsatsu* has been put down by the "strong hand" of the law. He is mistaken. The Authorities have taken no step towards that end beyond the imposition of a tax on Exchanges. How far that tax has proved prohibitive may be judged from the fact the Yokohama Stock Exchange declared a dividend of 50 per cent. on its shares for the half year ending June 30th, 1883. It is true that the Government, by refraining altogether from operations on 'Change, has immensely curtailed private opportunities for speculation. But gambling of this sort still goes on and will always go on so long as *Kinsatsu* remain inconvertible. We do not agree with "X." that this is the only cause of fluctuation, but there is no necessity to go beyond his theory. He attributes the fluctuations to gambling, and as the latter is still in operation, the former, on his own showing, must continue. As yet there has not been devised anything capable of steadying Japan's paper money except to render it convertible. Towards that end the Government is resolutely working, and we cannot see that any case for a change of programme has been established by our correspondent, or by those, and they are not a few, who think with him. If the MIKADO'S Ministers have any plain duty before them it is to rescue their country from an evil "the most insidious and wide-reaching" by which any nation can be afflicted—a dishonest currency.

* Walker.

FOREIGN INTERCOURSE.

WE have frequently drawn attention to the curious features of resemblance which exist between the present and past attitude of asession of the Japanese people towards their foreign visitors. Every student of Japanese recent history is familiar with the fact that foreign policy was the rock upon which the TOKUGAWA Government virtually split. To be quite correct, indeed, we should say that their conciliatory treatment of Westerns was the pretext, not the cause, of the fall of the Yedo Regents. The country was weary of feudalism and only waited for some plausible reason to effect its overthrow. Be this as it may, however, the fact remains that in those days the national sentiment was keenly impatient of foreign dictation. Men had learned, not without good cause, to be mistrustful of European adventurers who, coming in the guise of peaceful traders, stirred up religious and political feuds, and added largely to the difficulties of quiet government. It had become a sacred tradition that all such visitors were to be kept at arm's length, and when the TOKUGAWA Regents violated that tradition, they made the business of intrigue very easy to their enemies. Yet the latter, so soon as they found themselves face to face with the same conditions, yielded to the irresistible pressure from without, and became in their turn the advocates of liberal reforms such as the BAKUFU Government never, in its most progressive moods, ventured to contemplate. Then came that course of foreign travel wisely prescribed as an eye-salve for stubborn patriots who persisted in regarding everything beyond the Four Seas with the same old-fashioned spectacles; and then, too, came that headlong pursuit of novelties, that seemingly reckless adoption of foreign things and foreign thoughts, which, if it nearly brought the nation to the brink of financial ruin, forced the people to lay aside once and for all the prejudices to which they had so long been wedded, and to forget that the men who were leading them along these new routes were the same who on coming into power had pledged themselves to the very opposite policy. It was a bold programme, that which the Government of the Restoration pursued, and there is little likelihood that we shall ever learn the full extent of the obstacles its advocates encountered. This much, however, we do know, that for a long time the change of front which the reformers had shown remained a weak spot in their armour, not sufficiently weak,

perhaps, to invite independent attack, but always a dangerous supplement to other shortcomings. It was certainly in accordance with the duty, no less than conducive to the interests, of foreign Powers to prevent any conjuncture which by increasing this peril might lead the nation to feel that its dignity was sacrificed to its ease when the enemies of the TOKUGAWA Dynasty remodelled their policy on the lines of the men they had overthrown. How far that duty has been fulfilled and how far those interests have been consulted, may be learned from a recent article in the *Fiyu Shimbun*, entitled "Peaceful Times." The writer, after touching briefly on the social disturbances which necessarily accompanied the abolition of feudalism thirteen years ago, and noting the fact that this brief period has sufficed to efface from men's minds the memory of the days when the partisans of the MIKADO and SHOGUN stood face to face in the battlefield, and hundreds of political enthusiasts immolated themselves on the altar of reform, goes on to criticize the indolent fashions of the day and to compare them with the perfunctory and listless existence of the feudal government in its old age. He likens the people to a pleasure-party chaunting ditties in a leaking boat, or to men sleeping over a powder-magazine, and asks them whether they have not yet grown weary of the *Sat-chō* (Satsuma and Choshu) rule, and whether they find the accord between themselves and their Government diminishing daily or increasing. Of the effects of the paper currency on the national finances, the losses suffered by the agricultural classes, and the failures among the commercial, he draws a vivid picture, and then suddenly passes to another question, that of Japan's foreign relations. With what motives, he asks, was the Restoration effected, and on what grounds were the TOKUGAWA Regents overthrown? Was it not to restore the Imperial authority and to remodel the unpalatable foreign policy to which the country had been committed? But has this been accomplished? Have the present rulers of Japan recovered for her the rights infringed by foreign nations? It is now more than ten years since the time when the treaties should have been revised, yet the Western Powers are as far as ever from consenting to any revision in a sense favorable to Japan. Japanese authority is still powerless to reach the five Treaty Ports, and the nation still labours under the imputation of being incompetent to administer justice within its own borders. "If those in power," the *Fiyu Shimbun* continues, "have any earnest desire to attain the purpose for whose ac-

complishment they were entrusted with the government of the country thirteen years ago, they will shrink from no sacrifice calculated to remove this disgrace; otherwise they must know that the souls of the patriots who perished for that cause will not find repose."

This species of writing contains much to which the epithet "wild" is fairly applicable. The *Fiyu Shimbun* talks; it does not reflect. It is true that the treaties have not been revised, and it is true that extritoriality has not been abolished. It is also true that Japan may justly feel impatient at seeing herself forbidden to control her own tariff or to exercise complete jurisdiction over those residing within her borders. All her honest efforts to free herself from these disabilities deserve and receive sympathy, nor is it denied by those who take the trouble to think that, if she were strong enough to enforce her claims, they would have been fully respected long ago. But it is impossible to believe that the protests of the *Fiyu Shimbun* are dictated by a sincere desire to assist in procuring recognition of those claims. The obvious purpose of our Tokiyo contemporary's essay is to bring discredit on the Government; to persuade the people that to the apathy, not the helplessness, of their rulers must be ascribed these national disabilities. And here it is that we find the resemblance between the present and the past alluded to at the beginning of this article. Fifteen years ago the spirits of political intrigue and public reform were fused into one party of opposition to the TOKUGAWA Regents by the pretext that the latter's foreign policy was a national indignity. To-day the Radical party formulates its indictment against the Government in exactly similar terms, and on scarcely less plausible grounds. The leaders of the Restoration have not fulfilled their pledges, we are told. It is admitted that a liberal assent to foreign intercourse was inevitable, but in return for that assent the people are reminded that they have a right to claim equality of intercourse, and that by failing to assert that right their rulers have betrayed the trust reposed in them.

It is beside our present purpose to examine the justice or injustice of these charges. We merely desire to point out that, whether through our own fault or that of the Japanese, the conditions under which foreign intercourse is carried on in this country are still a source of danger to the public peace. The Government of the Restoration accepted foreign intercourse as a necessity, and ultimately succeeded in persuading the people that it was at once a

pleasant and profitable necessity. Suppose that Government—the *Sat-chō* combination of which the Radical journal speaks with such ill-disguised dislike—overthrown tomorrow and replaced by the party which, according to its own statement, receives the support of the English local press—what would be the policy of the new administration? Would it consent to extend the limited privileges we enjoy; to preserve a five per cent. basis for the tariff, and to leave the abuses, the injustices, and the glories of extraterritoriality exactly as they are? And if it did consent, would it not thereby arm sedition with a weapon far more trenchant than that wielded by the present Opposition? We find no satisfactory answers to these questions; nor can we persuade ourselves to believe that the discontent and mortification breathed as well in the manifestoes of the Radicals as in the protests of their political opponents, are entirely due to the intolerance and impatience of the Japanese people.

FRANCE AND CHINA.

IF any reliance can be placed on the version now made public of France's latest proposals, or rather declarations, to China, it is not difficult to understand that the official who was charged with the duty of making them known to LI HUNG-CHANG may have considered anything like courtesy or tact not only superfluous but inconsistent. That China should unconditionally surrender all title to suzerainty in Annam and consider the latter an independent country; that every Chinese soldier taken by the French in Annamite territory should be shot forthwith; that any movement of Chinese troops towards the Annamite frontier or the presence of any Chinese vessels of war in the waters of Tonquin, should be regarded as an act of war, and that, in such an event, China should be held responsible by France for all expenses which the latter might incur in the prosecution of the campaign—such are the terms said to have been put forward by M. TRICOU, who must have recognised that they could have only one of two objects, either to force China to fight or to put upon her a humiliation which would do more to weaken her position as a great nation than the heaviest disasters in the field. A country that fights for its rights and is beaten, may forfeit prestige but not respect: a country that surrenders its rights without venturing to defend them, forfeits both prestige and respect. To understand the cruelly harsh nature of this *ultimatum*, if such it be, one must remem-

ber that there are settled in Annam large numbers of Chinese subjects, generally estimated at about twenty thousand, and that there are serving in the ranks of the Annamite army many Chinese adventurers, whose motive in enrolling themselves under the banners of the TUDUC must be presumed to have been partially derived from a knowledge of the relations in which that monarch's Kingdom has stood for centuries to the Dragon Throne. However little capable of resisting any practical tension the links that join the two countries may appear to France, it is her plain duty not to snap them asunder without some show of deference, unless, indeed, the common rules of international courtesy have ceased to have any weight for her. It is true that those rules have generally been neglected in dealing with Oriental States. France can plead a multitude of precedents whose value varies directly with the morality of the nation adopting them. But it would be difficult to find a single example of a peacefully disposed Government formulating such demands as those which report puts into the mouth of the French Envoy. If China is to be openly shamed or driven to bay, then it may become France to fashion her conduct on whatever rough and arbitrary models she may find in the past, but it is difficult to imagine her so careless of the issue and of her own reputation as to desire either of these alternatives.

It would appear, indeed, that M. CHALEMEL LACOUR, who must be held responsible for the instructions given to M. TRICOU, though he cannot be justly blamed for the fashion of their observance, fails altogether to perceive, what the world has lately learned to recognise, that the Chinese empire is held together by the very absence of vitality in its members, and that direct contact with an European Power might awaken forces capable of defying the control of the Dragon Throne. Against such a contingency China is bound to struggle with a strength proportionate to her love of national life, and some respect is certainly due to the instinct underlying her resolve to preserve a neutral zone between herself and the new French province—for such Annam is plainly destined to become. Further, the accumulation of indignities to which she fancies that she has been subjected by half the nations of the West during recent years, is an unfortunate preface to such treatment as France is now meting out to her. The conference which ended so abortively at Shanghai was an occasion requiring a class of diplomacy very different from that suggested by M.

TRICOU's experience as well as by the nature of the demands he had to urge, and the best, if not the only, hope of a peaceful outcome seems to lie in LI HUNG-CHANG'S adroitness. The Grand Secretary took care, it would appear, that accurate information of every step in the negotiations should be telegraphed to the Marquis TSENG, in Paris, and so soon as the two statesmen, LI at Shanghai and TSENG at Paris, were able to be sure that they had a case strong enough to warrant an appeal to England's interest and England's sense of justice, the intervention of the Cabinet at St. James's was solicited. It is therefore permissible to trust that the event has been removed beyond the disturbing influence of local diplomacy and that France may ultimately be persuaded not wholly to exclude justice and courtesy from her new programme of colonial aggrandizement.

REPORT ON THE DRAFTS OF CRIMINAL CODES FOR THE EMPIRE OF JAPAN.

COMMUNICATION BY MR. DESJARDINS, &C.

The *Société de Législation Comparée* has received a *Draft of a Penal Code for the Empire of Japan*, presented to the Senate by the Minister of Justice in the eighth month of the tenth year of Meiji (August, 1877); and a *Draft of a Code of Criminal Procedure*, presented to the Senate by the Minister of Justice in the ninth month of the twelfth year of Meiji (September, 1879).

These two drafts are offered to us in the name of the Commission which has prepared them, and whose President, the Minister of Justice in Japan, belongs to our Society, as does another member, a French savant, Mr. G. Boissonade.

A great change will be accomplished in the Empire of Japan when the new Criminal Law is applied there. No legislation will approach more closely to our own than that which will then enter into operation: none was farther from it than that which will cease to exist there.

While the new Penal Code recognizes and protects absolute liberty of conscience, the ancient law proscribed Christianity, foreign creeds in general, and any reformation in Buddhism itself, and treated as a crime the practice, even in secret, of a forbidden religion. The state recognized many cults; but it behoved any one changing from one to another to be authorized to do so. This remarkable application of the system of previous authorization disappears before the new Public Law.

While some subjects of accusation are suppressed because there is no longer any reason for their survival, others are absent from the present draft (although the deeds which used to occasion them might recur) because the legislator appears to be inspired with the ideas which rule the private morals of Western Europe. It is less timorous than those which preceded it: and so it shows itself less implacable. The ancient Japanese law had infinite dread of the temptations to which women might be exposed by the feelings or complacency of servants. The servant

(1) Translated from the French of Mr. A. Desjardins, Professor to the Faculty of Law in Paris. (Extracted from the *Bulletin de la Société de Législation Comparée*: No. IV, April, 1880.) Tokio: Reprinted at the Imperial Printing Office, 1883.

who secretly pandered to the intrigues of his master's daughter was simply banished from the house; and if he gave her a love-letter he was deported; but he who allowed himself to be employed in a love intrigue by the wife of his master, or incited her to it: he who made that woman a declaration of love in writing, sought to seduce her, or, in order to attempt her honor, secreted himself in her chamber, was decapitated. In case he succeeded in seducing her, he was taken on horse-back to the execution ground, and his head was exposed on a stake. Other provisions showed the legislator as severe in repression as foreseeing in the detail of breaches of morality. In abandoning them, he bears witness to his confidence in the nation, and allows us to believe in a grand amelioration of private morals.

It was not only matters regarding the conduct of woman which occasioned so much severity towards servants. The law had constantly in view the security of masters. The pain of death, more or less surcharged with aggravations, was incurred both by those who killed them wilfully and those who wounded them, and even by those who threw a sword or a piece of wood at them. Special protection was extended even to the relatives of masters and former masters. This was nothing but the application of a general idea, the respect due to certain social superiorities, created as much by the political institutions of the country as by the relations of ordinary life. We will only cite one example, to wit, the formal precept that any one who killed the proprietor of his house should be decapitated.

Another feature of the law which is about to be replaced appears to be great concern for detail. It is probable that the new law is much more simple, because each one of its provisions is drafted in terms much more general. Nothing appears more to tend to limit the power of a Judge than a law which dictates to him beforehand the decision to give in each particular case. But, on the other hand, he had sometimes a singular discretion allowed him. The penalty varied in certain cases according as the author or the victim was a bad person (*méchante*) or not.

The ancient Japanese law contained many rules which had for their object to insure, by means of penal sanctions, the conduct of the public services, especially the administration of justice and the execution of sentences. It was feared, not only that functionaries might commit infractions themselves, but further that they might protect persons who did so, or cause the traces to disappear. It was also dreaded that indifference or fear might prevent the people from aiding the authorities in their search for crimes and criminals. A police agent who retained money, jewels, or other objects found by him in his diurnal or nocturnal round, was tied on horseback, thus carried to the place of execution, and beheaded. If his find was of small value he incurred only the scourge or the brand. He who found, when on a beat submitted to his surveillance, exposed infants or sick persons unable to continue their journey, and took them into another beat, was beheaded. He who played a game of chance in his room or in the guard-house was transported to an island. Confinement (*les arrêts*), censure, and fine, awaited the mayors, heads of districts, and even bonzes, who lent themselves to conceal, or did not endeavor to verify, an assassination, the traces which it left, him who committed it. Any person concealing another against whom a warrant had been issued was liable to decapitation.

The system of penalties was not the same for people of the lower class and those of high condition. The pain of death was very frequently

pronounced. On the former it was inflicted in many different fashions: decapitation by the sword, crucifixion, the stake, beheading by the saw; and each one of these penalties might receive aggravations destined to render it more infamous: for instance some culprits were taken to their doom in their shirts, tied on horseback wearing a placard which proclaimed their crime and name: their heads were exposed: their bodies cut to pieces. There were horrible details in these various executions. As for Japanese of distinction, they opened their bodies or had their heads cut off: this latter was the graver penalty. Voluntary disembowelment, which no person condemned to ever shirked, sometimes took place in the temples of Buddha, among the priests and in the fashion of a ceremony. It is certain that penalties of this nature must have been very frequent, inasmuch as the art of opening one's body according to rule was taught, and every nobleman was bound to keep in his wardrobe the costume which he would wear on the day that he had to perform it. Further, it was not only a means of executing the fatal sentence: it was also the exercise of a privilege to anticipate judgment, avoiding infamy for oneself and one's descendants. A person might thus efface the gravest crime; and the sentiment of honor impelled the employment of the same means of expiating the most trifling fault. The legislator has only tried to render rarer the suicide that was honored by custom. We understand why its practice should be contemplated in the present draft. For the lowest classes were reserved the bamboo and manacles. Among the infamous penalties applicable to the women belonging to them a singular contrast is to be signalled. Side by side with seclusion in a convent was relegation to a place of ill fame. Deportation was common, but of most frequent employment in the case of persons of inferior condition. Imprisonment, on the other hand, was proper to the higher classes.

This information, borrowed from an article published in the *Echo du Japon* of October 23, 1876^a shows us what distance the Japanese had to cover in order to come to us and borrow the principles of a penal legislation.

The two drafts are of peculiar interest to Frenchmen. Our codes have served as a model for them; but the compilers have proposed to themselves to better the works that they imitate. In the legislation thus prepared for Japan we, too, may find the means of perfecting our own.

It was desirable to make between the two Codes a better division of matter. Thus, in the Penal Code are found the rules laid down on the subject of Crimes and Delicts committed in foreign countries as well as those which relate to the prescription of penalties. The order of each Code has been changed. It doubtless appeared little conformable to the exigencies of science and logic, and the compilers have sought to arrange the material in a more rational manner, following in that the criminalist rather than the legislator. The codification is more complete: it has been possible to bring into the body of the work some laws which, with us, have been passed subsequent to the Code, as for example those for the Press, Elections, and the sale of unwholesome food. The rules regarding judiciary organization and competence are included in the Code of Criminal Procedure. Provisions in which our experience has discovered gaps have been rendered more complete: those whose obscurity has caused controversy have been cleared up: the legislator formally recognizes some principles which our jurisprudence has gathered from tradition or painfully extracts from text-books, for example the maxim of *una via electa*. It is not the spirit of the legislation

(a) The article in the *Echo du Japon* is refuted in many points by Mr. E. Labbé, professor, in a work upon the Japanese drafts.

which is changed: it is to the method and arrangement that the compilers have principally devoted their efforts, which are often felicitous.

The Penal Code, like our own, is divided into four books: Book I., *General Provisions*; Book II., *Crimes and Delicts against the Commonwealth*; Book III., *Crimes and Delicts against private persons*; Book IV., *Contraventions*. The first Book unites the matters which form in the French Code the *Preliminary Provisions* and the *First Book or Penalties in Criminal and Correctional matter and their effects*. The arrangement of this book gives a good idea of the new work. After having treated of *The application of Penal Law in general* in Chapter I., and *Penalties in Chapter II.*, the authors occupy themselves successively with *the gradual Elevation and Diminution of Penalties* (Chap. III.); with *Causes which exclude or diminish Penalties* (Chap. IV.); with *Causes which aggravate Penalties* (Chap. V.); with *Concurrent Causes of aggravation and diminution of Penalties* (Chap. VI.); with *Several Concurrent Infractions committed by the same person* (Chap. VII.); with *Concurrence of several persons in the same Infraction* (Chap. VIII.); and, lastly, with *Unconsummated Infraction* (Chap. IX.). The compilers do not leave, in their subsequent books, any provision of a general character, just as they do not insert in the Code of Procedure any rule which has a properly penal character. While forming a systematic whole, they obtain a double result. Not only do they foresee, in the spirit of him who has to study or apply the law, all the uncertainty of the extent of such or such prescription, but they, further, put into their work more logic and harmony.

In Chapter I., *On the application of Penal Law in general*, we will remark Sections 5 and 6 of Article 5, which subordinate prosecution before Japanese tribunals of Crimes or Delicts committed abroad to these two conditions: "If the infraction has not been amnestied by the foreign Government: if prosecution is not already extinct by prescription according to the law of the foreign country." Article 6 applies a principle admitted in France, but contested by distinguished juriconsults, to wit, that the extradition of a subject cannot be accorded by his government. Article 7 submits to the Penal Law foreigners who commit infractions within Japanese territory, but a note informs us, that the notification which will promulgate the new Penal Code will have the following provision:—"The period at which the present Code shall be made applicable to foreigners will be decided later on by treaties and diplomatic conventions."

The general system of penalties, treated in Chapter II, also faithfully reproduces ours:—"The pain of death is carried out by hanging. Execution takes place within a prison, in the presence of persons designated by the general regulation for the execution of penalties." The same measure, it will be seen, is proposed simultaneously to the Parliament of France and the Senate of Japan. Differing from our legislation, the Draft admits temporary deportation, for from sixteen to twenty years (Art. 26). Reclusion, involving hard labor, is divided into *major* and *minor* (Art. 28): no other difference but that of time is here indicated. So of detention (Art. 29). After two years of major detention or one of minor detention convicts may be allowed to work out the balance of their sentences in an island set apart for deportation (Art. 30). There is not, any more than with us, any forced work for those condemned to deportation and detention. Article 31 distinguishes between two kinds of correctional imprisonment, namely, with compulsory work, and simple imprisonment. The draft provides a rule which is found in many

foreign legislations—the conversion of unpaid fines into imprisonment, which must only be simple imprisonment.

Among accessory penalties the draft does not discern, at least by name, civic degradation in purely correctional criminal matters—the interdiction of certain civic rights, civil and family. It simply employs the expression, *Privation of civic rights*. Article 39 indicates, under three heads, the incapacities that this privation implies: the list is even longer than that in our Article 34: the compilers retain incapacity to give testimony before justice, otherwise than as simple intelligence, and they add inability “to be a syndic, or administrator of goods in bankruptcy, of a society, corporation, or whatsoever other collective industry.” Perpetual privation of all the rights enumerated in Article 39 is attached to every criminal penalty (Art. 40). Sentence to correctional imprisonment involves, *per se*, disability to fulfil public functions and employments (Art. 41): all the other rights enumerated, except (? including) those of bearing, whether nobiliary or honorific titles or national decorations, are suspended during the term of imprisonment (Art. 42); and this suspension may be prolonged by the tribunals, “according to the nature and circumstances of the infraction,” in whole or in part, “during a time equal to the term of imprisonment, such as it is fixed by law.” One sees that, while the Draft provides civic degradation in all but its name, that which creates with ourselves the subject of interdiction from certain civic rights, civil and family, is very differently arranged.

The Draft provides, like our Code, for special confiscation, but with a two-fold difference. On the one hand Article 55 determines with precision three categories of objects which are subject to it:—“(1) manufactured goods, produced or possessed contrary to law, no matter to whom they belong: (2) the material which has served for the infraction: (3) objects directly obtained or acquired by means of the infraction, when, in these two last cases, the property belongs to the convict or when the owner cannot be found.” On the other hand, this is an imperative provision and not merely an implied one like that of our Article 11: the judges must pronounce special confiscation in virtue of this text whenever an object is found to belong to any one of the three categories; and it is only on the hypothesis of an object coming outside of them that a special text would be necessary. Solidarity is only pronounced for costs and civil sentences; and, further, the judges can suppress or restrict it in regard to one or several convicts or persons civilly responsible (Art. 59).

Preventive detention (term of imprisonment served previous to sentence) is allowed for all penalties privatory of liberty and temporary: “(1) Day for day or month for month in simple imprisonment: (2) for three quarters of its duration in imprisonment with toil: (3) for half its duration in temporary criminal penalties” (Art. 63).

One Section, forming Articles 65 to 67, is devoted to preparatory liberation; that institution which several European countries congratulate themselves upon having adopted, but is only availed of with ourselves in the case of young prisoners, and which penitentiary science commends as one of the fittest to enable the prisoner to get back into society without danger to himself or to it.

Article 68 enumerates ten methods of extinction of sentences. Article 70 lays down for prescription seven different terms, namely:—from thirty years for the pain of death to one year for detention (*arrêts*) and simple police fine.

In Chapter III., *On the Gradual Elevation and Diminution of Penalties*, the compilers give general rules for the calculation by which they shall be regulated every time when there is a question of increasing or reducing penalties. They content themselves with saying that such and such shall be augmented or diminished by one or several degrees, without for instance indicating the figure of the fine or the term of imprisonment which shall result from such augmentation or diminution.

In Chapter IV., *On Causes which exclude or diminish Penalties*, special note will be taken of that part which concerns the young. The compilers distinguish four periods: up to twelve years there can be no infraction, but the Court has power to order correctional imprisonment (*emprisonnement de garde*) up to sixteen years of age, as a maximum: from twelve to sixteen years of age the minor will be acquitted with the same proviso or condemned according as he has acted with or without discernment: from sixteen to twenty the ordinary penalty is reduced by one or two degrees: only after twenty years of age does complete responsibility begin (Arts. 91 and 93). The deaf and dumb are always exempt from penalty; the utmost that they can be subject to is a limited imprisonment for five years. (Art. 94). The spontaneous avowal of a prisoner who gives himself up, “before any trace or revelation has been produced against him,” is a valid excuse, and involves reduction of the penalty by one degree (Art. 96); and, in the case of Crimes and Delicts against property, voluntary restitution or reparation, with confession added, implies a fresh reduction, by two degrees if it is complete—by one when it is at least only half effected (Art. 97). Extenuating circumstances may be admitted in all cases: they may be combined with excuses as with aggravating circumstances, but the effect is limited to a reduction of penalty by one or two degrees (Arts. 99, 100).

Chapter V., *On causes which aggravate penalties*, opens with Receiving. The point of departure is the penalty. In the case of a criminal penalty, (1) a second crime carries the temporary penalty to the maximum, and augments by one quarter the criminal penalty already carried to the maximum by virtue of the fact itself; (2) a delict is punished by one degree. In the case of correctional imprisonment, the penalty incurred for a new delict is augmented by one degree (Arts. 101 and 102). Article 105 deals separately with the consequences of every new infraction committed during the period of the first penalty, a subject at present occupying the attention of the French legislator, *à propos* of crimes which have been committed in our penitentiaries.

According to Article III., if there be in the same affair general and special causes, whether of aggravation or extenuation, the special causes are first considered:—“If there exist, at one and the same time, causes of aggravation and causes of extenuation, a balance shall be taken as of one degree of aggravation against one degree of extenuation, first observing the similarity of causes, if that be possible.”

The Penal Code, in Chapter VII. of the first part, deals with *Several Concurrent Infractions committed by the same person*. Two systems are presented. The majority of the Commission proposes, for Crimes and Delicts, simply to impose the highest penalty, considering the longest the highest, imprisonment severer than fine, and on the principle that, in case of differences of maxima and minima, “sentence cannot descend below the lowest minimum and can attain the highest maximum” (Art. 112). According to the minority, distinction should be made: in certain cases only the

severest penalties should be pronounced; but, in others, there is room either for cumulation or augmentation of the severest penalty. Art. 114, equally subscribed to by both parties of the Commission, settles the hypothesis of successive prosecutions, so embarrassing to our jurisconsults:—“The smallest penalties are cancelled by fusion. If they are punishments privatory of liberty, the time which has been actually undergone is counted day by day with the severest penalty. In the case of fines which have been actually paid they are restored, or counted as part of the new fine if the latter is the higher of the two.”

Chapter VIII. defines co-authors (Sec. I.) and accomplices (Sec. II.). To the first are assimilated such as, “by gifts, promises, threats, abuse of authority, or whatever other culpable means, provoke or determine another to commit a crime or delict,” and such as provoke to crimes or delicts by word or writing when provocation has been followed by an act: in any case neither the first mentioned nor the others, when they take no part in the accomplishment, “are reckoned as forming plurality of authors, in cases where such involves an aggravation of the penalty” (Art. 120). When the author, “under the influence of provocation,” commits a crime or delict different from that which the provoker had in view, the latter only answers for the one he has instigated if it be the less grave, and for that which has been actually committed in the other case. The same distinction is applicable if the difference between the act provoked and the act accomplished bears upon the methods of execution (Art. 121). Among accomplices are included “those who, subsequently to the accomplishment of a crime or delict have aided the culprit in acts tending to insure its effects” (Arts. 122, 123), a provision which is would be criticized by the greater number of criminalists. Ordinary accomplices are punished with the penalty attaching to the infraction committed, but with reduction of degree. Whether there be question of co-authors or of accomplices, causes of aggravation are only deemed effective in regard to those who have known or foreseen them; and those which relate to the personal qualities of one person are only prejudicial to himself; but to him they are always prejudicial, barring a reduction of one degree, in the event of there being but one accomplice.

There is no general provision analogous to our Article 61. We must refer to the special portion to find (Art. 146) “punished as accomplices of crimes committed according to the preceding article those who, knowing the object and character of the said acts, may, voluntarily, before or after the fact, have provided the guilty with shelter for meeting or escape,” with absolute excuse in the case of near relations or connections.

The compilers, in Chapter IX. *On Unconsummated Infraction*, carefully establish a distinction between divers degrees, (1) resolution formed individually or collectively to commit an infraction, (2) and preliminary actions, which are not punished outside the cases provided for by law: (3) an “attempt at crime manifested by beginning of execution which has only been suspended by a circumstance independent of the will of the author is visited with the penalty of the same crime achieved, with the reduction of two or three degrees:” (4) any crime aborted by a circumstance independent of the will of the author is punished as the crime itself with a reduction of one or two degrees: (5) the evil-doer who voluntarily stops in the course of accomplishment, or who voluntarily fails after having achieved all the acts necessary to accomplishment, is punished only for the wrong actually inflicted: (6) a crime, impossible by reason of the nature of the act or the means employed, is

(3) Gallic, “libération Préparatoire,” answering apparently to the English “Ticket-of-leave” system.—*Franklin*.

not punished, "if the act and the means employed could only produce an injury less than that which the author proposed to himself, it is only punished to the extent of the wrong actually produced." Attempted delict and delict aborted are only punished in virtue of a formal text. Attempt at contravention and contravention aborted are never punished.

With Book II., *On Crimes or Delicts against the Commonwealth*, we enter upon the special portion of the Penal law. From the very first provision we find a dissidence between the two parties of the Commission. They agree on the principle that every Crime or Delict committed against the persons of the Emperor, the Empress, the Empress Mother, and the Prince Imperial, are to be punished as though they were committed by descendants against ancestors, but the minority proposes certain provisions whose object is to strengthen or to assure repression (Art. 131). A wise foresight suggested to the compilers, who are acquainted with the history of parliamentary countries, Article 137, punishing "with major detention those who, united in bands, and employing force against a Deliberative Assembly of political or administrative standing, or against a Juridical Body being part of Central or Departmental Power, have prevented it from uniting or deliberating, or constrained it to deliberate contrary to its will."

The compilers settle, in Articles 144 and 145, the question of crimes against Common Law involved with political crimes, by applying the penalties of Common Law. The pain of death is, as with ourselves, suppressed in purely political matters.

The minority of the Commission proposes (Art. 154 *bis*, Chap. 3 *bis*) provisions relative to Crimes and Delicts against the Law of Nations. Chapter 3 *bis* contains two Sections—one treating of *Piracy*, the other of *Trade in Slaves and the Sale of Free Men*.

Chapter VI., *On Crimes and Delicts against the Public Health*, contains a Section against which we have nought to say, *On the Commerce in and use of Opium*. To give an idea of the dread that opium inspires in Japan, we will only quote Article 268:—"Whosoever may have manufactured, imported, or exposed for sale opium intended for smoking, shall be condemned to Penal Servitude for Life."

On the other hand, we find traces of our own legislation in Chapter VII., *On Delicts against Public Morals and the Respect due to Cults*, and in Chapter VIII., *On Delicts against Freedom of Trade and Industrial or Agricultural Labor*. It is not only jurisconsults: it is economists who have drafted this latter Chapter. These Chapters comprise the provision, that our Penal Code classes in its Book III., *On Crimes and Delicts against Private Persons*:—for instance those which concern unauthorized lotteries and obstacles thrown in the way of free purchase at auctions.

Section II. of Chapter XI., entitled *On Crimes and Delicts of Functionaries against the Person*, is remarkable for the respect it testifies for individual liberty, security, and dignity. Let us quote only Article 316, according to which "any Judge, Officer of the Public Ministry or Police, who may use, or cause to be used, upon a suspected person, violence or ill treatment in order to extort from him avowals or declarations, shall be punished by imprisonment with labor for from six months to three years, and with a fine of from twenty to one hundred *yen*, without prejudice to severer penalties, if occasion requires, for wilful blows or lesions." Rights are protected as carefully as persons, as proved in Article 318, which punishes refusal and delay to decide, on the part of any Judges, civil or administrative, criminal or military.

Book III., *On Crimes and Delicts against Private Individuals*, contains incriminations almost all of which are borrowed from our legislation, but notice has been taken of the criticisms which have been passed upon this latter. For example, Waylaying, useless to say accompanied by premeditation, because it implies that necessarily, disappears in the definition of Assassination (Art. 327). Poisoning is no more than wilful homicide resulting from the administration of substances of a deadly nature (Art. 329). "Certain gaps are filled up, or certain additions are made." Murder is still qualified as *Assassination*, even in the absence of premeditation, "when it has been preceded or accompanied by mutilation, physical torture, or other acts of barbarity" (Art. 328). Counsel maliciously given to commit an act which causes death is punished, according to circumstances, as assassination, poisoning, or murder (Art. 332); and that which entails lesions and bodily and mental infirmities is punished as would be such lesions wilfully inflicted (Art. 342). The case in which, desiring to kill or wound some one person, a person kills or wounds another, is specially provided for: the crime is treated as wilful (Arts. 333 and 339).

Legal excuses and causes of justification (same Chapter, Sec. III.) are the same as with us. Excuse resulting from provocation is formally refused "to him who, by his own fault, has exposed himself to provocation" (Arts. 343 and 342). The generous notion which sees a cause of excuse "in the transports of anger caused by blows or grave injury inflicted upon another in the presence of the accused" is endorsed by Article 344. Excuse is allowed to both parties when it is not possible to determine who has been the provoking party (Art. 345). It is extended in a case wherein "murder or violence has been the sole means either to prevent a robbery without violence from the person or to recover immediately the objects stolen" (Art. 349).

Article 352, while reducing legitimate defence to an extenuating excuse when the measure has been exceeded, in admitting none but this excuse when the injury has been inflicted after the danger has disappeared, gives legislative sanction to decisions which with us are only furnished by maxims or jurisprudence.

The very force of circumstances did not allow the compilers to leave homicide by imprudence unpunished; but Article 353, which foresees it, is not easy of reconciliation with Article 89, according to which, "there is no infraction so long as the accused had no intention to commit it or to do harm in committing it, except in cases wherein the Law punishes simple disregard of its provisions and its rules." Not always can general principles be propounded without danger. The same remark might be made, for instance, *à propos* of Article 369, assimilating to homicide and wounds inflicted through imprudence any threat made in jest resulting in mental disease or death, Articles 454 and 400,—*à propos* also of the first of which punishes incendiarism, the second, inundation, caused not only by disregard of the regulations but by imprudence.

Complicity in suicide is the subject of a special Section (Art. 356 to 358).

Complaint of the injured party is necessary for the exercise of Public Action in case of threats (Art. 367), abduction, or kidnapping children or minors (Art. 383), offences to modesty with or without violence, and rape (Art. 390).

The gravity of the penalty, in case of threats, varies with the injury produced upon the physical or moral health of the person to whom the menaces have been addressed (Art. 368).

Another Section represses, together with the

abandonment of children, that of the aged, the sick, and the infirm (Arts. 374 to 379).

In Section XI., *On Crimes and Delicts against Good Morals*, actions contrary to modesty are divided into two classes, according as the victim is more or less than twelve years old (Art. 386). In Article 389, it is the minority of the Commission that proposes to admit the aggravating circumstances allowed in our Article 333: it is permissible to ask how dissidence could occur on this point. Article 392 (2) "punishes as a co-author him who by gifts, promises, threats or otherwise, has procured constitutive agency—"incited to debauch."

In Section XII., *On Crimes and Delicts against the reputation of others*, we will mention Article 395, which punishes a lying plaint or denunciation made in writing or verbally, Article 402, which guards the principle of professional secrecy, in making, of cases applicable, a more complete enumeration than that in our Article 378.

Chapter II. of Book II., *On Crimes and Delicts against Property*, deals with *clandestine thefts or those committed without violence* (Sec. I.), *open robbery, or such as is committed with violence* (Sec. II.); and expressly provides, in Section III., for punishment for *embezzlement of objects or treasure found*. Among the other Sections we must take note of Section VIII., *On Inundations*, and Section IX., *On collisions, and sunk or foundered vessels*, which shows the Japanese legislator completing the work of the French legislator.

The inspiration of Roman Law is not perhaps foreign to Article 412, aggravating the penalty in case of a robbery committed "during fire, inundation, shipwreck, tumult, or any other calamity."

Leaving on one side many points upon which we could indicate differences from our own legislation, we will conclude this study on the draft of the Penal Code, by signaling the arrangement of Contraventions in six classes (Book IV.).

The draft of the Code of Criminal Procedure contains, first *General Provisions*, and then five Books:—Book I., *On the Organisation and Competence of Repressive Tribunals*: Book II., *On Search after, Prosecution and Instruction of Infractions*: Book III., *On Judgment of Infractions*: Book IV., *On the Attributes of the Court of Cassation*: Book V., *On the Execution of Judgments, Rehabilitation and Pardon*.

In the *General Provisions* the rule that the criminal's status is civil, is not only laid down, but is explained with precision by Article 1:—"If the two actions are pending simultaneously, whether before the repressive jurisdiction or before two different jurisdictions, the civil suit cannot be decided before the criminal one, at the risk of the nullity of the two decisions if, a civil sentence having the precedence, a penal condemnation follows."

Among the methods of extinction of prosecution, Article 8 (4) mentions "the abolition of penalty inflicted in virtue of a law passed after an infraction." Does this paragraph mean that the infraction will thereafter remain unpunished, even in case the new law should substitute another penalty for the one that it abolishes? The authors most probably supposed that an infraction ceases to be punishable in virtue of a new law; but this time they have not expressed themselves with sufficient clearness.

Prescription of procedure is confined to six months when it is question of contravention (Art. 40). If, in principle, civil action is prescribed within the same delay as criminal action, it falls, under the application of Civil Law when that has occasioned a judgment (Art. 11), and generally, "notwithstanding the pre-

scription of criminal action, and so long as the term of ordinary civil prescription has not expired, the aggrieved party preserves the right of action for damages and for restitution, conformably to the rules of Civil Law, but without power to attribute to the alleged fault the character of an infraction." (Art. 12). Article 13 expressly includes in the term the day on which the act was committed. Articles 14 to 16 regulate in detail the cases and bearings of the interval.

Damages are awarded the accused, not only "in case of nonsuit or acquittal," if there has been bad faith or grave fault on the part of the accuser, plaintiff, or prosecutor, but even in case of condemnation and acquittal "if the fault of the plaintiff or accuser has consisted in serious exaggeration of the acts incriminated (Art. 18).

Articles 21 to 23 contain general rules as to the manner of calculating such adjournments as are allowed by the Code: Articles 24 to 26, on the manner in which notices have to be given: Articles 27 and 28 on all documents drawn up by a public officer.

The first Book treats of the *Organization and Competence of Repressive Tribunals*. The rules which our legislators have laid down, in our codes and special laws, are here coordinated: it is in the *Common Provisions* and not by themselves in a category of infractions, as in our *Code of Criminal Instruction*, Article 227, that connexity, approximately as it were, is defined as it is with us.

Articles 41 to 44 deal with competence *ratione loci*: cognizance of an infraction is attributed to that one of the tribunals within whose circumscription the infraction has been committed; and the place of arrest is only taken into consideration. (1) if there is any uncertainty as to where the infraction was committed: (2) if the same infraction was perpetrated at the same time or successively within the range of many tribunals: (3) if many distinct infractions have been committed in different jurisdictions:—"In a case where several tribunals are competent, if there has been no reason for preliminary arrest, or if it could not be effected, the tribunal which first commenced instruction or procedure is alone competent" (Art. 44).

A privileged Court is provided for Justices of the Peace, Judges, officers of the Public Ministries, and Secretaries. The derogations from the ordinary rules of procedure which this renders necessary are laid down in Articles 49 to 54.

Articles 56 to 60 deal with competence. The rules are the same as those we follow; but they are here expounded in such a manner as to form a separate theory, to understand which is easy, and whose application is general.

As with us, the Justice of the Peace discharges the functions of simple Police Magistrate; but the Deputies (*suppléants*) of a Justice of the Peace may sit on the bench with a consultative voice [Art. 62 (2)]. In case of a Commissioner of Police being prevented from attending, the functions of the Public Prosecutor will be fulfilled by his Deputy, if there be one, or failing that by a Deputy of the Justice of the Peace [Art. 63 (3)].

Correctional Tribunals are the subject of Chapter II., Article 66 (2) charges them with preliminary instruction in case of Delicts and Crimes:—"The functions of the correctional Judge are conferred for one year, in each tribunal of *arrondissement*, on one or several titular Judges, by the President with the advice of the tribunal and Government Commissioner Assembled in Council. They cannot be conferred on the same Judge for two consecutive years, nor be given to the same Judge a third time before all the Judges of the Tribunal have

been called to discharge the said functions during one year at least." It is a rotation surrounded by guarantees; and the same system applies to the Court of Appeal sitting on correctional matters (Arts. 75 and 76). In the Correctional Tribunal, as in simple Police cases, the right to be present, with consultative voice, is given to Deputy Judges [Art. 69 (2)].

Enumeration of officers of judiciary police is found in Article 72. Some correspond with the Government Commissary. Such are the Prefect and the Vice-Prefect of Police in Tokiyo, Prefects and Vice-Prefects in the Departments: the second are Commissaries-General, Commissaries of Police, Sub-Prefects, Judges of the Peace, Mayors, in the districts where officers of one of the grades above described have not their residence (Art. 72). It is not a question here of the Judge of Instruction as in our Article 9. The officers who have just been named, if they have deputies, are replaced by them in case of hindrance. The right of conferring rogatory commissions and the necessity of filling them are defined with the greatest minuteness by Article 73. Lastly, Article 78 permits the Procurator-General to "make by himself or one of his substitutes, in the whole extent of the circumscription of the Court of Appeal, the acts of judiciary police and prosecution, which are attributed to the Government Commissary in the correctional Tribunals."

Criminal Tribunals are composed, like our Assize Courts, of a President, two Assessors, and Jurors to the number of ten only. The rules according to which the President and Assessors are designated remind one of the French system even in its complications, with modifications destined to give more safe-guards to the defence. The composition of the jury depends upon a double drawing by lot, the first giving a Session list, the second a judgment list (Arts. 86, 89 to 91, 454 to 460). But there is a special law for the jury which prescribes the mode of drawing up the annual list. The functions of the Public Minister "are filled by the Procurator General or a substitute designated by him. The Procurator General may also designate for these functions that prosecuting official who took part in the preliminary instruction. Failing special appointment, or in case of inability to act on the part of him who has been designated, the said functions shall be fulfilled by the Government Commissary in the civil tribunal where the session is held or by substitutes nominated by him."

Book I. closes with the organization of a High Court, doubly competent by reason of the quality of certain persons and the nature of certain affairs.

Book II. treats of the *Inquiry into, Prosecution and Instruction of Infractions*.

We will specially remark, in what concerns complaints and denunciations, the double competence of the Judge of Instruction and the Government Commissary. If they are preferred before the latter he may, in case of urgency, and if the deed appears to involve imprisonment or a graver penalty, preside at the first verifications and at the interrogation of the accused and witnesses, after which he will send the documents to the competent Judge of Instruction, with his advice in his requests, if there is occasion. The officers of the Judicial Police may also, in case of urgency, make the verifications and interrogatories, and must send the documents to the Government Commissary under whom they serve" (Art. 107). These provisions relate to the case of urgency, which is not provided for with us. What is borrowed from us is what is special to flagrant infractions (Art. 114 *et seq.*). The difficulties to which Article 106 of our Code of Criminal Instruction has given rise are removed

by Article 116 of the Japanese Code, thus conceived:—"Any Agent of the public force, any functionary having the right to command or require its services, or being in the exercise of his duty, who shall surprise a person in an act of crime or flagrant delict of a kind involving imprisonment or a graver penalty, must arrest the said person, or cause him to be arrested, without warrant or order for arrest."

The methodic spirit of the whole work is found in Article 123, in which the Government Commissary is shown the various actions that he may have to take when he has terminated his inquiries. The attributes of the Judge of Instruction are detailed with precision in Articles 29 *et seq.* The legislator takes care to describe to him explicitly his part and that of the Government Commissary, by fixing the cases in which they act separately or in concert.

One section (Arts. 133—155) is devoted to warrants. This is not a point in which the compilers of the Draft have made any concessions to the criticisms directed against our Code. We find our four warrants—to appear, to bring, hold, and to arrest; but the cases wherein they must be issued, the conditions to which they are subordinated, the effects which they produce, are determined in a more precise manner. For example, "after ten days from the execution of a *mandat de dépôt*, the Judge of Instruction must either change it into a *mandat d'arrêt* or set the accused provisionally at liberty with or without bail." Solitary confinement (for accused persons) is established. The conditions of its infliction are carefully explained in a special section (Arts. 156 to 159); the power of the Judge of Instruction is only limited by the necessity of making a report, giving his reasons to the President of the Tribunal in case of its renewal, and by that of interrogating the accused at least twice in each period of ten days after which such solitary confinement, if it is not renewed, expires.

In our Code of Criminal Instruction there are only scattered provisions for the proofs to be furnished before the different jurisdictions, rules of detail laid down in regard to divers categories of infractions; and one has often some difficulty to decide whether what is said of one category should be extended to another. The compilers of the Draft have thought fit to devote one Section to proofs generally (Arts. 163 *et seq.*): their system is that of conscience proofs (Art. 160).

They employ, generally, such methods of investigation as are in use with us, without enfeebling them, and sometimes even strengthening them, but leaving out all that is insidious and liable to abuse:—"The Government Commissary may always assist at the interrogation of the accused, and ask the Judge such questions as it may appear to himself advantageous to put" (Art. 164). "The Judge may urge the accused to avow his guilt, to designate his co-authors and accomplices, and to make any such other declaration as he may think is in accordance with the truth; but he must not, in order to obtain confessions, use either threats or intimidation, either illusory promises or false allegations" (Art. 165). The accused may obtain a copy of his statements.

The right of delegation is expressly extended to acts for which it is practised in fact, but contested in law, with ourselves. "In matters of small gravity, the Judge of Instruction may charge the Justice of the Peace, even within his circumscription, with visits to places and domiciliary investigations such as are above described" (Art. 183). Article 184 bestows on the Judge of Instruction in most ample terms the right of intercepting letters, despatches, etc., "addressed

(4) *Compassion, d'Amour, de Dépôt, et d'arrêt.*

to the accused or other persons concerned in the instruction, or forwarded by them."

A remarkable provision is that which limits the number of witnesses:—"If the number of persons designated to be summoned (before the Judge of Instruction) exceed five in correctional, and ten in criminal, matters, whether on the side of the prosecution or the defence, the Judge may confine himself to summoning, first, the five or ten persons who have been first indicated to him or whom he may deem to be the best informed, with discretion to summon, afterward, a greater number, if he thinks it necessary for the discovery of the truth" [Art. 185 (2)].

"If the witness refuses to take oath, he will be condemned, without appeal, to a fine of from five to twenty yen at the discretion of the Public Prosecutor" (Art. 196). Article 197 enumerates those who are not required to take oath; and Article 191 those who are not allowed to do so. Article 201 punishes a refusal to explain in the same way as failure to appear, with a reservation in favor of professional secrecy.

The matter of expert testimony is treated in a special paragraph. We observe that, according to Article 209 (2), "women and foreigners may be appointed experts."

Instruction of flagrant infractions (Art. 208 *et seq.*) is regulated on the same principle as with us; but if the Government Commissary is informed earlier than the Judge of Instruction, he may, after having informed the latter and without waiting for him, proceed in whole or in part with such proceedings as are in the function of that magistrate (Art. 220), the same rights only devolve, in a less degree, upon subordinate officers of the Judiciary Police (Arts. 222 and 223).

The Judge of Instruction may always order an accused person to be set, provisionally, at liberty, "with the understanding that he must comply with every order to appear during the course of the instruction and to receive judgment if necessary," subject to asking for the conclusions of the Government Commissary, and subject also to the protest of the latter, when the accused is under a warrant of arrest (Art. 230):—"Liberation may always be subordinate to a bail guaranteeing the appearance of the accused, the amount to be fixed by order of the Judge according such liberty." (Art. 232). We may remark here the exclusive employment of bail for the appearance of the accused (cf. Art. 234).

In Section VI. the Code treats of the *Closure of the Instruction*. After having determined the functions and obligations, both of the Judge of Instruction and the Government Commissary during the term of instruction, in such a way that the former retains all his independence, and the latter is never left ignorant of the process, the Draft indicates the five different orders that may be given, thus, order of incompetence, of *non lieu*, sending before a simple Police Court, sending before a Correctional Tribunal, and lastly, sending before the Criminal Court in state of accusation (the machinery of the Chamber of Accusation having been suppressed), the consequences of these orders, notably as regards individual liberty, and the question of contumacy.

Chapter IV. is devoted to *Methods of Relief from Acts of Instruction*. The draft takes notice, first of all, of a class of acts including, (1) decisions rejecting a declinatory or an exception of incompetence, (2) service of an order of *dépôt* or *d'arrêt* contrary to law, (3) grant or refusal of provisional freedom when the Judge has not complied with the forms and conditions prescribed by law on this subject, (4) any other decision which may constitute an abuse of power. Protest is open to the accused as well as to the Public Prosecutor (Art. 258).

It is the Tribunal which decides the point, in Council Chamber with three Judges at least (Art. 260), save an appeal which can only be received together with an appeal against the order for closing. A second class includes these Orders for Closing. They may be, in all cases, protested against by the Public Ministry (Art. 274), by the prosecutor in certain defined cases (Art. 275), and by the accused (Art. 276). Here also it is the province of the Council Chamber to decide. The orders of the Council Chamber, deciding on a protest, may themselves be appealed from in which case the higher Court has very extensive powers (Arts. 282, 287, *et seq.*). It will be seen that the accused is treated far more liberally in the Japanese Draft than by the French Code; and that the institution of the Council Chamber is invested with attributes whose object is to offer guarantees without fettering procedure.

Articles 261 to 263 treat of the exception of "conflicting jurisdiction" which may be taken by the Public Ministry, the accused, or the prosecutor, when two Judges of Instruction, or one Judge of Instruction and a Tribunal may simultaneously have taken up the same affair or kindred cases. The order of the Judge of Instruction can be protested against: the conflict may be stopped by the Council Chamber, when it has not been stayed by the Judge of Instruction himself; and it is only in case the exception has been carried to these two degrees that there is need to refer to the ruling of the Judges.

Articles 264 to 273 contain very perfect provisions anent the causes for challenge of Judges of Instruction, Clerks of Court, and all officers of Courts of first Instance or of Appeal deciding upon recourse against an act of instruction. The same system, with the modifications which may be necessary in procedure, is applicable to Jurisdictions of Judgment. Thus, one of the gaps in our own criminal legislation, forcing us to apply the provisions of the *Code of Civil Procedure*, is filled. As for the Government Commissary, he only can challenge himself: he cannot be challenged.

Book III. treats of *Judgment on Infractions*. Faithful in all respects to an excellent system, this Draft includes (in Articles 301 to 375) the provisions common to the three orders of jurisdiction. There are many more than with us.

In the very first Article in the Book, Article 301, we find a precaution taken against a species of arbitrariness:—"The roll of the cases to be heard, for each day of audience shall be arranged according to the order of their inscription in the registry of the Tribunal concerned.—Notwithstanding, the President of the Court may modify this order, whether of his own motion, to shorten preventive detentions, or on the demand of the parties, for weighty and justifiable causes."

The rights of the defence are recognized on the same principles as with us. The reservations which the violence of the accused in the famous trials of 1830 to 1835 forced the legislator to introduce, will be found reproduced in Article 305. The necessity of suspending the debates when the accused is unable to attend by illness and when he is in a condition of mental alienation, is here recognized by formal text, that of Article 306.

The attributes of the Presidents are nearly the same in all the jurisdictions. There is no discretionary power proper to a Court of Criminal Justice.

Acquittal is distinguished from "placing beyond prosecution" (*mise hors de poursuite*) which is pronounced in the following cases:—(1) if the deed incriminated is not punishable by the law; (2) if prescription from prosecution has been acquired; (3) if the infraction has

already been the subject of a judgment: (4) if the deed has been amnestied; (5) if the accused finds himself possessed of an absolutive excuse allowed by the law; but always provided that the exception has not been already rejected during the instruction by the Court of Cassation" (Art. 366).

Article 357, holding that "by the judgment which shall decide on a prosecution, the Tribunal shall decide at the same time on the civil suit brought by the party who feels himself aggrieved, and upon the suit in indemnity by the accused," makes no distinction according as the process terminates in condemnation, acquittal, or "placing beyond prosecution." It effaces that distinction in our law which reserves for the Court of Assizes the faculty of deciding upon damages in all cases.

Among other provisions favourable to the defence we will mention Article 363:—"The convict may be relieved from failure resultant upon the expiration of the adjournments fixed for his various remedies, if he proves that there has been for him or for his representative any hindrance resulting from *force majeure* or fortuitous circumstance, without fault on his part or that of his representative. In this case recourse must be formulated within the term of legal delay beginning with the removal of the hindrance, by reason of a petition stating the motives with proofs in support." The Public Minister has, it is true, the same right; but he will very rarely have to make use of it. The same spirit of liberal justice is apparent in Article 368, where it is said, without distinction between the jurisdictions, that, in case of contradictory sentences the President will apprise the condemned of the privilege which he enjoys to obtain, at his own expense, copy of or extract from the judgment, of such rights to appeal, or powers in cassation, as may belong to him; and of the period within which he can apply this remedy.

Many points of detail are foreseen by a legislator who has appeared late enough to profit by knowledge whereof experience has proved the importance, to appropriate whatever useful rules practice has spontaneously admitted, and to adopt and complete them. We cite Article 369, relating to the rectification of errors or omissions in minutes of judgments, and Articles 374 and following relating to the docket of cases kept by Clerks of Courts.

The Common Provisions are followed by three Chapters, containing Special Provisions for the three kinds of infractions. Each of these Chapters commences with an Article (376, 406, 431) wherein the legislator enumerates, with his habitual care, the various methods of settling competent jurisdiction: he does not wish his interpreters to be obliged to assemble scattered provisions, but presents a complete picture.

The method of interrogating the prisoner both before the Criminal Court [Art. 465 (11)] and the other two Tribunals (Art. 383 and 414) is prescribed. The only difference is in what concerns the effect of a confession. Before the two inferior jurisdictions, "if there has been full avowal on the part of the prisoner there will be no occasion for the production of other proofs except in case the prosecuting party requires it, or the Court orders it of its own accord" (Art. 384). If there is only an imperfect confession other proofs are produced (Art. 385). On the other hand "a confession, however full, by the accused does not absolve the Court" (criminal) "and the Jury from proceeding to the full investigation of the affair." [Art. 465 (3)].

The procedure which ought to be followed in cases of default by the accused in simple Correctional Police cases, offers some peculiarities worthy of remark. The processes-verbal or reports are read; but the witnesses for the pro-

secution are not heard unless the pursuing party desires it. The witnesses of the prosecutor are heard in support of his demand: the rebutting witnesses present are heard, if the Public Minister, the Prosecutor, or the parties civilly responsible, require it, or if the other side's witnesses have been heard. The Judge may also hear any witnesses of his own accord (Art. 389).

Right to appeal from a simple Police sentence is accorded not only to the prisoner condemned to *arrêts* (the mildest form of detention) but to the Public Ministry if the Court has not ordered the *arrêts* in conformity with its conclusions. In this case the right of the prosecution is strengthened by the Draft. Appeal is open, with us, "when fines, restitutions, and other civil reparations exceed the sum of five francs in addition to the costs" (Art. 172, *Code d'instr. crim.*). The Draft leaves the fines on one side and adopts another principle. "Appeal will be allowed on the part of the prosecutor, the prisoner, and the persons civilly responsible respectively, on the subject of damages, whenever the claim exceeds the scope of the civil competence of the Justice of the Peace in last resort." Lastly, appeal is receivable, "on the part of all the parties to the cause, for incompetence, abuse of power, and any violation of the penal law or of the form prescribed, on pain (if they do not succeed) of nullifying their interests" (Art. 396). An appeal, primarily limited to certain heads of judgment, may always, even at the hearing, be extended to others; and, on the other hand, the respondent can always formulate a counter appeal (Art. 401). Finally, Article 403, which Article 415 declares applicable in correctional matters, determines the effects of the appeal according to the principles followed by our legislation, although they are not expressed in our Code.

In Chapter III., *On sentence for Crimes*, we will remark Article 452, including the address that the President should make to teach Jurors their rights and their duties. It is a veritable treatise, very complete, on the matter; and the Draft takes the sage precaution of distributing printed exemplars among those who have heard it. True, it is only pronounced once, in the solemn audience where the Session list is definitely arranged. The Jurors take oath for the whole term of the Session at this sitting: they have to affix their seals to the written form of oath (Art. 453): here we have a detail peculiar to Japan.

We will mention Article 475, which deals with the summing up of the President, to whom it recommends the greatest impartiality: Article 484, holding that "in the matter of prescription, the jury will only be interrogated if there is doubt or dispute as to the period at which the crime was committed;" Article 486, determining the question, that may be asked as the result of the debates, independently of the questions relating to the indictment, as it is framed in the order or the warrant for sending: Article 508 which provides for the case in which the Court, after the verdict has been given, can send the Jury back to its Deliberative Chamber. According to Article 415, when the accused is declared not guilty, it is the Court which pronounces his acquittal. The Chapter terminates with rules of Procedure for contumacy. We will mention Article 523, a paragraph of which permits the Court "to recognize, in favor of the accused, legal excuses or the existence of extenuating circumstances."

Book IV. treats of *the Attributes of the Court of Cassation*; and the first Chapter, *Of Appeal in Cassation*. Article 533 enumerates the causes which may open the way to Cassation: they are fifteen in number; but Article 537 indicates the cases in which the different parties may avail themselves of one or other of them.

Further, an extraordinary appeal may be formed by the Procurator-General with the Court of Cassation either of his own accord or by order of the Minister of Justice "from judgments or orders carrying a condemnation not authorized by law, in regard to the facts recognized by the judgment, and which neither the person sentenced nor the Public Prosecutor with the Tribunal would have assailed within the prescribed delay" (Art. 540): against "judgments or orders, be they of acquittal, 'beyond the reach of prosecution;' or of lighter sentence than that which the law ordains, (1) if there has been corruption of Judges or Jurors; (2) if violence or grievous threats have been employed toward those persons; (3) if there have been false declarations in rebuttal, obtained by the same means, whether on the part of witnesses, experts, and interpreters, or of the public officers charged with the verifications;" on condition that "the accused has been condemned as author, instigator, or accomplice in the said acts of corruption, violence and threats" (Art. 541): finally when there is contrariety in the provisions of the same judgment or of two different judgments" (Art. 542). This appeal may be formulated at any period against decisions susceptible of protest or appeal, thus differing from the ordinary appeal. In the case foreseen by Article 540, the Court itself, after having annulled the decision, applies the law: this is not so in the cases foreseen by Article 541, except if the sentence passed is too light in view of the facts established. Article 543 regulates, with distinctions, the deduction of penalties privatory of liberty, already undergone on a sentence cancelled, from the new penalty inflicted.

Cases of the non-receivability of appeal are limitatively determined, and are the subject of special and expeditious procedure (Arts. 552 and 553).

We have seen that the Court of Cassation decides without return, at least in certain cases, upon extraordinary appeal of the Procurator General. It should act in the same manner when it breaks a decision for false application of the law to deeds of which the accused has been found guilty (Art. 561): when a Court of Assize, after the Jury has returned a verdict of "guilty," has wrongly admitted an exception against the lawfulness of the prosecution, and pronounced the acquittal of the accused; but if the same method of cassation is proposed against the decision of a Correctional or simple Police Tribunal, the Court will quash the sentence and send back the affair to another Tribunal of the same order (Art. 562). This idea of the Draft is clear, and commends itself without difficulty, whenever there is only question of applying the law: a sending back is then useless, the Court of Cassation pronounces. In simple and correctional Police cases, an exception accepted against the propriety of prosecution has prevented searching examination: the case must be sent elsewhere. In a Criminal Court the Jury has pronounced for guilt, the examination of the facts is complete: and the question of receivability is the only one to decide.

The decisions of the Court of Cassation have, from the first cassation, the force of *chose jugée* in points of law. "Further, the Tribunal to the Court to which a cause is sent back cannot, without being guilty of a denial of Justice, declare itself incompetent for the cause on which the Court of Cassation has decided, nor admit any exception against the receivability of a prosecution which may have been rejected by the said Court" (Art. 570).

Article 573 prohibits protest against the decrees of the Court of Cassation, but establishes certain guarantees to insure that the legal explanations

shall reach the unsuccessful petitioner. On the other hand civil petition is permitted (Art. 577).

A remarkable provision is that of Article 575:—"In all cases where cassation of a judgment or decree may occur, in virtue of Articles 532, 540, 541, and 542, if the Court recognizes that there has been grave fault or serious negligence on the part of one or several known members of the Tribunal or Court, it can pronounce against them, at the request of its Procurator General, by warning, reprimand, or censure, according to the gravity of the case, without prejudice to more serious penalties, if occasion requires in the case of Article 541.—The Court has the same right, when, adjournments or term of appeal having expired and cassation having become impossible, the Procurator General submits to it documents or judgments, smirched with the same vice." One sees that the Court of Cassation is invested with immense power over all the magistracy.

In Chapter II., *On Appeal in Revision*, we must signalize Article 582, which adds two cases to the three provided for by the French law: (1) If after a sentence for a Crime or Delict committed in a place and at a time determined it is afterwards proved by an authentic document, drafted at the same time and in another place, that the prisoner was present at the making of that document; and if, further, this place is so far from the site of the infraction that the prisoner could not in any probability have been the author of the said infraction: (2) if one or several of the Judges or Jurors who have taken part in the judgment have been condemned for corruption on the occasion of the affair in which sentence was passed, save the case in which such corruption may have been exercised by the prisoner himself. Let us congratulate ourselves that a similar provision did not appear necessary to the French legislator.

Finally, Book V. treats of *The Execution of Judgment, Rehabilitation and Pardon*. Although we have noticed in the scheme rather what differs from our legislation than what resembles it, we will signalize Article 628, which places penitentiary establishments under the control of the Minister of the Interior. Such is with ourselves the actual condition of matters; and, as is known, it has been briskly attacked of late years. Article 629 adopts legislatively our useful institution of a judiciary cash-box. On the other hand Article 625 is a proposal very proper to the Code. It confers right to petition for pardon or commutation of sentence on the Judges and Jurors who participated in the conviction, within three days, on the Government Commissary of the jurisdiction that condemned, and on the Governor of the penitentiary establishment where the penalty is being worked out, at any time. It also permits the Minister of Justice to recommend whenever he pleases, the prisoner for pardon to the Emperor; and it keeps perfect silence as to the convict himself.

REVIEW.*

The book before us forms the second part of the first volume of a *magnum opus* undertaken by Dr. A. J. C. Geerts, of the Imperial Japanese Laboratory, Yokohama. The first part was published in June, 1879. Dr. Geerts announces that the third and last portion of the first volume, dealing with what remains to be treated of in connection with minerals and inorganic substances, will be published with the least possible delay. Many circumstances, independent of the will of the author, have retarded the publication of the present instalment.

* *Les Produits de la Nature Japonaise et Chinoise, comprenant la dénomination, l'histoire et les applications aux arts, à l'industrie, à la médecine, etc., des substances qui dérivent des trois royaumes de la nature, et qui sont employées par les Japonais et les Chinois; par A. J. C. Geerts. Partie inorganique et minéralogique, contenant la description des minéraux et des substances qui dérivent du royaume minéral, avec Parties, Yokohama, L. Lévy et S. Salabelle.*

Doubtless, Dr. Geerts intends to issue an index with the whole work when completed. Meanwhile, we would suggest that the value of a compilation eminently technical, destined to be so comprehensive and useful as Dr. Geerts evidently proposes that his shall be, would be enhanced by the addition of an index with each number. Yet it is only fair to say that the arrangement of the contents is so well conceived, that the inconvenience entailed by the absence of such an aid to reference is reduced to a minimum. The typographical get-up of the book reflects much credit upon the publishers, Messrs. Lévy and Salabelle.

This instalment is devoted, in its first seventy pages, to the consideration of the lighter metals—Potassium, Sodium, Ammonium, Calcium, Barium and Strontium, Magnesium and Aluminium. The most esteemed of the salts of potassa is saltpetre, anciently known as the "Spirit of Ashes" commonly described here as *shioeki*, or "flux" for ore. It has several other more or less poetic appellations. In China a special license is required for its exploitation, the internal resources of the empire being insufficient for its needs. Hence large quantities are imported from Hindustan, Malacca, and Japan. In the last mentioned country, as in the neighboring empire, its use has been familiar for many centuries. It is produced spontaneously under the basements of houses, a fact which validates the recent theory of nitration propounded by Messrs. Schloesing and Muntz, who attribute an oxidizing power to organized and living beings. Japan has more than enough saltpetre for her own requirements, and is in a condition to export it in some quantities. Other salts of potassa obtained in this empire are the sulphate and carbonate—the latter being the ordinary potash of commerce, which might easily, the author thinks, be obtained in considerable quantities by the ordinary processes, and some minor salts, employed, like most other substances mentioned in this book, in the charlatany of the Chinese pharmacopoeia. Of the salts of sodium, the chloride (common salt) is, of course, the most regarded. It is principally prepared from sea water, and there are salt pans of large extent in Hiogo, Nagato, Higo, Tosa, and Yehime. In Oshiro, province of Iwashiro, is a mountain lake, strongly impregnated with salt, whence large supplies are derived. *Umi mo naku Ama naradaru shi'te Michinoku no Yamaga shiwo kumu Oshiro no sato.* "Though there is neither sea nor diver, there are mountaineers who gather salt in the hamlet of Oshiro." Glauber's salts, carbonate of soda, and many other mineral combinations of sodium, including borax, are extensively found in both countries, and enter largely into the prescriptions of old-style practitioners. Of calcium there are many local varieties, including the beautiful white marble of Yunnan, so largely employed—a fact which the author omits to mention—in the gorgeous but crumbling palaces in and around Peking. The districts of Japan in which marble is produced, with descriptions of the various kinds of stone, are carefully tabulated. We observe quaint illustrations of limestone quarries and lime-kilns as worked in Omi and Mino.

Under the general heading of Silicates is alumina, including Kaolin, one of the most important, both from a domestic and artistic point of view, of Japan's and China's natural productions. Doctor Geerts derives the name from Kau-ling, a mountain situated about sixty miles East of the famous porcelain factories of King-teh-chin, Kiangsi, China. It is remarkable, however, that the material extracted from this mountain is solid and hard and resembles rather a feldspathic formation than what we Europeans know as Kaolin or China clay. Analyses of a certain number of the different *pâtes* used in Japan in the manufacture of porcelain have proved that the principal constituent is not pure Kaolin or Kaolinite, but rather a combination of many feldspathic rocks, richer in silica than in kaolin. The Doctor here pertinently remarks that it would be more accurate to speak of rock or porcelain "stone" than porcelain "clay." Mr. Salvétat has shown clearly that feldspar quartz clays and rocks in China are mixed in proportions varying with the nature of the product; and he has also proved that the porcelain of China is more silicious than that of Sévres and Europe generally. So of Japan, whose *pâtes* and porcelains are, as a rule, rich in silica, and contain less alumina than do

those of Europe. Mr. Würtz has said that he discovered that, of eight samples of matter employed for porcelain in Arita only one had less than 74 per cent. of silica, and concluded that Japanese porcelain is, in no degree, made of what we understand by porcelain clay. This statement, Dr. Geerts thinks is a little exaggerated, because almost all the porcelain *pâtes* in Japan are a mixture of petro-silex (rock-stone or adinole in English) and Kaolin, in proportions varying according to the nature of the porcelain. From the analyses of Würtz, Atkinson, Berthier, and Salvétat, our author formulates the proposition that the Kaolins of Japan and China are somewhat richer in silica than those of France, the latter being nearly pure Kaolin. Yet in both of the eastern countries the best methods of purifying, by washing, their clays are familiar to potters. The finest particles held in suspension, after separation from the sediment by decantation, are employed in the best porcelains. Apart from its employment in the arts, Kaolin is (of course) a factor in the Chinese *medica medica*. Mixed with camphor it is presented by the faculty in cases of burns and for tooth powder, recipes which, if we mistake not, are not unfamiliar to the old wives of the West. Washed Kaolin is sold in China in the form of bricks. The Japanese article is made up in squares of some three decimeters (about one foot) in length by six decimeters (two feet) deep. The value of all the porcelains manufactured in Japan is estimated by the government at about \$3,000,000 annually. The various earths of China and Japan are carefully described principally, it seems, in view of their quaint application by medical charlatans. Thus, we have "the earth from below the threshold," which, steeped in warm wine, is good for ladies after child-birth; "earth from the yard" excellent in allaying bubonic swelling; "earth collected from old shoe-soles," infallible in the case of a traveller rendered sick by change of drinking water, and so on, absolutely *ad infinitum*.

Passing over other silicates, felspars, garnets, micas, and serpentines—we come to the section treating of precious stones, wherein is included, for obvious reasons, a serpentine which in Japan, and more especially in China, is deemed precious, the "Jade" to wit. This poetic stone is symbolic of the five virtues with their concomitant actions and attributes. It is benevolent, modest, valiant, just, and polite; (1) because it is as transparent as a cordial and beneficent person; (2) when it is uncut and unpolished it hides its beauty as a modest man conceals the goodness of his heart; (3) it will break rather than bend or humiliate itself, even as does the gallant and courageous man; (4) the pure and enduring sound which it gives out when it is struck resembles the wisdom of a well balanced soul. All the sages and poets of China have chanted its excellences and compared human virtues to them. Dr. Geertz enumerates fourteen classes of the stone, a category which, as he admits, is far from complete. The derivation of the European word, which has an unpleasant significance, apart from any context of the poetic and medicinal fame of the mineral, to an English ear, is ascribed to the Spanish word *hijada* (the reins), owing to the fact that the Mexicans of three or four centuries ago, believing in its therapeutic and preventive qualities, used to carry specimens of it slung as amulets round their loins. Here we find an almost identical superstition observed in very different latitudes by Cortes and Marco Polo. Oriental Jade, according to Dr. Geertz' comparison of several analyses, contains from 58 to 59 per cent. of silica: its other principal constituents being magnesia (22 to 27 per cent.), lime (about 12 per cent.), with alumina, some oxides, potash and water in comparatively small traces. The gem (for so, with its local value, it may justly be called) though largely esteemed is not apparently much found in Japan. Jadeite differs from jade in that it contains a large percentage (22 to 24) of alumina, and 12 per cent. of soda. In other words jadeite is a double silicate of alumina and soda, while jade is a double silicate of lime and magnesia.

Coral, although not a mineral properly so called, is included under the heading of "precious stones," because it is the gem, when cut and polished, *par excellence*, of Japanese ladies, and ranks in the *Hon so Ko moku* immediately next in order to

the jade. Coral is one of those seven precious Buddhist gems which together form the treasures of Paradise. Here, as usual, we find preparations of powdered coral largely prescribed in old style medicine, while, as was analogous in ancient Roman custom, the branches are a favorite amulet. The places of coral production in Japan are Sado Island, Tosa (the main producing district) Kii in Kamano, and, still nearer, Venoshima, where, as is fairly well known, the material is of very inferior quality. Other gems including crystals, are mentioned, with emeralds and sapphires, which latter, though much regarded, are not indigenous but imported. No mention is made of the diamond proper.

The remaining four hundred pages of our author's work on the products of these regions are devoted to a description of such heavy metals as Iron, Manganese, Chrome, Cobalt, Zinc, Tin, Lead, Antimony, and Copper, the longer descriptions being accorded, naturally, to Iron, Copper, and Lead. In treating of all these metals the author displays remarkable industry in his classifications, his studies and personal observations, and his arrangement of the work of his predecessors. He gives admirable descriptions of the various methods employed in mining operation, and lists of the localities where the metals are to be found, with some half dozen illustrations of processes of manipulation in smithies and foundries. Dr. Geertz' work is evidently encyclopedic in the scope of its author's intention. We trust that he will have the opportunity and leisure to bring it to a happy completion, adding an exhaustive and valuable series of references to the present meagre scientific or student's library on Japanese and Chinese productions.

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

THE CURRENCY QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The currency of Japan and the means and methods wherewith to remedy the existing evils which seem to environ the financial situation of the Empire, being a subject of the most vital importance, the *Japan Mail* is doing good service by opening its columns to an extended discussion of the matter. It is well that there is at least one newspaper in Japan that can afford to give to its readers the arguments of those with whom the editor may differ most essentially. The wealth of all the wisdom and experience in the world is not concentrated in the brain of any one individual, consequently there may be some good evolved in a free interchange of opinion on this momentous subject of currency needs and adjustments. In my letter, discussing the proposition of the native press to contract a foreign loan of \$50,000,000 in silver for the purpose of retiring the *Kinsatsu* money now in circulation, I had no thought of advocating a gold standard for Japan. Not at all. The suggestions in that regard were only in the way of badinage, intending that the inference should be seen by the reader, that the substitution of another fluctuating currency in the exchange markets of the world was not a complete panacea for the evil that was deplored in regard to the *Kinsatsu*. What I thought to make apparent was that there is no demand for the substitution of any other money for the *Kinsatsu*. Your correspondent, "T.W.," in your issue of the 14th seems to have fallen into the same error the *Mail* did, in attributing to me an advocacy of a gold standard. I must have written very obscurely to have failed in my intention of advocating the retention of the *Kinsatsu* as the currency of the people. The line of argument held by

"T. W.," if carried to its logical conclusion, runs on all fours with my conceptions of the needs of Japan as they are manifest to-day. I claim that *Kinsatsu* is the money that the Government should give the people, and that Japan has no more need of a silver currency than she has need for an absolutely gold standard and gold money. The argument is that silver, since it is ostracised as a legal tender money in Europe and thereby cheapened, is the currency for Japan, or, to quote "T. W.,"—"What I wish to impress upon your readers is that a currency of silver, or of notes convertible into silver, is just now the very best currency this country could have." The argument is all in favor of silver because it is cheap money,—and the argument is a good one. Silver, cheap as it is, cannot be utilized by the Government of Japan as a currency for its people and for its own disbursements in its domestic affairs for years to come without it is procured at a large cost. Fifty millions, added to the twenty millions in the coffers of the Government, if used to displace the volume of paper to the extent of seventy millions, would leave the country such a wreck of financial ruin that the present state of affairs would be prosperity in comparison. The *Kinsatsu* is just the currency for Japan to-day and for all time; let Silver and Gold take such place as the commercial needs of foreign merchants may demand for them—but for the general requirements of the 35,000,000 of population of the Empire the *Kinsatsu* is the most desirable, for the reason that it can be procured in quantities sufficient to develop the industries and energies of the mass of the people, while it is without the grane of possibility to procure sufficient coin money, even of silver, except at a cost so ruinous as to render it impracticable of consummation. The great demand, financially, is more money. The paltry sum that there is now in the channels of circulation is insufficient to lubricate the wheels of enterprise in any one direction. And when it is remembered that the appreciation of the *Kinsatsu* from an average of 165 to 127 has whelmed the land in woe, it is strange that it can be seriously advocated that a rapid appreciation from 127 to 100 shall take place. The majority of all people are of the debtor class, and when they are crowded to the wall, the fabric of financial and national prosperity is shaken from turret to foundation stone. The cheap money of the United States, ground out by Salmon P. Chase, from the money mill of the United States Treasury, was as potent in the grand problem of saving the Republic to freedom and humanity as if there had been stores of gold behind it. The green-back of the United States was fiat money, irredeemable upon its face,—so is the *Kinsatsu* of Japan. During the suspension of specie payment on the part of the United States Treasury, and when gold and silver coins were only seen in brokers windows as merchandise for sale, all the varied industries of the land were amazingly developed. The energies of the Government were taxed to the uttermost and the enterprise of the people was given full play; cheap money coursed through thousands of channels; the trade and manufactures of the land were opened up; cheap money gave an impetus to the development of great interests which were consummated and which, five years previously, had been declared impracticable because there was not money enough in the United States to prosecute them to a successful termination; cheap money gave to the world the Central Pacific and Union Pacific Railroads; cheap money saved the Union and left the regenerated

country the richest nation on the face of the earth. It is within the province of the *Kinsatsu* to elevate the condition of Japan to the level of the most prosperous nations of the earth, if the Government will only place enough of them among the people. While the Government of the United States was spending at the rate of three million of her green-backs daily she was piling up wealth for those who came after. I have in my pocket one of these green-back notes, which to-day is worth 10 per cent. premium in Japan over the silver dollars of the Empire, and I have seen this same kind of money worth only forty-five cents in silver. The history of the United States green-back note is better than all the theories any man can put forth. Facts are better than words at all times. Your correspondent, "T. W.," seems to be under the impression that Gold is the standard money of the United States to the exclusion of Silver. Under the Administration of President Hayes the remonetization of Silver was effected; and to-day the Green-back, Silver dollar and Gold, are legal tenders for any and all sums. The gloom and disaster that darken the present and casts their baneful shadows far into the future might be made to give way to the rosy tints of jubilant prosperity if the Government would promulgate the fact that, in the immediate future, it would inaugurate an expenditure of funds for the improvement of the country, in road building especially, that would give opportunity for labor to employ itself at remunerative wages. Three hundred millions of paper would not be an excessive volume of currency for Japan; with that amount the possibilities of the Empire would take shape, and the world would witness such an advance on the part of this people as the past twenty years have failed to demonstrate. A country not burthened with foreign debt or embroiled in war is independent of the world besides, and as the people have loyalty and faith toward the government, it can establish fiat money, for its own needs and purposes, that shall answer all the requirements of Gold or Silver. The *Kinsatsu*, bearing the broad seal of the Empire, should be as good for Japan as is the gold sovereign bearing the stamp of the Empress of India and Queen of Great Britain; or the double eagle of the United States bearing the impress of the Goddess of Liberty. Had gambling in *Kinsatsu* by the exchange boards of the country never been allowed, this question of a substitution of Silver in place thereof never would have had standing room. The strong hand of the Government should have throttled these institutions long ere it did. More currency, and no gambling in it, is the moto for the future.

Yokohama, June 14th, 1883.

YOKOHAMA JOURNALISM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There is a pebble occasionally found in Ceylon, and commonly called "Cat's Eye," which Dana classifies as mere ordinary Quartz holding some fibres of Asbestos so placed as to refract light and give to the stone a dim luminosity. It is so rare that it has some value among gems, and curious people have been known to pay high prices for fine specimens of it, though it possesses neither beauty nor brilliancy.

A similar kind of value attaches to an Editorial in the *Japan Herald*. Its light is by no means bright, but its rarity renders it interesting.

I was, then, with a sense of real refreshment that, faintly glimmering among the usual mass of clippings from old British or American newspapers (often uncredited), detailed accounts of the performances of our local cricketers, elaborate notices of sporting events in every quarter of the globe, extended reports of the arraignment of tipsy sailors before the patient Assistant Judge of Her Majesty's Consular Court, and other like "items," I found in this evening's paper a remarkable expression of the Editorial Wisdom on financial questions.

Some of us here in Yokohama, who feel that our affairs are touched at many points by the currency irregularities which now prevail in this country and abroad, and who desire to bring to our business an intelligent apprehension of the subtle and powerful influences thus affecting it, are simple enough to imagine that some careful occasional discussion of the subject in print may prove useful, not only to ourselves but to our neighbours.

It appears however, according to our local Solomon, that, in this notion, we are quite irrational. He assures us that his readers, at all events, care far more about the date when a coming steamer is likely to arrive (query, for betting purposes?) than about any such paltry matters as Finance or Currency, and that articles or communications on these subjects are not only not amusing but positively repulsive.

If the *Herald's* readers resemble its editor this opinion may be entirely just. For it is easy to believe that any one who can enjoy a daily dose of stale extracts, and cheerfully pay for the same at the rate of \$30 per annum (if in advance, but with 20 per cent. extra if in arrear) would no more re-lish matter of the kind in question than the good folk of Berlin did fresh oysters when their railway first brought them the mollusc in that unusual condition. But are the readers of the *Herald* only of this calibre? The editor ought to know. Yet I would fain think he does some of them an injustice in so classing them, and that, if he would deign to bend his Mentoric mind, or to open his costly columns, to something with more flavor than the pap he ordinarily administers, his paper would be more acceptable, and would give people in other countries, who may happen to read it, a better idea of the prevalent topics and tone of this community than it at present conveys. It is not, I think, quite generous of him to represent us all as wholly absorbed in "events" of the kind he most loves to chronicle, and quite indifferent to anything bigger. It strikes me that this is presuming rather heavily on the good-nature which sustains, in this poor place, one of the dearest, though one of the dreariest, journals in the world, mainly because it is "the oldest newspaper in Japan."—Your truly,

W.

July 19th, 1881.

[If those who have been kind enough to discuss in our columns the vital subject of Japanese currency, think it worth their while to notice criticism such as that which has evoked this letter, we, who have been indirectly the means of exposing them to impertinence, cannot in fairness decline to publish their remonstrances. We do so, however, with extreme reluctance and in violation of a rule which has forbidden the insertion of many similar communications.—Ed. J. M.]

HIS EXCELLENCY THE LATE IWA-KURA TOMOYOSHI.

We extract from the columns of the *Japan Mail* of August 10th, 1880, the following biographical notice of His Excellency Iwakura Tomoyoshi:—

The subject of this sketch is the son of Iwakura Tomoyoshi, and has ever enjoyed the reputation of being the possessor of great ability, in addition to his undoubted gifts as a most eloquent speaker. While yet a youth, Iwakura was appointed one of the chamberlains attached to be Emperor Komei Tenno, the father of the reigning Sovereign, an office which he fulfilled to the satisfaction of his superiors.

In the fifth year of Ansei (1858) Hotta, a member of the *Gorajin*, or Council of State, visited Kiyoto as a representative of the Shogunate Government, and requested permission from the Emperor to conclude treaties with Foreign Powers which would have the effect of throwing open the country to intercourse with the western strangers. Iwakura, who naturally shared in the detestation then felt by the Court party for the intruders, opposed the proposition with all his power, and eagerly accepted the suggestion, made by the Envoy, that the Imperial and Shogunate parties should unite their forces for the purpose of expelling foreigners. However, in consequence of the marriage of Her Imperial Highness, the Princess Kazumiya (younger sister of Komei Tenno) with the reigning Shogun, Tokugawa Iyemachi, in 1861, the design came to nothing, and the principal movers were banished from the Court. In token of his regret for the part he had taken, Iwakura, when in exile, shaved his head and remained in strict seclusion at his residence at Iwakura Mura.

At this time His Excellency was generally looked upon as a supporter of the Bakufu Government and therefore avoided by the adherents of the Court party. Notwithstanding this, several influential persons knew the real aims of Iwakura, and formed a means of communication between him and Saigo Takamori, Okubo, Kido, and other prominent leaders of the southern confederacy to restore the lustre of the Imperial throne by the overthrow of the Shogunate. This connection of Iwakura with the Court party was altogether unknown to the Bakufu officials, and it was therefore a general surprise when, on the Restoration being accomplished, he was openly recognised as one of the chief leaders of the movement. Imperial gratitude recalled His Excellency to Court, where he was appointed *Sanyo*, Councillor, Vice-Administrator, and Vice-Prime Minister, besides receiving other substantial marks of favour. All these offices he shortly after resigned, and retired into private life.

In the second year of Meiji (1869) Iwakura was again called into the councils of the Empire and appointed *Dainagon*, receiving at the same time an annual pension of 5,000 koku of rice, as an acknowledgment of his eminent services.

His Excellency was then sent on a special mission to Satsuma and Choshu, where he succeeded in persuading Prince Shimadzu and Prince Moori, to return with him to Tokio.

In 1871, Iwakura was appointed Minister for Foreign Affairs, and was accorded the unprecedented honour of a visit from the Emperor in person. His Majesty is reported to have addressed him on the occasion in the following terms:—"Ever since the restoration of Our Imperial authority to the pristine splendour of Our ancestors, you have laboured earnestly and successfully, day and night, in the administration of the affairs of Our kingdom. You have spared no toil and known no fatigue in Our service, and it is to you, under the favour of the Gods, that We owe the flourishing condition of Our kingdom. As a special mark of Our favour, We have departed from the usual etiquette and have visited you in person, to thank you for your service."

Shortly after this unparalleled token of Imperial favour, His Excellency was appointed *Udaijin* and visited Europe and America in the capacity of Envoy Extraordinary and Minister Plenipotentiary to the Government at Washington, and the various Courts of Europe.

Returning in 1872, his mission having proved successful, Iwakura found the Cabinet engaged in debating the question of invading Corea. His Excellency saw that financial ruin must inevitably result from a declaration of war, and opposed the project with all his influence. His Excellency Sanjo was at the time in ill-health and the Emperor sought advice in the difficulty from Iwakura. The result may be easily imagined. The war-cloud dispersed, and by skillful negotiation Japan obtained from Corea all the concessions desirable. The position taken by His Excellency in the Korean and other questions—notably that of the

Samurai pensions—raised against him a host of enemies, and on the 14th of January, 1873, a desperate attempt was made to assassinate him by nine *ronins*—eight from Tosa and one from Satsuma. Returning in the evening from an interview with the Emperor, His Excellency's carriage was stopped outside the castle moat, close to the gates of the Akasaka Palace. Instantly the coachman and betto were cut down, and the body of the vehicle pierced with sword and spear thrust. Wounded, but fortunately for the future of the Empire only slightly, Iwakura leaped into the moat and escaped under cover of the friendly darkness. In a few days His Excellency was able to attend to his official duties, and also plead for mercy to be extended towards his would-be assassins. In commemoration of this narrow escape the Emperor conferred upon Iwakura the Japanese Order of the junior first rank.

In 1876, His Excellency accompanied the Emperor on his progress through the northern provinces, and subsequently to Kiyoto, where he remained in attendance upon the Sovereign during the Satsuma rebellion, acting as his most trusted councillor while that grave crisis was pending. Peace being restored to the troubled land, Iwakura received the decoration of the Rising Sun of the first class. After the cold-blooded assassination of Okubo Toshimichi in 1878, His Excellency Iwakura became the most influential member of the Cabinet.

EXTRACT FROM THE REPORT OF THE BANKING BUREAU.

We have to acknowledge the receipt from Mr. Kato, President of the Banking Bureau, of the third annual report of that office for the period from the 1st July of the 13th year of Meiji (1880) to the 30th June of the 14th year of Meiji (1881). It consists of some three hundred and fifty-one pages and is very neatly printed and bound. The work has lost much of its value on account of the delay in its publication, the information conveyed there in being two years old. We proceed, however, to translate the most interesting part of it as follows:—

GENERAL REMARKS.

Prior to reporting upon the nature of the transactions carried on for the period under review by the various national banks, it seems necessary to publish a statistical account of them which is as follows:—

I.—NUMBER OF BANKS.

| | |
|---------------------|-----|
| National Banks..... | 150 |
| Branches..... | 105 |
| Specie Bank..... | 1 |
| Branch..... | 1 |

II.—CAPITAL.

| | |
|---------------------|-----------------|
| National Banks..... | yen. 43,216,100 |
| Specie Bank..... | 3,000,000 |

III.—RESERVE FUND.

| | |
|---------------------|----------------|
| National Banks..... | yen. 1,861,374 |
| Specie Bank..... | 16,800 |

SPECIAL RESERVE FUND.

| | |
|---------------------|--------------|
| National Banks..... | yen. 324,008 |
| Specie Bank..... | 7,100 |

VI.—BANK NOTES AND SPECIE NOTES.

| | |
|-----------------------------------|-----------------|
| Bank notes { nominal issue..... | yen. 34,396,880 |
| { actual issue..... | 34,385,133 |
| Specie notes { nominal issue..... | 1,500,000 |
| { actual issue..... | 302,920 |
| Total Nominal issue..... | 35,896,880 |
| Total Actual issue..... | 34,688,053 |

V.—MONEY AND PUBLIC LOAN BONDS IN POSSESSION OF THE BANKS.

| | NATIONAL BANKS. yen. | SPECIE BANK. yen. |
|------------------------|-------------------------|----------------------|
| Gold..... | 988,191 | 500,000 |
| Silver..... | 902,045 | 435,655 |
| Copper..... | 206,706 | 3 |
| Paper money..... | 9,634,270 | 450,325 |
| Bank notes..... | 1,199,009 | 21,537 |
| Public Loan-bonds..... | 65,322,937 | 1,030,650 |

VI.—BUSINESS ITEMS OF THE BANKS.

| | NATIONAL BANKS. yen. | SPECIE BANK. yen. |
|------------------------------------------------|-------------------------|----------------------|
| Investments..... | 942,963,828 | 55,368,009 |
| Government Deposits..... | 107,460,729 | 4,641,259 |
| Public Deposits..... | 239,632,496 | 17,284,621 |

| Loans to the Govern- ment..... | 15,621,163 | — |
| Loans to the public..... | 162,138,466 | 10,449,482 |
| Advances to the Go- vernment..... | 32,944,866 | 1,810,000 |
| Advances to the public..... | 68,387,826 | 385,456 |
| Bills discounted..... | 20,947,189 | 454,241 |
| Advances on goods..... | 14,057,724 | 1,203,282 |
| Bills collected..... | 2,677,012 | 234,123 |
| Sale and purchase of Public Loan-bonds..... | 13,066,961 | — |

VII.—PROFITS.

| | NATIONAL BANKS. yen. | SPECIE BANK. yen. |
|--------------------------|-------------------------|----------------------|
| Gross profits..... | 11,044,867 | 380,672 |
| Expenses and losses..... | 4,106,966 | 60,123 |
| Net profit..... | 6,937,901 | 320,509 |
| Dividends..... | 5,683,677 | 147,901 |

Of the above items, the 1st to the 5th were made up to the end of 1880. But the 6th and others following it are twelve months old. According to the report, there is a decrease of two in the number of the banks as compared with previous years, this is due to the amalgamation of two banks with others. As regards the capital, there is an increase of yen 1,100,000 as compared with that of the previous year, which was yen 4,211,000. This is due to the number of shares having been augmented. The total amount of the bank and specie notes aggregate yen 35,896,880. This sum shows no difference; but there is a decrease of more than yen 300,000 in the amount of the actual issue, a decrease which is traceable to the reduction of paper money, and the falling off in the demand for silver, owing to the decline of trade. During the year, the various sums of money employed by the National Banks and Specie Bank in financial operations, amounted to yen 998,331,836. This is nearly twenty-one times as much as the aggregate capital of the banks and shows an increase of yen 214,000,000 as compared with previous years. This, divided according to the number of days, say three hundred days a year, gives an average of more than yen 3,320,000 per day. This cannot but be called prosperous. The manner in which this large sum of money was employed can be found in the items under Section VI. as enumerated above. Deposits and bills of exchange added together, show an excess of more than eight times the capital; loans and remittances three times; advances twice; discounting bills, fifty per cent., advances on goods nearly thirty per cent., and transactions in public loan bonds, more than twenty per cent. The collecting of bills shows a very insignificant increase, yet it nearly amounts to yen 3,000,000. Thus, it appears that the great advantage of banking operations or the economical appliance of money is making itself felt in every quarter. The business transacted by the banks under the afore-said headings, amounts to more than yen 715,000,000. As the prosperity or otherwise of the banks cannot be ascertained by the report for one year only, it is necessary to compare it with the reports for other years. A comparison shows that in 1880 the fixed and temporary deposits were yen 7,520,000 and yen 143,780,000 respectively, whereas in the present year (1881) the former shows a decrease of more than yen 1,210,000 and the latter, an increase of more than yen 29,000,000. As regards bills of exchange, the decrease is more than yen 7,880,000 against yen 21,960,000 last year. There is, however, an increase of yen 7,280,000 in the special

contract deposits, which together with the fixed deposits amounts to more than *yen* 33,230,000. In the year under review the total increase in the deposits of the public was upwards of *yen* 17,000,000. The reason why the fixed deposits decreased while the temporary deposits increased, is that the people find much more convenience in the temporary deposit system, and do not like to invest money at a low rate of interest while it can be more lucratively employed. The decrease in the bills of exchange is traceable to the enactment of the regulations for the control of this business in October, 1879, which curtailed their circulating capacity. The special contract deposits are the funds for the maintenance of schools and for municipal purposes, etc., which are nowadays deposited in the banks. The money borrowed from other banks is often placed under this heading, hence the cause of a steady increase in that item. As regards loans, the increase is more than *yen* 31,010,000. This shows the development of the banking business and the brisk demand for money. The commercial prosperity of the nation depends upon the amount of the products, and banking business is so closely connected with it, that the decline of commerce means a corresponding decline in the business of the banks. As this country abounds with natural products, the markets are usually more active in Autumn, for by that time the harvests are sent into the towns for sale. Therefore, the demand for money is always brisk in the second half of the year, whilst the contrary is the case in the first half. To ascertain the prosperity or otherwise of the banks, it is essential first to note the condition of the money market. In the second half of 1880, the money market was very tight. This was due to the excessive rise in the value of silver. In the months of January and February, 1880, it rose from thirty to forty per cent.; and in May reached upwards of fifty-four per cent. The Minister of Finance then suspended transactions on the Bourse; but his efforts were not as successful as were anticipated. In the month of September it rose as high as seventy-eight per cent. As silver rose in value, the paper currency depreciated, causing a rise in the price of commodities. The farmers sold their crops at this favorable opportunity: therefore their purchasing power was greatly augmented, and traders were obliged to steadily increase their stocks to meet the pressing demand. The scarcity of money was severely felt throughout the country and the rates of interest were exorbitant. In Kobe and Osaka, the slightest fluctuation produces a great effect in the market, sometimes the merchants are in the possession of a large amount of silver when they want paper currency; on other occasions they are compelled to receive paper money when they want silver. Thus, the irregular supply of the currency, both paper and metallic, causes great inconvenience to those concerned in trade. It is a matter of frequent occurrence that the daily interest ranges from ten *sen* to fifteen *sen* per 100 *yen*, but the people willingly pay it. In such times, the banks are heavily drawn upon and loans are eagerly sought for. In consequence, there is not much money left in the banks and they are compelled to refrain from making loans for long periods, and obliged to employ their money in such a manner as to secure speedy repayment. In the first half of 1881 a reaction ensued, and as the silver currency depreciated, there was a corresponding fall in the value of commodities. The banking business for the year under review was limited, but, on the whole, it manifests a marked improvement as compared with the preceding year. Thus, discount and advances on goods show an increase of more than *yen* 40,000,000. The profit is 15 per cent. on the capital; and dividends average 13 per cent.

TRANSLATIONS FROM NATIVE JOURNALS.

ON THE TAXATION OF RICE AND STOCK BROKERS.

(Translated from the *Bukka Shimpō*).

With regard to the proclamation of regulations for the levy of taxes upon *saké*, tobacco, patent medicines, Rice and Stock Exchanges, some of our contemporaries have asserted that the taxation of members of the Bourse must be regarded as a measure specially intended to prevent speculation on the part of brokers. Such an assertion, however, must be condemned as a display of ignorance of the legitimate functions of the Rice and Stock exchanges. The prime object of taxing these establishments no doubt is to provide a revenue, just as is the case with *saké*, tobacco, and patent medicines. We may then reasonably declare that the Government ought to adopt the simplest methods of attaining its ends so that the people may as easily as possible perform its duties of tax-paying. Some time ago we raised the question whether it would not be impossible for the Government effectually to levy a tax upon the Bourse, we urged the necessity of reducing the impost upon the brokers to 1-500, 1-1000, or even 1-2000 (per cent). In order to show that it is very easy for the Government to obtain a million or a million and a half *yen* by adequate taxation, we investigated practically the amount of transactions actually carried on in the various exchanges of the Empire, and determined the rate of contribution which they are able to make, for the maintenance of the functionaries who are responsible for the management of taxation. It must be remembered, further, that the reason why we have made such a special investigation is because we desired to show the propriety of increasing the taxes upon Rice and Stock Exchanges, in spite of those who entertain the opposite view, and because we wish that our Government should not fail to obtain its ends, and to supply its treasury.

The financial estimates issued by the Privy Council for the 16th year of Meiji show the revenue to be *yen* 75,606,059, which gives an increase of *yen* 8,791,936 as compared with the previous fiscal year. The principal cause of this augmentation is the proposed extension of the Army and Navy as well as improvement in our internal administration, both of which require a considerable amount of expenditure. A new method of taxation is enforced, and the former rate of taxes is increased. The most important augmentations were those provided in Proclamations, Nos. 51, 65, 61, and 63 issued in the 15th year of Meiji (1882), defining the taxes to be levied on *saké*, tobacco, patent medicines, and Rice and Stock Brokers. These assessments on *saké*, tobacco, and brokerage have increased the revenue by *yen* 7,800,000. Moreover, postage stamps and railway traffic under the superintendence of the Public Works Department have realized more than *yen* 2,710,000. Accordingly, although there is a decrease of *yen* 2,350,000 in the profits derived from mining enterprises conducted by the same Department and in the taxes levied on the productions of Hokkaido, precise calculation shows the whole revenue to be augmented by *yen* 8,791,937. As regards the tax on companies, a diminution of more than *yen* 77,000 is noticeable on account of the fact that some of the National Banks were ordered to suspend business, and that dues on Rice and Stock Exchanges were decreased by Notification No. 67 issued in the

15th year of Meiji (1882). But it is nevertheless plain that, as taxes were levied on Rice and Stock Brokers by Notification No. 65 of the same year, and as the Rice Exchanges have arranged to continue their transactions under fresh charters from the Government, the revenue from such sources was increased by *yen* 930,000 and *yen* 130,000 respectively. From this we may perceive that the Government is desirous to impose a tax upon tobaccoists, *saké* brewers, medicine dealers, and Rice and Stock Brokers to the amount of *yen* 8,400,000, of which *yen* 930,000 (or one-ninth) is to be exacted from the brokers. This sum is much smaller than we anticipated, and yet suffices to prove that the intention of the Government is not the prevention of speculative enterprises, but must be traced to the simple desire to augment its revenue. In other words, the sum of *yen* 930,000 must be regarded as a tax which is absolutely indispensable for the extension of the army and navy as well as for the improvement of systems of internal administration.

Thus, the amount of *yen* 930,000 collected from the brokers must form a portion of the revenue, and therefore be mentioned in the financial estimates. There is no objection to the sum collected exceeding the estimates, but in case it falls short the authorities must adopt measures to make up the deficiency.

They may have already devised a scheme to meet such a contingency, and it is scarcely necessary for us to say anything more on the subject, but when we consider that, under this pressure of circumstances, Government is compelled to enforce a new method of taxation as well as to increase the old taxes, we may reasonably assert that it ought to carry out its schemes in such a manner as to ensure prompt success, while on the other hand, it should adopt such means as will enable the people to pay the imposts without difficulty. This is the case with rice and stock brokers, whom Government can most effectually tax, as they are well able to disburse the money. The amount of taxes should be as high as possible. For our own part, we regard *yen* 930,000 as an exceedingly low figure, and we are inclined to propound that the brokers are able to contribute a million or a million and a half *yen* annually. A simple method by which the tax payers can easily fulfil their obligations should be adopted. Whether they will find it easy to pay *yen* 930,000 under the existing system of taxation, or whether they might find it difficult to pay a million or a million and a half with a decreased rate of tax, we will endeavour to show in the following lines.

We have already stated that the regulations issued by the Government to define the rate of the tax to be imposed upon the brokers, are evidently intended to augment the revenue. Whether it is easy or difficult for them to pay *yen* 930,000 we are unable to say without reflection. Yet it is undeniable that since the regulations commenced to operate on the 1st of April, the apparent prosperity of the Stock and Rice Exchanges in the capital as well as in Yokohama, Osaka, and other localities, has dwindled away; and that the brokers have sunk into a deplorable condition. Their distress is far greater than is supposed by outside observers. Should the present anomaly continue, not only will they be unable to pay the tax of *yen* 930,000, but are likely to fall into greater calamity. Hence the Rice and Stock Exchanges will be unable to maintain themselves, and this cannot fail to deter the progress of agriculture and commerce. We cannot then lament the present state of affairs.

A glance at the two Rice Exchanges in Tokiyo will show that scarcely any transactions have taken place since April last, and that although a greater amount of business was conducted at Kakigara-cho than at Kabuto-cho, even there it did not exceed three or four thousand *Koku*. Sometimes the transactions were so small that the transfer of some tens of *Koku* only were registered, the daily average being less than 1,200 or 1,300 *Koku*. Our readers may remember that in the prosperous days of these institutions, the average amount of daily transactions was twenty-thousand or thirty-thousand *Koku*. Now they have remarkably declined, and the brokers are involved in great embarrassments. The recent amalgamation of the two institutions under the name of the Tokiyo Rice Exchange must be regarded as a result arising from this depression. There is no certain prospect of the possibility of the brokers maintaining their present organization. Such being the case with the Rice Exchange in Tokiyo, we are justified in supposing that similar institutions in Osaka, Shimonoseki, Niigata, and other localities have shared a similar fate. We are informed that members of some provincial exchanges have lately arrived in Tokiyo, where, having consulted with regard to the regulations, they have determined to investigate the actual condition of the amalgamated Rice Exchange at Kakigara-cho, and then forward a memorial to the Government. We are unable to tell what the prayer of their petition may be, but we suppose that it will refer to the abatement of taxation. All this tends to the conclusion that provincial institutions have likewise sunk into serious embarrassment. As regards the Yokohama Stock Exchange, the public are aware that it suspended business on the 1st of April this year, declaring its inability to bear the duties imposed. It petitioned the authorities for a decrease, but was persistently refused. We are unable to foretell the future of this institution, but it is not altogether unlikely that it will be constrained to relinquish its business. It is the case, the maintenance of similar establishments in Tokiyo and Osaka is also beyond all hope.

Of the various Rice Exchanges in the Empire, the largest transactions are carried on in Tokiyo, while the Yokohama Stock Exchange surpasses in prosperity all other similar establishments. Should present stagnation continue in Tokiyo and Yokohama, we may reasonably assert that the Government will be hardly able to collect the estimated amount of *yen* 950,000 in the shape of taxes levied upon the brokers of the various exchanges in the country. We earnestly hope that the authorities will take resolute steps to lower the rates in such a way that the brokers may be enabled to pay without any great difficulty. Such a scheme should not fail to realize the sum of a million or a million and a half *yen* if necessary.

THE CATASTROPHE IN THE HIROSHIMA PRISON.

(Translated from the *Choya Shimbun*)

Some time ago we published a series of articles concerning the management of the various prisons in the Empire, and urged the necessity of treating prisoners in such a manner as to inflict a proportionate amount of pain on each, so that by discrimination of age, physical constitution, and profession measures may be effectually enforced to protect them from falling sick or losing their lives through insufficiency of work, clothing, or food. The reason why we take the trouble of making lengthy statements with regard to the management of prisons is not only because we take pity on those who are liable to imprisonment for discussing public affairs or leading a journalistic life, but also we consider that ordinary convicts who are put in irons and carry wood or stone on the road, are some of our thirty-five million brethren. Of these,

some may have become criminal to society by misbehavior: others have fallen into the clutches of the law for devoting their energies to the promotion of what they think the public interests. Which of them has no parents? Which has no wife and children? The most hardened criminals desire to return to their home in good health on the expiry of their term of imprisonment. More assuredly should this be so with educated persons or those of prominent position who recognize the importance of their personal health and reputation. In short, the Criminal Code ought to aim at removing evils in society; its provisions are not to be enforced for motives of private spite. Should imprisonment injure the health of convicts or endanger their lives by inflicting on them an undue amount of suffering, the result must be condemned as the outcome of efforts made in contravention of the true motives of the government. Since the Prison Regulations were revised many persons have been thrown into gaol for criticising public affairs, and it was very seldom that they did not fall sick there. Several of the editors of our office were released from custody this year, but all of them have been seized with dangerous illness, while some are almost expiring. These circumstances lead to the question whether it is not because the existing system of imprisonment is defective. We request the attention of the authorities to this point.

Great caution is necessary even in the treatment of ordinary convicts. What feelings must our authorities have when prisoners awaiting trial lose their lives in consequence of an unexpected catastrophe? Such is a question of great moment and requires immediate consideration. A fire that sometime ago broke out in a prison in the prefecture of Hiroshima, where prisoners awaiting trial were confined, was so serious as to cause grievous lamentation. It is said that sixty-one were burned to death, and about a hundred and sixty severely injured, while a hundred and twenty criminals escaped. There is no doubt that prisoners awaiting trial should be presumed to be innocent. We ought to feel piteous for the death by fire of even such convicts as are under sentence of penal servitude, or imprisonment, with or without hard labour. How much more should we be so in the case of those unconvicted. Not a few persons have hitherto been committed to gaol on mere suspicion of guilt, and subsequently acquitted. We can hardly pretend to say that there was none among the sixty-one prisoners burned, who might not have been similarly released. Nor is it altogether unlikely that some of them deserved to be punished with one or two months' imprisonment, and that their parents and children should be supported by them. But should any such persons perish in prison, what must be their agony and the sorrow of their families? Many fires are reported to have lately occurred in the local prisons, but none of them were so serious as that of Hiroshima. It is said to have occurred in the cells where prisoners were confined, and is ascribed to the work of an incendiary. We do not doubt that the prison authorities took the best measures to extinguish the fire, but failing to master it they allowed it to produce most calamitous results. There is one thing to which our Government should direct its special attention. It must be remembered that the burning of sixty-one prisoners by fire is a serious event in so far as the loss of lives is concerned. When the Government establishes prisons for suspected persons whom it deprives of liberty it must be responsible for their immunity against disaster. In case the fire spread so rapidly that the prison authorities were really unable to adopt measures for the protection of the prisoners, we cannot blame them; but in case the disaster is traceable to the negligence of the authorities, we ought not to regard the death of convicts as an ordinary misfortune. Should our Government receive a report from the Prefect of Hiroshima on the recent conflagration to the effect that there was really no time to let out the prisoners on account of its rapid extension, would it not be well to make a strict enquiry into the conduct of the Superintendent? If not, it deserves blame for not duly recognizing the value of the lives of its people. The Government ought to despatch special commissioners to Hiroshima to investigate the facts and act disinterestedly. The Government ought to proclaim the result throughout the Empire. As

regards the responsibilities of the Government, the escape of a hundred prisoners should be as nothing against the salvation of one from injury or death.

In the time of the Shogunate, the prisons at Demmacho were frequently destroyed by fire, but we have not heard that any of the prisoners perished in the flames. This must be due to the caution of the authorities, who did not hesitate to release them on such occasions.

In the Prison Regulations at present in operation, Article 35 provides that, in case a fire breaks out in the vicinity of the prison and threatens to spread to it, the prison authorities must, according to circumstances, adopt measures to remove the prisoners to some other place where they may be guarded; and that in case such measures cannot possibly be adopted on account of the gravity of the fire, inundation, hurricane, earthquake, or similar catastrophe, all prisoners may be temporarily set at large, except such as are confined on suspicion or for the production of their testimony. From this it seems that, according to the Regulations, the most grievous criminals can be liberated in case of emergency, while those who have not been convicted, or who are supposed to be able to furnish evidence cannot be released however serious the event may be. What may be the true object of such regulations we are at a loss to understand. The prisoners lately devoured by fire in Hiroshima were of such a character. Their death was perfectly legal, and the prison authorities must be regarded as having consumed them in the execution of their duty. Can anything more unjust be found in any legislation of ancient or modern times?

JAPANESE MERCHANTS IN IN-CHHON.

(Translated from the *Fiji Shimpō*.)

A traveller who has lately returned from the port of In-chhōn, Korea, states that, since it was opened to foreign commerce in January last, no steamers have arrived there except war vessels or such as have been despatched on special service by the War Department, and that there are none available for commercial purposes. The Mitsu Bishi Company's mail steamers may be serviceable in this respect, but they do not visit the place more than twice a year. Since the opening of the port, only one of the company's mails has arrived. The summer has set in: the bay is deadly calm. Traders imagine that they will visit In-chhōn in order to develop the internal commerce of Korea. They wait for an opportunity to embark with merchandise ready for transportation. In May last, the small steamer *Chinsei Maru* and the Mitsu Bishi Company's steamer *Chitose Maru*, both private vessels, arrived in In-chhōn with lading from private individuals. The number of Japanese residents has considerably increased. They are now about a hundred and fifty. Ché-mul-pho, where the Japanese are settled, was originally one of the smallest hamlets of the peninsula, without streets, warehouses or stores, and presented a most dreary aspect. A parallel for its barrenness may be found in the Yokohama of some thirty years ago. Any Japanese landing must, first of all, provide for his immediate necessities, namely, a dwelling to protect him from rain and wind, and water to quench his thirst, as well as mats, screens, doors, tubs, and other articles of daily use. These necessities, generally speaking, have to be provided from the mother country. Before entering into mercantile transactions with the natives, Japanese settlers in In-chhōn must look for the supply of all their wants from home. In summer, during which the voyage is free from marine perils, even such small steamers as the *Chitose Maru* and *Chinsei Maru* can take provisions and save one hundred and fifty Japanese from starvation. But, in the autumn, the waters about In-chhōn become perilous to such vessels. Should we, then, arrange to despatch large instead of small steamers, in order to supply the settlers with provisions as well as merchandise? Notwithstanding that the port of In-chhōn may probably advance in prosperity to the same extent as was attained by Yokohama, it is at present in a chaotic condition, as regards its foreign commerce. The export and import of merchandise is considerable; and therefore the employment of such

small steamers as the *Chitose Maru* or *Chinsei Maru* is quite sufficient for present purposes. The charter of a large, seaworthy, steamer would be likely to entail loss on account of the smallness of outward and inward foreign trade. Indeed, it would not be possible for traders to maintain such a steamship service in view of the loss of thousands of *yen* for each voyage. Suspension of all trade communication becomes inevitable when the cold weather sets in. The Japanese in In-chhōn will find themselves left, helpless exiles, as it were on a desolate island. Is it too late to seek for means to avert their misfortune? Would they return home? They have no ship in which to embark, even would they sail about five hundred *ri* across the perilous sea. Will they remain until next spring? They have no shelter to protect them from rain and snow; no fire to warm them in the rigid cold. Clothing and provisions they have not sufficient for half a year. If they do not perish in snow and ice, they must congratulate themselves upon their good fortune. To avert such calamities imminent to Japanese in In-chhōn, our Government ought to grant a subsidy to the establishment of a regular steamship service, so that communication may be practicable at any time; and Korean commerce may be fostered.

Such is the position as stated to us by a person who is perfectly familiar with the actual condition of In-chhōn. We have ever complained of lack of communication with Korea, and have frequently urged the necessity of establishing a regular steamship service to and from In-chhōn. But no measures have yet been taken, a neglect which we regret, not only for itself, but because it puts our compatriots to grave inconvenience. This true account of the condition of In-chhōn makes us grieve. Who taught the Koreans that there are many countries beyond their own? Who persuaded them to open the ports of Pū-san and Wōn-san to foreign commerce? Who opened the way for the visit of Europeans and Americans to the peninsula? Who prayed for the growth of civilization in Korea, of her independence, power, wealth, and commercial prosperity? None but the Japanese, to be sure! The trouble that occurred in Sōul last year did not induce us to take up arms; and the Koreans becoming aware of the just motives of our Government, the event actually afforded a chance for the consolidation of mutual friendship and commercial relations. We regret to have to add that the opportunity so offered was not availed of to produce beneficial results. In-chhōn was opened six months ago, yet the difficulty of communication remains as it was before. Two months hence, Yang-hwa-chin will likewise be opened. Is the adoption of protective measures not likely to be attended with remunerative results? Is our Korean commerce to be left to mere chance? Several tens of thousands of *yen* may be economized, but our people are likely to suffer.

THE TOBACCO TAX.

(Translated from the *Nichi Nichi Shimbun*).

Inquiry made by the Kiyoto-Fu authorities on the 18th of June last as to whether Government stamps should be attached to cigars and whether persons other than those engaged in the trade can sell them, elicited an answer from the Finance Department to the effect that no such measure was contemplated. Article II. of the Tobacco Tax Act, enacted on the 27th of December last, says that those who make cigars and smoking tobacco shall be considered "manufacturers." Nobody, whether manufacturer, broker, or retail dealer, can carry on the trade without a licence from the Government. Such is at least, the spirit of the regulations.

Formerly cigars and cigarettes were largely imported. Owing to a steadily increasing demand among the well-to-do classes, local manufactures were started. Although our cigars are not as yet perfectly good, differing in quality according to the places where they are made, great improvement is noticeable in the cigarettes which, in some respects excel the imported article. They are now extensively smoked by the higher classes in preference to foreign made cigarettes, the importation of which is nearly abolished. This is a matter for congratulation. Considering, how-

ever, the mere point of taxation, a question arises why cigars and cigarettes should be exempt from taxation, while smoking tobacco is subject to a heavy tax. An explanation may be found in the fact that the former are not as yet widely availed of, while the latter is used all over the country. This reason is eminently unsatisfactory to the public. There is no cause why a tax should be imposed according to the amount of consumption. The production of cigars and cigarettes is no doubt meagre as compared with that of ordinary smoking tobacco, but still the actual quantity must be great. Unable to make an exact calculation, in the absence of statistics, we can only speak of what we see. People of high society, including functionaries of distinction and wealthy merchants, smoke cigars and cigarettes. It is a matter of common occurrence, when we enter the houses of well-to-do persons, to find cigars or cigarettes on the table, but seldom or never do we see Japanese tobacco with its accompanying utensils. Visitors too, whether dressed in Japanese or European costume, bring cigars and cigarettes with them. This fashion, inaugurated by the gentry, is largely imitated by the poorest students, not alone in Tokiyo, but in Kiyoto, Osaka, Yokohama, Kobe, and all other places where there are shops for the sale of foreign goods. Thus, we are convinced that the consumption of tobacco of foreign manufacture is great. Furthermore, we do not see why Government stamps should not be affixed to it. It is more convenient than Japanese tobacco, being packed in boxes. Why then should these cigars and cigarettes be exempt from tax. The irregularity is either directly or indirectly traceable to existing treaties with foreign powers. In all countries, a heavy duty is imposed on tobacco and spirits. But according to convention, Japan cannot impose any duty higher than five per cent. No other country in the world has so low an impost upon these articles of luxury. Since the Restoration, tobacco and spirits have been received as essential to progress and civilization. They are now looked upon as necessary embellishments of civilization. Whatever law is made, it cannot have effect on the importation of tobacco, since no higher excise duty can, now, be imposed. Fortunately, however, the local manufacture of cigarettes having been started, an end has been put to their importation; and that of cigars is also about to be arrested. With this we must be content for the nonce. If a tax is imposed the price will be enhanced: manufacturers will be deprived of their advantage in competition with Occidental makers; and, finally, the use of foreign tobacco will be revived in society. One may illustrate this by the story which tells of a man who killed the bull while attempting only to cut its horns. Such is the reason why cigars and cigarettes are exempt from the stamp tax, as is the case with home-made wine, beer, and spirits, which at present enjoy an exemption from excise, but which, if a heavy tax were imposed upon them, would soon ruin their manufacturers. On the other hand, *saké* is subjected to an exorbitant tax. Therefore, it appears that the burden is put upon the poor alone, the rich having nothing to carry. The anomaly is the outcome of the existing treaties. When they are amended, a duty of 30 or 40 per cent. should be imposed on foreign tobacco and spirits as well as on the home-made articles. Thus anomalies of taxation would be removed.

THE SILK CROP IN FUKUSHIMA.

(Translated from the *Keisai Zasshi*).

Silkworm education in Kakeda, in the Rural Division of Date, Fukushima *Ken*, has been very successful this year, and preparations are already made for reeling. A large proportion of the worms entered on the insect stage of existence and produced their eggs; but the market value of these is unsettled. It is generally believed, however, that cards will fall in price considerably. The production of immense numbers of eggs for transportation to Yokohama having been singularly unfortunate for educators last year, they have arranged to confine their production to half the previous quantity. What the condition of the market will be hereafter remains to be seen. The cocoons are more or less light in all parts of the

Prefecture as compared with last season. This may be due to the sudden rise of temperature after the period of the "fourth sleep." In former years the cocoons were perfected in eight days, but this year they have only required six in some districts. The worms had not fed sufficiently. In Kawamata and Jino, the perfection of cocoons appears to have been effected also in six or seven days after the fourth lethargy. We have not received any precise information concerning the result of these premature cocoons. But when we consider that cool weather prevailed during the past few days, accompanied with rain, we may safely say that it must have been very satisfactory.

The Rural Division of Shinobu has failed in some respects, and the general result is reported to be worse than that of last year; but the magnanerie under the management of Mr. Murai, at Isa-mura, has met with complete success, some fourteen *koku* of cocoons having been produced by grubs which at first weighed forty-two *momme* in all. No other districts in Shinobu have witnessed such good results. On the whole, success was only noticeable where the eggs were hatched as early as possible. In the main street of the town of Fukushima, a market is held every night for the sale of mulberry leaves. A packet of ten *kuwamme* is purchaseable for eighty or ninety *sen*. The abundance of mulberry leaves this year is ascribed to the sudden arrival of the hot weather. A telegram was lately received from Mayebashi announcing that new silk had been quoted at \$540. Some merchants in the town attempted to sell their cocoons, and the result was that what was hitherto sold at *yen* 25 per *koku* has risen in value to *yen* 36 or *yen* 37. Twin cocoons are saleable at one *yen* per eight *sho*, but since unfavourable information was received from other silk producing districts, the trade has temporarily ceased. Quotations of silk in the market of Hobara on the 30th ultimo were as follows:—*Teppo*, *yen* 290 per bale; *Orikaye-shi*, *yen* 400 per 1,500 *momme*; floss silk, *yen* 130 per bale.

Owing to the insufficiency of the stock, no considerable settlements have yet been made, and merchants are watching each other.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, JULY 13TH, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokyo, Japan.

LATEST SHIPPING.

FREIGHTS.

Two trifling engagements took place during the week just ended, viz., the German brig *Minerva*, from Nagasaki to this port, at \$1.50, and the British steamer *Chinkiang*, from same port to Hongkong, at \$1.50. Enquiries reach occasionally from the China coast, but at such low figures that disengaged vessels prefer coal at a dollar and half per ton, to venturing on that side where port charges is so high. For London, the steamship *Benedi* is loading and should get away on the 22nd instant. For New York, via Suez Canal, the steamships *Yorkshire* and *Ehrenfels* sailed via ports on the 19th instant, leaving the steamships *Euphrates* and *Ascalon* filling that berth. For New York direct, the *Annie F. Marshall* is circulated both here and at Kobe; while for San Francisco, the American barque *Mary Winkelman* follows the *Grecian* dispatched on the 19th instant. For Havre and Hamburg, the steamship *Feronia* sailed on the 19th instant, and the German barque *l'Alparaiso* is now loading for same destination.

ARRIVALS.

Wakanoura Maru, Japanese steamer, 1,342, A. F. Christensen, 15th July,—Kobe, General.—Mitsu Bishi M. S. S. Co.

City of Tokio, American steamer, 3,128, J. Maury, 16th July,—Hongkong, 10th, July Mails and General.—P. M. S. S. Co.

LATEST COMMERCIAL.

IMPORTS.

There has been during the week a considerable falling off in transactions of Yarns, only some 700 bales being reported sold, dealers in this article as in most other goods only buying from hand to mouth. The steady appreciation of *kinsatsu* is given as the reason for this, the dealers hoping to buy later at a cheaper cost (in currency). Prices of Yarns are not altered since our last report. In Shirtings there has been next to nothing doing. In other Goods there has been more doing in Mousselines, while Velvets and Satins show rather more activity at low prices. In Metals, the business generally is very small, as usual at this time of the year, the weather being too hot to "work" Iron.

COTTON YARNS.

| | PER PICUL. |

| Nailrod, small size - | 2.85 to 3.10 |

KEROSENE.

Sales during the week amount to 31,000 cases and deliveries to 35,000. Stocks now amount to about 613,000 cases sold and unsold oil. The Market is steady at quotations:—

| | PER CASE. |
|----------|-----------|
| Devco - | \$1.70 |
| Comet - | 1.68 |
| Stella - | 1.62 |

SUGAR.

White sorts continue to move off slowly and the transactions are limited, but prices have not varied during the interval, and a large Stock remains on hand. Formosa Browns are mostly held for higher rates, and, as buyers will not accede to the demand, the quantity of the commodity that has lately changed hands is very small.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$8.50 to 9.00 |
| White, No. 2 - | 8.00 to 8.50 |
| White, No. 3 - | 7.25 to 8.00 |
| White, No. 4 - | 6.25 to 6.75 |
| White, No. 5 - | 5.25 to 5.50 |
| Brown Formosa - | 4.95 to 5.00 |

EXPORTS.

SILK.

Only a moderate business during the week. Buyers do not seem very eager, and, while arrivals are so scanty, sellers are in no hurry to reduce quotations. Settlements are about 170 piculs; export to date 856 bales (against 1,127 to same date last year): in addition to these figures the *Kashgar*, leaving this afternoon, will take a few.

Hanks.—A few bales of Tomiyoka grading about 2 have come in and been taken at \$517½, beyond this the business has all been done in 2½ to 3½ kinds at about quotations. Better class Maibashi and Shinshu hanks may now be looked for daily.

Filatures.—A few bales Nihonmatsu came in and were taken at \$665. Arrivals of good Silk are small; and the bulk of the shipments per *City of Tokio* were Koshiu sorts, grading 1½ down, being of good bright colour, and fair quality but with the old fault of uneven size.

QUOTATIONS.

| | |
|---------------------------------|--------------|
| Hanks—No. 2½ - | \$490 to 495 |
| Hanks—No. 3 - | 470 to 480 |
| Hanks—No. 3½ - | 450 to 460 |
| Filatures—No. 1, 14/16 denier - | 630 to 640 |
| Filatures—No. 1½ - | 620 to 630 |

TEA.

The same quiet tone mentioned in our last weekly issue has again prevailed throughout the past week, and both settlements and shipments of Teas are beginning to exhibit a marked falling off, which at present seems likely to continue, as buyers show but little disposition to purchase. Settlements aggregate but 3,155 piculs, consisting of the following grades:—Common 15, Good Common 570, Medium 1,020, Good Medium 920, Fine 425, Finest 85, Choice 90, and Choicest 30 piculs. Settlements here and at Kobe are 157,650 piculs against 172,940, at the corresponding date last year. The P.M. steamer *City of Peking* is advertised to leave here on the 3rd of August taking Tea at 2½ cents per lb. gross to Eastern States and Canada and 2 cents per lb. gross to San Francisco. The steamship *Ehrenfels* sailed for New York, via ports, on the 18th with 3,800 packages Tea. The steamers *Ascalon* and *Euphrates* are still loading Tea for the same destination at 45/50 shillings per ton of 40 cubic feet. The American ship *Greician* left here for San Francisco on the 19th, taking about 6,000 packages Tea. The American bark *Mary Winkelman* is advertised for San Francisco with "quick despatch," rate of freight \$6.00 U.S. gold per ton of 40 cubic feet.

QUOTATIONS.

| | |
|---------------|--------------|
| Common - | \$12 & under |
| Good Common - | 13 to 14 |
| Medium - | 15 to 17 |
| Good Medium - | 18 to 20 |
| Fine - | 22 to 24 |
| Finest - | 25 to 27 |
| Choice - | 28 to 31 |
| Choicest - | 32 & up'ds |

EXCHANGE.

Only small transactions have taken place during the week, and rates at the close are slightly firmer.

| | |
|-------------------------------------------|--------------|
| Sterling—Bank Bills on demand - | 3/7½ |
| Sterling—Bank 4 months' sight - | 3/8 |
| Sterling—Private 4 months' sight - | 3/8½ |

| On New York—Private 30 days' sight - | 89½ |
| On San Francisco—Bank Bills on demand - | 88½ |
| On San Francisco—Private 30 days' sight - | 89½ |

KINSATSU QUOTATIONS.

The following table shows the rate of the day, and the fluctuation during the past week:—

| | |
|----------------------------|------|
| Monday, July 16th | 124 |
| Tuesday, July 17th | 122½ |
| Wednesday, July 18th | 123½ |
| Thursday, July 19th | 124½ |
| Friday, July 20th | 122½ |
| Saturday, July 1st | 123 |

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c., is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

BARNET & FOSTER, Engineers,
23c, Forston Street, London, N.

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 28TH, 1883.

BIRTH.

On the 22nd July, the wife of LANCELOT C. MASFEN, of a Son.

WEEKLY NOTES.

THE obsequies of His Excellency the late Third Minister of State, Iwakura Tomomi, were performed on Wednesday. The funeral was a most imposing affair. It was attended by almost every person of consequence in the capital. The posthumous rank of First Minister of State was conferred on the deceased statesman by the Emperor's orders, and every possible mark of honour was shown to his memory. The vernacular press unanimously referred to his biography in terms of high eulogy, though one or two of the Radical journals professed themselves unable to discuss his acts at any length owing to the restrictions imposed upon liberty of speech. His Imperial Highness Prince Komatsu is spoken of as likely

to succeed to the office of Third Minister of State, but rumour also points to Shimadzu, ex-Daimyo of Sasshiu.

THE trial of the Fukushima suspects on a charge of high treason has been going on throughout the week. Four of the prisoners have been examined, and each has taken the same line—viz., that of retracting the admissions made before the Court of First Instance on the grounds that cruelty was employed to extort confession, or that the admissions were improperly recorded. The prisoners appear to be receiving every consideration at the hands of the Fokiyo Court; and the vernacular journals are wisely reporting the proceedings in detail.

THE railway from Tokiyo to Kumagai, a distance of 38 miles, was opened on Thursday. This is the third line in Japan which has been built entirely without foreign assistance. The two others are in the South—one from Nagahama, on Lake Biwa, to Sekigahara, and another from Nagahama to Tsuruga. The Tokiyo-Kumagai line runs through a level country and is nearly parallel to the Nakasendo throughout a great part of its length. Kumagai is a town which owes its origin to the development of Japan's foreign trade in silk; and its growth, already remarkably rapid, is likely to assume large dimensions in the near future. When the Tokiyo-Kumagai line was first projected, foreign critics were not slow to predict that the enterprise would never be carried through on the proposed conditions, but fortunately this forecast has proved erroneous.

THE heat throughout the week has been most oppressive; and the want of rain is beginning to be severely felt. Cholera, however, is keeping at a distance. A few scattered cases have been reported, but nothing resembling a serious outbreak seems probable.

M. JOUSLAIN, Consul for France in Yokohama, has addressed a very strong letter to the *Echo du Japon* apropos of a violent attack upon himself and two other officials, which has lately been published in that journal. The attack sets out by drawing attention to comments made by certain French Chambers of Commerce with reference to the incapacity of the members of the Consular body, the majority of whom, according to the *Echo's* version, have been found to owe their appointments to favoritism and to

have been originally "sworn and zealous functionaries of Napoleon III." At the instance of the Minister for Foreign Affairs, the President of the Republic recently authorized the appointment of a Commission to examine into the condition of the Consular Service, but the *Echo du Japon* thinks that Commissions generally succeed better in obscuring than in elucidating the questions they have to consider. Our contemporary, accordingly, assumes the functions of a commission himself, and proceeds to relate various instances, just or unjust, of fragrant consular incompetence. Soon he fixes upon M. Jouslain by name, and speaks of him in terms which, whether they be well or ill deserved, are certainly most insulting, and fail to find justification in the somewhat frivolous evidence upon which they are apparently based. Hence M. Jouslain's remonstrance, couched also in pious terms and speaking of proceedings at law, civil, criminal, or otherwise. It has elicited from the *Echo du Japon* a rejoinder in which we find such expressions as "*M. Jouslain ment impudemment*;" "*M. Lévy lui donne un démenti formel*," &c. We have seen something of this sort in an English local journal of Yokohama, but we were not prepared to find a parallel in the *Echo du Japon*.

NOTES.

WE do not know exactly who Monsieur F. Granet may be. His address, as given by himself, is "France," which leaves something to be desired in point of perspicuity. That he is a forcible writer, however, nobody will deny who may happen to have read his last essay* on Annamite affairs and the attitude of political parties in France. It would appear that some disloyal Frenchmen have attempted to throw the blame of the Rivière episode upon the President of the Republic. They pretend that, in December, 1882, M. Dœclerc, viewing with apprehension the perilous situation of the expeditionary force in Tonquin, resolved to send reinforcements to Commandant Rivière. Accordingly the Minister of Marine, Admiral Jauréguiberry, drew up a plan of procedure, which, however, in consequence of the obstinate opposition it encountered from the President, was ultimately consigned to the flames by the Admiral, in a fit of patriotic indignation. So the reinforcements did not go, and in the issue Commandant Rivière lost his life. The formulators of this statement do not hesitate to add that, in vetoing

* Vide *L'Echo du Japon*, 29rd instant.

Admiral Jauréguiberry's scheme, President Grévy consulted, not the national honour, but the love of peace and repose felt by all egoistical grey-heads. Thus he becomes directly responsible for what they are pleased to call "the massacre of the Garrison of Hanoi." This charge the other side, represented by M. Granet, repel with indignation. They remind the calumniators that their attempt is "not only culpable, but rash:" that "the honored name of the President has preserved in the country, in Parliament, an authority which it would be imprudent to shake by rash assaults," and that "on the day when Democracy shall be called on to pronounce between an unscrupulous coterie and the President of the Republic, the decision will be given without hesitation." With all these assertions right minded persons will doubtless sympathise. What specially interests us, however, is the reason assigned for the President's veto, for it is admitted that he did veto M. Duclerc's proposal. Everybody knows, we are told that the object of M. Jauréguiberry's scheme was, not to send a few companies to Tonquin by way of reinforcements, but to despatch a force capable of completely occupying the country. To carry out this plan, the employment of a considerable number of troops would have been required, and the expenditure of a large sum of money, probably twenty or thirty million francs. "Such a vast enterprise went beyond the limits of the prudent and reserved policy which the Chamber had declared itself desirous of following in Tonquin. Many Ministers were disturbed at the prospect, and their scruples compelled its abandonment." But how does it happen, one is disposed to enquire, that no minister is found to oppose a still more extensive project to-day? How does it happen that President Grévy, having refused to permit such a "vast enterprise" as the occupation of Tonquin six months ago, readily consents to-day to a much vaster enterprise, namely, the occupation of the whole of Annam; the extension of France's Indo-Chinese colonies to the very borders of the Chinese Empire? Here is the reason, as given by M. F. Granet himself:—

La Chambre avait offert dans la séance de samedi (28 mai) un noble spectacle. En présence du drapeau insulté, au souvenir des braves tombés à plusieurs milliers de lieues; majorité et minorité, oubliant pour une heure leurs disputes, ont fraternisé dans une frêve de patriotisme. Les partis avaient disparu; il n'y avait plus que des Français.

Union touchante, honorable pour tous, mais éphémère! L'esprit de parti n'abdique jamais; il ne devait pas tarder à prendre sa revanche.

The question, then, has altogether ceased to be one of the wisdom or unwisdom of a national policy. Nothing remains to be considered but an "insulted flag" and "brave men who had fallen thousands of miles away." One reflects involuntarily what it was that Commandant Rivière proposed to himself as the object of his disastrous reconnaissance. Surely it was to kill as many Annamese soldiers and insult as many Annamese flags as possible. Had he succeeded in driving back the forces of the Tuduc and in dealing a fatal blow to that potentate's power, France would have continued to pursue her "prudent and reserved policy." But inasmuch

as he suffered himself what he hoped to inflict upon others, there can no longer be any exercise of prudence or reserve. It is well that this doctrine should receive the recognition it deserves. It amounts to this—that an assault becomes proper and prudent from the moment it encounters any resistance. If Commandant Rivière had shot down two or three scores of half-armed, half-savage Annamese, it would have been a glorious feat of arms; but since by a military blunder he managed to get his own men shot down, it was a "massacre." This is the logic of aggression.

THERE are a number of terms which the law excludes from the list of libellous utterances, but which cannot be counted conducive to the preservation of the public peace. Among these a prominent place will be given by common consent to the double-barrelled compliment of placing a man's mother among the canine species and calling him her son. Probably the sting of the remark lies in its impartiality. One cannot be quite sure about the gravamen of the insult, or in resenting it, whether one's motives are chivalrous or purely selfish. At all events, it may be safely predicted that very few persons would preserve their equanimity did they suddenly become aware that a gentleman was leaning over the gangway ladder of a ship and whispering such amenities as "Boo! Son of a b——h!" This is what seems to have happened the other day to a Yokohama shipping agent, Mr. C. H. Cobden, and our readers will not be surprised to learn that he lost no time in communicating his appreciation of the compliment to its author in the form of a blow in the face that drew blood. To appreciate the occurrence thoroughly it is necessary to observe that the person whose face suffered was a Japanese Custom House official, and that the origin of the trouble was a difference of opinion between him and Mr. Cobden as to the scope and employment of shipping permits. Mr. Cobden had frankly stated that the official's knowledge of his duties was *nil*, and the official, whose mind does not seem to have been of a very logical order, attempted to combat this proposition by querying the humanity of Mr. Cobden's mother. With such divergent data the discussion could scarcely have proceeded satisfactorily. The upshot was that, at the instance of Her Majesty's Assistant Judge, Mr. Cobden had to choose between the alternative of ten days' imprisonment or a ten dollars' fine. On the whole he has reason to congratulate himself. We doubt whether he could have indulged in the luxury of blacking the eye of a Custom House Officer equally cheaply anywhere else. But, on the other hand, it must be admitted that the behaviour of the officer was a little abnormal. The Assistant Judge pointed out that the Japanese was probably unaware of the offensive import of the epithet he employed. We trust that the surmise is correct; for to abuse a man's mother is a sin of infinite gravity in the eyes of Orientals. Cases are common where serious offence has been given by Japanese whose ignorance of the subtleties of English betrayed them

into rudeness when they desired to be markedly polite. This is, perhaps, unavoidable, but the line must be drawn somewhere, and we should be inclined to draw it at this side of all disrespect to a man's mother. Mr. Cobden would have done well had he subjected the flippant official to a catechism of slang terms, before proceeding to extremities, but the Custom House Authorities would do better if they were careful to provide altogether against the occurrence of such questions. Their officers might be required, without any undue infringement of personal liberty, to confine themselves to the use of language which they *do* understand. The representatives of Japanese sub-officialdom in Yokohama cannot be cited as salient examples of the courtesy for which their countrymen are generally remarkable, and as some of them have to do with shipping agents of Mr. Cobden's type, it would be judicious, perhaps, to warn them against the profuse employment of English maledictions. Otherwise the course of public business is not unlikely to be interspersed with racy incidents.

THE following is the text, as published by the *Official Gazette*, of His Excellency Iwakura's memorial, which he addressed to the Throne the day before he died:—

I have the honour to state most respectfully and sincerely that, in spite of the inferiority of my character, having received special favours at Your Majesty's hands, and occupying a prominent position in Your Government, in the present glorious era, I have devoted my utmost energies to render myself competent for the discharge of my duty, and to evince, by moderation and perseverance, a thorough interest in such affairs as have come within my functions for more than ten years. Your Majesty has had to enforce special laws in cases of national emergency and adopt measures for the extension of Your power as well as for the maintenance of Your Empire. The task has devolved upon You from Your remote ancestors and directly from Your father. But You have not yet brought Your work to perfection; and this is the reason why I have occupied an eminent position in Your Government and worked assiduously, in utter disregard of my lack of personal qualifications. Unfortunately, I have fallen sick through over-exertion; and I have thought that if, while I receive at Your hands favours with distinguished rank and honors, bestowed in recognition of my faithful, but unworthy, service, I remain unable to attend the Cabinet and participate in the management of public business on account of an indisposition which threatens to deprive me of the power to return my thanks for Your singular urbanity,—in this case blame must inevitably be my portion. In these circumstances, I earnestly beseech Your Majesty to take pity on me, and accept my resignation, so that I may be released from my duties and submit to treatment in the most effectual manner. Should my request be granted, I can regard myself as alive even in case of my death. Some time ago You honoured my sick-bed with a personal visit, and subsequently despatched special messengers to enquire after my health, but You would not allow me to resign. I know not how to express my thanks for Your favor. Yet I am compelled to ask you to consent to my resignation, even in violation of Your sentiments, by reason of my illness. I swear that I will never misbehave myself in any way, but will always remember the duty of a subject to his Sovereign, no matter whether I resign or hold my office. I implore your Majesty to grant my request for medical treatment. As soon as I recover from my indisposition by the employment of medicines, I will again wait on Your Majesty, and with the utmost sincerity and loyalty endeavour so to labor that each day shall afford an opportunity for a panegyric upon some of Your achievements. Hoping that Your Majesty will clearly realize my sentiments, I remain, Your most obedient and humble subject,

IWAKURA TOMOMI, Third Minister of State.

THE *Yi-yu Shimbun* states that a meeting of the Privy Council was held on Sunday last, presumably with regard to the death of H.E. Iwakura. The same journal says that on every occasion of receiving a visit from his colleagues, the dying statesman explained with great earnestness his views on political matters, and that he had two interviews with H.E. Yamagata, to whom he solemnly bequeathed the task of

carrying out the reforms now in contemplation. General Yamagata, who for several years held the portfolio of War, is now President of the Privy Council, and popular report indicates him as not unlikely to succeed to the high office vacated by the decease of Mr. Iwakura. He is a native of Choshu, so that his accession to the ranks of the *Daijin* would tend to strengthen the hands of the *Sat-cho* coalition in the Cabinet.

THE *Fiji Shimpō* states that a telegram has been received announcing the arrival of General Foote, on the 21st instant, at Nagasaki. It is also said that Min Yong-ik, Adviser to the Board of Foreign Commerce in Korea, has arrived at the same place. The purpose of the latter official's journey is not mentioned, but there are rumours that Japan is not his ultimate destination.

THE past year has been a bad one for underwriters both in England and America. In the United States over-competition was first stigmatized as the cause of disaster. If that is the trouble, it is not without parallel. Some of the largest English companies found, at the end of the year, that they had made a deficit, while the thirteen principal companies averaged but three per cent. profit. The result was not due to a decline in business, which was larger than ever before, but thirty per cent. of the premiums was swallowed up in expenses, which is considered too large a proportion. Reckless competition is the cause of the bad condition of the business in both the United States and Great Britain; but in the former it takes the form of assuming unsound risks, while in England excessive salaries and commissions are the leak.

A SAN FRANCISCO Exchange of late date remarks that a sudden rise has taken place in the price of silk, the cause ascribed being the failure of the crop in China and the partial failure of the European crop, an occurrence rightly deemed of considerable importance in connection with the efforts to establish the business of silk culture in California, for the higher the price of the article the greater the chance that it can be successfully produced there. "If the Chinese crop for this year is a failure, the price is likely to rule higher for several years to come. The failure may be due to disease of the eggs or other causes which will prevent the gathering of a full crop for a number of years, and California will receive the benefit of the higher prices in the initiation of her experiment under more favorable circumstances. Japan is rapidly increasing her export of silk, it is true, the quantity now sent abroad being four times as great as a dozen years ago, but still the demand is likely to keep ahead of the supply. If the business of sericulture is once firmly established in the United States, we may trust to American mechanical genius to devise inventions for reeling the silk which will go far to neutralize the advantage of cheap labor enjoyed in China and Japan. Indeed, it is claimed that this has already been done in the invention of Mr. Serrell, which is now being tried in the

principal silk-producing districts of France." We have already more than once alluded to this mechanical appliance. It was first brought before public notice by Mr. Peixotto, U.S. Consul at Lyons, some months ago, in his official reports to Washington. For obvious reasons it is well to refrain from predicting either its success or failure until it is reported upon by the Silk Association of America, which according to latest accounts had it under practical consideration.

ONE of the mono-metallist journals of New York writes that, "according to the monthly report of the Treasurer of the United States, 108,821,977 silver dollars lie rotting in the Treasury vaults at Washington." This is a new count in the indictment against the dollar of the fathers. There have been many and various charges against the big, round dollar, but never before has it been alleged that they rotted. If it is a fact that the large accumulation of silver coin in the Treasury of the United States is in a state of decay and putrefaction, no time should be lost in doing something to avert the loss that will inevitably descend upon the Government.

NOTICE has been received by the Imperial Telegraph Office to the effect that, notwithstanding the strike among the staff of the Western Union Telegraph Company, arrangements have been made whereby trans-Atlantic telegrams for all the principal towns in America will be transmitted as usual.

RECENT vital statistics from France indicate increasing sterility in that country. The census of December, 1881, showed a total population of 36,905,788, an increase over the census of 1876 of 766,260. The gross increase was 945,643, and the decrease (in thirty-four departments) was 179,383, thus leaving a net increase as given above. Of this augmentation five-sevenths was in larger towns, for 561,869 of the gain was reported from cities of over 30,000 inhabitants. This indicates that the great centres of population still attract the rural inhabitants. The increase of the population of France in fifty years, as shown by the difference between the census returns of 1831 and 1881 (32,569,229 and 37,672,048 respectively), was 5,102,825. The gain in the population of the United Kingdom in the same fifty years, exclusive of emigration, was 10,854,148, and it was estimated that 2,453,481 persons left Ireland between 1851 and 1877. The emigration from France, of course, has been comparatively insignificant. But notwithstanding the heavy emigration from the United Kingdom and Ireland, the latter have witnessed an actual growth of 18,000,000 population, as against the 5,000,000 in France. Taking the five years ending 1880, the population of England increased at the rate of 340,118, against 95,039 per annum in France. This contrast is the more conspicuous when shown in connection with the yearly increases in various countries of late years: France (average for fifty years) 95,039; Germany (for five years) 493,360,

and United States (for ten years) 1,155,446. The yearly gain in population per 10,000 of inhabitants has been: France 26; Great Britain 102; Germany 115, and United States 260.—*Bradstreet's*.

THE *Pall Mall Gazette* "Fisheries Exhibition Supplement," published June 2, in addition to a double-page diagram of the exhibition showing the location of the various exhibits, etc., contains a lengthy description of the display from the United States. Of the exhibition as a whole it is said that it is very popular, and is constantly crowded. The United States section is said to grow in importance with every inspection, and with fisherman and angler it holds the supreme position. It is noted that this exhibit forms a flattering manifestation of international courtesy, as the largest part of the contributions are from the National Museum at Washington and from the storehouses of the United States Fish Commission, private or trading exhibitors being very few. The account published of the various classes of exhibits in the American section are sufficiently detailed to give a fair notion of what has been sent abroad, and how the list of models, pictures, and specimens constitute, with proper explanation, an illustrated history of the fishing industry in the new world. All the varieties of American fishing boats from the earliest times are to be seen, with the dates of use, sectional views, and particular properties possessed. In conclusion are furnished some facts in reference to evolution in shipbuilding in the United States. Models of American types of fishermen are described, photographic views of their homes, and specimens of their handiwork are noted, which soon satisfy the visitor that the New England fisherman is much better off than the fishermen of the British Isles. Whale-ship models, models of American whalemen engaged upon a whale, and other scenes from the palmy days of this industry, are found of exceeding interest. A model of the United States steamship *Albatross*, launched last autumn, and specially designed for deep-sea research, together with the deep-sea electric light and other paraphernalia of this department of investigation, in which the United States has already made so important a record, serve only to whet the appetite of the visitors to the exhibition to see the *Albatross* itself, which is expected in the Thames in July as an exhibit of the United States section of the Fisheries Exhibition. The remaining features claiming special mention are shells, ornaments and sealskins, an angler's camp, and fish hatching. Last, but not least, are specified the entertaining exhibits of the Signal Service, the Lighthouse Board and the Life-saving Corps of the United States. The display of dried and canned fish is a large one. Fifteen American firms exhibit, in addition to the United States Museum and departmental exhibits. In the centre is a huge tin containing an 86 pound salmon.

THE *Friend of China* for June contains a reply, by the Rev. George Cockburn, of Ichang, to an official report addressed by Mr. Consul Spence,

late of that port, to Her Majesty's Government. The reverend author asks whether, when the Consul asserts that "of all the products of Szechuen, the most important now-a-days is opium," to those acquainted with China it is enough simply to remind him that he has for the moment forgotten rice and salt, and silk and medicines. Mr. Cockburn, while admitting that the poppy is far too largely cultivated in the province, denies that it is grown to anything like the extent asserted by the Consul. With reference to official interference Mr. Cockburn avers that it is very extensively exercised. He says a word on behalf of H.E. Ting, Governor-general of Szechuen, and his "most extraordinary" proclamation, which began by denouncing the growth of the poppy, and ended by giving notice that the transit duty on opium was to be raised. "The man must have a wonderfully keen moral sense that can detect hypocrisy in this, and it is no more extraordinary than it would be for an advocate of local option in the meantime to record his vote for an increased duty on spirits. I have no high idea of Chinese veracity, but if we only admit that, when men do not get all that they want, they may honestly take what they can get, it will be hard to show that the Chinese have been remarkable for duplicity in their negotiations respecting the opium trade." We read that, at Ichang, the magistrate interfered in a very practical way a few years ago by sending out companies of soldiers to root up the poppy, nor has any one dared to cultivate it in the district (*hien*) since. In some places the law may be a dead letter, but it does not follow that it will not be enforced when the time comes. The cause of the present laxity is not far to seek. If opium is to be forced upon China, it would be much to her advantage to produce it at home instead of importing it. Were the Chinese Government indifferent as to whether the people smoked opium or not, and only solicitous about securing a revenue and preventing silver from leaving the country, they would extricate themselves from their difficulties to-morrow by formally withdrawing all restrictions on the home-growth of opium. It serves their purpose in the meantime to let the law fall into abeyance. It mitigates to a certain extent the financial difficulties of the opium trade, and it is showing the foreigner that China could, if she wished, produce all the opium she can consume at a cheaper rate than it can be imported. Such are, doubtless, the motives underlying this strange apathy. The Chinese contrived to have the ammunition sent out by Britain against themselves, used on their behalf in suppressing the Taipings; they have subdued the Mohammedan power in the north and also in the south; they have been a match for progressive Japan; they have vindicated their suzerainty over Korea when it seemed lost; and, strangest of all, they have, without firing a shot, recovered territory from Russia by paying what is perhaps no more than a just claim for the cost of administration. At home they are winking at the cultivation of opium, and abroad they are making treaties with other nations, binding them not to engage in the

business of importing it. Britain will not again go to war to maintain the trade, and of this, too, they are aware. The Chinese know what they are about, and if we are not wise enough to do the right thing in time, we will find one day that they have overreached us. As for the injury done by the drug to its votaries, Mr. Cockburn affirms that it is prodigious, and cites numerous proofs of his opinion, one that certainly cannot, with any appearance of success, be controverted by apologists for the custom. He concludes:—"Evidence, purely Chinese, that opium is altogether evil can be produced *ad infinitum*. The streets of Ichang furnish it in abundance. To-day I went from my house to the British Consulate, eight minute's walk, and I saw posted up eleven advertisements of medicine for curing opium smoking (all purely Chinese), six sheet-tracts pointing out its evils and exhorting people not to use it (also purely Chinese), and a proclamation by the magistrate as to the repression and better regulation of opium shops. This, too, at a time when there are fewer bills allowed upon the walls than usual, as the people are cleaning up for their New Year. Why does Mr. Spence mention none of these things? He tells us 'Ichang has 700 opium shops at least,' an estimate which used to be given by those who pretended to know best, but a recent census by the magistrate has reduced the number to 550."

At the annual meeting of the Society for the suppression of the Opium Trade, held in May, the principal speaker was the Rev. J. Hudson Taylor, a medical missionary who has had thirty years work in China, where his experience has been largely among opium-smokers. As early as the year 1858 he assisted in the management of a missionary hospital in Ningpo, which had for one of its objects the cure of opium-smokers; and in 1859 and 1860 that hospital was under his exclusive management. He had thirty beds continually filled with opium-smokers, many of whom came 200 miles, or even more, in order to escape from the cruel bondage of a habit which they could not throw off. "Thus, twenty-five years ago I often saw men wrestling with the opium craving, strong men determined to throw it off, but the sufferings through which they passed were almost more than they were able to bear. The health and strength of their own bodies, the honour and purity of their wives, the success of their worldly prospects, and, what was more to them, as Chinamen, than all these, the grey hairs and tears of aged fathers and mothers, nerved them to endurance. But I have heard such men, not once or twice, say in despair, 'It cannot be helped. I can bear the craving no longer.' Thank God, many such men were saved. But, oh, there were many who came from a great distance, and at great cost to themselves in the hope of being cured whom we could not receive, for our accommodation and power to receive them were limited; and of those received not all were cured; and of the cured some relapsed into opium smoking." In Ningpo and Hangchow the experience of the

speaker was the same; and his testimony is borne out by all the members of the China Inland Mission, as well as by evangelists of other bodies and more worldly observers.

Canon Wilberforce, a name that will always be associated with benevolence and emancipation, addressed the meeting, insisting upon the vice of the practice of opium smoking and the wickedness of the trade in the narcotic. He was followed in the same strain by Messrs. Samuel Smith, M.P., and Samuel Morley, M.P., David MacLaren, and an Indian Baboo. Mr. Thomas Hanbury (for many years a merchant at Shanghai) moved the concluding resolution, which was seconded by Mr. James Cropper, M.P., and carried with applause. It runs:—"That the report and balance-sheet of the Society, which have been presented to this meeting, be adopted and printed; that very cordial thanks be given to Sir Joseph Pease for presiding on the present occasion, and also to Sir Joseph Pease and Mr. Samuel Smith for their able advocacy in the recent debate in the House of Commons, and to all those members of Parliament who supported them; to the Chairman and Members of the Executive Committee, the Honorary Treasurer and the Honorary Auditor, for their constant attention to the Society's work; and that the Executive Committee be re-elected, with power to add to their number."

On the other hand, the seventh annual report of the Society, says that the Marquis of Hartington's despatch to the Government of India, written in fulfilment of his lordship's promise to the House of Commons, was published last autumn, together with the Indian Government's reply. In this despatch, Lord Hartington, although not agreeing with the views of the society, acknowledges in respectful terms the importance of the Anti-Opium Movement, and "the ability, activity, and high character of those by whom it is supported," and calls upon the Indian Government to consider whether it cannot make some concession to public opinion in England. The reply of the Viceroy and his Council is an elaborate argument against any change of system or policy. They withdraw their opposition to the ratification of the Chefoo Convention, and are even willing "to consider any reasonable proposal made by the Chinese Government to increase their import duties;" but they rigidly guard themselves against a too liberal construction of this concession by a declaration that "the total loss of the revenue at present derived from opium in Bengal, would render the Government of India insolvent, and, on that account, any proposals which would involve the loss of so large a sum cannot be considered within the scope of practical politics."

THE *Express de Lyons* gives a fuller version than we have yet seen of the Treaty proposed by M. Bourée and Li Hung-chang. It runs as follows:—

The Chinese troops shall evacuate the provinces which they occupy in Tonquin and return to their cantonments in Yunnan and Kwangsi, the limits of

which they shall not in any cases or under any pretext pass by more than *_____* miles.

M. Bourée shall transmit to the Chinese Minister of Foreign Affairs a despatch from his Government, in which it shall be declared that France will not pursue in Tonquin any idea of conquest, and that she will not attempt any enterprise against the sovereignty of Annam.

France seeks chiefly to open across Tonquin a route by water so as to bring the Chinese province of Yunnan into free communication with the sea.

The town of Laokai, being considered the terminus of the navigable waters of the Red River, shall be recognized as a part of the possessions of China. Chinese Custom Houses shall be established there, and foreign goods destined for importation into China shall be subjected, after they have passed the barrier of Laokai, to the ordinary rules which obtain in the case of merchandise coming into the Chinese Empire by the open ports.

The Chinese Government pledges itself to adopt all measures necessary to assure the security of the import and export trade at Laokai.

The Governments of France and China shall mutually arrange for the tracing of a line of demarcation across the country comprised between the frontiers of the Chinese Empire and the left bank of the Red River.

The territory situated to the north of this line of demarcation shall be placed under the surveillance of the Chinese Government: that situated to the south, under the administration of the French authorities.

Under these conditions France and China reciprocally pledge themselves to protect the integrity of Tonquin against every enterprise of other nations.

These terms bear out, in some degree, the remarks made by M. Challemeil-Lacour to the Senate in reply to the questions of M. de Saint-Vallier. "M. Bourée," the Minister for Foreign Affairs said, "had never demanded or received any authority to negotiate. He took it upon himself to do so, under the belief that a war between France and China was inevitable, though nothing showed, and nothing as yet shows, that his forecast was right." M. Challemeil-Lacour then went on to explain that there had been nothing more than *pourparlers*, and that even these were couched in somewhat vague and contradictory terms. "M. Bourée made a useless declaration. He recognised that Annam was a vassal of China, which was simply to tear up the treaty of 1874." He made another error also, according to M. Challemeil-Lacour. He inserted a clause providing for the establishment of a Chinese Custom-house at the terminus of the Red River. "That," exclaimed the Minister, "was to hand over to China the key of the river's navigation."

And why should not China have the key? We speak of course from the standpoint of right, not of commercial expediency. Why should not China have the key? It is not an uncommon thing for people to keep the keys of their own doors; and since France's chief object, according to the showing of the same draft, was to obtain access to a Chinese province, Yunnan, *vid* the Red River, China might, with some show of reason, put forward a claim to act as gate-keeper. We hear a great deal about the treaty of 1874. That is to be held inviolable at all hazards. But we hear nothing of France's treaty with China; a treaty by which certain ports and no others are open under certain conditions to French trade. Is it quite consistent with the latter treaty that France should open for herself another port in Chinese territory—for that is what the Red River route to Annam

virtually signifies—without letting China have any voice whatsoever in the matter. If China is not to have a Custom-house at Laokai, where is she to have one, or is she to have one at all? Imagine these principles applied to the Danube, or to some other river in the navigation of which European Powers are interested.

So far as we can discern, M. Challemeil-Lacour failed altogether to explain the cause of M. Bourée's recall. No treaty had been concluded by that official with China. He had confined himself to hearing the Chinese prepositions and embodying them in a note to be submitted to the Cabinet at Paris for approval or rejection as M. Challemeil-Lacour and his colleagues should decide. In short, the limit of his fault was that he negotiated. It was probably because M. Tricou understood this that he took so much pains to make it clear that he had come to China expressly not to negotiate. Even to suffer himself to be enticed into *pourparlers* might lead to being recalled. Truly, having regard to the senseless language of M. Challemeil-Lacour when he hinted that England is egging China on, and spoke of the "revival of passions which were supposed to be extinct," one is tempted to credit the suggestion of certain London journals which declare that M. Bourée was recalled chiefly because he made the mistake of being on too good terms with the English Minister at Peking, and partly because he is not a personal friend of the Minister for Foreign Affairs.

IMMENSE excitement seems to have been caused in Paris by the victory of Frontin in the *Grand Prix*. The race was established in 1863 chiefly through the exertions of the Duc de Morny, the Municipal Council voting a credit of fifty thousand francs and the five principal railway companies fifty thousand more; generosity which was rightly described at the time as a piece of excellent financial wisdom. And so the event has proved, for the number of visitors drawn to Paris by the great race increases enormously every year and includes thousands of Englishmen and Americans. This time the contest had come to be regarded as a sort of duel between the French and English stables. For among the competitors from across the channel was St. Blaise, the winner of the Derby, while on the French side was Frontin, who made his first appearance last March, and running only four times in all, had obtained four victories. Still the odds were in favour of the English horse, though Frenchmen tried to console themselves with the thought that in 1864 Vermont won the *Grand Prix* against Blair Athol, while in 1873 Boiard beat Doncaster. Since 1863 the French Derby had been run 19 times—1871 having been a blank year—and of the 19 winners 9 had been French, 8 English, 1 American, and 1 Hungarian. For the three years, 1880, 81, and 82, however, the victory had fallen to a foreign stable, and there was naturally an absorbing anxiety about the result of 1883. Frontin is by an English sire out of a French dam, and

is the property of the Duc de Castries, brother-in-law of Marshal MacMahon. He was ridden by Cannon, while Archer steered St. Blaise, and so great was the enthusiasm over the former's victory that ladies were seen to kiss his boots; poor Archer, on the contrary, being so heartily hissed by his countrymen that his confusion was painful. The total value of the *Grand Prix* this year was 165,900 francs; namely, the stakes, 100,000; forfeits (399 horses), 57,900, and entries 8,000.

THE faculty of acquisitiveness occasionally takes curious forms. The other day a post office clerk at Berchem, near Anvers, committed suicide, and after his death the people of the district were surprised at receiving letters dated years before. Widowers, who had taken heart of grace and married again, found themselves suddenly perusing epistles from their former spouses; debtors, who had long before discharged their liabilities saw themselves menaced with all sorts of pains by irate creditors; lovers, who had forgotten one another, once more exchanged vows of affection and fidelity. The neighbourhood was aghast. It seemed as though the inhabitants of ghost-land had become frolicsome and were indulging in practical jokes. At last it turned out that the deceased clerk had been a gentleman of acquisitive eccentricities. There were days when he could not bring himself to part with the letters that came to hand, so he stowed them away in a portmanteau. The Post Office authorities found them there after his death, and thought it wise to distribute them, causing immense confusion thereby.

THE year 1883 will at least be memorable for its exhibitions. In Tokiyo an exhibition of Fishery appliances and produce, and a grand Fisheries Exhibition in London, have been held. Louisville, Kentucky, has a show opening on the 1st of August, and classic Boston, Mass., opens hers on the 1st of the following month. Calcutta has a grand exposition from the 1st of December. Even Poonah proposes to have one; and an Australian Exhibition to be held in London is also in contemplation.

THE confidence of persons who advocate trial by jury everywhere and under all circumstances must have received a somewhat rude shock when, at the Star Route trial, Juror Vernon lay down in Court and became unconscious of passing events owing to an unwise attempt to cut off his usual supply of liquor, and when it was found necessary to keep what he was pleased to call his mind in working order by periodical doses of whiskey. One ceases to appreciate the full force of subtle legal arguments, carefully collected testimony, lucidly enunciated laws and fine displays of judicial acumen, if the ultimate arbiter of the whole performance is to be a sot, wavering between delirium tremens and alcoholic discernment. Juror Vernon, however, may be dismissed as an accident rather than a type. A better illustration of the dangers of the system is furnished by a case which occurred the

other day in Greece. According to the *Messager d'Athènes*, a sub-lieutenant of gendarmerie was put upon his trial for theft, and an overwhelming mass of testimony was produced in proof of his guilt. Nevertheless, the twelve citizens who formed the jury, brought in a verdict of not guilty. To complete the farce, their foreman had no sooner pronounced the words than the whole twelve men were marched off to prison at the instance of the public prosecutor, on a charge of having taken bribes from the accused.

MARINERS in the China Sea have been given another guide to navigation, the already extensive service of the Lighthouse Department of the Chinese Imperial Maritime Customs having been augmented by the erection of a Lighthouse on Bonham Island, in reference to which the usual notice has been issued from the Coast Inspector's Office.

Two cases of cholera, both of which terminated fatally, are reported to have occurred in Tokyo on the 19th instant. Whether this be true or false, there does not seem to be much cause for apprehension on the score of cholera this year.

ACCORDING to the latest advices from the North, the other schooners had met with varied success in hunting, the *Penelope*, the new craft launched last year, having at the beginning of the month the biggest bag, 16 otters and one pup. The *Helena* had 4, the *Olone* 7, the *Rose* 2 and one pup, the *Diana* 5 and four pups, the *Stella* 8 and two pups, and the *A. Cashman* 10 or 12 otters. No accident or casualty from the fleet has to be reported, and fair weather had mostly been met. The sealing season had not commenced when the last news left.

TUESDAY'S *Hochi*, *Shimbun* publishes a report from Sapporo to the effect that a fire had broken out on a mountain where charcoal is manufactured and that all efforts to extinguish it had proved unavailing since water could not be obtained. Grave apprehension prevailed for the safety of a neighboring gunpowder magazine, but all possible precautions were being taken to prevent an explosion. The origin of the fire is ascribed to an escaped convict.

TELEGRAPHING from ships at sea to shore is by no means a new notion, as *Engineering* reminds us. There are things much more unlikely of realization. The chief difficulty in the way of establishing mid-ocean-Telegraph stations has hitherto been the necessity of keeping the ship connected, by a branch cable, with the main cable lying on the bottom, and anchoring her so as to maintain this communication in all weathers and depths. Professor A. E. Dolbear has now proposed a plan which may render this fixed communication unnecessary. A large metal plate attached to an insulated conductor is lowered from the ship to the bottom on the track of the cable, and another plate is merely submerged. Between these two plates a battery

and Morse key is inserted. On working the key the Morse currents induce other currents in the cable, which can be heard in telephones attached to the cable on shore.

THE now proved ability of India to supply tea, and the favorable reception of the leaf in England naturally produce satisfaction in both countries. A recently published tea chart shows the great increase in the consumption of Indian tea during the past six years. In the first three months of 1878 it was 3,215,000 pounds, and in the first quarter of 1883, 5,152,000 pounds. The price has also declined from 1s. 7d. to 1s. 1d.

Whether the leaf be Indian or Chinese, there can be no doubt that, as an American journal just reminds us, Great Britain's consumption of tea is one of the marvels of commerce. Last year the revenue derived from duties on tea, at six-pence per pound, amounted to £4,200,000, showing that the importations must have been 198,000,000 pounds. This is at the rate of five pounds per head for the total population, and is far in excess of the largest importation of that article into the United States. In the fiscal year 1882 the importation of tea into the United States amounted to 78,789,060 pounds, valued at \$19,392,102. But the import of coffee was 459,922,768 pounds, valued at \$46,041,609. Why the United States should be a coffee-drinking nation and Great Britain a tea drinking nation is a question to which the students of social science have not devoted sufficient attention. It is reasonable to suppose that in the course of half a century this difference in habits might create important physiological peculiarities and distinctions.

THE following interesting note on the employment of the blind in Japan appeared in the *Philadelphia Medical Times* of last April. It is from the pen of Doctor W. N. Whitney, of Tokyo:—

On a fine day one can scarcely walk a square in any of the more thickly populated districts of Tokyo without hearing the shrill whistle of the blind shampooer, as, with long stick in hand, he slowly feels his way, calling out from time to time his fee for a complete shampoo.

A system of employment for the blind so suited to their condition, affording as it does fair profit and an abundance of healthful exercise in-door and out, certainly deserves at least passing notice.

Shampooing, or perhaps, more properly speaking, massage, as practised by these blind men (called *amma*), consists of a gentle rubbing with the palms of the hands of the surface of the whole body, together with passive exercise of the joints, and a slow kneading of the superficial muscles, more particularly those of the trunk and extremities. The sensation to the subject is usually very pleasant, especially if submitted to after violent or continued exertion, as after a difficult climb or a long walk.

Japanese physicians recommend it in tabes dorsalis and certain other forms of paralytic disorders, as well as in hysteria and some kinds of headache, in lumbago and in many other diseases, also in convalescence from diseases in which there has been loss of power or wasting of the muscles. It is much used, and probably often abused, in cases of difficult labor. One Kagawa, who first employed it for this purpose, called it "the body-regulating art." It is also generally employed after labor to soften the breasts.

Massage is not employed in rheumatism, gout, or acute fevers. Acupuncture, too, was formerly performed by some of these *amma*; and I am told that the examinations for license to practise these, especially the latter, were very rigorous.

The skill and anatomical knowledge sometimes acquired by these unfortunates are truly wonderful, for, besides a gentle touch and an almost instinctive appreciation of the seat of pain, many of them know all the superficial muscles, and can even tell in what position to insert needles for the cure of certain diseases. Unfortunately, scabies has been occasionally communicated by these shampooers, as well as certain contagious diseases,—a fact, however, which does not seem to lessen the demand for shampooing.

I am told that over one-half of the cases of total blindness in former days were attributable to small-pox; and it is probable that purulent ophthalmia and syphilitic disease were responsible for the larger portion of the remainder.

The number of blind, deaf, maimed, etc., according to the published census of 1875, was 101,587, of whom 63,759 were males and 37,828 were females, the total population at that time being 33,110,825. Of this number it is probable that the greater part were blind, and it is not at all unlikely that in former days the proportion of this class to the total population was still greater, as the gradual institution of compulsory vaccination, the regular examination of prostitutes, and the growing popularity of Western methods of treatment of ophthalmic disorders have tended, on the one hand, to limit the spread of the most potent causes of blindness, and, on the other, to increase the number of eyes rescued from actual loss.

Since the "restoration" in 1868, the ancient laws allowing these blind certain rights and privileges have been repealed, and the profession is now open to all. Formerly the blind belonged to the so called "long-robed" or professional class, in which were also included those who practised the arts of acupuncture and divining, the priests and the doctors. Various titles or degrees were bestowed upon the blind upon passing examinations and the payment of certain fixed sums of money. The lowest of these degrees, next to that of the common *amma*, was the *shibun*, which gave the possessor certain rights and privileges and raised him to the rank of the military or two-sworded class. He was also permitted to wear a ceremonial dress on certain occasions and to carry a white stick surmounted by a wooden ball. The fee for this degree was about one hundred dollars. Upon obtaining the next degree, that of *ko-to*, the blind man ceased to practise the art of shampooing, and became a teacher of music, for which position he had been preparing during the chrysolia state, so to speak, of shampooer. Above the degree of *ko-to*, came that of *ken-yo*, or inspector, the fee for which was one thousand dollars. To obtain this degree was considered a great honor, and among its possessors were to be found some very remarkable men. One of these, Hanawa Kenya by name, a professor of mathematics, is said to have possessed such a wonderful memory that he could recognize at once any quotation made from any book in his great library, and could give the title of the book and even the number of the page from which the quotation had been made. It is also said that, although he had been blind from infancy, he knew the names, forms, and meanings of nearly all the Chinese characters in use, and was, besides, a writer of note.

The highest degree or rank was that of *soro-ku*, of which there were, I understand, only two holders at one time in each of the capitals. All the appointments and honorary titles were conferred through these *soro-ku*, who also acted as judges in matters relating to their own people.

A certain amount of authority was attached to the lower ranks, and no doubt added considerably to the income of the possessors. On occasions of great rejoicing in any household, as, for instance, a birth, a marriage, or elevation in office, one of these blind shampooers would call for a present, which by law it was necessary to make, and which ranged from ten or fifteen cents upwards, according to the wealth and position of the family. The collection of these fees fell to each *shi-bun* in every district in turn, besides which fees were also received from apprentices.

In order that a blind man might travel from place to place, and yet not interfere with other blind practising in these places, his stay in each town or village was limited to three days, during which time only he might receive fees for professional services.

The blind were also allowed to lend money, for which they received high rates of interest, popular sentiment protecting them from loss. A blind man might marry only after he had taken a degree, as this was considered proof that he would be able to provide for a family; but marriages between blind and blind were strictly forbidden. There were societies or guilds of blind men, which afforded their members considerable protection.

This whole system has proved of great utility in giving these unfortunates an opportunity of competing on a most favorable footing with their more fortunate brethren, and at the same time stimulating them to higher attainment. Such, indeed, was its success that

the blind, unfortunate as they might be in the loss of sight, led happy and comfortable lives, supporting themselves and families, and proving as well a benefit to their fellow-creatures. It is, therefore, not without some feeling of regret that we see these old institutions passing away, and in their stead attempts being made to care for the blind in large asylums and at public expense.

The experiment of teaching a few of our own blind this most useful art, though, I believe, yet untried, is perhaps worthy of consideration, especially as massage is beginning to have an important place in the treatment of so many disorders.

ONE need not come to the Orient to find newspapers remarkable for the strength of their language. Hear, for example, what the *République Française* has to say:—"If the inhabitants of Kamtschatka, if the Iroquois or the Redskins, have deliberative assemblies, as they doubtless have, the language used there is more polished than the language spoken at the Municipal Council of Paris." It must be gratifying to Frenchmen who have any care for the proverbial courtesy of their countrymen, to find the preservation of that quality so vigorously recommended. But the interesting part of the matter is that it is not politeness which is at stake but gas. The Gas Company of Paris is a political institution. It is "the Citadel of Opportunism." One of its founders, M. Dubonchet, is said to have left to M. Gambetta several millions of francs, gained in business, for the express purpose of paying the expenses of Opportunist propagandism. The Municipal Council, however, is Radical, and it gave the Company notice the other day that the price of gas supplied to the city must be reduced from 15 to 12 centimes, and that of gas supplied to private consumers, from 30 to 25 centimes. The grounds of this reduction were that the price of production having been largely reduced, consumers ought to profit by the fact. And indeed there is room for participation. For it is calculated that the Company has recovered its original outlay seventeen times over. Its shares, of a nominal value of 250 francs, were selling a few months ago for 1,600, and paying a dividend of 82 francs. Nevertheless the directors have refused to make any reduction, and threaten to shut off the gas if consumers persist in declining to pay more than the rates fixed by the Municipal Council, which, in its turn, promises to annul the Company's Charter if the latter ventures upon any such course. Now the *République Française* is the leading organ of the Opportunists, and hence it is that it finds the language employed by the Municipal Council less polished than that heard in the deliberative assemblies of the Iroquois and the Redskins. The connection needed explanation.

In the little Ile Maurice there is published a journal called the *Cernten*. It has a correspondent at Tamatave, who gives some interesting particulars of the state of affairs in Madagascar. The Hovas, he says, are much concerned about the ill-health of their queen. Her death is daily expected and her successor is quite uncertain. The chiefs of the Government are by no means unanimous in their election, and the decease of the queen may be the signal for

a general battue. Added to these perplexities are the complications with France, and the dissatisfaction caused by the failure of the embassy to England and Germany, which Powers seem disposed to leave Madagascar to its fate; meanwhile the manufacture of arms and levying of soldiers goes on apace. The more violent patriots declare that not one inch of Malagassy soil shall pass into foreign hands, while the moderate party is not indisposed to purchase peace at the expense of a little territory. The strangest feature is that the military preparations are all carried out without any cost to the Government. Those who work on the fortifications not only receive no pay, but are obliged to support themselves and furnish the materials required for the undertaking. Even the soldiers have to fight gratis, to find their own food, arms, and ammunition. It may well be supposed that under these circumstances, the trade of war is not very popular.

We published on Saturday last a telegram announcing that the British Government had agreed with M. de Lesseps for the construction of a second Suez Canal, and that three millions would be contributed by England towards the cost. We now see by a telegram to the *Shanghai Courier* that the amount is stated to be eight millions. Supposing this latter sum to be correct, which we cannot yet believe, it will be altogether a British undertaking. A subsequent telegram states that Sir Stafford Northcote has given notice of a motion to reject the agreement, but in face of the recent agitation for a second canal, the Devonshire baronet's proposition will hardly receive the support necessary to carry it.

H.I.M. THE MIKADO has conferred the posthumous title of the *Daijo Daijin* upon the late Ex-Third Minister of State, accompanied by the following Rescript:—"The Ex-Third Minister of State aided me with unflagging fidelity and loyalty in the accomplishment of the great work—the work which is destined for eternity. He was the pillar of the nation and a model for my subjects. I ascended the throne in my youth. Dependent upon the Ministers, I listened to their counsels. The deceased was my teacher. Heaven has deprived me of his aid! How grieved am I! In honor to his memory, I confer on him the posthumous title of First Minister of State.—*Official Gazette*."

An enterprising French "interviewer," Mr. Maurice Francais, has sounded Mr. Dupuis, the famous Tonquin explorer; and the result of his investigations into the recesses of that energetic traveller's opinion, cannot fail to be respectfully received at the present juncture. The time will come shortly for some student of French opinion to analyse its different developments and hesitations and angers, as now manifested. The mere chronicler's mission is to seize words and facts as they fly. One can readily understand the interest that the visitor had in eliciting the opinion of his illustrious compatriot, whose ideas may also be accepted as those of a very large

class, fortunately not a majority class, of modern French Society. However, allow Mr. Maurice Francais to speak of his exploitation of Mr. Dupuis for himself. We are indebted to a quotation in the *Echo du Japon* for our ability to report it. Mr. Dupuis lives in small and very modest rooms in the Rue Saint-Georges. There, in one chamber simply furnished, in the midst of maps, pamphlets, and packets of newspapers, the explorer of Tonquin received his visitor with affability and an evident disposition to answer the questions that might be addressed to him. Viewing Mr. Dupuis in such modest state, Mr. Francais could not help thinking of the big fortune possessed by Mr. Dupuis when he became "possessed of the idea to open Tonquin to the commerce of the world, and the patriotic scheme of endowing his country one day with a rich province." Of course Mr. Dupuis was quite free of any notion of adding more to his own already sufficient resources. Ambition and love of wealth are not incompatible with patriotism. However, as for Mr. Dupuis personally, he speaks in an animated tone of voice accompanied with original gestures and phrases. His physiognomy, both pleasant and masterful, appears to reflect the sorrows that he has so long endured. As regards the subject, he entered upon it at once *avec une cordiale brusquerie*; and this is about what the reporter says he said. The death of Rivière and his unfortunate comrades in arms was doubtless the result of "a heroic imprudence" something like that which caused the death of Garnier the brave. To-day the matter is to avenge the French blood which has been spilt, and finish with the Tonquin question. Its solution is impatiently awaited. Tonquin might have been taken without striking a blow. It is well known that the Tonquinese are already gained, and that they await with impatience the French who have to rescue them from the tyrannical Annamite yoke. What ought to have been done, whether according to Mr. Dupuis himself, or his interviewer, or both, was to send the explorer to Tonquin to announce that France was about to intervene and drive out the Annamite mandarins. "The Tonquinese notables and the whole population would then have been prepared to receive" their French liberators. If the troops of the republic had arrived with proper introductions from their President—we beg pardon, with "a French administration ready to take possession of the administrative posts"—the Tonquinese would have abandoned the Annamites and opened the gates of all their towns to the French; and thus "the military expedition would have consisted in a simple demonstration made in the midst of a benevolent welcome from the populace." Arcadian Mr. Dupuis! When, oh, when, have European settlements in Asia been so peacefully founded? Were you not, worthy and adventurous explorer, somewhat "pulling the leg" of your admiring interviewer? But to resume. "Why did the French wait so long, to realize all this, for the massacre of Commandant Rivière and his companions in arms?" Mr. Dupuis whispers in reply (and Mr. Maurice Francais is, in his interpretation

of Mr. Dupuis, in close accord with Mr. Grant who perhaps draws inspiration from a similar source) Mr. Gambetta took the greatest possible interest in Tonquin: it was only his short tenure of power that prevented him from taking up the question, . . . which, however, he intended to resume as simple deputy.

According to the interviewer, Mr. Dupuis is convinced that there is no prospect of Chinese intervention any more than there was in 1878, when the French first occupied Hanoi. We are reminded that the situation was then, much more than now, delicate for France, whose home provinces were hardly evacuated by the German armies, and Mr. Dupuis, "officially charged by the Chinese Government, had just forcibly opened to China's profit the road from Yunnan to the sea by the Red River." At that time France and China met on level ground, and "the Court of Peking might have complained of what it would have had perfect right to consider as a defection on the part of its Agent, Mr. Dupuis, in favor of the French whose presence he desired with all his heart, and to whom he had furnished opportunity, to interfere."

The Annamites have still to be considered; "and they are in no respect to be dreaded" (in spite of Rivière's experience). For when the Tonquinese see the arrival of the French, and realize that they are certain to be protected this time and not abandoned, they will second their Gallic visitors to the best of their ability to chastise and expel the Annamites. And, after all, what is there to fear—it is the reporter interpolating now—from such Annamite troops as Dupuis and his little band and that handful of heroes commanded by Garnier, invariably put to flight? Did not Commandant Rivière, abandoned as he was to his meagre resources, hold them victoriously at bay for more than eighteen months? Once again, and finally, in this interview, Mr. Dupuis insisted upon the friendliness of the Tonquinese people for the French, and their desire to be once and for all rid of their Annamite "oppressors." Probably the views attributed to the traveller are those entertained by him. At any rate they are such as he might naturally be supposed to hold; and, as the reporter suggests, none than he would be better suited to guide French schemes in Indo-China, provided they be schemes of adventure and conquest.

DEPUTY RIVIÈRE recently proposed in the French Chamber a bill abolishing that article of the civil code which forbids inquisitions into the paternity of a child. One of those who supported the measure instanced a case of a father who had openly espoused a natural daughter of his own, in the very teeth of the authorities, who were unable to prevent him as the child had no legal status. M. Rivet himself told the following story:—"One day there came into the office where I acted as clerk an individual who was known to us all because he had lent some money through us on mortgage, and came twice a year to receive his interest. He had left his wife to

live with his servant, by whom he had had a daughter. Addressing himself to the chief clerk, he said:—"I have come for a marriage license. I am going to espouse my daughter." "Your daughter!" exclaimed the astonished clerk. "Certainly. Why not?" "But you are married." "My wife is dead. Here is her burial certificate." "You used always to say that if ever you became a widower you would marry your servant." "Yes, I used to say so. But she is too old now. I prefer the young one." "Your daughter?" "My own daughter, whom I have not been able to recognise because she was born out of wedlock, and who, so far as you, the Mayor, and the Code are concerned, is not my daughter at all." "How old is she?" "Seventeen." "But will she consent to marry you?" "I should think so, considering she has been my mistress since she was fifteen!" "And the other, what will you do with her?" "I put her out of doors fifteen days ago." The chief clerk got up and went into the notary's office. A few moments afterwards the notary came out, pale, and with trembling lips. "Get out," he cried to the would-be bridegroom, pointing to the door. "All right," the other replied, "we shall see. According to the law my daughter is not my daughter. I can marry her therefore, if I please, and you have no right to refuse me my certificate." He spoke the truth. A less scrupulous notary drew up the certificate, and a few days later the incest was duly legalized."

A NICK question came before the German Courts two months ago. Article 303 of the Penal Code provides for the imposition of a fine upon anyone who injures or destroys an object that does not belong to him. The principle is clear enough, but the application is sometimes attended with perplexities. A Prussian gentleman of Rospitz hung himself by the neck to the rafters of his room. One of his neighbours, happening to have business with him, came in and finding him in this unbusiness-like position, cut him down without preamble. "He would-be suicide was furious. He summoned his neighbour before the local tribunals for violation of domiciliary rights and destruction of property, to wit, one cord. The tribunal, after due deliberation, decided that Article 303 could not safely be applied to this busybody, although everybody was obliged to admit that, in the words of his accuser, "he had meddled with something which in no wise concerned him."

THE unfortunate occurrence at the funeral of His Excellency the late Third Minister of State is a subject to which we would fain avoid any renewed reference. We have pleasure, however, in saying that from what we have since been able to learn, the affair was in great part the outcome of inadvertence. The ladies and gentlemen who appeared in the stalls set apart for Japanese officials taking part in the funeral, had, in the main, no conception of the blunder they were committing. Ignorant of the arrangements made either on their behalf or in connection with the obsequies, they failed, it is said, to

recognize the nature of the place where they found themselves, and, not unnaturally, reposed implicit trust in the discretion of their guides. In our previous comments we scarcely thought it necessary to observe that some such explanation might be presumed in the case of the Yokohama residents, who certainly may be acquitted of any willingness to give offence. But this explanation cannot be stretched beyond a certain limit. It leaves much to be accounted for. A correspondent who addresses us to-day on the subject seems, however, to be under a misapprehension. He does not distinguish between the picnic party and the rowdies who apparently thought that a national funeral in Japan was a good opportunity to display European independence of decency and etiquette. His confusion is a pregnant comment on the whole affair, but we do not hesitate to publish his letter, our original notice of the event having been dictated not less by a desire to show that the thoughtlessness of which we complained is not common to foreigners, than by a conviction that a majority of those who inadvertently performed such a regrettable rôle at the funeral would themselves be the first to condemn it.

AUTOBIOGRAPHIES are not uncommon. A great many people have undertaken to write them, but very few have ever made any profession of speaking the whole truth, and none have succeeded in persuading their readers that they had any such intention. Jean Jacques Rousseau is an exception to the former statement, but not to the latter. He makes a show of being perfectly candid, but fails to sustain the effect. Yet writing is in some respects like acting. To be quite natural is the highest art an author can cultivate. Boswell had a gift in that direction, and the consequence was that he achieved immortality. Mr. M. Z. Martin, who was shipwrecked in the *Sumida-maru*, and who has published his experiences through the columns of a local journal, is similarly gifted. From the very outset he plunges into the greatness of simplicity. Embarking on board the *Sumida-maru*, he tells us, "we had as passengers only one other gentleman as well as myself." There were two gentlemen, in short, and myself was one of them. Then "the time passed quickly until the fatal moment; and in the face of the fact that the ocean was perfectly calm and scarce a breeze to be felt at all, little did we, on that fatal morning, think that at any rate one of our number would be within a stone's throw of eternity; but such alas! was my fate." The ship struck. "As soon as I felt the shock," continues Mr. Martin, "I jumped out of my berth, rushed forward to the bridge, and there met the captain who told me at once to get my things up ready for transshipment into the boats." But Mr. Martin had no care for his "things." After pausing a moment to admire the captain's "grand composure at that terrible moment," he "immediately ran aft to find that all the boats save one were lowered. I was quickly pushed into one, but owing to some mistake the 'painter' gave way and I found the tide taking me away

from the ship; so I shouted to those on the wreck, but they failed to hear me, and at once turned their attention to lowering another boat." His craft drifted on and began to leak, and he was in his "pajamas and night-shirt only." The oars were heavy; the boat, large and clumsy. He drifted on to within a stone's throw of eternity and then swooned. Having lain thus for "one, two, or three hours" he recovered consciousness. Probably by that time he was within pop-gun range of eternity, but he still had time to say his prayers and drift a little farther. Presently to his hopeless ears there came a shout "wafted o'er the breeze." Then he suddenly remembered what a rich prize he would be to the Japanese pirates, the "bands of lawless ruffians" who frequent the shores of these islands seeking to expose a man to "an agonizing death by starvation and torture" for the sake of his pajamas and night-shirt. Then for the first time he began to appreciate the charms of a "quiet, watery grave." "With almost "bated breath he strained his eyes in the direction of the now more audible shouts," though even the full benefit of this resource was denied to him, he being, as he parenthetically explains, short-sighted. Soon, however, he discerned, "dashing towards him over the now roaring sea, the second officer of the *Sumida* with a gallant crew." He was saved, landed at a Japanese fishing village, and taken into a hut "where he lay down in an exhausted condition." His sufferings had been terrible. The mad rapidity of his journey to and from the confines of eternity; the harrowing anxiety of the moment when blood-thirsty pirates were supposed to be bearing down on his pajamas and night-shirt; the overwhelming effect of the rescue from an agonizing death by starvation and torture—all this was well calculated to upset his mental equilibrium. The poor fishermen, pitying his condition, "cooked up" for him a cake made of rice flour and water and baked it on a charcoal fire. But it didn't rise properly, and proved of the "consistency of heavy suet pudding," not at all the proper aliment for a gentleman who had just been within a "stone's throw of eternity." His "exhausted condition prevented his doing justice" to the fishing folk's dough. He had to be taken on to another place where, obtaining a pony, he performed the feat of riding 13 miles to Shimonoseki; a truly marvellous performance, when one reflects that he had but a short time previously been swooning, praying, getting within a stone's throw of eternity, bating his breath, straining his short-sighted eyes, barely escaping a lawless band of piratical ruffians, and attempting to swallow rice cake of the consistency of heavy suet pudding. It is not often that such hair-breadth escapes and heroic conduct are to be found among the realities of life. Mr. M. Z. Martin is well qualified to cite his own case as an example of the admirable advice he gives to shipwrecked people:—"Under all circumstances, keep perfectly cool and collected." Nobody could have been more cool and collected than he was. While fully sympathizing with him, however,

we cannot honestly regret that he happened to be on board the *Sumida-maru* on "the fatal morning." The world would otherwise have been deprived of a charmingly artless narrative. The true inwardness of the tale is incomparable. Nobody but Mr. M. Z. Martin could have written a column of matter about his experiences at the wreck of the *Sumida-maru* without travelling an inch beyond Mr. M. Z. Martin and his concerns. The author must not be surprised if certain scoffers make a mock of his genius.

Sometimes nature will betray its folly,
Its tenderness, and make itself a poisine
To harder bosoms."

He must not be surprised if unkind slanderers give a different version of his sufferings: tell how a fussy, egotistical, short-sighted, and nervous individual, of middle age, taking passage, in the *Sumida Maru*, became the *bête noir* of all busy men, until one morning, the sea being perfectly calm, and the sky clear, the ship ran on a rock within a few hundred yards of shore: how the nervous passenger rushed up in his night clothes, and on being assured that there was no danger whatsoever, and told to go below and collect his things, resumed his rushing, got among the sailors who were lowering boats to tranship the mail, entreated them to save him and made himself generally such an obstacle to progress that in sheer self-defence they had to push him into a boat and send it adrift. How, finding himself adrift, he first shouted wildly to be rescued, but failing to attract attention and seeing that the boat leaked, swooned away; how, coming to, he was observed to say his prayers; how his presence being now less likely to create confusion, the second officer went to bring him back, but hailing him after the fashion of sailors, was mistaken for a piratical chief and nearly threw the nervous man into convulsions; how the reaction from abject terror to a sense of safety proved almost equally disastrous; how these varied emotions so completely prostrated him that he had to be thenceforth treated like a bale of goods, and was unable to swallow a rice dumpling; how he forthwith became in his own short-sighted eyes a sort of Sinbad the Sailor, and how publishing his experiences in a local newspaper, he created a vast amount of merry pity. Mr. M. Z. Martin must not be surprised, we say, if this story gets abroad. But let him take comfort. No such artist has appeared among us since Yokohama was opened to foreign trade, and if he will give us his experiences of men and things in Japan, with some deductions similar to his advice to shipwrecked men, he may confidently count on seeing himself a celebrity.

A RECENT letter from Pusan, Korea, to the *Mainichi Shimbun* refers to the kidnapping last year of the Dai-on-kun, father of the Korean King, and the supposed originator, or mainspring of the *emute* in Sôul last year. The correspondent says that some of the old prince's countrymen believe him to be in Japan, while others hold that he is in China in possession of great wealth. The Chinese Government coerces

the Korean Government, which is petitioning the Emperor of China to liberate the captive. The Commissioner in charge of foreign intercourse at Pusan is a man of progressive views and an enthusiastic advocate of external relations. He has lately visited the Japanese Consul-General, Mr. Mayeda, and expressed his willingness to execute any commissions in Sôul for that gentleman. When the Consul requested him to obtain autographs and pictures of the Dai-on-kun, he was surprised at the friendly feeling thus evinced after the occurrence of the outrage at Sôul. Mr. Mayeda speaks of the Commissioner as a man of much ability and has great hopes of him. The Korean officer was highly pleased and promptly complied with the request of Mr. Mayeda for the writings and likenesses. The Korean Government has been financially embarrassed by the rebellion. A bad harvest has increased the number of thieves, but the statesmen of the peninsula are working hard to remedy existing evils. Rice planting is impeded by drought, and in every province prayers are offered up for rain. A very curious custom prevails in Korea, and is resorted to with the sanction of the Government in case of dire necessity. It is throwing dirt on the top of mountains. Religious books speak of it as infallibly producing a rainfall. The execution of members of the anti-progressive faction has added to the number of the internal enemies of the Government, which is said to repent the harsh measures it adopted under the pressure of a grave occasion.

AN example of what it is for a country to be without proper systems of transportation is nowhere more evident than in Russia, and, there, in no respect more painfully clear than in the question of coal. Although possessing vast measures of excellent coal, that empire imports half of what it consumes of the mineral. Possessing the cheapest labor in Europe and coal equal to the best found elsewhere, but lacking railroads or other means of conveyance operating at low rates, Russia finds it impossible to bring her produce to the consumer.

CINCHONA is to be largely cultivated in Java. Indeed, a recent writer, Mr. Moens, upon the condition and prospects of Netherlands India, believes that while there will not be any great fall in the price of the bark for four years, yet after that the produce of South America will be to a great extent shut out; and that Java will supply the world within fifteen years time. This is not very probable, as India and Ceylon are both rapidly developing their cinchona plantations, and are at least likely to have a share of the business. There seems no reason, from its history, why the tree should not thrive in Southern Japan; but we are unaware that any effort has yet been made for its acclimatization.

THE *Hioغو News* reports that the *Hakodate Maru*, one of the vessels transferred to the Union Shipping Company by the Government, has had a successful trial trip upon the com-

pletion of the extensive repairs done at Messrs. E. C. Kirby & Co.'s Iron Works. While at Ono a hurricane deck was added to this steamer, her hull was thoroughly overhauled, and she was supplied with new engines and boilers made at the Works. On the trial trip the *Hakodate Maru* attained a speed of a little over 9 knots, while with the former engines 6 knots were the utmost that could be got out of her. Naturally the owners of the steamer were much gratified at the improvements effected in their vessel, and after the successful trial trip they entertained Mr. Kirby and his principal employes at a dinner given to commemorate the satisfactory completion of the work.

NORMAN MACLEOD appeared at H.B.M. Court on Monday, sued by a Chinaman for an amount, \$26.95, for carpenter's work done. The defendant, who appears from the evidence to be in the habit of keeping his accounts on the wall, had no case whatever, and after deducting an amount admitted as having been paid on account, His Honour ordered the defendant to pay the balance.

At the U.S. Court before Consul-General Van Buren on Monday, two seamen named Hammond and Andersen, belonging to the *Annie H. Smith*, were charged with being drunk and assaulting the police; the latter was also charged with stealing a dollar. Besides having to pay for damage, they were each fined \$5 or 10 days.—Another seaman, named Stoken, belonging to the *R. R. Thomas* appeared before the Court, also on a charge of drunkenness and assault, and was fined \$3, and to pay *yen* 3 damage.

We have received from the office of the *Echo du Japon* a *Carte du Tonkin*, arranged on the projection adopted by Dr. G. Maget. The map is of large size and delineated with great clearness. It should be of considerable service to those who wish to follow present operations and future developments in that region, but are quite unable to do so with the best Atlases. The sheet is presented by the Proprietors of the *Echo* to subscribers to their paper. Non-subscribers may procure copies at the *Echo* office for one dollar per map.

We are requested to call attention to a change in the place of meeting for the appointment of a Committee to take into consideration the departure of Sir Harry Parkes. The meeting is now announced to take place at the United Club instead of the Rooms of the Chamber of Commerce.

COMMUNICATION between Europe and the East is being rapidly improved in matters of facility and convenience. The Vienna correspondent of *The Times* tells us that the first of the new express trains running part of the journey between Paris and Constantinople arrived in Vienna at 11.25 p.m. on the 6th of June. It had left Paris the evening before at 7.30 p.m., and was due in Constantinople on the following morning, at 8.15 a.m., making the whole journey, *vid*

Varna, with the sea passage, in 84 hours, or three days and a-half. The train consisted of two sleeping cars, each constructed to carry 14 people, a dining car, with a kitchen, and a waggon for provisions and baggage. The fares are moderate; and accommodation is ample.

Our account of the opening of the new railway between Ueno Park and Kumagai, published elsewhere, is made complete by the following table of time and fares. No doubt many foreigners will avail themselves of the opportunity this line affords to make a pleasant trip through a fertile country and one entirely new to most people:—

| LEAVES. | | ARRIVES AT. | | | | | |
|-----------|---------|-------------|--------|---------|----------|--|--|
| Uyeno. | Oji. | Urawa. | Age-d. | Konosu. | Kumagai. | | |
| 6 A.M. | 6.15 | 6.45 | 7.23 | 7.54 | 8.24 | | |
| 1.30 P.M. | 1.45 | 2.18 | 2.53 | 3.24 | 3.54 | | |
| Kumagai. | Konosu. | Age-d. | Urawa. | Oji. | Uyeno. | | |
| 9 A.M. | 9.35 | 10.06 | 10.37 | 11.10 | 11.24 | | |
| 4.30 P.M. | 5.05 | 5.36 | 6.07 | 6.40 | 6.54 | | |

| FROM. | | FARES TO. | | | | | |
|---------------|------|-----------|--------|---------|----------|--|--|
| Uyeno. | Oji. | Urawa. | Age-d. | Konosu. | Kumagai. | | |
| Special Class | 25 | 70 | 1.10 | 1.50 | 2.00 | | |
| First Class | 14 | 44 | 68 | 92 | 1.20 | | |
| Third Class | 7 | 22 | 34 | 46 | 60 | | |

| Third Class | 14 | 26 | 38 | 53 | 60 | | |

DISTANCES FROM UYENO.

Oji, 4 miles; Urawa, 12½; Age-d, 21½; Konosu, 29; Kumagai, 33.

THE body of a well-dressed Japanese man of middle age was found floating in the Honmura Creek opposite the Buddhist temple yesterday afternoon, and was removed by the police. That the deceased had died a violent and cruel death was evident from wounds in his head and neck. His hands and feet had been tied together before he was thrown into the water which has given up its dead. Strangely enough, this corpse was discovered immediately opposite the place where six years and more ago the dead body of an English sailor, one Bourne, was found murdered, to the tragedy of whose death no clue has even yet been discovered.

THE festival on the river Sumida at Riogoku is fixed for Wednesday the 1st proximo. It is to be hoped that a third postponement will not be necessary, but the weather prophets say that there are not wanting signs of an approaching change in this persistent sunshine.

SO FAR as the knowledge possessed by the French Government is concerned, it would appear that the fate of Commandant Rivière is still to some extent wrapped in mystery. The unfortunate officer disappeared in a sortie, that is all the authorities know about it, and that is all they have been able to tell to Mme. Rivière when she requested that the body of her husband should be brought back to France.

THE *Shanghai Mercury's* Tientsin correspondent says, of Mr. Tricou's alleged rudeness

to Li Hung-chang, that the statement is untrue:—"H.E. when he was here said it was not true that he telegraphed to Tseng Hou that Mr. Tricou was rude. He telegraphed that he was firm and unyielding, we think, but our informant could not recollect the precise word; it was to the effect that Mr. Tricou was impervious to 'soft sawder.' In fact Li could not talk him round him as with Sir Thomas Wade at Chefoo."

We are glad to be able to state that the cable steamer *Scotia* has successfully completed the laying of the duplicate cable between Nagasaki and Vladivostock. We understand the electrical condition of the new cable gives every satisfaction.

We are informed that the Pacific Mail steamship *City of Peking*, with the next English mail on board, has been detained in Hongkong, and only left that port on the morning of the 26th inst. Consequently she is not to be expected here till Tuesday night.

THE *Official Gazette* states that terrible destruction, to the extent of four thousand houses, has been wrought by a fire in Niigata.

THE Occidental and Oriental Co.'s steamship *Oceanic* left San Francisco for this port on the 10th instant.

THERE will soon be a new road from the Far East to the Far West. According to Canadian and American papers, the Canadian Pacific Railroad is now driving ahead at a more rapid rate than ever before, and its completion is not very far off. The road is completed from Winnipeg west about 775 miles and, advancing at the average rate of four miles per day, will reach Calgary, 150 miles further west, by August 5th. From Calgary, at the base of the Rockies, to their summit is a further distance of 121 miles, of which completion is promised before Winter sets in. At three other points on this great line the work is advancing, though by no means as rapidly—in British Columbia, east; from Prince Arthur's Landing, on Lake Superior, east; and from the Ottawa side, west. From Prince Arthur's Landing the road will be finished 65 miles east to Nepigon by August 15th, and it is promised that 40 miles farther will be made on this division before the season closes. Work is also advancing on the main line west of Sturgeon river, leaving a gap of less than 350 miles between the east and west ends at the close of the season. Though the company has till 1891 to finish the road, it seems fully assured that it will be done inside of three years. From Lake Superior to Port Moody this road is estimated to be 1,945 miles, of which not more than 200 miles will remain unfinished at the end of the year. The section around Lake Superior from Prince Arthur's Landing to Lake Nipissing, 600 miles in length, will be the last completed. From Halifax to Burrard's Inlet the distance of the completed line will be 4,500 miles. The company is granted immunity from taxation for ever, from competition for twenty years, and virtually for ever, and, until the earnings of the road exceed ten per cent. interest on the capital, the Government cannot interfere to regulate freight or passenger rates.

THE RESUMPTION QUESTION.

IT is with a feeling of something like hopelessness that one approaches the discussion of such a question as that suggested by a correspondent whose interesting letter we publish to-day. Nobody has dealt with the problem of Japanese finance more logically or lucidly than "T.W.," and from the first he has continued an unvarying supporter of the "Quality" versus the "Quantity" theory. We ourselves have endeavoured to show, in previous articles, that the two are virtually inseparable: or, in other words, that if the volume of inconvertible notes capable of circulating at par in any community be a function of the services they are required to perform, those services, in their turn, are a function, to some extent, of public confidence in the value of the notes. It is conceivable that the uses to which such notes are applied may be strictly limited to the payment of taxes. In whatever quantities they are issued by the Treasury, the people may decline to employ them in the transactions of every-day life. In such an event defective quality would obviously be the cause of their exclusion from circulation, and their depreciation might remain the same whether the aggregate issue were ten or fifty millions. Japan herself has furnished an example of this nature. The specie value of *Kinsatsu* was never lower than in the early days of their issue, when as yet but three or four millions had been emitted, and it was only by a liberal exercise of its despotic powers, supplemented by the hereditary submissiveness of a law-abiding people, that the Government succeeded in overcoming public repugnance to a form of money associated, in the history of the various fiefs, with all sorts of financial inconveniences. This repugnance once fairly overcome, however, it really did not appear to signify, for a time, how much inconvertible paper was issued. From 24 million *yen* in 1868, the volume rose to 73 millions in 1872, and then remained virtually stationary till 1877; yet all this while the premium on silver was so small as to be scarcely significant. Looking back at the story of those ten years, it seems plain that defective quality, otherwise expressed as popular mistrust, was the only difficulty the *Kinsatsu* had to contend with. But when we come to 1877, two new and powerful factors enter the calculation. In 1876 there were 5 national Banks with a note issue of less than 3 millions. In 1877 there were 28 of these institutions; in 1878, their number had suddenly swelled to 120 with a note

issue of twenty-seven millions; and in 1880 there were 152 with a note issue of thirty-three millions. Can there be any doubt about the effect of all this? The Central Government, by an extreme exercise of its well nigh limitless power, had with difficulty usurped the position of a solvent note-issuer, when suddenly, in the space of two short years, there sprung up throughout the country a hundred and twenty new issuers, almost entirely divested of the mystery of authority, working under the very eyes of the people, and directly connected with the representatives of feudality, under which every Chief had his own fluctuating paper money. It was a perilous experiment. The marvel is, not that it shook the credit of the inconvertible currency, but that any shred whatever of public confidence survived such a shock. The other factor to which we allude is the Satsuma rebellion. Not only was the Government compelled to increase its issues by more than twenty-five per cent., but its very stability was threatened, and its opponents resorted to the same expedient of paying their way with inconvertible notes. Depreciation may be fairly said to have set in from 1878, and the rest of the story is familiar to everybody.

There is nothing in this retrospect which militates against the "Quality" theory, but, on the other hand, there is nothing which need seriously embarrass those who maintain that the depreciation of inconvertible paper money is chiefly due to its issue in quantities disproportionate to the functions it has to perform. Among the advocates of this latter doctrine are numbered so many leading economists that we cannot afford to dismiss their opinions off-hand. Thus RICARDO says that there need be no depreciation provided only the notes "are not supplied in excess of the amount of money of full value which would circulate as the community's distributive share of the world's stock of money." TOOKE expresses the same opinion in similar terms. WILSON remarks that "if inconvertible paper he kept somewhat below the amount of currency required there is no reasons whatsoever why such notes should suffer depreciation." PRICE endorses this, citing the evidence of experience in support of his doctrine; and COURCELLE-SENEUIL writes:—"La valeur de ce papier, résultant uniquement de l'usage auquel il sert, est limitée par cet usage même. Si les émissions étaient médiocres, la papier-monnaie pourrait valoir autant que la monnaie métallique." A host of other authors might be quoted

to the same effect, but these will suffice to show that in accepting depreciation as a proof of redundant issues we are not without weighty and numerous warrants. The upshot of the matter is that what we encounter here is not a radical difference of opinion, but a phraseological difficulty. Quantity and quality are, in this case, interchangeable terms. Too much *good* money cannot remain in circulation in any country. If at any time its amount reaches a height which, having regard to the number of exchanges to be effected, will not allow the commodities of that country to be exchanged at home at prices on a level with those of other countries, a movement at once begins for the importation of commodities, and the exportation of gold and silver. But with inconvertible paper, there exists no such security against redundancy. It cannot leave the country, and the only effect of its presence in excess is a rise of prices, that is, depreciation. To say then that depreciation is due to defective quality,—i.e., non-convertibility,—is only another method of stating that the depreciated money is redundant.

With all this "T.W." will probably agree, and for our own part we are decidedly of opinion that, speaking accurately, defective quality must be regarded as the prime cause of depreciation. Excessive quantity is in reality a consequence of that cause. Good money cannot be redundant. But when we come to the definition of the terms "good" and "defective," we go somewhat further than our correspondent seems disposed to lead the way. We hold that the essence of "goodness" is the fact, not the prospect, of convertibility. "It will be a happy thing for all concerned," "T.W." says, "when it is recognized that convertibility is the only important object, and that the moment it is fairly in sight there will be no more talk about redundancy." Assuming, however, that the final purpose of contraction and resumption alike is to restore stability, we cannot think that any promise of resumption, on whatever assurances based, will suffice to accomplish that end. The experience of the United States is against such a theory. The Resumption Act became a law on the 14th of January, 1875. Yet during 1875 the premium on gold was higher than it had been during 1874, 1871, 1872 or 1873. It was as high in 1876 as in 1871 or 1872. It showed no distinct fall until 1877 and 1878, and WESTON says:—"The opinion of the soundest minds has always been, and still is, that the gold premium did not fall in 1877 and 1878 in consequence

of an expectation of resumption on January 1st, 1879, but that resumption at that date was a *consequence of the preceding fall in the gold premium*, brought about by commercial causes, such as great grain crops in the United States contemporaneously with deficient crops in Europe, large favorable balances in our foreign trade, &c. The question to be answered in Japan's case is this:—Can the Government reasonably hope that if it openly devotes itself to gather specie towards final resumption and leaves the currency alone meanwhile, the latter will appreciate, so gradually as not to induce any serious commercial disturbance, but so sensibly that the act of resumption will ultimately be brought within safe reach? "T. W." replies in the affirmative. He is distinctly opposed to the supplemental measure of currency contraction, and he quotes England's sufferings in support of his position. But what was it that happened in England? In the debates on the Act of 1819, the bullionists held that the depreciation of the inconvertible paper was measured by the premium on gold, which, at that time, had sunk to 3 per cent. They carried their point, and the Act passed, providing for the gradual exchange of bank-notes for gold, *at current rates of depreciation* at the outset, the operation to be extended over a period of nearly three years. With the commercial and industrial misfortunes that ensued, readers of history are only too familiar. It would not perhaps, be just to lay those misfortunes entirely at the door of the Act, but nearly all economists are agreed that it was responsible for much of the subsequent suffering. People had been persuaded that, having regard to the insignificant depreciation of bank-paper as against gold, the effect of resumption upon prices would be slight, but as a matter of fact the operation was followed by extensive disturbances in trade. The prices of the most important staples fell through many degrees, bringing to distress, if not to ruin, large manufacturing and commercial interests. With this experience before their eyes, it is not surprising that Japanese financiers are impressed with the advisability of paving the way, as far as may be, to resumption by removing the effects of inflation, that is to say, by reducing the bulk of the inconvertible paper in circulation.

It is necessary to observe here that the operation of restriction, as carried out during the past eighteen months, has been for the most part free from any arbitrary element. The debts called in by the Treasury were of comparatively insignificant amount, and it will scarcely

be contended that the authorities would have acted wisely in leaving them outstanding. Something, too, was doubtless effected by the periodical redemptions, provided for in the estimates; but the chief measure, the sale of Government Bonds, might have taken place at any time since 1872, had the people been disposed to purchase. The original idea of these specie bonds was to provide an outlet for redundant currency. It was erroneously supposed that a low rate of interest is a feature of currency inflation, and that the demand for this class of commodity would be encouraged by the depreciation of *Kinsatsu*. The converse ought to have been anticipated. It is precisely when the circulating medium begins to appreciate sensibly that rates of interest diminish and enterprise turns in the direction of stocks which bring in a fair annual return and are constantly appreciating as against the commodity for which they have been exchanged. For some months past all classes of Government securities have been in brisk demand, and it seems very doubtful whether anything more than an acceleration of currency appreciation can be laid to the charge of the sales of bonds effected by the Treasury. It may be justly replied that this leaves untouched the general advisability of providing for inconvertible notes such a means of exit from circulation. But what we desire to emphasize here is that, for any shrinkage the bulk of the currency has undergone, the people themselves are scarcely less responsible than their rulers. Our correspondent describes the process as "a simple contraction of the volume of the currency without putting anything that can be used as money in the place of what has been withdrawn," and adds that this contraction "has already produced most distressing effects and to carry it further may lead to general ruin." We cannot quite endorse this forecast; but having regard to the crippled condition into which, from whatever causes, energy and enterprise have plainly fallen, it seems desirable that the Government should discontinue any process calculated to encourage a further diminution of the general volume of money seeking investment.

"T. W.," while fully agreeing that a gradual accumulation of silver in the Treasury for purposes of future redemption is the only wise policy, nevertheless concludes that Government operations in produce are a questionable method of carrying out that policy. With his reasons for this view we cannot differ. They are, in short, what we ourselves have already noted. All that can be urged in favour of the plan is that it is the lesser of two evils.

Our correspondent, however, suggests another course—"the direct sale of national bonds for silver, even if made abroad." It seems to us that such sales would *have* to be made abroad. There are doubtless hoards of specie in Japan which might be brought into use with great advantage, but to draw them from their hiding places, terms of an exceptionally favorable nature must be offered. The Bank of Japan has projects of this nature, but it apparently experiences some difficulty in carrying them out. Ultimately, therefore, this method of procuring silver would assume the form of a foreign loan, and the country's aim at present, so far as can be judged, is to emerge from financial embarrassments without any recourse to foreign aid. They are not very alarming embarrassments. When compared with her extraordinary career, with the feats she has accomplished and the difficulties she has overcome, her national debt is a mere bagatelle; and as for her inconvertible notes, their fluctuations are scarcely perceptible by the side of those recorded in the case of other countries now solvent and prosperous. All she wants is breathing time. There is nothing very delicate about her present system of finance. It is not a masterpiece of science or subtlety. On the contrary, the scheme for the recall of the National Banks' paper excepted, the programme presents no remarkable features. But there has not yet been proposed any other device exclusive of European assistance, and that adjunct the Government, which may be credited with some knowledge of the country's wishes, considers prohibitive.

THE LATE IWAKURA TOMOMI.

THE Funeral of His Excellency IWAKURA took place on Wednesday morning. Long before daylight the whole of Tokiyo was astir, and at sunrise thousands of people might have been seen wending their way from all quarters of the city towards the streets along which the procession was to pass. Not only the newspapers, but also official notices exhibited in conspicuous positions at the Government Departments and near the residence of the deceased statesman, had furnished accurate information of the routine to be observed at the ceremony, and every available space from which the procession could be viewed was crowded with eager but orderly spectators. There was, however, one notable exception to this display of curiosity—an exception which, as a revival of now obsolete customs, and as a purely voluntary act

on the part of the people, was significant of the respect in which the great Minister was universally held. All along the line of route the upper windows looking on the streets were untenanted, or only used by persons seated so far back as to be nearly invisible to those passing below. In old times these windows would have been closed, and to peep from them at all would have entailed serious consequences; but such restrictions have long ceased to be imposed, and if the citizens of Tokiyo reverted in this instance to their former habits, it was entirely because they felt that the occasion demanded some exceptional mark of reverence. Six o'clock A.M. was the hour fixed for the *cortège* to set out, and despite the extensive nature of the preparations to be made, scarcely fifteen minutes delay took place. The order of the procession was as follows:—

A Company of Pioneers,
50 Men.

The Band of the Imperial Guards.

Two Double Companies of Imperial Guards,
250 Men.

Two Squadrons of Cavalry,
150 Men.

The *Naga-biru* (Travelling Valise) of the Deceased, Draped in White and carried by Servitors in White.

A number of Shinto Priests in White robes, carrying long Bamboo Poles with Streamers and large Bouquets of Artificial Flowers.

THE BIER.

The Carriages of the two Chief Mourners; Arima, Duke of Kuruma, and Nabeshima, Duke of Hizen.

A number of Shinto Priests, carrying Flowers and a tall Bamboo Pole with White Stays, to which was attached a White Banner with the name and titles of the deceased inscribed.

Four Chief Priests on horseback, their horses led by two Grooms each.

Two Carriages, with Ladies of the deceased's household.

Three Hundred and Twenty Carriages and Four Hundred and Seventy Jinrikishas, containing the Imperial Princes, Ministers of State, Officers of the Army and Navy, &c.

Mounted Field Officers—Thirty-five.

Two Battalions of the Tokiyo Garrison,
800 Men.

A Battery of Mountain Artillery,
Six Guns.

Two Batteries of Horse Artillery,
Twelve Guns.

A Company of the Military Train.

The troops were in full dress, and fortunately for them, as well as for the high officials, whose heavily laced tunics are ill fitted for midsummer use, the morning was cloudy and comparatively cool. The bier was made of snow-white pine-wood, of graceful shape and the most skilful workmanship, but entirely without ornamentation, except the mountings which were of silver gilt. The ladies of the deceased's household were dressed in soft white crape, and constituted the most charming, if not the most picturesque, feature of the pageant. Nothing could have been more striking than the stillness of the immense crowds which lined the streets on either side throughout the whole length of the route.

Instead of the buzz and clamour generally inseparable from these huge gatherings, even the ordinary sounds of life seemed to be hushed, and beyond the tramp of the soldiers and the roll of the carriages nothing was audible. Only six foreigners, of whom two were missionaries and the rest *employés*, present or past, of the Japanese Government, joined the ranks of the procession. Not there was any lack of desire to pay the last tribute of respect to the memory of the great Minister, but because special provision had been made elsewhere for the attendance of strangers. It was thought, apparently, that the early hour and the slow rate of progress over so long a route might advantageously be dispensed with in their case, and instructions were accordingly issued to the effect that foreigners wishing to take part in the ceremony should proceed at once to the neighbourhood of the temple, where they would find a house prepared for their reception. This course was adopted by the Corps Diplomatique, the foreign *employés* of the Government, and a few others.

The Temple of Kaianji, where the funeral service was performed, lies at the Southern outskirts of Shinagawa. Like many other notable places in the environs of the metropolis, it owes its fame to the beauty of its scenery, for the people are wont to say that nowhere else does "autumn's fire burn ruddier along the woods," or "the dead leaves fall and melt" more tenderly. It is a quiet spot, with no architectural grandeur to recommend it, nor do the tombstones in its cemetery bear any name more illustrious than that of the man who has just been laid among them. The procession reached the Shrine a little before nine o'clock. With the exception of the carriages containing the lady mourners, all the vehicles were stopped at a considerable distance from the entrance, and their inmates dismounting, followed the bier on foot. On either side of the temple avenue there were erected large stalls draped with white, and in these the principal officials ranged themselves, the artillery meanwhile firing a salute. For the foreign visitors the neighbouring Temple of Kaiunji had been set apart, and in an inn at the opposite side of the street similar preparations had been made for the accommodation of the *Kwasoku* (nobles). The Temple of Kaianji itself is small, and could never have been destined by its builders for such a ceremony as that of yesterday. Some confusion was caused by the difficulty of carrying the bier, with its lofty roof, through the door of the fane, nor was the latter by any means large

enough to accommodate the numerous assemblage of Princes, Ministers, and Officials seeking admittance. The burial service was exceedingly simple. The officiating prelate, a member of the Imperial family, standing before the bier, read two funeral orations, the first written by the EMPEROR himself, and the second composed by the priests. Each person present, one by one in due order, then approached, and making a last obeisance to the dead, deposited before the bier a branch of *shikimi*. It was pleasant to see that even the Foreign Representatives took part in this performance, though at Mr. OKUBO'S obsequies they were prevented from doing so by some scruple with which not many will sympathise. This brought the service to a conclusion at a few minutes before eleven, and the body was afterwards lowered into the grave in the presence of a select few. The sun, meanwhile, having dispelled the mists, shone brightly over the woods and waters on which the grave of the dead patriot looks down.

We cannot close this brief notice of the obsequies of one of the greatest and noblest men Japan has ever possessed, without noting an occurrence which for callous discourtesy stands alone in the story of foreign relations with Japan. We have said that on either side of the steps forming the temple avenue, stalls were erected for the accommodation of Japanese officials, and these places had, of course, been duly allotted according to the grade of the occupants, the higher stalls being reserved for officers of *Chokunin* rank. In Japan, as elsewhere, all persons are at liberty to attend State funerals, but it is presumed that, doing so as a mark of respect to the deceased, they will come in mourning dress, and observe the dispositions made by the Master of the Ceremonies. On this occasion, out of the immense number of persons who followed the remains of the Minister to the grave or assembled at the Shrine to take part in his obsequies, all, with one notable exception, were attired in full uniform or in black clothes as prescribed by the regulations. That exception was this Highness the Maharajah of JOHORE and a party of foreign ladies and gentlemen who were understood to be his guests, and who, with their host, made their way into the front seats of the highest stall on the right of the temple avenue, and there, dressed in picnic costume, many coloured and conspicuous, formed a group not less out of harmony with their surroundings than embarrassing to the order of the ceremony. There were two or three roughs from Yokohama who thrust them-

selves into the circle of the mourners or broke into the stalls from the back and sides, treating the affair as though it were a holiday show, not the expression of a nation's sorrow. For this sort of thing, however, the police are the only remedy, and as the police do not generally officiate in cemeteries, rowdies who take advantage of their absence must be left to the enjoyment of rowdyism. It is humiliating, though for the moment unavoidable, that our civilization should present such phases. But that a potentate who has been the honored guest of the EMPEROR of JAPAN should find a fitting opportunity for a picnic in the funeral of a Japanese Prime Minister and member of the Imperial family, should conduct his guests into a place set apart for the principal officiators at the obsequies, and should take his departure in the middle of the ceremony, is a proceeding which cannot honestly be described as mere thoughtlessness, and had best, perhaps, be left undescribed. We do but echo the sentiment of all the foreigners who attended the funeral when we say that this most deplorable incident has remained a memory of shame and humiliation. The occasion could scarcely have been more solemn: the act less decorous. It may, perhaps, be said that the Japanese have themselves to blame; that their want of resolute self-assertion encourages liberties otherwise impossible, and that they themselves too often set the example of a lack of earnestness. Let those who please avail themselves of these excuses. For our own part, we are well assured that the codes of Western courtesy and kindness have sufficient strength to resist the attraction of such opportunities or the force of such precedents.

OPENING OF A NEW RAILWAY.

THE railway between Uyeno (Tokyo) and Kumagai was opened on Thursday. For many months this line has been in some measure a mystery to the foreign public. More or less scepticism used to be expressed as to whether it would ever be completed at all without foreign assistance. From the time the road was first surveyed until the last load of ballast was thrown down, no recourse whatsoever was had to western engineers, and people were not slow to predict that this independence was premature and must result in disaster. How little reason there was for such a forecast will be understood when we say that a line presenting incomparably greater engineering difficulties, namely that from Nagahama to Sekigahara, had already been

successfully laid by Japanese experts. The same may be said of the road from Nagahama to Tsuruga, which, however, though open to traffic, cannot be regarded as entirely completed—one of the tunnels not being yet pierced. It was easy to see that the constructors of these roads would not be embarrassed by the Uyeno-Kumagai line, which traverses a series of level plains, and, with the exception of one river, crosses nothing worthy of mention. Still, it must be confessed that the Japanese have shown very remarkable aptitude in the matter of railways. Their opportunities of learning have been circumscribed, but they have evidently profited by them to a degree which bespeaks great diligence and ability. The line of which we set out to speak has its Tokiyo Terminus on the east of the hill which overlooks the Shinobadzu Lake and within less than a furlong of the main entrance to the Uyeno Park. So far as its permanent buildings are concerned, the terminus exists as yet only in name. The Directors have wisely contented themselves for the nonce with wooden structures, and the place which at present does duty for a station is destined ultimately to become a goods' shed. Indeed, a portion of this remark applies to all the stations along the line, five in number. They are plain, wooden buildings, in Japanese style, as far as possible removed from any pretence of elegance or diletanteism, but thoroughly well adapted to the work they have to do, and showing plainly that they have been erected at a minimum of cost. Economy, in fact, has obviously been a ruling object throughout. In nothing does this strike the observer more than in the width of the road. There is not a foot to spare on either side of the rails. Up to the very edge of the permanent way farmers cultivate their rice and buckwheat, and village urchins, unimpeded by fence or bank, come to make the acquaintance of the novel monster which has begun to career across the plains. Those that desire to view once more that spectacle so strange in these times of overtaxed practicality,—unsophisticated curiosity in its frankest phases, cannot do better than take a trip to Kumagai before the lads and lasses have ceased to gird up their loins and come galloping through dust and sunshine to feel the earth tremble under the tread of the snorting giant, or before wrinkled rustics have ceased to be startled into the instinct of old times, and to squat down in the paddy-fields with humble heads as though the train of a Daimiyo not of a steam-engine were passing.

Leaving Uyeno the road runs by Oji,—

where there is a station,—passing almost within arm's length of the picturesque gardens and tea-houses so much frequented by Tokiyo pleasure-seekers. Thence through a long succession of rich valleys, where the young rice plants are just now pushing upwards with a lusty luxury that does not much endorse recent predictions of poor crops, and then on to Kawaguchi, where the Arakawa is spanned by a bridge of scanty dimensions. It is a trestle bridge of the simplest construction, solid and strong enough for all practical purposes, but so narrow that the steps of the carriages seem to overhang the water as they pass. This stream promises to be a somewhat troublesome customer hereafter. Its dimensions just now are insignificant—much smaller than the river at Kawasaki—but the flood-bed appears to have considerable width. The intention is to span it ultimately by an iron bridge similar to that on the Tokiyo-Yokohama road, and the line of the permanent structure is already laid out. But for the next two years, at least, the work must be done by trestles. From this point the road rises almost imperceptibly, and entering an immense upland plain, runs without obstruction right through to Kumagai, a total distance of 38 English miles. Beyond this a section of nearly ten miles is approaching completion, but between Kumagai and Mayebashi the Tonegawa has to be crossed, an operation of a somewhat serious nature. The Arakawa, as we have said, does not suffer itself to be easily negotiated, but, on the other hand, it has conferred an immense boon upon the company by supplying them with excellent gravel in quantities almost unlimited. The whole of the line between Tokiyo and Kumagai has been ballasted from this source, and the pits will doubtless suffice for the second section also. Fortunately, too, the work of taking out the gravel has largely benefited the river, which had gradually silted up and showed a disposition to commit troublesome encroachments upon the neighbouring country. The rolling stock, with the exception of the engines, has been built in Japan. We say "built" because, although the woodwork is entirely Japanese, the metal for springs and axles was imported from England. The carriages are after the English fashion. They are only first and third, a second class being wisely dispensed with. It would, however, be more correct though less literal to say that there are no first-class carriages, for the so-called *Jōdō* is little if anything better than the *Chiuto* of the Tokiyo-Yokohama line. A special

arrangement (*Dokubetsu*) enables passengers who desire privacy to secure a compartment to themselves by paying a slightly increased fare, and this most convenient plan is intended to provide a first-class, properly so called, on the rare occasions when it may be required.

We have spoken of an opening, but in truth, the ceremony of Thursday only admits that description in a most practical sense. There was no parade of any sort: no display of bunting, no reception, no presentation of addresses. A number of people, sixteen carriage-loads, assembled quietly in the terminus, that is to say, the future goods' shed, at Uyeno; rode to Kumagai and back; dined at Uyeno on their return, and separated very soberly at nine o'clock in the evening. Among them were their Imperial Highnesses the Princes KOMATSU and KITA-SHIRAKAWA; their Excellencies SANJO (First Minister of State), General YAMAGATA (President of the Privy Council), General YAMADA (Minister of the Home Department), SASAKI (Minister of Public Works), INOUE MASARU (Vice-Minister of Public Works); Messrs. YOSHIKAWA (Governor of To-kiyo), YOSHII (President of the Nippon Railway Company), DATE (ex-Daimiyo of Urajima), ISHII (Director of Telegraphs), and several others, officials and private persons, with half a dozen ladies and as many children. Of foreigners only two or three were present by special invitation. Mr. YOSHII, President of the Company, received the guests, and without further ado they took their seats in the carriages. Leaving Uyeno at ten minutes past 1 o'clock, the train reached Kumagai at 3.40, and, starting on its return journey at 4.20, arrived in Tokiyo at 6.50. The trip was in all respects successful. The time named in the table was punctually kept, and the carriages ran smoothly and steadily. The road opened for general traffic to-day (Saturday). Only three trains *per diem*, two for passengers and one for goods, are to be run at first, but doubtless the number will be increased hereafter. That the line will pay and that it will have an immensely valuable effect in opening up the rich district to the north of Tokiyo, there can be no question; and considering the rapidity with which it has been constructed as well as the auspicious nature of its prospects, the congratulatory speeches made at the dinner on Thursday evening seemed unnecessarily temperate.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE CURRENCY QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your articles on finance and currency are generally so sound that I reluctantly dispute the accuracy of the statement in that of 14th instant that "there can be no question that paper money is now redundant in Japan." If you mean by that statement that the existing currency of Japan is, as currency, excessive, I think you are in error. There is no real analogy between the case referred to by Professor Walker—that of the United States in 1862—and that of Japan now. The United States in 1862 had a metallic currency, and the question was whether the Government, to obtain funds for the war, should displace that currency by the issue of inconvertible paper, or sell, at low prices, its interest bearing bonds. The former course was adopted, and it has been correctly described as insane and injurious, not because paper money is necessarily bad money (for it is excellent money to-day in America, France, and England) but because, under the circumstances of the United States in 1862 a flood of it was sure to prove "a curse" to the people by unsettling all private contracts and calculations. That the Government should inflict such an evil on the nation merely to avoid or postpone selling its bonds below par was an outrage on equity and common sense which can only be excused by supposing Congress at that time to have been thoroughly bewildered on financial questions and hardly knowing what it did.

The case of Japan is entirely different. She has practically no metallic money, and her problem is how to deal with an *existing* paper currency, and to improve its value. The first point to determine in considering this problem is whether that currency is, or is not, redundant. If a thorough comparison could be made between the present prices of commodities and those current here when metallic money was abundant, some light would be thrown on this point. But so many changes of circumstance, other than currency changes, have occurred meantime, that such a comparison is hardly possible, and one is reduced to mere estimate. Mine would be that 140 millions *yen* is rather a deficient than an excessive volume of currency for these 36 millions of people under present conditions. That this money is not at par with Silver does not prove that it is redundant, but only that it is defective in quality, is, in short, not good money because it is not convertible into metal. If its quantity were but half what it is and this defect attached to it, it would manifest itself precisely as it does now. It is actual or prospective convertibility which alone gives value to any paper money, and that convertibility has no necessary relation to the quantity in circulation. As this question has been much obscured in the discussions of it which have taken place it is not surprising, though it is very unfortunate, that the Government itself has been perplexed about it. It will be a happy thing for all concerned when it is recognized that convertibility is the only important object, and that the moment it is fairly in sight there will be no more talk about redundancy. If the Bonds now issuing were calculated to procure the silver requisite to assure convertibility for *Kinsatsu*, they

would be unobjectionable. The nation can well afford to pay a large sum for interest on these Bonds, during many years, for the sake of obtaining immediate stability in its current money. But have these Bonds that object? If not they are but a useless and costly change in the form of a national debt which is in better form as it stands. And this, I fear, is the fact of the matter. The Bonds produce no Silver, but, as far as the Government is concerned, merely substitute an interest-bearing debt for a currency debt bearing no interest. The advantage of this operation, even to the Government, is not clear. But its injurious effects on the people seem to be evident enough. It works a simple contraction of the volume of the currency, putting nothing that can be used as many in place of what is withdrawn. If this policy were pursued till all the *Kinsatsu* were retired, and replaced by bonds, the country would have no money at all. Already the contraction accomplished has produced most distressing effects, and to carry it further may lead to general ruin.

I do not deny that the Government may properly call on the people to bear, now and at once, some part of the cost and pains of reforming the currency; or that measures leading to a reduction of previously inflated prices, to smaller importations of foreign goods and greater exportations of native products, are a wholesome method of putting that part of the burden on the people's shoulders. Nor do I doubt that when the people require new money for their transactions they will find a way to obtain it. But if the present generation are not to be utterly crushed, or goaded into insurrection, their burden and the effort demanded of them must be adjusted to their ability, and this is probably now very near exhaustion. The fall in prices of commodities, the increased weight given to all debts, in consequence of the rapid contraction of the currency, may easily prove fatal. It is no answer to say that this is but the reversion of a previous inflation of prices and injustice to creditors. For two wrongs do not make a right. If no other remedy were possible this severe one might be justifiable. But that is not the case. The malady does not need heroic excision, but strengthening nourishment. And such nourishment can only be supplied by a gradual accumulation of Silver in the Treasury, towards the conversion of *Kinsatsu* into coin by and by.

As to the best means of obtaining that supply of Silver opinions will differ. To obtain it by means of Government operations in produce is first, costly, owing to the incapacity of governments for profitable trading; and second, demoralising, owing to the disorder such operations introduce into the markets and into private business. Moreover, they tend to increase rather than to diminish the paper in circulation, so that the Silver they yield to the Treasury loses much of its efficiency.

To apprehend the full force of these objections let us imagine the American Government resorting to such shifty measures for gathering bullion. It is not conceivable that the American people would tolerate an administration which did so. The circumstances of Japan may be peculiar; the Government may have the right as well as the power to raise money in that way if it chooses, and the people may submit to it very patiently. Still it is a questionable method, and it must seem to any foreign observer that the direct sale of National Bonds for Silver, even if it had to be made abroad, would be a better operation, more dignified for the Government, and less costly in the end to the nation. One may agree that shipments of produce on Government account are preferable, from every point of view, to the "bulling" and "bearing" transactions in the exchange market which were practised some time ago. Still the new plan is not a good one.

What I wish to show, however, is that "removing the inferior money," without putting superior money in its place, is too drastic and cruel a process. England tried it in the early part of this century and men still shudder over the wretchedness which resulted. America, France, and Italy have lately adopted the contrary policy of letting the volume of the paper currency alone, and improving its value by gathering specie towards its final redemption, and this policy has restored convertibility in all those countries with none but good effects.

Japan seems disposed to try both these plans at once. But, clever as the Japanese undoubtedly are, I doubt if they will succeed in this feat, and that they will have any reason to congratulate themselves if they do.

T. W.

Yokohama, July 17th, 1883.

THE FUNERAL OF HIS EXCELLENCY THE LATE THIRD MINISTER OF STATE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As one of the oldest of the foreign employés of the Japanese Government—and as most of our number are now absent from Tokiyo—perhaps you will allow me to express the thanks of the foreign community here for your well-merited strictures on the conduct of certain persons from Yokohama who were present at the funeral of H.E. Iwakura. That the persons referred to were guests of the Maharajah of Johore was unknown to us at the time, but the indignation evoked by their unbecoming appearance was, as you say, unanimous. It was an insult not only to the authorities who, with mistaken courtesy, as I think, refrained from removing them from the position they had taken, but also to all respectable foreigners resident in this country. In only one of your remarks do I think you mistaken, and that is where you state that the obnoxious personages were "dressed in picnic costume." Surely, sir, even at a picnic people put on *clean* clothes, whereas, at the ceremony referred to, even this decency was neglected. The whole episode was calculated to bring foreigners into disrepute with the upper classes of Japan. Let us hope that the Japanese officials can distinguish between the mass of their foreign guests and those "rowdies" who did their best to bring discredit on their compatriots.

I may add, in confirmation of your remarks, that those of us who were invited to attend the funeral were specially requested to rendezvous at the Temple of Kaianji, instead of joining the procession, which we should otherwise willingly have done.

I am, &c., faithfully yours,

EMPLOYEE.

Tokiyo, 26th July, 1883.

SUMMARY OF THE FOREIGN TRADE OF JAPAN FOR THE YEAR 1882.

The Annual Summaries of the Foreign Trade of Japan that have hitherto been compiled in this Legation have been based on the Reports furnished by Her Majesty's Consuls at the several Treaty Ports. The present one of the Trade during the year 1882 has, however, been prepared from the Return published by the Bureau of Customs which has for the first time been issued by that Department complete for the calendar year. The value and nature of the Trade is shown in the following seven tables:—

- General Summary of the Foreign Trade of Japan for the year 1882.
- Synoptic Table of the Foreign Import and Export Trade of Japan for the year 1882.
- Comparative Table of the Import and Export Trade of the various Treaty Ports during the years 1881 and 1882.
- Comparative Table of the Principal Articles of the Foreign Import Trade of Japan during the years 1881 and 1882.
- Comparative Table of the Principal Articles of the Foreign Export Trade of Japan during the years 1881 and 1882.
- Return of Treasure imported from and exported to Foreign Countries during the year 1882.
- Return of Foreign Shipping entered at the Open Ports of Japan during the year 1882.

From the first of these Tables (Table A) it appears that the Foreign Trade of Japan during the year 1882 reached a total value of \$66,403,816.19, shewing, as compared with that of 1881, viz.: \$61,359,349, an increase of \$5,044,467.19. It also exceeds by over two million dollars the largest value which the Foreign Trade of Japan reached during any previous year since the country has been opened to Foreign Commerce, and by over nineteen million dollars the average annual value of the trade during the fifteen years 1867-1881:—

The Trade of 1882 consisted of—

| | |
|-------------------|-----------------|
| Imports..... | \$29,168,040.68 |
| Exports..... | 37,235,775.51 |
| as compared with— | |
| Imports..... | \$31,032,742 |
| Exports..... | 30,326,607 |
| in 1881. | |

It will be seen from these figures that the increase in the total value of the trade is owing entirely to an increased value of Exports, these exceeding the amount which they reached in 1881 by \$6,909,168.51, and by a still larger amount the total of any previous year. Imports, on the other hand, show a considerable decrease during 1882, falling short of those for 1881 by \$1,864,701.32, and their value during the latter

year was again less than that for each of the three years immediately preceding. The comparative values of the Imports and Exports during 1882 leave a balance on the trade of the year in favor of Japan of \$8,067,734.83, the Exports exceeding the Imports in the cases of three of the ports as follows:—

| | Imports during 1882. | Exports during 1882. | Excess of Exports over Imports |
|----------------|----------------------|----------------------|--------------------------------|
| Kanagawa | \$20,119,060.69 | \$26,659,807.45 | \$6,540,746.76 |
| Nagasaki..... | 1,156,781.57 | 3,313,390.48 | 2,156,608.91 |
| Hakodate..... | 7,417.48 | 504,953.12 | 497,535.64 |

While in the case of Hiogo and Osaka, on the other hand the following figures show an excess in favor of the Imports:—

| | Imports during 1882. | Exports during 1882. | Excess of Imports over Exports |
|-----------------------|----------------------|----------------------|--------------------------------|
| Hiogo and Osaka | \$7,884,780.94 | \$6,757,424.46 | \$1,127,356.48 |

The distribution of the trade among the several ports during the past year shows that, as compared with 1881, there was a decrease in both Imports and Exports at Hakodate, that the Increase in Exports was divided between Kanagawa, Hiogo and Osaka, and Nagasaki; that at Kanagawa and Hiogo and Osaka there was a decrease of Imports, Nagasaki alone showing an increase in this respect; and that at all the ports with the exception of Hakodate there was an increase in the total value of the trade. The following table shows the amounts of increase or decrease in each of these several cases:—

| PORTS. | IMPORTS. | | EXPORTS. | | TOTAL INCREASE OR DECREASE IN THE TRADE OF PORT DURING 1882. | |
|-----------------------|-----------------------------------------|-----------------------------------------|-----------------------------------------|-----------------------------------------|--------------------------------------------------------------|------------|
| | Increase in 1882 as compared with 1881. | Decrease in 1882 as compared with 1881. | Increase in 1882 as compared with 1881. | Decrease in 1882 as compared with 1881. | Increase. | Decrease. |
| Kanagawa | \$ | 1,352,965.31 | 5,505,143.45 | | 4,152,178.14 | |
| Hiogo and Osaka | 154,959.57 | 545,841.06 | 810,914.40 | | 265,973.40 | |
| Nagasaki | | | 931,785.48 | | 1,086,745.05 | |
| Hakodate..... | | 120,854.52 | | 338,674.88 | | 459,529.40 |

IMPORTS.

In the Synoptic Table (Table B) of the Imports a slightly different arrangement has been adopted of the principal descriptions of merchandise to that of previous years. Arms and Ammunition—the value of which has fallen to a trifling amount—have been omitted as a separate item, while on the other hand, Kerosene Oil and Sugar, which have become important staples, have been inserted. The former of these has heretofore been included under the heading of Miscellaneous Foreign, and the latter (with the exception of loaf sugar) under that of Miscellaneous Eastern.

The decrease in the total value of the Import Trade is divided as follows:—

| | AMOUNT OF DECREASE OF VALUE IMPORTED IN 1882 AS COMPARED WITH 1881. |
|------------------------------------------------------|---------------------------------------------------------------------|
| Cotton Manufactures | \$1,658,545.07 |
| Woolen and Mixed Cotton and Woolen Manufactures..... | \$1,732,851.92 |
| Metals including Manufactures | \$ 92,520.82 |
| Miscellaneous Foreign | \$1,246,041.07 |

The falling off in the values of the various articles comprised under these four headings reaches a total of \$4,729,957.98, but this is in some degree compensated by an increased import of Kerosene Oil, Sugar, and Miscellaneous Eastern to the extent of \$2,865,256.66, divided as follows:—

| | AMOUNT OF INCREASE OF VALUE IMPORTED IN 1882 AS COMPARED WITH 1881. |
|-----------------------------|---------------------------------------------------------------------|
| Kerosene Oil | \$1,341,972.12 |
| Sugar | \$ 712,832.37 |
| Miscellaneous Eastern | \$ 810,452.17 |

thus making the total falling off in the Imports amount, as has been before stated, to \$1,864,701.32.

COTTON MANUFACTURES.—The decrease in the value of the articles of merchandise imported

under this heading amounts to \$1,658,545.07, and it will be seen from the following table that the decrease is divided among all the principal articles with the exception of *Shirtings*, in which case the quantity imported in 1882 exceeds in value that of 1881, by \$401,333.17:—

| ARTICLE. | VALUE IMPORTED IN 1881. | VALUE IMPORTED IN 1882. | INCREASE IN 1882 AS COMPARED WITH 1881. | DECREASE IN 1882 AS COMPARED WITH 1881. |
|--------------------|-------------------------|-------------------------|-----------------------------------------|-----------------------------------------|
| Yarn | \$ 7,263,776 | 6,562,011.50 | | 701,764.50 |
| Shirtings | 2,328,000 | 2,729,333.17 | 401,333.17 | |
| Turkey Roods | 706,465 | 817,775.99 | 111,310.99 | |
| Chintzes | 406,924 | 107,441.53 | | 299,482.47 |
| Velvet | 820,470 | 331,435.92 | | 489,034.08 |
| Lawn | 264,343 | 92,430.26 | | 171,912.74 |
| Satins | 416,478 | 96,178.78 | | 320,299.69 |
| Drills | 149,202 | 153,444.05 | 4,242.05 | |

WOOLEN AND MIXED COTTON AND WOOLEN MANUFACTURES.—Of the total falling off, amounting to \$1,732,851.92 in these goods the principal item, Mousseline de laine, alone shews a decrease of \$1,487,556.20. Blankets, Lastings, Orleans and Woolen and Cotton Mixtures not specified, have also been imported to a less extent than in 1881, while the values of Flannels, Italian and Woolen cloths on the other hand are in excess of those during the latter years.

The amounts in each of these cases are as follows:—

| ARTICLE. | VALUE IMPORTED IN 1881. | VALUE IMPORTED IN 1882. | INCREASE IN 1882 AS COMPARED WITH 1881. | DECREASE IN 1882 AS COMPARED WITH 1881. |
|------------------------------------------------|-------------------------|-------------------------|-----------------------------------------|-----------------------------------------|
| Mousseline de laine | \$ 2,709,341 | 1,221,784.80 | | 1,487,556.20 |
| Blankets | 231,187 | 310,130.93 | 78,943.93 | |
| Flannels | 80,110 | 105,784.93 | 25,674.93 | |
| Italian Cloths | 531,858 | 573,404.59 | 41,546.59 | |
| Lastings | 121,434 | 46,949.35 | | 74,484.75 |
| Orleans | 145,073 | 75,397.31 | | 69,675.76 |
| Woolen Cloths | 89,010 | 181,081.33 | 92,071.33 | |
| Woolen and Cotton Mixtures not specified | 509,080 | 353,891.00 | | 155,189.00 |

METALS.—Metals also exhibit a falling off in value, though one which is slight as compared with the entire quantity imported. The decrease

is common to all the principal items in the class with the exception of Steel :—

| Article. | Value Imported in 1881. | Value Imported in 1882. | Increase in 1882 as compared with 1881. | Decrease in 1882 as compared with 1881. |
|------------------------------------|-------------------------|-------------------------|-----------------------------------------|-----------------------------------------|
| Iron (including manufactured)..... | 1,503,404 | 1,342,976.66 | 8 | 159,427.34 |
| Lead..... | 97,180 | 57,833.85 | 39,486.75 | — |
| Silver and Zinc..... | 110,380 | 35,049.23 | 75,330.77 | — |
| Steel..... | 1,074 | 147,485.37 | 87,701.77 | — |
| Tin..... | 97,314 | 84,150.53 | 13,163.77 | — |
| Yellow Metal..... | 97,715 | 48,625.82 | 49,089.38 | — |

KEROSENE OIL.—A very large increase has taken place both in the quantity and value of Kerosene Oil imported during the year 1882, the figures being gallons 20,682,205, valued at \$2,320,905.12, as against gallons 8,006,210, valued at \$978,933 in 1881.

The value of that imported in 1882 reaches a larger amount than that shown in any previous year—the figures for the five years from 1878 (when the value first exceeded a million of dollars) to 1882, being :—

| 1878. | 1879. | 1880. | 1881. | 1882. |
|-----------|-----------|-----------|---------|-----------|
| \$ | \$ | \$ | \$ | \$ |
| 1,856,881 | 2,185,223 | 1,400,378 | 978,933 | 2,320,905 |

SUGAR.—This staple also shows a large increase in both quantity and value over 1881, the only descriptions in which a falling off has taken place being that of Loaf Sugar, which has hitherto been included under the heading of Miscellaneous Foreign, while the others have, as has been already remarked, classed as Miscellaneous Eastern. The Customs Return shows that the quantity and value of each kind in 1882 were :—

| | 1878. | 1879. | 1880. | 1881. | 1882. |
|------------------|----------------|------------------------|-------|-------|-------|
| | | | | | |
| Brown Sugar..... | piculs 601,290 | valued at 2,887,887.93 | | | |
| White Sugar..... | piculs 189,156 | valued at 1,545,821.00 | | | |
| Candy Sugar..... | piculs 8,780 | valued at 83,843.29 | | | |
| Loaf Sugar..... | piculs 1,177 | valued at 12,085.19 | | | |

Total.....piculs 800,403 valued at 4,529,639.27 as against—

| | 1878. | 1879. | 1880. | 1881. | 1882. |
|------------------|----------------|---------------------|-------|-------|-------|
| | | | | | |
| Brown Sugar..... | piculs 487,251 | valued at 2,287,158 | | | |
| White Sugar..... | piculs 172,050 | valued at 1,420,485 | | | |
| Candy Sugar..... | piculs 8,899 | valued at 85,390 | | | |
| Loaf Sugar..... | piculs 2,174 | valued at 23,774 | | | |

Total.....piculs 670,404 valued at 3,816,807 in 1881.

MISCELLANEOUS FOREIGN.—Kerosene Oil having been removed from the list of articles hitherto included under this heading, the total value reached by them is considerably less than that of previous years. Even not taking this staple into account, however, the value of the import during 1882 still falls short of that for 1881 by \$1,246,041.07, the respective amounts for the two years being :—

1881, excluding Kerosene Oil... \$6,146,332.00

1882, excluding Kerosene Oil... \$4,900,290.93

The comparative value of the Import during the two years of some of the numerous and varied articles included in the class are given in the following Table :—

| Article. | Value Imported in 1881. | Value Imported in 1882. | Increase in 1882 as compared with 1881. | Decrease in 1882 as compared with 1881. |
|-----------------------------------|-------------------------|-------------------------|-----------------------------------------|-----------------------------------------|
| Books..... | 8 | 8 | 8 | 8 |
| Paper..... | 43,253 | 43,934.78 | 681.48 | — |
| Stationery..... | 56,683 | 111,318.74 | 54,635.74 | — |
| Clocks..... | 122,100 | 130,627.36 | 8,527.36 | — |
| Machinery..... | 482,927 | 330,705.48 | — | 152,221.52 |
| Watches..... | 186,124 | 108,899.72 | — | 77,224.36 |
| Silk and Cotton Manufactures..... | 320,108 | 468,700.10 | 148,592.10 | — |
| Glass..... | 188,326 | 70,577.13 | — | 117,748.88 |
| Leather..... | 373,411 | 370,140.05 | — | 3,270.95 |
| Umbrella Frames..... | 77,493 | 29,099.40 | — | 48,393.60 |
| Wines, Beer, and Spirits..... | 304,811 | 304,099.70 | — | 711.30 |
| Coal..... | 256,623 | 149,715.90 | — | 106,907.10 |
| Coral..... | 146,461 | 78,046.32 | — | 68,414.68 |
| Lamps..... | 72,524 | 27,356.78 | — | 45,167.22 |
| Provisions..... | 157,395 | 324,128.30 | 166,733.30 | — |

MISCELLANEOUS EASTERN.—The following list contains the principal articles imported under

this heading together with the value of the quantity imported :—

| ARTICLE. | VALUE IMPORTED IN 1882. |
|-----------------------------|-------------------------|
| Raw Cotton..... | \$467,248.86 |
| Beans, Peas, and Pulse..... | \$200,651.65 |
| Oilcake..... | \$44,468.39 |
| Gunny Bags..... | \$60,363.74 |
| Packing Mats..... | \$57,413.42 |
| Rattans..... | \$45,324.53 |
| Chinese Paper..... | \$78,652.90 |
| Drugs..... | \$145,258.45 |
| Dyes and Paints..... | \$195,422.55 |

EXPORTS.

The large increase in the Export Trade of Japan during 1882 is divided among three of the Ports as follows :—

| | INCREASE IN 1882 AS COMPARED WITH 1881. |
|----------------------|-----------------------------------------|
| Kanagawa..... | \$5,505,143.45 |
| Hiogo and Osaka..... | \$810,914.46 |
| Nagasaki..... | \$931,785.48 |

The trade of Hakodate alone shows a falling off in this respect to the extent of \$338,674.88.

The principal articles of Export are detailed in Table E, which shows that an increase took place in the Export of each of the following articles to the extent named :—

| ARTICLE. | INCREASE IN 1882 AS COMPARED WITH 1881. |
|----------------------|-----------------------------------------|
| Raw Silk..... | \$5,971,863.10 |
| Cocoons..... | \$52,800.67 |
| Tea..... | \$8,859.11 |
| Copper..... | \$138,824.84 |
| Wax (Vegetable)..... | \$18,219.67 |
| Camphor..... | \$162,992.93 |
| Coal..... | \$72,905.52 |
| Dried Fish..... | \$331,843.42 |
| Rice..... | \$1,390,379.94 |
| Lacquered Ware..... | \$29,922.23 |

The following articles on the other hand show a decrease :—

| ARTICLE. | DECREASE IN 1882 AS COMPARED WITH 1881. |
|--------------------------------|-----------------------------------------|
| Silkworm's Eggs..... | \$188,654.10 |
| Tobacco..... | \$160,685.28 |
| Earthenware and Porcelain..... | \$140,950.28 |
| Seaweed..... | \$309,695.93 |
| Miscellaneous..... | \$469,457.23 |

The large increase in the value of Raw Silk is alone more than sufficient to account for the increase in the general Export trade of Kanagawa, the value of this staple exported during the past year having not only exceeded that during 1881, but also during any previous year since the opening of the port. With very trifling exception, the export is limited to Kanagawa, and the following figures show the increase that has taken place both in its quantity and value during the past five years :—

| | QUANTITY OF RAW SILK EXPORTED FROM JAPAN. | VALUE. |
|-----------|-------------------------------------------|--------------|
| 1878..... | piculs 25,708 | \$8,995,341 |
| 1879..... | piculs 32,545 | \$11,148,640 |
| 1880..... | piculs 30,134 | \$9,062,879 |
| 1881..... | piculs 36,855 | \$12,667,121 |
| 1882..... | piculs 52,321 | \$18,638,984 |

Both quantity and value have thus more than doubled in the space of five years ; and though the great increase in 1882 must be to some extent accounted for by certain exceptional causes, it is at the same time owing in as large a degree to an increased production of silk throughout the country, and a consequent increase in the surplus left for Export after the Japanese have satisfied their own requirements.

Next to Silk, the staple which reaches the highest value in the return of Exports is Tea, and here also an increase is observable in 1882, as compared with 1881, though to a small extent. Taking, however, the figures for five years, as has been done in the case of Silk, it will be seen that there is a marked increase both in

quantity and value, though neither has reached to the extent of doubling itself. The quantities and values for the five years were as follows :—

| | QUANTITY OF TEA EXPORTED FROM JAPAN. | VALUE. |
|-----------|--------------------------------------|-------------|
| 1878..... | piculs 217,579 | \$4,417,457 |
| 1879..... | piculs 256,016 | \$7,445,489 |
| 1880..... | piculs 303,251 | \$7,497,422 |
| 1881..... | piculs 288,260 | \$7,020,859 |
| 1882..... | piculs 283,011 | \$7,029,718 |

The increase in the value of the Rice exported is divided between Hiogo and Osaka and Nagasaki, the figures in the case of these ports being :—

| | Value of Rice Exported in 1881. | Value of Rice Exported in 1882. | Increase. |
|----------------------|---------------------------------|---------------------------------|--------------|
| Hiogo and Osaka..... | \$67,244 | \$858,933.93 | \$791,739.93 |
| Nagasaki..... | 134,593 | 775,160.97 | 640,567.87 |

Camphor also shows an increase of \$115,047.36 in the case of Hiogo and Osaka, and Dried Fish one of \$235,457.92 in that of Nagasaki.

MISCELLANEOUS EXPORTS.—Four items formerly included under this heading, viz. : Coconuts, Earthenware and Porcelain, Lacquerware and Sea Weed have been removed and separately inserted in the synoptic table—the value in each instance exceeding or being very slightly below half a million dollars. The value of the remaining goods is still large, viz. : \$2,135,996.77, but falls short of that of last year by \$469,457.23. A table of the principal items is subjoined :—

| Article. | Value Imported in 1881. | Value Imported in 1882. | Increase in 1882 as compared with 1881. | Decrease in 1882 as compared with 1881. |
|------------------------|-------------------------|-------------------------|-----------------------------------------|-----------------------------------------|
| Bamboo Ware..... | 80,227 | 82,372.63 | 2,145.63 | — |
| Bronze..... | 92,993 | 87,159.50 | — | 5,743.50 |
| Fans..... | 267,434 | 182,899.21 | — | 84,534.79 |
| Isinglass..... | 333,047 | 211,237.05 | — | 121,809.95 |
| Matches..... | 249,758 | 37,239.57 | — | 212,518.43 |
| Mushrooms..... | 381,468 | 332,104.86 | — | 49,363.14 |
| Paper..... | 126,276 | 211,632.90 | 85,356.90 | — |
| Sulphuric Acid..... | 111,391 | 40,359.10 | — | 71,031.90 |
| Timber and Planks..... | 127,660 | 195,395.66 | 67,735.66 | — |
| Umbrellas..... | 101,195 | 35,337.46 | — | 65,857.54 |
| Screens..... | 100,979 | 87,465.79 | — | 13,513.21 |
| Ginseng..... | 36,558 | 94,908.52 | 58,350.52 | — |
| Silk Manufactures..... | 81,909 | 68,559.96 | — | 13,349.04 |
| Awabi Shells..... | 83,175 | 58,254.12 | — | 24,920.88 |
| Antimony..... | 48,842 | 101,111.98 | 52,269.88 | — |

SHIPPING.—The Total foreign Tonnage entered at the open Ports of Japan during 1882 was 920 vessels measuring 888,331 tons, as against 789 vessels measuring 763,700 tons in 1881, showing an increase of 131 vessels and 124,631 tons. This increase was divided among the several nationalities as follows :—

| | VESSELS. | TONS. |
|----------------------------|----------|--------|
| British..... | 1 | 55,601 |
| French..... | 2 | 2,377 |
| German..... | 86 | 52,231 |
| Russian..... | 21 | 12,585 |
| Chinese..... | 4 | 3,322 |
| Swedish and Norwegian..... | 8 | 4,579 |

American Shipping shows a decrease of tonnage to the extent of 6,311 tons, but an increase of 10 in the number of vessels.

No distinction is made in the Customs Return between Mail and Ordinary Merchant Steamers, nor is any information given as to the Foreign vessels which entered the unopened Ports of Karatsu and Kuchinotsu under Japanese charters during the year.

TREASURE.—The Treasure Return shows a balance of \$1,523,105.10 in favour of Japan, a sum which falls short of the excess of Exports over Imports by \$6,544,629.73.

CENSUS.—The usual return of the numbers of the Foreign Residents and firms at the various Treaty ports is appended (Table D.). It shows that the total numbers of European and American residents was 2,351, against 2,553 in 1882, and of Chinese 3,545 against 3,553 in 1882.

H.B.M.'s LEGATION, TOKYO, July, 1883.

A.—GENERAL SUMMARY OF THE FOREIGN TRADE OF JAPAN FOR THE YEARS 1881 AND 1882.

| PORTS. | 1882. | | | 1881. | | |
|---------------------------------|----------------------------------------------|---------------|---------------|-----------------|------------|------------|
| | IMPORTS. | EXPORTS. | TOTAL. | IMPORTS. | EXPORTS. | TOTAL. |

THE NATIVE PRESS ON H.E.
IWAKURA TOMOMI.

The *Nichi Nichi Shimbun*, commenting upon the death of His Excellency Iwakura, says:—This Minister expired in his fifty-seventh year in possession of the junior first rank. The 20th day of July in the 16th year of Meiji will long be deplored. Remember that that day robbed us of the foundation-stone of the Empire and the chief support of the Cabinet in the withdrawal of Iwakura, to the great grief of the Emperor and his people. After referring to the biography of the deceased statesman published elsewhere in the same paper, the *Nichi Nichi Shimbun* remarks that the most remarkable features of Iwakura's personal character were candour and loyalty. Seized last winter, after his return from Saikiyo, with illness under which he rapidly sank, he yet, when the Privy Councillors came to enquire after his health, insisted upon consulting with them on political affairs and expounding his own views. So assiduously did he discharge his duties that he cared little for his indisposition, keeping in view the adjustment of national affairs. As his condition did not show

any tendency to improve, His Majesty the Mikado visited him in person on the 5th July, and the Empress paid a similar visit on the 12th. Indeed, the Minister received special favour from their Majesties. On the 19th he sent in his resignation, and was honoured with a special visit from the Emperor, who expressed his deep distress. But destiny is uncontrollable by mere human power; and the Minister died at 7-45 a.m. on the 20th instant. What is most needed in a country is a meritorious and able Minister. Among the most prominent personages who are remembered as the originators and founders of the Restoration, may be mentioned Kido, who died in Saikiyo, before attaining his fiftieth year; Saigo Takanori who died an unnatural death at Shiroshima; and Okubo Toshimichi who, while stout and healthy, lost his life at the hands of an assassin. Most of the great men who rendered good service to the Restoration in its early days had thus perished, Mr. Iwakura alone surviving until the age of nearly sixty. It was hoped that this Minister would assist the Emperor in establishing a constitutional form of Government, and attend the National Assembly which is to be convened in the 23rd year of Meiji (1890). The public have earn-

edly cherished this hope, and their lamentation at the death of its object can easily be imagined. "A man while living is liable sometimes to aspersions and sometimes to flattery. His motives can only be accurately judged after his death." The truth of this axiom is most apparent in the case of those who have become eminent in society for some extraordinary achievements. Let us take the case of Mr. Iwakura. From his youth, he had been bound by an oath of allegiance to the Emperor; and in the epochs of Ansei (1854-60) and Bunkiu (1861-64) he devoted all his energy to the adjustment of national affairs, in spite of several accusations brought against him, and an occasional order of confinement in his own house. Yet the hardships to which he was subjected only strengthened his desire to restore the Imperial Government and establish the Empire in the utmost tranquillity. His loyalty and fidelity have been acknowledged by the people at large. Since the Restoration, he has endeavoured to manage the affairs of the Government in utter disregard of popular criticism, ready to lay down his life on behalf of his Sovereign and country. The fact that all matters of an uncommonly intricate nature were referred to him is well known by those who can recall the events by which

the Empire was thrown into confusion in times prior to the abolition of the clans and the establishment of the prefectures. When an embassy was despatched to Europe and America, he was accredited with power as Envoy Extraordinary and Minister Plenipotentiary. During the Formosan complications he persistently opposed all propositions for war, and in the time of the South-Western Rebellion he remained in Tokiyo and took charge of measures for defence. It is certainly well known that the mental and physical exertions made by Mr. Iwakura for a space of sixteen years sprung from his enthusiastic allegiance to the Emperor and love for his country. Yet some of our own people, unfamiliar with his motives, and actuated by intense hatred, attempted to assassinate him, whilst others were disposed to criticize his proceedings, to blame his views, and to spread ill reports with regard to him. His achievements have in most cases attracted public eulogy, but in some instances received extreme censure. So soon as his death was announced to the people, adverse criticisms, however, ceased entirely; and his opponents appear to mourn as bitterly the loss of this Minister as do those who approved his measures.

The *Jiyu Shimbun* says:—In memory of the decease of Mr. Iwakura, we should wish to furnish our readers with his precise biography, but as in so doing we must necessarily refer to the proceedings of the Government, the restrictions on the liberty of the press prevent us. We will only, therefore, mention some of the praiseworthy actions of the Minister, which will serve to show his superiority. Toward the end of the 3rd year of Keiwo (1867) when the new Government was established, the whole Empire was in disorder, and some of the powerful clans had assumed an attitude of mistrust. The Minister went by night to the residence of the chief vassals of these clans, and argued them into allegiance to the Emperor. At one time when the lord of a certain influential clan appeared at the Palace, Mr. Iwakura pressed him in vehement terms for a decisive answer concerning the course which he meant to adopt. The result added considerably to the strength of the Government, at the same time as it proved the extent of Iwakura's devotion. In those times, on the allegiance or treachery of a few powerful clans hung the supremacy of the Imperial or Tokugawa Dynasty. After the Minister had arrived in Tokiyo in November of the first year of Meiji (1870), in the escort of the Emperor, he held an interview with Mr. Katsu Awa, who afterwards said to some of his friends:—"I have just perceived the reason of the Restoration. I did not know that among the Court nobles there was such an intelligent statesman as Iwakura." This incident shows the greatness of the Minister's personal ability. His death cannot fail to obstruct the working of our political machinery. How will the vacancy thus created be filled?

TRANSLATIONS FROM NATIVE JOURNALS.

THE TRIAL OF THE FUKUSHIMA RIOTERS.

(Translated from the *Choya Shimbun*).

This case which, only a short time ago, gave rise to vehement public discussion, was brought to hearing on the 19th instant. This being the first sitting of the Special Criminal Court since the New

Penal Code has been in force, the doors were besieged by an anxious crowd from early morning, but as the Court limited the audience to one hundred and fifty to prevent confusion, many failed to gain admission. At 10 a.m., everything being in readiness, the presiding Judge, Mr. Tamano, made his appearance, followed by the assessors and public prosecutors. The assessors were three senators, (Messrs. Hayashi, Kawada, and Nagaoka), and three Judges (Messrs. Okada, Seki, and Takehisa). The prosecution was represented by Messrs. Watanabe, Horida, Takeuchi, and Sumikawa. The prisoners, six in all, were placed on a bench before the Judge. In opening the case, the Judge asked them for full particulars regarding their names, birth-places, professions, ages, etc. Kono Hironaka is of lofty stature and fair complexion, a *heimin*, native of Iwashiro in the prefecture of Fukushima, aged thirty-three. Tamono, who wears a long beard, is also a *heimin*, native of Iwashiro, thirty-four years old. Aizawa Kennei is of dark complexion and has a prominent nose. He is a native of the same prefecture, a *shisoku*, aged thirty-three years and ten months. Hanaka Kiyojiro is a *shisoku* of Tokiyo, twenty-six years and nine months old. Hiroshima Matsuwo is a *shisoku* of Nihonmatsu, Adate-gori, Fukushima, twenty-eight years and four months old. The last prisoner, Sawata Seinosuke, was born at the same place as Hiroshima. His social position is not properly ascertained—as to whether he is *heimin* or *shisoku*. The counsel for the defence consists of the most prominent lawyers in the Capital, namely, Messrs. Hoshi Toru, Oi Kentaro, Kitata Masataro, Nakashima Matagoro, Yamada Taizo, and Uyeke Koji. The Judge ordered the prisoners to be arraigned according to the provisions of the Penal Code. A short discussion followed between the Judge and Mr. Hoshi as to the order in which the prisoners should sit. They were finally seated as follows:—No. 1, Hanaka, No. 2, Hirashima, No. 3, Tamono, No. 4, Kono, No. 5, Aizawa, and No. 6, Sawata. The Judge then ordered their indictment to be read. It runs as follows:—

The accused (names as mentioned above) have been found plotting to overthrow the Government, for which purpose they assembled at Mumei Kan, the head-quarters of "the Liberals" in August of the fifteenth year of Meiji (1882). The evidence upon which this indictment is based, is the confessions made by the accused during the preliminary trial, the copy of the oath written by Hanaka himself, the statements of the witnesses Kamada Naoro and Tamura Kioun, a letter from Aizawa to Yoshida Mitsukadzu, a letter from Tamono to the Mumei Kan dated the 15th August in the 15th year of Meiji, and the manifesto calling for co-operation to publish a journal. This testimony is sufficient to incriminate the accused in a plot for the overthrow of the Government. But as their scheme was only in process of hatching, they are only liable to be punished according to Article 125, Article 121, and Article 68 of the Penal Code. Article 125 says:—If there have been only levies or enrolment of bands, supplying of arms, munitions of war or provisions, or other acts preliminary to the offences before mentioned, the penalties borne by article 121 shall be diminished by one degree. If there have been only a conspiracy formed, not followed by preliminary acts, the penalty shall be diminished two degrees. Article 121 says:—All individuals guilty of having taken part in a civil war, in an insurrection or an armed sedition, having for its object either to overturn the Government of the country or to take away from the Imperial autho-

rities any part whatsoever of the territory of Japan or its dependencies, or to diminish the right and prerogatives of the Emperor in the Government of the country, shall, according to the nature of their participation, be punished as follow:—1. With the penalty of death; those who have been the instigators of the crime and those who have been the ringleaders.—2. With transportation for life, or, in circumstances less serious, with temporary transportation; those who have held command or exercised authority.—3. With major or minor imprisonment; those who have furnished arms, munitions of war, money and provisions, and those who have held ordinary positions.—4. With minor imprisonment for a period of from two to five years; those who, without exercising any function, have participated in insurrection or have been employed in different services, less important, during the insurrection. Article 68 says:—Political criminal penalties are lowered or raised in the following order:—1. Death.—2. Penal servitude for life.—3. Penal servitude for a time.—4. Major imprisonment.—5. Minor imprisonment.

At a preliminary examination held in the Special Court, it was found that the accused were guilty of a plot to overthrow the Government. Therefore the undersigned committed them for trial.

S. TAMANO, President of the Special Court.

K. WATANABE, Commissary to the Special Court.

16th April the 16th year of Meiji (1883).

After the reading of the indictment was concluded, the clerk read the report of the examination of Hanaka Kiyojiro, conducted by Iwashita Keizo, a Police Inspector at the Fukushima Police Station. It was as follows:—Report of examination of Hanaka, conducted the 17th January 1883.

Question.—Have you ever signed, with your blood, the covenant which was entered into between you, and Kono and Tamano? Answer.—Yes, I did.

Q.—Then, I will give you a short time to make a written statement of what you remember. A.—I will do so.

The accused immediately wrote the following, saying that it was the covenant referred to:—"1. We will overthrow an oppressive Government if it exist in Japan and establish a purely liberal constitution.—2. We will sacrifice our lives and property to consummate our object.—3. We will carry out whatever has been resolved upon in any of our meetings.—4. We will cut down those of our party who reveal our secrets.—5. We will not dissolve our party till the foregoing objects are accomplished." I do not remember the whole thing, but the above is the tenor of the covenant.

HANAKA KIYOJIRO,

14th January the 16th year of Meiji (1883).

Q.—I understood that, in the original, the words "bureaucratic Government" are used, instead of the words "oppressive Government." Is it really so? A.—Yes, the word "oppressive" is wrong, and ought to read "bureaucratic." I wish you to add the words "will abandon the cordon of gratitude and love" (dictate of humanity) below the words "we will sacrifice our lives," etc.

Q.—Of course, you refer to the Government of Meiji. A.—Just so.

The reading of the above report brought the preliminary proceedings to a conclusion. The prisoners conducted themselves with a considerable amount of self-possession, and appeared cheerful in spite of having been imprisoned for a long period. The examination of Hanaka came first,

Judge Tamano—Do you not observe any error in the report just read by the clerk?

Prisoner—Yes, there is a slight mistake. I have already referred to it on the occasion of the preliminary examination. I will again mention it. I have a very sorrowful recollection of the inhuman treatment I received at the hands of the Fukushima police. They arrested many persons on mere suspicion and detained them. I have been imprisoned since the middle of December last, and was frequently taken into Court to answer charges. The police inspector asked me if I intended to kill Mr. Mishima, governor of Fukushima. I was at a loss to understand why he put such an irrelevant question. Sometimes he intimidated me; and sometimes tried to coax me. I replied that I had no intention of killing Governor Mishima. The officers told me that they would give me time to think over the matter. They made me stand in snow, and on other occasions I was kept without my meals. I was subjected to such cruelty seven times. Especially, on the 4th, 6th, 11th, and 12th of January, I had bitter experiences. The recollection of these wrongs kindles my anger. One day, the police inspector inquired of me what I had meant to do, and what was my object. I said I was following the dictates of reason. He asked me, "what is reason?" I replied "reason is reason, and whosoever possesses a brain, ought to know it." My answer exasperated him. He kicked me on the breast, and I fell down. This incident alone is sufficient to show the misconduct of the police. No reliance whatever can be placed on their statements. The report of the trial just read to me consists of a few pages. It took fully three days to examine me. Therefore I should have expected that the report should be more lengthy. On the contrary, it is all comprised in a few pages. This shows the carelessness of the police inspector. In addition to this, the police employed as recording clerks are ignorant and cannot write a single sentence without error or confusion. This shortcoming even the police inspector in question observed, and suggested to me that it would be better to abridge my lengthy statement rather than have it liable to confusion. I agreed to that, intending to have the truth or otherwise of my assertions decided in this Court, as it was impossible to do so in the police station. The police inspector informed me in a most kindly manner that the rioters were all arrested and that as a certain covenant which, he said, bore my signature and stamp, had been seized by the authorities it was useless to deny my complicity. This appeared so strange that I hesitated to answer; but as I was previously informed that armed police had made a raid on the Mumei Kan and carried off all sorts of documents, I concluded that the draft of the covenant which I wrote had been captured, and that the police inspector referred to it. Accordingly, I put down what I remembered about it and gave it to him. The copy of the covenant now produced in Court is the very thing I wrote. I could not tell whether or not the draft of the covenant was resolved upon. When, afterward, I was examined in the Wakamatsu Judicial Court, I found that it had not been seized by the authorities. Then I discovered that I had been entrapped by the police. In the Court just mentioned, I corrected some portion of the copy, as I had omitted some words. When I showed the draft to a certain person, he suggested to me that the words "overthrow the oppressive Government," etc., were offensive, and I changed them to "improve the Government."

The report of the hearing of Hanaka at Wakamatsu was then read. It is as follows:—

Preliminary hearing of Hanaka Kiyojiro.

Question.—Is there no inaccuracy in the report of the case heard at the police station of Fukushima? Answer.—Yes, there is.

Q.—Tell me what part is wrong. A.—The words "If it exist in Japan" in the Article 1 of the covenant are miswritten for the words "enemy of liberty." In my answer to the question whether I referred to the Government of Meiji, etc., I replied, "Yes." I of course referred to all the beaucratic Governments in the world, including our Government.

Q.—Is that all the discrepancy? A.—Yes.

Q.—How did the inaccuracies creep into the copy of the covenant which you wrote yourself? A.—Because I forgot.

Q.—What is the use of the covenant if you forgot it? Why did you not keep a copy of it for yourself? A.—Soon after it was drawn up, I went lecturing round the province, and then I was arrested.

Q.—Is it true that a man called Sato Kiyo assisted you in writing it? A.—No, it is not true.

Q.—What do you mean by the words "overthrow the Government?" A.—I mean "to overturn it."

Q.—Do you mean by the words "to overturn it" to plot against the Government? A.—Yes, you can call it so if you please.

Q.—Who penned the characters in the original of the covenant? A.—I drafted it; and Sawata Seinosuke wrote it out fair.

In proof of the above we hereby affix our signatures.

AKASHI KINICHI, Judge.

SUDZUKI SIYONOSUKE,

Clerk of the Court.

HANAKA KIYOJIRO, Accused.

February 3rd, 16th year of Meiji.

The examination of Hanaka was continued:—
Judge Tamano—Do you wish any amendment to be made in your statement just read?

Answer.—It is nearly all correct. But to avoid confusion in the interpretation of my language, I will give an explanation of it. In Article 1 of the covenant, the words "bureaucratic government" occur. The expression refers to all the bureaucratic governments in this world, and not only to our own. It is not an easy task to eradicate the abuses of bureaucratic government, but there are many means to attain the end, such, for instance, as recourse to physical force, to argument, or publication of books. (Here the accused pointed out at great length the abuses that arose from the usurpation of the Imperial authority by the families of Minamoto and Taira; and how Rai Sanyo contributed toward the downfall of the Tokugawa Government by publishing his treatises). He continued:—Our aim is to put an end to despotism. Once I said, that I was ready to sacrifice my life in the accomplishment of our object. This expression appears too violent now; but on the occasion when I used it, it was but reasonable. When I was subjected to inhuman treatment at Wakamatsu Police Station, I was under the influence of intense indignation, and thought it better to die than be outraged by mean officers. Under such pressure, it was natural that I should have used violent words.

Q.—Have you finished your explanations? A.—No. I leave, I imagine, a doubt in your mind why I ask so many alterations to be made in the copy of the covenant I had drawn up myself. The reason is that the original was often altered at the suggestion of many men: in fact it was so com-

pletely changed when submitted to the consideration of our party that I can say that the draft had been almost abandoned. Moreover, I was informed later on that Kono had drawn up the covenant himself, and that Sawata penned the characters. In these circumstances, I could not remember all the incidents consequent upon the changes.

The report of the preliminary hearing of Hanaka at the Special Court was then read. It runs as follows:—The question as to the meaning of the words "overthrow the Government," elicited the following answer from the accused:—When I myself drew up the covenant, the words in question were intended for what they mean. It was, however, afterward changed to "improve the Government." The idea was that we should first overturn Government and then improve it. I have nothing to change in the foregoing statement. Asked whether he applied the words "improve the Government" in the same sense as "overthrowing Government and afterwards improving it," he replied in the affirmative.

We have conducted the above inquiry according to Article 151 of the Code of Criminal Procedure.*

IWAYA RIUICHI, Judge.

HIYODO MASAKI, Judge.

UNO TOMOAKIRA, Clerk of the Court.

OKAZAWA KEIICHIRO, Clerk of the Court.

March 2nd, 1883.

Judge Tamano—Do you find any inaccuracy in the report read by the Clerk? Answer.—In the preliminary hearing, I mentioned that our idea was to overturn the Government first and improve it afterwards. That was my mistake. I only intended to change the words "overthrow the Government" to "improve the Government."

The report of the preliminary trial was again read. It was as follows:—

Preliminary hearing of Hanaka Kiyojiro, conducted according to Article 378† of the Code of Criminal Procedure, before S. Tamano, President of the Court, Takahashi Michitada, Clerk of the Court, and Araki Riuhi, Assessor.

Question.—In the preliminary hearing held on the 4th April last at this Court, you said Hirashima was absent for about twenty days when the covenant was signed, and that it was shown him by Kono. Was this on the 1st of August? Answer.—I do not know whether he was absent on that day or not. But, as the covenant was drawn up in his presence seven days before the day in question, that is on the 22nd or 23rd of July, whether or no he was absent on the 1st of August, he must have been aware of its existence.

Q.—Do you mean that it was drawn up at the end of July and signed on the 1st August, and that, though Hirashima was absent, he agreed to it. A.—I do not know whether he agreed to it; but since he is one of the party, I think he was aware of the contents of the covenant.

Q.—Do you mean that the meeting was held any day before the 1st of August? A.—I said,

*Article 151.—An account of the examination and of the prisoner's replies will be drawn up by the Clerk and read by him to the accused. The accused will be asked by the Judge if he persists in his statements, and if so, he will sign the said document. If he declares that he is unable to sign, the fact will be noted in the same document. The clerk will state that preceding provisions have been observed and will sign with the magistrate.

†Article 378.—After twenty-four hours from the said promulgation of the notification, the President of the Criminal Court or one of his assessors, delegated by him, assisted by the clerk, shall interrogate the accused on the offences laid to his charge, and shall enquire of him whether he has, or has not, chosen Counsel. If he has made no choice, the President shall, by virtue of his office, designate one from among the advocates inscribed on the roll of those practising in the place. If there are several accused, the same advocate may be nominated for all of them if no objection be raised on their part or on that of the Counsel. The accused may not be submitted to examination until after three days from the designation of the advocate by the Judge-president.

"better try it." Hirashima also said the same thing.

Q.—Was the meeting held before the 1st August intended for discussing matters concerning the league? How many members were there at the meeting? A.—Kono, Tamono, Sawata, Hirashima, and I, were present.

Judge Tamano—Is there no inaccuracy in the statement just read?

Prisoner—With regard to the statement where it says that I participated in the meeting with Hiroshima, I wish to explain one thing. I have had most intimate relations with Hiroshima. At the meeting in question, I stated that reliance cannot be placed on untried men, that our opponents (here the Judge asked whom he meant by opponents. Accused answered that he referred to the Monarchical Party) have recourse to physical force; and that to destroy such a party it is necessary to compose our own side of men who know no danger. There are but few who will carry out one principle with unflagging faithfulness from the beginning to the end. To pick up such men, it was considered indispensable to draw up a covenant and thereby to ascertain their patriotism. Only six men enrolled themselves. We did not desire to increase the number of our members, but should not have failed to do everything in our power to improve the state of national affairs. Being exceedingly busy, we avoided advertising our meetings in the newspapers several days beforehand; but we met together and discussed public affairs.

The examination of prisoner No. 2, Hiroshima, was next proceeded with.

The following report of his trial at the Fukushima Police Station was read in accordance with his request:—

Trial of Hiroshima at Fukushima Police Station.

Question.—The authorities are informed that after Kono returned from Tokiyo on the 8th November of the 15th year of Meiji (1882), you met him at the Mumei Kan and consulted with him how best to take violent measures concerning the disturbances at Wakamatsu. Explain to me all the particulars. Answer.—No, I did not consult him about taking any violent measures. Despatches were sometimes sent from Mumei Kan to the head-quarters in Tokiyo, asking for a number of stout men. On each occasion, I said, "We do not hesitate to fight to the last with the Monarchical party."

Q.—Previous to that occurrence, Kono posted a letter stiling himself the *Mukiyo An* (Nihilist). To whom was it sent? A.—Yes, it is true. The letter in question was sent to Mumei Kan as well as to our party.

Q.—What did it contain? A.—It said that the head-quarters recognize its responsibility to send men and publish newspapers in order to struggle with our opponents.

Q.—Have you ever signed a covenant with Kono, Hanaka, Tamano, and some others? A.—Yes, I made oath to encourage liberalism and to hold by it even at the cost of my life.

Q.—Who took part in the oath with you? A.—Kono, Tamono, Aizawa, Hanaka, Sawata.

Q.—Who drew up the covenant, and on what day was it signed? A.—In August or September of last year.

Q.—What were the articles? A.—It consisted of five articles. The first article said, "We shall adhere to liberalism and destroy the government that obstructs it."

Q.—What was the second article? A.—The

second, I believe, contained the expression that we shall endeavor to establish a constitution. The third one said, "We will abandon, if necessary, our wives, children, and property to attain our aim," and the fourth article, "We will take the lives of those who break this covenant."

Q.—Who drew it up? A.—I do not know; but I believe that it was written by Hanaka, for he is a good scholar.

Q.—Who penned the characters? A.—Sawata. (Here Hiroshima wrote down what he remembered concerning the covenant).

Q.—The original contained the words "bureaucratic government." You just now wrote the words "oppressive government." Which is right? A.—I am sure it was written "oppressive government" in the original.

Q.—What do you mean by the words "bureaucratic government?" A.—It means such a government as that of Japan.

Q.—The first article of the covenant contained the words:—"We will overthrow an oppressive government, if it exist, in Japan," etc. Do you refer to the Government of Japan? A.—Our Government inclines toward oppression. The words "oppressive government" in the first article of the covenant admit of a wide explanation.

Q.—That is a vague and incomprehensible explanation. Do the words "inclined toward oppression" mean that the Government is oppressive. A.—Yes, we made the covenant in consequence of its oppression.

Q.—Then, of course, you refer to the existing Government. A.—Yes, I refer to the Government of Japan.

Q.—What are the means of overthrowing it? A.—We have not as yet decided.

In attestation of the above, we hereby affix our signatures.

IWASHITA KEIZO, Police Inspector.

HIROSHIMA MATSUO, Accused.

January 17th, 16th year of Meiji (1883).

Judge Tamano—Do you find any part of this report erroneous?

Prisoner—When I was arrested at Wakama, the police inspector put various questions to me. I could not answer, as I did not remember every thing. I told him that it was, and would be, my aim to sweep away oppression, and promote liberalism, and that the covenant was the outcome of this desire. Then he showed me the copy of the covenant, asking me to give an explanation of the words. I refused to do so on the ground that it was unnecessary. He inquired if the words "bureaucratic government" referred to the Government of Japan. I replied, explaining at some length the difference between constitutional and bureaucratic government, and said that the letters in question referred to all bureaucratic governments. The officer wrote what purported to be the copy of my statement. It was full of errors. But as I could do nothing, I left it in its original state. (Judge asked why he sealed the document with his thumb.—Prisoner answered that he acted under pressure of the occasion).

The following report of the preliminary trial at the Special Court was reproduced:—

Q.—In yesterday's hearing, you deposed that you did not remember the contents of the covenant and could not have written it but for instruction given by the police inspector. If you discover any inaccuracy in the first article of the covenant, point it out. A.—I do not remember the contents of Article 1 exactly. But I think it was to the effect that we wished to improve an oppressive govern-

ment by establishing a liberal constitution. No such thing was mentioned as the overthrow of an oppressive government if it existed in Japan.

Q.—Hanaka attested that, when the covenant was drawn up many discussions took place, and that as "overthrowing government alone" is not sufficiently conducive to the execution of the end in view, it was decided "to overthrow it first and improve it afterward." With this object, they resolved upon the wording—"We will overthrow an oppressive government if it exists in Japan and establish a purely liberal constitution." Kono also testified to the same effect. After Kono was arrested, Kamada Nawozo discovered the covenant at Mumei Kan and found the words in question in it. But you alone state that it did not contain them. A.—My aspiration has been, and is, to improve oppressive governments, and though I remember having read the words "improve oppressive government," in the covenant, yet as I was absent when it was agreed upon, I do not know the wording of it. It was twenty days after the covenant was resolved upon that Kono remarked to me about it, and I bound myself to it. I was then under the impression that there was no material change between the words "overthrow" and "improve," since to improve we must overthrow first, and after overthrow comes improvement. I do not see how this is against the law.

HIRASHIMA MATSUO, Accused,
KIYODO MASAKI, Judge,
TSUDA CHOKI, Clerk of the Court.

April 4th, 1883.

Judge Tamano—Do you find any discrepancy in the report just read? Prisoner—Please note that what we want is the eradication of all things that obstruct the progress of liberalism and that we do not care whether or not are mentioned the words "overthrow" or "improve" in the covenant. (Here the Judge asked if the prisoner meant, that his statement at the preliminary hearing was wrong.—Accused replied that the import of the words was, in his opinion, different).

July 20th. On opening the Court, Judge Tamano resumed the examination of Hiroshima.

The following report of the preliminary hearing of the prisoner at the Special Court was then read:—

Question.—Have you asked of any one of your compatriots who signed the covenant before you what view Kono took of it? Answer.—I made no inquiry. It may appear strange that in binding myself to a covenant which subjected me to a penalty of being cut down, I did not inquire into anything. But it is simply a matter of politics, and as we trust each other, we act in strict harmony as though we were one body with one mind.

Q.—Then, you mean that as, exactly the same political idea prevails among your party, it was unnecessary to inquire into it, and that the covenant was its embodiment? A.—Yes.

Q.—In other words, you mean that the spirit of the covenant lies, not in the oath made, but in the member's usual political convictions. A.—Yes.

Q.—Did Aizawa inform you of the contradiction made by Kono, or did you inform him of it? A.—I was informed by Aizawa.

Q.—What did he say? A.—He said that, as the existence of the covenant is likely to give offence, and as it is not good to prove men's fidelity by writing, it would be better to cancel it.

Q.—Was what Aizawa said his own opinion? A.—He learned it from Kono. I thought it inconsistent, but agreed to it.

Q.—Then, do you mean that it is not the

covenant that inspired you with a desire to proceed, but that, without it, your opinion is unchangeable? A.—Yes.

S. TAMONO, President of the Court.
HIROSHIMA MATSUWO, Accused.
SHIROTO KOJIRO, Clerk of Court.

May 25th, 1883.

Judge Tamano—Have you anything to say?

Prisoner—As we are incurring great suspicion from the public, I deem it not altogether unnecessary to explain the nature of our covenant—that it has no wicked design. It is from patriotism that we love liberalism from the bottom of our hearts, and strive to promote the national welfare. We will spare no effort to attain our end according to the dictates of the popular will. It was this very motive that prompted us to draw up the covenant. If any violent expressions occur in it, we have penned them—however improper they may have been—under the impulse of occasion. We have no reason to feel ashamed of our conduct, nor has the public any cause to despise us. We have no desire beyond that of promoting liberalism. At one time I was a journalist, once a lecturer, and I went round the provinces lecturing. What I said and wrote was all intended to promote the good of the nation; but on no occasion did I express myself with violence. I was only twice required to dismiss my audience. This was on occasions when I rebuked the conduct of Governor Miyoshi. That was not my fault, but the Governor's. He imposed heavy taxes upon the people for repair of roads—taxes which they could not bear. That functionary persisted in his own wisdom and enforced the sale of the property of poor defaulters. He had no heart. We attacked him for his unjust conduct. Our doings are always in strict unison with the dictates of justice and reason. The Monarchical party at Aizu who profess themselves to be modest and practical in their aims often resort to violence. We were bodily assaulted on many occasions. But we never on any occasion resisted. The words "overthrow government," etc., suggest, when viewed from a narrow point of view, a nefarious design. But in fact such is not the case. Who in this world would live under an oppressive government? It is the duty of every man with a brain to work hard to eradicate abuses. One suspicious feature of the covenant is the fact that it was kept secret and that only six men subscribed to it. On this point, I want to explain myself. In order to effect a political resuscitation, it is necessary to select men whom one thinks will not go back on their obligation. Therefore, we did not show the covenant to common men but rather concealed it. When I was arrested, two men, Kamada and Sasaki, were greatly surprised and immediately put the paper under the mat. This circumstance greatly increased the suspicion against our people. These men were ignorant, so they were taken aback at seeing the words "overthrow oppressive government," etc. Previous to this occasion I went to Tokiyo, where I learned that Kono was arrested. I immediately left the Capital in order to inquire into the matter. When about two *ri* from Fukushima, I met two friends of mine, and was informed that the police were on my track. I therefore decided to return to Tokiyo, and lay the matter before the Home Minister. I could not obtain any interview with him. When I was on my way to the residence of the Prime Minister, I was arrested by the police. (Here a short discussion took place between the accused and the Judge as to the meaning of the words "oppressive," etc.)

The examination of prisoner No. 3, Tamono, was next proceeded with.

Judge Tamano caused the report of the trial at the Wakamatsu Police Station to be read. It was as follows:—

Question—Have you signed any covenant with Kono, Hirashima, Hanaka, and others? Answer—I agreed to one in July of 1883.

Q.—How many persons participated in it? A.—Four persons in all, including Kono, Sawata, Hanaka, and myself. I was afterward informed that Hiroshima joined the league.

Q.—Who drew up the covenant? A.—Sato Kiyō framed it, and Sawata wrote it.

Q.—What were the contents of the covenant? A.—It was to the effect that we should strive with unflagging fidelity to establish a purely liberal constitution and accomplish the work in spite of any difficulties.

Q.—Did the covenant contain any expression entailing the loss of your life in form of penalty? A.—Yes.

Q.—Tell whatever you remember of its contents. A.—I do not remember well, and therefore cannot reply.

Q.—How can you forget the things that entail the loss of your life. A.—I do not forget the essence of the covenant, as I have already explained to you. But I have no recollection of its details.

Q.—I am convinced that you contrive to evade inquiry. If you have forgotten it, I will show you a copy produced by Hiroshima. You had better explain it. A.—Yes (copy shown).

Q.—Now, you can recollect the contents. The knowledge of the confessions made by your companions cannot fail to convince you of the true import of the contents. A.—I did not remember; but now I am convinced that it is the covenant.

Q.—Do the words "overthrow the oppressive Government" in the first article of the covenant mean the Government of Japan? A.—They refer to all the oppressive Governments in this world, and not alone to that of Japan.

In attestation of the above, we affix our signatures.

MATSUMOTO TOKIMASA, Police Inspector.

OZAKI YUKI, Assistant Police Inspector.

TAMONO HIDEAKIRA, Accused.

January, 25th 1883.

Judge Tamano—Do you find any inaccuracy in the report?

Prisoner—It is entirely wrong. Before proceeding to explain it, I want to know according to what article of the Code of Criminal Procedure, this case is to be proceeded with. (The Judge said in accordance with Article 391 § of the Code). Then, I have to demand one thing. The statements made yesterday by Hanaka and Hiroshima are productive of confusion and make the representation of facts impossible. This is due to the wrong order. I wish you, therefore, to change the order.

Judge Tamano—That is your view of the matter. I have mine. It is within my power to decide in what order the prisoners shall be examined with a view to the discovery of the truth. I can commence the examination of the principal figure first or that of his assistant, just as I deem it fit. Sometimes, I trace the cause to the effect and *vice versa*. Your counsel disputed the matter with me yesterday. But as I thought it expedient

to examine Hanaka first, I could not agree with the opinion of your counsel. Now, I cannot change the order. You had better proceed with your statement.

Prisoner—I do not dispute that: what I mean is the order of the facts. (The Judge acknowledged a misunderstanding, and told the prisoner to go on with his statement.)

Prisoner—Hanaka failed to explain sufficiently the nature of the covenant. In making the covenant, we had a great work in contemplation. We did not solely aim at promoting the good of one district or province, but we worked to promote liberalism all over the world. Civilization is not the exclusive gift of any one nation. In my opinion, the world is yet in a barbarous state: the weak is devoured by the strong. Every nation is watching for an opportunity to carry out aggressive designs. There are a few truly civilized countries, but the others do not follow their example. Born in this country, I must execute my duty as one of the people—I must sacrifice my life in the interests of the nation. It is on this account that we entered into combination. As regards the report of the declaration made at the Wakamatsu Police Station, I say that it is all wrong: in fact, it is not my confession at all. They treat inculcated persons without sense or humanity. No cruel functionaries can excel them. For many days I was given no food. I was on the verge of starvation. I was compelled to stand in the snow, exposed to the bitter wind, and often struck by the police inspector, whenever I replied to him in the negative. Mr. Konya was subjected to the same cruel treatment and became ill. He died shortly afterwards. I was most insolently treated. The police inspector brought a piece of paper to me and ordered me to write certain things on it. I refused to do so, because I was aware that the a trap was laid for me. He intended to use the writing against me afterward. On a certain occasion, they put something strange in my food. Of course, I did not eat it; and I remained three days without food. Our relations with the police were of an exceedingly bitter nature. The police extorted confessions by threats. Under these circumstances, no reliance whatever can be placed on the reports of the police. They prepared what purported to be our statement and showed it to us. We found many errors in it, and requested them to read it a second time. They then became very abusive and declined, saying that it was against their custom. Accordingly, I demanded to see the so-called statement, but my demand met with a refusal. The police inspector ordered me to seal the statement with my thumb. I refused to seal it until after I had seen it. Then a police officer pulled my hand and so sealed it. I became aware of the danger to my life, so I reluctantly signed. At one time they informed me that they had re-written a certain document, as it was soiled and torn, and they then made us sign again. Beside this, we were often confined in a dark room. These cruel actions are against the Articles 26§ and 150§. Therefore, it is not my statement at all.

Q.—What was the true issue of the affair, then? A.—What I stated a short time ago as our principles, is the true issue of the affair.

Article 95.—In the original drawing up or in the copies of informations, or proceedings either on the part of public officers or on that of private individuals, no word is to be written over another; the interlineations, the alterations, and the erased words should be guaranteed by the seal of the writer; the erased words should remain legible and their number stated; in default of which the correction will be deemed invalid.

Article 150.—The Judge should not use, in order to obtain a confession from the prisoner, either menaces or false allegations.

Q.—Is there any inaccuracy in the covenant?
A.—Yes. It is entirely different in essential features. I have forgotten to tell one thing. When I wrote what I remembered of the original copy of the covenant and gave it to the police inspector according to his order, he said, "It is entirely different from what Hanaka and Hiroshima wrote." He insisted that I had made a false declaration in order to deceive him. I explained it to him several times, but he did not listen to me and argued that there was no reason why the statement of the minority should be accepted in place of that of the majority.

Q.—What did you write on that occasion? A.—I think I wrote as follows:—1. We will alter oppressive administration, which is the enemy of liberalism.—2. To carry out our object, we will, if necessary, abandon our wives, children, and relatives.—3. All affairs shall be carried out in accordance with the decision of the majority.—4. We will commit self-despatch in case we reveal the secret of our league.—5. We will carry out our object, even though it costs us our lives," &c.

Q.—Had you in your memory these articles when you were tried at the Wakamatsu Judicial Court? A.—Yes, I remembered them.

Q.—Why, then, did you not give the statement of it to the Court? Did the Court employ threats? A.—Not exactly threats, but something very like it was resorted to. I had no time to speak about it. I will give you a short account of the proceedings in the Court. The Judge appeared as though he was drunk. He did not listen to me. He hurled all sorts of opprobrious epithets at me. He called me a scoundrel. I naturally got angry. As he left his seat, I asked the clerk what his name was. He overheard my interrogation, and turned back, saying, "What do you want to know my name for, you intolerable fellow?" Thus, I could not learn his name. Afterwards I asked the police to tell me his name, but the jailer then came and took me out of the Court, so I did not learn his name.

Q.—Have you not been tried twice in the Wakamatsu Court? and had you no time to alter the copy of your statement? A.—No I had no opportunity to correct it. The following report of the preliminary trial of Hiroshima at the Special Court was then read:—

Q.—Did you enter into the league with Kono and others in July and August of the 15th year of Meiji (1882)? A.—Yes. I entered into the league to effect a political organization.

Q.—What was the cause of the covenant? A.—It was the outcome of our patriotism and our anxiety to promote the national happiness and tranquility. Now-a-days, the strong devours the weak, and we know not when the thirst for blood will be brought to an end. Thus we are constantly feeling apprehension about the safety of the nation. If we enjoy it, it must be with difficulty. To provide for such a contingency, we united ourselves to form a political party.

Q.—When was the covenant drawn up? A.—In the end of July last year. Six men met together at Mumei Kan and accidentally the conversation turned upon the political problems of the day. We suggested then to draw up the covenant and all signed it with their blood.

Q.—How many men met together at the Mumei Kan? A.—Six men. But they did not meet together for the sole purpose of drawing up the covenant.

Q.—Were they Hanaka, Hiroshima, Kono, Aizawa, Sawata, and you? A.—Yes.

TAMANO, President of the Court.

SHIROTO, Clerk of the Court.

TAMONO HIDEAKIRA, Accused.

June 18th, 1883.

Judge Tamano—Do you find any inaccuracy in the report?

Prisoner—It is all correct. But as I did not make a sufficient explanation, I will here speak a little more. On the 18th of August, I was attacked by the Monarchical party and wounded. However, I made good my escape. I was for some time laid up in bed in consequence of my wound. During this time, Kono visited me and suggested to me the advisability of cancelling the covenant. I agreed to this proposal. Afterwards, I received a letter from him saying that the covenant was cancelled. From the beginning, I believed that the covenant contained nothing of an objectionable nature.

Q.—Why, then, did you agree to cancelling it? A.—Because no good would apparently accrue by concealing it.

Q.—What idea prompted you to cancel the covenant? A.—I had no intention of cancelling it, but as Kono sent me a letter announcing that he had cancelled it, I agreed to it.

The examination of Tamono was continued:—
The following report of the preliminary hearing at the Special Court was read:—

Question—When Sawata Seinosuke re-wrote the covenant, did anybody present suggest anything about its wording?

Prisoner—Yes. There was a difference of opinion as to the wording, especially in regard to the first and second articles. The first article said, "we will overthrow the government that is an enemy of liberalism." Some said that the word "overthrow" meant the subversion of government by means of arms; whilst in liberal principles it signified introducing improvement into the government by force of argument or writing, and that it is a very offensive term. Others said that if we did not write the word "overthrow" of an oppressive government which is the enemy of liberalism, the sentence would fail to convey the full meaning. It did not mean exclusively the subversion of the government by the use of arms. I think I remember that we decided upon the word "reform" instead of "overthrow," but I am not sure. The original draft contained the words "overthrow the government." As regards the second article that we should sacrifice our lives and property and "disregard the ties of gratitude and love" (dictates of humanity), Kono said that in ordinary times it is impossible for men to disregard the ties of gratitude and love; that it can be done only in case of great emergency; and that it would be better to suspend discussion till the time when the greater number of our compatriots should join us. We had some little debate concerning the wording of the fifth article, but it was of a trifling nature.

Judge—You had better sign the document with your thumb.

Prisoner—Yes. I will.

In attestation of the accuracy of the above, I hereby affix my signature.

TAMONO HIDEAKIRA.

June 19th, 1883.

To S. TAMANO, President of the Special Court.

In reply to a question by the Judge, the prisoner confirmed the foregoing statement. This brought his trial to a conclusion.

On opening the court, Judge Tamano commenced the examination of prisoner No. 4, Kono.

The following report of his trial at the Wakamatsu Judicial Court was read:—

Report of the preliminary examination of Kono at Wakamatsu Judicial Court.

Question.—The Court is informed that you signed a covenant with Hiroshima and some others. Is it true? Answer.—No. I have not entered into any covenant.

Q.—But the evidence adduced by Hiroshima and some others plainly shows that you entered into a covenant. I believe that there is no falsehood in his statement. A.—I have not signed anything exactly like a pledge. I wish to hear the evidence read to me. (Here the declarations of Hiroshima and others were read.)

Q.—Tell me your idea about these confessions.

A.—I was given to understand that you meant the pledge I made concerning a matter in the districts of Kitakata, so I replied, "no." You refer to the covenant respecting our political principles. Certainly I signed it. But I observe a great discrepancy in the statements just read. I remember the date. It was on the 1st of August. The object of the covenant was that, as a bureaucratic Government does an injury to the nation, we must establish a constitution. The expressions, "we will overthrow an oppressive government if it exist in Japan," etc., are all wrong. Perceiving that we had been foolish enough to sign such a covenant, we cancelled it afterward according to a suggestion made. But if I explain the cause of the cancellation here, I am liable to be regarded by my confederates as exhibiting cowardice and a desire to repudiate the obligation. Therefore, I do not explain it.

The Court ordered him to write down what he remembered of the covenant.

Accused then wrote the five articles, as follow:—

1. We will overthrow the government that is the enemy of liberalism and establish a constitution.—
2. We will sacrifice our lives and property, and disregard the ties of gratitude and love in accomplishment of our object, in effecting which we will not suffer ourselves to be deterred by any reflection.—
3. We will observe the statutes passed at the meeting of members and work in unison like that of one body and one mind.—
4. We will not dissolve our confederation till our object is accomplished, however dire the difficulties we encounter.—
5. We will commit self-despatch rather than reveal the secrets of our league. We will abide by the above five articles at the risk of our lives.

Q.—Have you made no mistake in your copy? A.—I believe there is no inaccuracy in it.

Q.—Where did you sign the covenant? A.—At Mumei Kan.

Q.—How many men signed it with their blood? A.—Six men in all.

Q.—Who were the confederates. A.—They consisted of Hanaka, Aizawa, Sawata, Tamono, Hiroshima, and myself.

The prisoner requested Judge Tamano to cause the above declaration of his own to be read again. The request was granted. The interlineation made on his confession were then read twice. The document bore the statement that the accused made the interlineation. It was as follows:—"In my reply to the interrogatories of the Court, I stated that, finding we had been foolish in making the covenant, we cancelled it. I wish to change that expression to this:—"We cancelled it because of having intentions other than those we held when the covenant was drawn up. Young men are apt to run to extremes,

and are otherwise thoughtless. They often undertake some impracticable affair and bring injury upon themselves. To stop this, it was deemed necessary to make them recognise the greatness of their responsibility."

Judge Tamano—If you have anything more to say, you may say it.

Prisoner—I will explain to you all the particulars of this affair. On the night of the 1st of December, 1882, a number of armed police suddenly broke into my domicile and attempted to arrest me. I was surprised by their sudden intrusion, and was very angry at their brutal manner. I thought then that the affair was the result of some misunderstanding, and allowed myself to be arrested. On my arrival at the police station, I was charged with being concerned in an insurrection. The officers produced many of my letters in evidence against me. At this time, they had not yet called my offence high treason. On the 25th of the same month, the police inspector asked me if I had drawn up a covenant and made preparations to rise in arms and attack the offices of the local Government. I replied that I had no knowledge of any such preparations. Then the inspector produced a piece of paper, saying that it was the confession of my confederates, and that therefore I could not plead non-complicity in the plot. On seeing it, I replied that it was the covenant I had made, but that it was not framed for the purpose of rising in arms and attacking the local Government. Before proceeding to explain further the cause of the covenant, I want to say one thing. Men look forward to reputation. Foolish as I am, I studied history while yet a boy and was inspired with a keen desire to follow the example of heroes. But I had no desire for notoriety. I was only anxious to do good to our nation. In the accomplishment of my work, I met with many dangers, the principal of which were an attempt to murder me, and the troubles then prevailing in the prefecture (Fukushima); popular feeling was in a state of ferment. The young men resorted to violence. The more the police attempted to check them the more outrageous they became. The struggle between the police and the political agitators reached a high pitch. The former stopped all political lecturers, and the latter, so soon as one audience had been dispersed, found another. Popular feeling was against the police, who attended the audiences in citizen's costume and arrested all violent speakers. To avoid collisions, I gave up delivering political lectures and counselled other youths to do likewise. The governor (Mr. Mishima) took a very serious view of the situation, and telegraphed to the district officers to meet in order to discuss the best measures to suppress the Liberals. Officers were despatched to the various parts of the province to extirpate our party. A Monarchical Party was organized to oppose the Liberals. I was informed that when a petition was made to the governor for revising the regulations of the local assembly, he summoned the district officers (the majority of whom were Liberals) and ordered them to devise some means of annihilating Liberalism. He resorted to all sorts of violence and encouraged the Monarchical Party to commit assaults upon their opponents.

(To be continued.)

A SHORT BIOGRAPHY OF THE LATE IWAKURA TOMOMI.

(Translated from the *Nichi Nichi Shimbun*.)

His Excellency, the deceased Iwakura, was a son of Iwakura Tomoyoshi, Privy Councillor and Ukonye-no-Chiuze of the senior third rank, and was born in Kiyoto on the 15th September, in the 8th year of the epoch Bunsei (1825). In his fourteenth year—on the 28th October in the 9th year of Tempo (1838)—he was raised to second junior fifth rank; and was subsequently allowed to attend at the Imperial Palace, after having performed the ceremony of *Gembuku* or shaving the forelock, on the 11th December of the same year. On the 14th of June of the 12th year of Tempo (1841), he was promoted to the first junior fifth rank, and on the 18th of February of the 2nd year of Kokwa (1845), to the second senior fifth rank. On the 20th of March in the 7th year of Kayei (1854), he was appointed Imperial Chamberlain, and was promoted to the 2nd junior fourth rank. On the 2nd of September of the 2nd year of Ansei (1856), he was admitted a member of the *Waka* club (a club for the composition of Japanese poems), and on the 25th January of the ensuing year, was elected Chairman, a position which was held in the highest honour by the Court nobles, as it could only be occupied by one well versed in poetic composition. Iwakura possessed this talent; and it was generally believed that his nomination was also in great measure due to his natural ability and personal qualifications in other respects. On the 25th of January of the 4th year of Ansei (1851), he was elevated to the first junior fourth rank and appointed Imperial Chamberlain. He was then thirty-two years old. On the 29th of December of the 1st year of Manyen (1860), he was appointed Ukonye-no-Gonshōsho, and promoted to the 2nd senior fourth rank on the 5th of January of the 1st year of Bunkiu (1861). On the 16th of the same month, he proceeded to the Palace to express his gratitude for his promotion, and on the 15th May of the 2nd year (1862) of the same epoch he was nominated Ukonye-no-Gonchiujo. Honour upon honour was heaped upon him by these annual promotions. On the 28th of July of the same year, he was ordered, nominally on account of temporary illness, to discharge his duties in the Special Department with officers of similar rank. The real cause may be found in the following. In the 5th years of Ansei (1858), Horita Bitchiu-no-Kami, Councillor of the Bakufu Government, arrived in Kiyoto and petitioned the Emperor to decree the opening of the ports to foreign commerce. Nakayama Dainagon and other Court nobles, numbering more than eighty, who had achieved some notoriety by the expression of their opinions in favour of the expulsion of foreigners, forwarded a memorial to the Mikado, bearing all their signatures, beseeching him to decline the petition of the Dainagon. This was the origin of the discord between the Imperial, and the Bakufu officials. The management of political affairs was grievously impeded, to the danger of any national tranquillity. A suggestion that a conciliatory course should be adopted was mooted in the Imperial Cabinet.

When the clamour for the expulsion of foreigners ceased, and question was raised as to the advisability of reconciling the Imperial and Bakufu Governments, Mr. Iwakura, having carefully observed the general condition of the Empire, changed his views and determined not to advocate the cause of the *Fōi* faction. He then devoted his energy to persuading the Emperor to send Kadsu no Miya to

Tokiyo or marriage with the Shogun, but this unprecedented measure having failed to induce the Shogun to enforce the policy of seclusion, some of the powerful clans which were fanatic advocates of the cause of the *Fōi*, began to complain of the results as contrary to what was originally desired. Some of the Court nobles also made a similar complaint, which grew louder day by day. The Mikado became anxious about the final issue, and this eventually led to a serious disagreement between himself and the nobles who recommended a reconciliation with the Shogun. On the 20th August in the ensuing year Mr. Iwakura resigned the office of *Chiunagon*, and received a decree from the Mikado ordering him to confine himself to his house. This induced him to retire from the political arena and enter the priesthood. His Buddhist name was Yuzen—"friendly mountain." Yet the anger of the Emperor was not appeased, and he issued another decree on the 25th September prohibiting him from dwelling in Kiyoto. Mr. Iwakura, therefore, removed to a rustic villa in the hamlet named Iwakura-mura, in the Rural Division of Atago, in the province of Yamashiro, and passed his days in strict seclusion. On the 13th of January in the 3rd year of Bunkiu (1863), he received an Imperial order desiring him to keep a strict watch over himself, so as not to offend the Mikado. Whilst he was thus confined to his house, Messrs. Kagawa, now Assistant Vice-Minister of the Imperial Household Department, and Ohashi, formerly a sixth-class officer in the Finance Department, secretly met in his house for the purpose of discussing national affairs, and, subsequently, Okubo, Kido, Saigo, Sakamoto, and Ishikawa went to visit him for similar purposes. It was afterwards known that the scheme of the Restoration was decided on at this time. On the 29th of March of the 3rd year of Keiwo (1867), he was permitted to visit Kiyoto, with the condition that he might only remain there for one night on each occasion. On the 8th of November of the same year, an order was issued to the effect that he might return to Kiyoto at his pleasure. It was then that the national trouble was at its height. Finally Iwakura was released from all confinement and restored to his position on the 9th of December. He was subsequently appointed Councillor, and ordered to participate in the debates on the method of effecting the scheme of the Restoration. In February of the 1st year of Meiji (1867), he was appointed Vice-Minister of State, and, on the 17th of the same month, was nominated a Chief Commissioner of Naval and Military accounts. On the 22nd he was promoted to the post of Ukonye-no-suke and to the third junior rank. On the 21st April, he was released from his office, transferred to the position of Councillor, and ordered to act as Minister of State.

On the 20th of April he was released from these duties and ordered by special favour of the Mikado to wait upon him every day. On the 25th he was again ordered to act as Councillor and Minister of State on the ground that there was considerable pressure of business owing to the introduction of reforms. But as he had fallen sick through over-exertion and consequent irregularity of living, both of which the result of his enthusiastic participation in the management of political affairs, he declined to accept this appointment. The authorities, having approved his refusal, released him from the office of Minister, but requested him in urgent terms to discharge the functions of Councillor; and he was allowed to occupy the first seat in the Council, notice to this

effect having been issued on the 17th of January in the 2nd year of Meiji (1868). On the 25th he was nominated *Gon Dainagon* and promoted to the second senior rank. He was frequently urged to accept the appointment of Commander-in-Chief, but he declined; and subsequently he was invested with the rank of *Dainagon*. On the 11th, February of the same year he obtained leave of absence for the benefit of his health, and proceeded to Osaka, but on the 14th he was unexpectedly ordered to return to the capital on special official business. On the 13th of April, he received an Imperial order to discharge the most important portion of the functions of the Executive. On the 26th of September he was honoured with the following Imperial address:—

"You, Tomomi, lamenting the decline of the Imperial Administration, have imbued yourself with the spirit of remedying evil, and at last succeeded in bringing about the Restoration by devoting your energies to the adoption of many necessary plans and measures which you have worked out with remarkable assiduity. I regard you as the foundation of my Empire, and as the most useful member of my Ministry. I acknowledge your merit, and hereby commend your services. I look for further faithful and diligent assistance from you."

A pension of five thousand *Koku* was granted Iwakura for life in recognition of his services. On the 23rd of November he was ordered to participate in the management of naval and military affairs, but was released from this duty in April of the 3rd year of Meiji. On the 16th of July he was appointed to the *Mimbusho* (Home Department), released on the 5th of October, and despatched as an Imperial messenger to the clans of Kagoshima and Yamaguchi. At this time he received another special address from the Emperor which ran as follows:—"So far as the present state of affairs is concerned, the task we have to complete in future will involve us in great difficulty. We order you to persuade Mōri, of the second junior rank, and Shimadzu, of the third, to come to the capital to assist us in the adjustment of political affairs, so that these two lords working in unison may show what course ought to be pursued by others as a rule of conduct, and adopt measures for the consolidation of the Imperial foundations. We entrust you to convey our sincere sentiments to them." On the 6th February of the 4th year he returned to the capital from his mission; on the 14th July he was appointed Minister of Foreign Affairs in his forty-seventh year. On the 11th August he was honoured with a personal visit from the Mikado and presented with the following address:—

"Since the commencement of the Restoration, you have performed your duties most assiduously, and it cannot be doubted that our present prosperity is in great measure due to the carrying out of your judicious resolutions. We have therefore come to visit you in person and to acknowledge your merits."

On the 8th October of the same year, the Mr. Iwakura was appointed Minister Plenipotentiary and Envoy Extraordinary to European States. He left Japan on the 12th of November. His mission greatly contributed towards introducing Occidental civilization into this country and promoting friendship between this and foreign countries. Our present civilization is a gift from him. In the 6th year of the same era, his father Tomofusa died. On the 20th of the same month, at the age of forty-nine, he succeeded his father. On the 13th of the same year, he returned from Europe.

On the 20th of October, His Majesty the Mikado visited him in person and expressed himself as follows:—"The illness of the Prime Minister at this juncture, when the nation is involved in many difficulties, causes us great anxiety. We earnestly desire you, Tomomi, to assume all duties on his behalf and apply yourself with all your energy to the work in order to secure ease for the people."

On the 14th of January of the 7th year of Meiji, Iwakura was assaulted by would-be assassins, but escaped. He recovered from his wound and resumed duty on the 23d of February. In May of the 9th year of Meiji, he accompanied the Emperor on his tour to the Oshiu districts. On the 18th of the same month, he was promoted to the junior first class and granted the 1st class of the Order of Merit and the insignia of the Rising Sun. On the 24th January of the 10th year of Meiji (1876), the Emperor left Tokiyo for Kiyoto. On the eve of his departure, His Majesty honored Iwakura with the following Imperial Rescript:—"During our absence, we cannot superintend the administration. We therefore entrust it to your care. We bid you to conduct it to our satisfaction; and if any important affairs take place, let us know, asking for instruction. However, if things demand immediate action, you must decide according to your own discretion." At this time, the South-western rebellion broke out. In August he accompanied the Emperor on his journey to the Hokurokudo and Tokaido. In May of the 16th year of Meiji, he went to Kiyoto to superintend the work commenced there to preserve the Palace. In that city he was attacked by enduring illness. He returned to the capital in June, in a precarious condition. On the 5th of July, the Emperor visited him in person, while Her Imperial Majesty the Empress paid him a visit on the 12th of the same month. On the 19th, his resignation was accepted by the Government. On the same day the Sovereign again visited him. On the 20th, Iwakura breathed his last.

THE NECESSITY OF FOREIGN INTERCOURSE.

(Translated from the *Fiji Shimpō*.)

It is not long since our Japan found her way into the world to compete with its civilization. While she was yet in a state of infancy and dwelt in perfect seclusion, holding no intercourse with foreign countries, her internal affairs were limited, and the method of managing them was very simple. They were not so intricate and ramified as they are now. Our people were only aware of the existence of this Empire, and utterly ignorant of the fact that there are many countries beyond their own. Friendship and intercourse was confined within the dominion; enmity and hatred was kindled only among fellow countrymen. In short, Japan alone existed as Japan's kosmos and had not the least connection with other countries. But civilization having progressed throughout the world, and the path having been opened for foreign relations, she began to assume a different attitude, and now recognizes the truth that the name of Japan is relative; and that there are other nations. It has become necessary for the people to direct their attention to the condition of foreign nations instead of restricting their consideration to mere home affairs as heretofore. They may disregard all their domestic affairs except those of a very serious nature; but in the case of matters concerning foreigners they are called upon to exercise the utmost discretion and

to consider them with relation to the general condition of their Empire.

And one glance at the state of society shows that most of our people have not even yet developed the idea of foreign intercourse, and that therefore they do not take any interest in the consideration of foreign affairs except those of a nature to produce a directly pernicious or advantageous result upon their country. They do not think anything of a fire that "breaks out on the opposite side of the river." They were encouraged to remain in this frame prior to the initiation of intercourse with foreign nations, when they barricaded their harbours and prohibited the visit of aliens; but, should we nourish the same ideas while we have entered into friendly relations with westerns, and constantly exchange visits with them for commercial and diplomatic purposes, the result will inevitably affect our national prestige, or at least the interests of individuals. Indeed, there is no doubt that the prosperity of the Empire will be considerable impaired.

We will mention a simple instance of the indifference of our people to foreign matters. There are innumerable items or notes published in the vernacular papers; but it seems that the readers pay little or no attention to statements which concern foreign countries. Some of them have even asserted that nothing is so uninteresting. This is a cause for regret. In our Empire, subscribers to newspapers are almost confined to the higher grades of society, possessing knowledge and talents, which may be regarded as the constituent elements of the political class or as the foundation of our country. Yet they appear to take no interest in diplomatic affairs, and do not attempt to obtain any knowledge of the outer world. It is not to be wondered at, then, that the lower classes, who are disposed to exercise their wits on proximate and visible phenomena only, are utterly indifferent to what occurs in foreign countries. Nor is it an exaggeration to state that there are many among our people who are familiar with foreign literature and that persons educated in foreign languages can be found throughout the country, but that even such are not, most of them, almost, if not completely, ignorant of the changes going on in the world, in spite of their perusal of native as well as foreign journals? The people of this country ought not to confine their consideration to their internal affairs, but should also bestow due attention upon European and American politics, military and naval organization, commerce and industry, the relations between our people and aliens, as well as those between the Orient, Europe, and America, the probable effect of the doings of these countries upon Japan, the views of their ministers and dignitaries, as well as the private conduct of their statesmen; so that they may familiarize the public with the results they may have come at through foreign information, and remind it of the existence of much stronger and wealthier nations than Japan. Should they pursue such a course, they will really deserve the reputation of enlightening their fellow countrymen. Is it not extremely ludicrous that they not only disregard diplomatic doings, but also take little or no interest in the perusal of foreign journals?

It has lately been urged that it is absolutely essential for the Empire under present circumstances to augment its revenue. The proposal has been approved by all except such persons as are notorious for their narrow-mindedness. The augmentation of the revenue has no doubt had its origin in the desire to extend our national power. It is true that there are as many countries in the

world as stars in the sky, excelling our Empire both in wealth and power. We regret to have to state that Japan is in many cases treated as a mere inanimate puppet. We hope that the successful extension of our Army and Navy will protect us from such treatment. We may be allowed to say that the augmentation of income has to be traced to the desire to maintain our position as a nation abroad. Our ignorant people complain of the existing system of taxation, and hate all further imposition of taxes more than they detest venomous reptiles, simply through want of knowledge of foreign matters. Should they become aware that they are surrounded by terrible enemies, or at least despised by them, and that they are by no means able to exercise their sovereign rights, they must consent to the extension of the Army and Navy. And this will eventually lead them to approve the proposal for increasing the revenue. Accordingly, those who are familiar with foreign sciences and are inclined to act as they ought—as educators of the public—encourage a desire for diplomacy abroad and teach people that they should contribute money towards the maintenance of their rights. We have always wished that such a course should be adopted. Yet our compatriots appear to devote all their energies to the investigation of internal polity in utter disregard of other things; while works and translations from foreign books, published in the country, invariably treat of popular rights and liberties, or the duties and relationship of the Government and people. Very few have been printed likely to familiarize the people with the actual condition of the world at large, and teach them to recognize their sovereign rights. Editors appear to value the importance of their own rights: why do they not carry their ambition to the full enjoyment of national privileges? Some of them may have been inclined to think that such attempts ought to be made only after we have completed all internal improvements. They look for the time when diplomatic transactions shall entirely cease, and perfect tranquillity shall reign in the world. While all nations around us progress rapidly by the introduction of reforms, is it advisable for Japan to neglect a similar course on the pretext that she is remedying internal abuses? We would fain inculcate the idea that, of domestic administration and foreign diplomacy, one requires greater caution to deal with than the other, according to circumstances; but we would have both adjusted in such a manner as to secure collateral progress. In short, the question of foreign diplomacy requires immediate consideration; and as we have in many cases to treat with foreign countries under pressure, we assert that those who take any interest in the projects of the universe, should not spare any effort to induce our people to cherish a desire for foreign intercourse.

THE VALUE OF DECORATION.

(Translated from the *Nichi Nichi Shimbun*.)

Notification No. 22 issued by the Council of State runs as follows:—"Should those who wear insignia commit any action derogatory to their Order, they shall be deprived of both decoration and annuity, and all the foreign decorations that they possess shall also be confiscated. They shall not be allowed to wear their Orders when they are detained on charge of minor and major crimes or when they are on bail. Furthermore, any rank, privileges, and annuities held by the bearers of such insignia shall not be accorded them

during the period of incarceration." A decoration forms part of a man's civil rights, as is defined in Article 31 of the Penal Code in relation to forfeiture of such rights. (3) "The loss of all pension, of all nobiliary or honorific title, and of every national decoration; (4) The prohibition of carrying in Japan any decoration, even foreign." Article 32 of the Code says that, whosoever shall be condemned to a criminal penalty shall incur, *de plein droit*, perpetual loss of all civil rights. Again Article 33 says that condemnation to correctional imprisonment entails, *de plein droit*, the forfeiture of any public functions or occupation with which the condemned was invested, and the suspension of other civic rights during the term of imprisonment. Finally, Article 34 provides:—"Condemnation to a correctional penalty, including police surveillance, entails, *de plein droit*, the suspension of all civil rights during the period of the aforesaid surveillance. The same law holds good for surveillance pronounced as sole punishment, in case of exemption from the principal penalty."

The articles quoted above show in what manner decorations are treated in the Penal Code. At first sight, it appeared to us superfluous to have framed a special act for privation of decoration. On mature consideration, however, we are convinced that it is a necessary one. Those who are guilty of grave crimes are liable to have their insignia and annuities confiscated. The same rule applies even to foreign Orders. Again, persons condemned to a correctional penalty cannot wear decorations, either foreign or national, during the period of incarceration or police surveillance; nor are they entitled to their annuities during that period. The law in question provides loss of the insignia in cases where the holders commit any shameful action of which the Penal Code does not take cognizance. Decorations are nothing but badges of honor; so that if the bearers disgrace themselves their badges are tarnished. As regards foreign decorations, we find that, though the Government has on right to seize Orders bestowed on Japanese subjects by foreign Governments, it is nevertheless justified in regranting the permission to wear them. That the Government promulgated the law prohibiting those condemned to correctional and criminal penalties to wear Orders, and denying them all the privileges associated with the rank conferred, is due to its desire to bestow distinction with its decorations. It is, however, plain that when the accused are found not guilty, they shall have such portion of their annuity paid to them as has been retained during the period of trial.

In foreign countries, there are special laws for preserving the honor of Orders. In this country, also, there was a similar law under the Tokugawa régime. The *Daimiyo* generally known as *Hokasama* or "relations" (in contradistinction to the rest of the feudal lords) and the bannerets (*Hatamoto*) who had the right of personal interview with the *Shogun*, wore a uniform bearing the crest of the Tokugawa family in honor of the privilege, and were known by the name of *Go-monpuku*. The wearers were at liberty to appear on ceremonial occasions in that costume. But in case they were found guilty of having visited places forbidden to the armed class, or of having committed any disgraceful act while clothed in official dress, they were punished. This rule was most effectively carried out, and preserved the honor of the emblem. In case of dismissal from the service, the bearers could not appear in the castle in their uniform, which also they could not wear in a judicial court, when answering a summons or giving evidence. This rule applied not only to vesture, but

also to the sword, and anything else that was the gift of the *Shogun*. However ridiculous this may now appear, yet it had the wholesome effect of preserving the true value of a distinction conferred for meritorious services.

THE STATEMENTS OF CERTAIN NEWS-PAPER EDITORS.

(Translated from the *Nichi Nichi Shimbun*.)

It was almost a year ago that the Mitsu Bishi Company forwarded a memorial to the Government disapproving the establishment of the Union Shipping Association, but the statements contained therein were immediately contradicted. Since the copies of the memorial and the contradiction were published in the vernacular papers last winter, the question of maritime enterprise has become a topic of public discussion.

It was debated on all sides as to its nature and aim, but it is extremely strange that none of the newspapers which are regarded as organs of the Reform party and are notorious for making lengthy criticisms on all subjects of public discussion, have not attempted to comment upon the question, as if they meant to say—"We did not know that there were any noisy arguments concerning our maritime enterprise. At any rate, this a topic quite unnecessary for statesmen to consider." Thus they did their best to refrain from making any comments. Moreover, they attempted to withdraw in a most absurd manner their previous proposition apparently supporting the Mitsu Bishi Company. These proceedings did not fail to create mistrust in the public, who began to regard the Reform party as the partisans of the said company. Conscious that the party will inevitably lose public credit through their indifference to the maritime question, we advised them to expound their views with as great accuracy as possible. Whether they supposed our advice to be rational or whether they were pressed by some other circumstances, the editors of the *Hochi* and *Mainichi* simultaneously commenced their criticisms on the question in the beginning of last month, as though they had previously arranged with each other. The *Mainichi* published thirty articles in daily instalments headed, "A treatise on maritime enterprise and contradiction of the statements of the *Fuyu Shimbun* and *Meiji Nippo*," completing them on the 13th instant; while the *Hochi* gave twenty-two articles of similar length, headed, "Criticisms on the Mitsu Bishi Company's memorial and on the official statements contradicting it, together with essays on marine enterprise," which were concluded on the 17th instant. The two editors may have been perplexed for want of material for comment, yet we recognize their assiduity in publishing these lengthy leaders.

We have carefully perused the articles referred to copy by copy, but as the whole publication covers a period of more than a month, we should have to reread the entire series did we seek to convey the precise meaning. The style of these articles may be elegant, and their theory rational, but it seems to us that they do not follow, in many respects, the legitimate process of reasoning, while the faulty arrangement of their clauses renders it almost impossible to discern the main idea. The editor of the *Hochi* made the following statements the gist of his argument:—(1) "The protection which the Government has extended to the Mitsu Bishi, as well as the assistance it rendered in the organization of the company, must be regarded as a legitimate and inevitable

policy. The assertion that the Government specially enforced protective measures for the Company and organized a useless association through partiality, must at once be condemned as the outcome of ignorance of the actual condition of our maritime enterprises as well as of the precise nature of the various companies which were formed in those times. (2) The Mitsu Bishi Company's competition with foreign shipping establishments has enabled it to maintain its maritime power to the present day. (3) After the restoration of its maritime influence, it has reduced the rate of freight by twenty-five or even thirty per cent, as compared with similar foreign establishments. (4) The Company adopted measures to facilitate the transportation of cargo to an increased amount, and extended its maritime influence year by year. (5) Past facts show that the rate of freight fixed by the Company was neither very low nor very high as compared with the rates enforced in the seas adjacent to England, France, and northern Europe. (6) The Company has not attempted to ruin the business of all other shipowners, but deserves to be censured for the unjust competition which it had entered into with regard to the amount of cargo for transportation. (7) The company is to be blamed for having transacted two or three kinds of business other than what it should legitimately have pursued, although such business was in some respects connected with their own. The above statements show the merits and demerits due to the company with respect to its marine undertakings."

The *Mainichi Shimbun* concluded its article as follows:—"Since we have been commenting on the subject of marine enterprise, we have published thirty articles in the space of more than one month, and completed our criticisms according to the announcement we made in our first article. We will conclude by epitomizing our propositions so as to afford the Editors of the *Fuyu Shimbun* and *Meiji Nippo*, facilities to contradict our statements if they wish to do so. (1) These editors have asserted that the reason why some of their contemporaries, recognized as the fanatic advocates of the Reform party, are indifferent to the proceedings of the Mitsu Bishi Company may be found in their desire to promote some private interest. Such assertions must be regarded as the outcome of fraudulent intention. (2) The present prosperity of the Mitsu Bishi Company is due to the fact that it has conducted its transactions in such a manner as to adapt them to internal as well as foreign requirements, while the Government has protected it. It is not through the partiality of the authorities that the company made any extraordinary progress. (3) The assertion that the contradictory statements against the memorial of the Company were issued by the Government, must be condemned as irrational and unfounded, or as having its origin in an intention to criminate the authorities, when we consider it with reference to the existing system of administration and the special order issued by the Government for the benefit of the Company. Nor is it worth while to bestow any attention upon the memorial and the contradictory statements referred to, both of which contain serious errors, while the text is contrary to facts. (4) The editor of the *Hochi* piques himself upon supporting convictions expressed in contradictory statements, and at the same time approves of the protection afforded to the Mitsu Bishi and the Union Shipping association. Moreover nothing can be so diametrically opposed as the statements of the *Fuyu Shimbun*, which on the one rebukes the proceedings of the Mitsu Bishi and hand on the other approves the organization of the Union

Shipping Association. (5) The writers of the contradictory statement in questions, having employed such terms as could only be used by one in an official position, incurs the imputation of having deceived the public. And the editors of the *Fuyu Shimbun* and *Meiji Nippo* must be held responsible for having induced the writers to gainsay the Mitsu Bishi Company's memorial. (6) The Government has no right to annul the contract entered into with the Mitsu Bishi without reasonable grounds, and therefore ought to effectually carry out the provisions of the contract by adopting measures to prevent the indulgence of arbitrary proceedings on the part of the Company. As regards other evils, different steps ought to be taken.

Although we desire to investigate the truth of the above statements, we are unable to do so on account of the irrelevance of the arguments; but we will take the liberty of asking some questions. It seems that the *Hochi*, in its comments covering a period of twenty-two days, assumed the position of a Judge, taking the Mitsu Bishi as plaintiff and the Government as defendant. It pronounced on the evidence adduced by both parties. It is scarcely necessary for us to say anything of the nature of such judgment as to whether it is ridiculous or not. But what we want to know is which of the two parties the *Hochi* regards as right. In so far as the arguments of the *Hochi* are concerned, we may be allowed to say that it intends to dismiss the case on the ground that the evidence is insufficient on the part of plaintiff and defendant, and that the former boasts of his merits and is unimpeachable, while the latter vehemently reproaches him. The *Mainichi* on the contrary, assumed the rôle of a defendant and denied the allegations of the Mitsu Bishi. It regards the latter's memorial and its contradictory statements as proposterous and unfounded, intimating that the Government ought to take suitable steps to check the selfishness of the Mitsu Bishi. Then the *Mainichi* finally declares that it is by no means under any obligation to be a defendant. As regards the editor of the *Mainichi* chooses place himself in the position of plaintiff or defendant, we have no concern whatever. Nevertheless, he deduces an accurate conclusion as to how our maritime enterprises may be best served. The principal assertions made by our contemporaries with regard to our maritime affairs may be summed up in three propositions. (1) There are very few vessels in our Empire, while the rate of freight is exorbitantly high. The task of extending our shipping ought not at present to be entrusted to the people alone, but the Government must adopt some protective measures. The Mitsu Bishi Company alone is likely to fail to meet the increasing demand for ships, and moreover is given to extravagance. Therefore it was necessary to organize the Union Shipping Association under the auspices of the Government, in view of the augmentation of our maritime power. (2) We have sufficient vessels with a low rate of freight. Although Government is called upon to support maritime enterprise, its patronage must be confined to the Mitsu Bishi Company, inasmuch as such protection is only to be temporarily afforded. (3) Marine undertakings ought to be left to the people. Official protection will not fail to produce pernicious results, and is not in the least conducive to profit. Accordingly it is quite unnecessary to render assistance to the Mitsu Bishi as well as to the Union Shipping Association. Besides the above three distinct propositions, there is none which need attract the attention of the authorities. The rest must be looked upon as mere castles in the air. As for us,

we approve the first proposition. But it seems that the *Hochi* and *Mainichi* entertain opinions totally different from the second and third, "intermediate" as it were, propositions. At all events we are unable to comprehend them clearly. This may be due to our want of knowledge, but it is almost certain that there are many who sympathise with us. We hope that the two editors will not spare an effort to furnish explanations. So soon as we learn the legitimate conclusions of their arguments, their lengthy articles will cease to be incomprehensible.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, JULY 20TH, 1883.

Observatory of Daigaku, Moto-Fujioka, Hongô, Tokiyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
--- represents velocity of wind.
percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.
* Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 15.9 miles per hour on Monday at 3 a.m.
The highest reading of the barometer for the week was 30.000 inches on Friday at 10 a.m., and the lowest was 29.811 inches on Monday at 9 p.m.
The highest temperature for the week was 91.8 on Wednesday, and the lowest was 73.3 on Friday. The maximum and minimum for the corresponding week of last year were 93.0 and 72.3 respectively.
The total amount of rain for the week was .001 inches, against .036 inches for the corresponding week of last year.

SUNDAY CHURCH SERVICES.

Christ Church: 11 a.m. and 5.30 p.m.
Union Church: 11 a.m. and 8 p.m.
Roman Catholic Church: 8 and 9.30 a.m.
English Church, No. 12, Sakaicho, Shiba, Tokiyo: 11 a.m.

LATEST SHIPPING.

The Freight Market offers nothing to report during the past week. Coast freights have gone to the lowest point reached for the year, and charters are difficult to obtain. The American ship *St. David* has been added to the list of vessels loading, having taken the berth for San Francisco; in other directions nothing doing.

ARRIVALS.

- Taganoura Maru*, Japanese steamer, 448, Matsumoto, 22nd July.—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.
Ada, British schooner, 73, Hardy, 23rd July.—Midway Island 19th June, Fish.—Captain.
Hiogo Maru, Japanese steamer, 896, R. N. Walker, 23rd July.—Hakodate 21st, and Oginohama 22nd July, General.—Mitsu Bishi M. S.S. Co.
Kanagawa Maru, Japanese barque, 1,184, Eckstrand, 23rd July.—Nagasaki 17th July, Coals.—Mitsu Bishi M. S.S. Co.
Seirio Maru, Japanese steamer, 329, G. R. Nirel, 23rd July.—Kobe, General.—Mitsu Bishi M. S.S. Co.
Tsuruga Maru, Japanese steamer, 580, Dithlefsen, 25th July.—Kobe 23rd July, General.—Mitsu Bishi M. S.S. Co.
Hindoo, German barque, 541, J. C. Matthiessen, 26th July.—Nagasaki 16th July, Coals.—Mitsu Bishi M. S.S. Co.
Tokio Maru, Japanese steamer, 1,146, R. Swain, 26th July.—Shanghai and ports, Mails and General.—Mitsu Bishi M. S.S. Co.

DEPARTURES.

- Kashgar*, British steamer, 1,515, W. J. Webber, 21st July.—Hongkong via Kobe and Nagasaki, Mails and General.—P. & O. S.N. Co.
Gembu Maru, Japanese steamer, 670, F. J. Brown, 22nd July.—Hakodate, General.—Kiyodo Unyu Kwaisha.
Niigata Maru, Japanese steamer, 1,096, Hubbard, 22nd July.—Hakodate, General.—Mitsu Bishi M. S.S. Co.
Benledi, British steamer, 1,000, J. Ross, 24th July.—London via ports, General.—Mourilyan, Heimann & Co.

- Genkai Maru*, Japanese steamer, 1,084, G. W. Conner, 25th July.—Shanghai and ports, Mails and General.—Mitsu Bishi M. S.S. Co.
Kaorio Maru, Japanese steamer, 617, G. Withers, 25th July.—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.
Seirio Maru, Japanese steamer, 591, 25th July.—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.
Suminoye Maru, Japanese steamer, 1,320, Frahm, 25th July.—Hakodate, General.—Mitsu Bishi M. S.S. Co.
Yechigo Maru, Japanese steamer, 751, Jones, 25th July.—Hakodate, General.—Kiyodo Unyu Kwaisha.
Toyoshima Maru, Japanese steamer, 956, Thomas, 26th July.—Hakodate, General.—Mitsu Bishi M. S.S. Co.
Tsuruga Maru, Japanese steamer, 517, P. Dithlefsen, 26th July.—Kobe, General.—Mitsu Bishi M. S.S. Co.

PASSENGERS.

ARRIVED.

- Per Japanese steamer *Taganoura Maru*, from Yokkaichi:—150 Japanese.
Per Japanese steamer *Toyoshima Maru*, from Hakodate:—1 Japanese in cabin; and 60 Japanese in steerage.
Per Japanese steamer *Hiogo Maru*, from Hakodate via Oginohama:—Messrs. Matheson and Taylor in cabin; and 121 Japanese in steerage.
Per Japanese steamer *Seirio Maru*, from Kobe: 74 Japanese in steerage.
Per Japanese steamer *Tsuruga Maru*, from Kobe:—Mr. Clausen and 3 Japanese in cabin; and 53 Japanese in steerage.
Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—Mr. and Mrs. Archer, Mrs. I. G. Ross, Mrs. Fairbanks, Miss J. Chisman, Miss B. Raymond, Captain Kato, Messrs. Sarony, Lacie, Thomas, J. R. Haggitt, MacMillen, E. C. Kirby, J. A. Singleton, Hayashi, Seki, Kobayashi, Rohno, Hatano, Hagino, Yamada, Morita, Ohara, Tamakata, Kosishi, Kikuchi, and Go in cabin; and 1 European, 3 Chinese, and 306 Japanese in steerage. For San Francisco: Captain and Mrs. Bassett and 2 children in cabin.

DEPARTED.

- Per British steamer *Kashgar*, for Hongkong via Kobe and Nagasaki:—Mr. and Mrs. Dangerfield, Miss M. Parkes, Captain Popp, Messrs. H. Pryer, J. Milne, Keeling, and Tokuda in cabin; and 4 Chinese and 8 Japanese in steerage.
Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—Mrs. Thomas and daughter, Mr. and Mrs. Senzaki, Mrs. Isobe, Dr. J. E. Eykman, Messrs. A. J. L. Mulder, J. J. Taylor, N. F. Guicciardi, W. R. Dunn, F. Retz, S. Samuel, Kigokuro, Ishii, Tomota, Yoneta, Shibata, Ikeda, and Iwanaga in cabin.

CARGOES.

- Per British steamer *Kashgar*, for Hongkong via Kobe and Nagasaki:—Silk for France, 206 bales; for London, 11 bales; Total, 217 bales.
Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—Treasure, yen 102,349.00; \$122,000.00.

REPORTS.

- The Japanese steamer *Toyoshima Maru*, Captain Thomas, reports having left Hakodate on the 19th instant, at 6.30 p.m. and experienced light south and south-easterly winds with thick fog to Yamada; thence to port light variable winds and fine weather. On the 22nd instant, at 10.20 a.m. passed steamship *Niigata Maru* off Kawatsu, bound northward.
The Japanese steamer *Kanagawa Maru*, Captain Eckstrand, reports having experienced light S.E. winds to Satano-misaki; thence to port light southerly winds.

VESSELS ON THE BERTH.

- Ascalon*, for New York via ports—Quick Despatch.—C. Illies & Co.
Mary Winkelman, for San Francisco—Mourilyan, Heimann & Co.
Mensaleh, for Hongkong—29th July, at 9 a.m.—Messageries Maritimes Co.
Tokio Maru, for Shanghai and ports—1st August, at 6 p.m.—Mitsu Bishi M. S.S. Co.
Valparaiso, for Havre and Hamburg—Quick Despatch.—C. Illies & Co.

SHIPPING IN YOKOHAMA.

STEAMERS.

- Ascalon*, British steamer, 1,523, Geo. Dinsdale, 1st July.—Hongkong via Kobe, Ballast.—C. Illies & Co.
Euphrates, British steamer, 1,300, Mitchell, 16th July.—Kobe, General.—Smith, Baker & Co.
Godavery, French steamer, 1,049, Du Temple, 20th July.—Hongkong 14th July, Mails and General.—Messageries Maritimes & Co.
Mensaleh, French steamer, 1,276, B. Blanc, 7th July.—Hongkong 1st July, Mails, Treasure, and General.—Messageries Maritimes Co.
Tokio Maru, Japanese steamer, 1,146, R. Swain, 25th July.—Shanghai and ports, Mails and General.—Mitsu Bishi M. S.S. Co.

SAILING VESSELS.

- Ada*, British schooner, 73, Hardy, 23rd July.—Midway Island 19th June, Fish.—Captain.
Alma, American schooner, 35, Tibbey, 17th November.—Hakodate 8th November, Furs.—J. D. Carroll & Co.
Black Diamond, German barque, 585, Boyd, 30th September.—Puget Sound, Lumber and Salmon.—P. Bohm.
Evangelina, British 3-masted schooner, 345, Bell, 14th July.—Takao 25th June, Sugar.—Chinese.
E. von Beaulieu, British barque, 353, 20th November.—Nagasaki 7th November, Coals.—A. Clark.
Hindoo, German barque, 541, J. C. Matthiessen, 26th July.—Nagasaki 16th July, Coals.—Mitsu Bishi M. S.S. Co.
Pearl, American barque, 536, R. Howes, 28th May.—Nagasaki, 20th May, Coals.—Jardine, Matheson & Co.
R. R. Thomas, American ship, 1,332, P. Nichols, 27th June.—New York 1st February, Kerosine Oil.—China and Japan Trading Co.
Sooloo, British barque, 473, Baikie, 16th July.—Nagasaki 4th July, Coals.—Mitsu Bishi M. S.S. Co.
St. David, American ship, 1,535, W. Wallace Frost, 5th July.—New York 26th February, Oil, &c.—J. D. Carroll & Co.
Valparaiso, German barque, 486, F. Mayer, 17th June.—Nagasaki 7th June, Coals.—H. MacArthur.

VESSELS FOR JAPAN.

SAILED.

- Alex McNeil*, 1,133—New York 18th April.
Adam M. Simpson, 1,524—Philadelphia 5th May.
Antelope, American ship, 1,306—New York 20th March.
Antoinette, British ship—Philadelphia 21st April.
Brasos, American bark, 918—New York 4th November.
Edward May (Shanghai), American barque, 928—New York 29th May.
Furness Abbey, American barque, 1,083—New York 12th March.
Gloaming, American ship—New York 6th June.
Handon Hall, British ship—Middlesboro' 19th April.
Hercules, American ship, 1,332—New York 31st May.
J. V. Troop, British ship—New York 17th March.
Mary L. Stone, American ship—New York 9th May.
Normandy, American ship, 1,209—New York 22nd March.
Paul Jones (China or Japan), American ship, 1,257—New York 17th March.
Phineas Pendleton, American ship, 1,525—New York 9th May.

LATEST COMMERCIAL.

IMPORTS.

The past week has been but a very quiet one in business generally. In Yarns, there has been but a small business, and Shirtings have been dealt in only on the smallest scale, with no change in prices. Other Goods show no improvement, and at the time of going to press, there is absolutely nothing doing. Metals continue very quiet, as usual at this time of the year.

COTTON YARNS.

KEROSENE.

During the past week 33,000 cases have found buyers and deliveries have amounted to 24,000 cases. There have been no arrivals: Stocks amounting to about 580,000 cases. The Market remains firm at quotations.

| | PER CASE. |
|----------|-----------|
| Devco - | \$1.71 |
| Comet - | 1.68 |
| Stella - | 1.59 |

SUGAR.

No change to note in quotations, except for Brown Formosas, which appear to continue on the upward line, this commodity having changed hands in small parcels at the advanced figure of \$5.25. There is not much business, however, in any kind of Sugar at the moment.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$8.50 to 9.00 |
| White, No. 2 - | 8.00 to 8.50 |
| White, No. 3 - | 7.25 to 8.00 |
| White, No. 4 - | 6.25 to 6.75 |
| White, No. 5 - | 5.25 to 5.50 |
| Brown Formosa - | 5.00 to 5.25 |

EXPORTS.

SILK.

Trade in this staple has continued on a moderate scale, Settlements for the week being returned at 250 piculs. Prices have ruled fairly steady, but the turn is decidedly in favor of buyers. Arrivals are now beginning to come in more freely, and we should soon have a good and well-assorted Stock

on offer. Export to date (excluding the outgoing *Mensaleh*) is 1,073 bales, against 1,443 bales to same date last year.

Hanks.—Nothing in from Shinshiu yet, and all arrivals are from provinces of Joshu and Bushiu. All Koshu cocoons, at present, seem destined for Filatures. A small daily business has been done, prices closing as at foot.

Filatures.—Transactions still confined to Bushiu and Koshu sorts. A few bales ordinary Shinshiu have come down, and been taken at \$620/630, but good, reliable, even Silks are scarce and wanted. No re-reels are yet to hand; possibly next month will bring a plentiful supply of these sorts as well as of New Kakeda.

QUOTATIONS.

| Filatures—No. 2, 14/18 - | - | - | - | 600 to 610 |

TEA.

More activity has been shown on the part of purchasers since our last report, and Settlements reported give a larger business than has been transacted during the past three weeks, but values are not materially altered. Settlements amount to 4,750 piculs, consisting of the following grades:—Common 450, Good Common 930, Medium 1,385, Good Medium 1,445, Fine 465, Finest 35, Choice 10, and Choicest 30 piculs. Settlements here and at Kobe are 164,236 piculs against 180,322 piculs, at the corresponding date last year. The following are the shipments of Teas to the United States since the 18th instant from this port:—The steamship *Ehrenfels* sailed on the 18th July, took 24,844 lbs., Tea, viz., 212,306 lbs. for New York and 36,141 lbs. for Canada. The American ship *Grecian* sailed on the 18th, took 250,787 lbs. for San Francisco. The steamship *Yorkshire*, sailed on the 19th, took 689,901 lbs., viz., 371,526 lbs. for New York and 318,375 lbs. for Canada. The P.M. steamship *City of Tokio*, sailed on the 20th, took 407,280 lbs., viz., 119,242 lbs. for New York, 110,178 lbs. for Chicago, 40,094 lbs. for St. Paul, 104,354 lbs. for San Francisco, and 33,412 lbs. for Canada. The P.M. steamship *City of Peking* is advertised to leave here on the 3rd of August taking Tea at 2½ cents per lb. gross to Eastern States and Canada and at \$12.00 per ton of 40 cubic feet for San Francisco. The American ship *St. David* is on the berth for San Francisco at the rate of freight \$6.00 U.S. gold per ton of 40 cubic feet, and is promised to be despatched not later than the 20th of August.

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c., is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

THE GREATEST WONDER OF MODERN TIMES

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

For the excellence of our Manufactures, we have received following AWARDS:—

Vienna Exhibition, 1873, Diploma of Merit.
South African Exhibition, 1877, Gold Medal.
Paris Exhibition, 1878, Gold Medal.*
Sydney Exhibition, 1879, First-class Diploma.
Melbourne Exhibition, 1881, First-class Award.

* The ONLY ONE awarded to any Tin Plate Manufacturer.

Sole Export Agent—BROOKER, DORE & CO.,
Corbet Court, London, E.C.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whosoever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 4TH, 1883.

BIRTH.

On July 25th, at Nagasaki, the wife of J. C. HALL, H.B.M.'s Acting Consul, of a son.

WEEKLY NOTES.

THE trial of the Fukushima suspects still continues. The Court, following apparently the official routine of the hot season, rises daily at 11.30 a.m., so that rapid progress is not possible. The examination of the prisoners has not hitherto elicited anything specially worthy of note. They appear to be men whose zeal for reform has betrayed them into a somewhat grotesque breadth of programme, as their scheme includes not only the improvement of Japanese bureaucracy, but also the abolition of Russian despotism and the restraint of British usurpation in India. Such fanatics deserve to be treated as children rather than as serious people. If the Government could procure some guarantee as to the order in which these aspirations are to be developed, the best plan would be to let the patriots follow their bent unopposed. The whole affair, indeed, is but little more than farcical. There has evidently been a combination of some sort, whether illegal

or not remains to be determined, and that being so, the authorities are of course bound to investigate the matter thoroughly. But the interest of the trial to the general, and especially the foreign, public is confined to the fact that it affords the first trustworthy insight into the procedure of Japanese Criminal Courts under the new *régime*. The utmost patience and impartiality have hitherto characterized the conduct of the Bench. Twice the Public Prosecutor endeavoured to have the doors closed on the grounds that the speeches of the prisoners were calculated to disturb the minds of the people, but his objections were wisely over-ruled. The Counsel for the defence alone showed a failure to follow the discreet example of the Bench, but the defence has a difficult part to play and may be forgiven a little impatience. It is, perhaps, premature to express any decided opinion yet, but we are disposed to think that, if the proceedings in this Special Court may be regarded as fairly illustrative of the future course of justice in Japan, much of the mistrust which has hitherto been felt by foreigners will disappear.

By the *Nagoya Maru*, on Wednesday, there arrived, *en route* for San Francisco, the members of the first Korean Embassy that has ever visited a Western State. It consists of an Ambassador, Mr. Min Yon-ik, who is a noble of high rank; a Vice-Ambassador, Mr. Hon Yon-sik; a Secretary, Mr. So Kwan-koin; a Chinese interpreter, Mr. Goriyoto, and four *Attachés* Messrs. Ko Yeitetsu, Gen Kiyotaku, Yukichi Chin, and Gan Kiyu-seki. Of the *Attachés*, Mr. Yukichi Chin has spent several years in Japan, where he was a pupil of the celebrated scholar, Mr. Fukuzawa. The Embassy carries an autograph letter from the King of Korea to the President. Its contents are said to be entirely complimentary, and so far as the public knows, the object of the mission seems to be nothing more serious than a desire to air Korea's newly developed taste for foreign intercourse.

THE Third National Industrial Exhibition, which was to have been held in 1885, has been postponed till 1889. The reason assigned by the vernacular press for this step is that the almost universal stagnation of trade and industry throughout the country, renders it superfluous to hold any public examination into the progress made in these matters since 1831. Whether or no the authorities have been influenced by these considerations, it is not in our power to say, but

the theory is not inconsistent with authenticated facts. A vernacular journal assures its readers that during the past two years the demand for certain classes of textile fabrics manufactured in Japan has diminished so largely that the value of the yearly sales has fallen from 4½ million *yen* in 1880 to 2½ million in 1882. Japan is passing through the same commercial phase which all countries have had to suffer in connection with currency appreciation. There is, indeed, nothing remarkable about the event save the extraordinary criticism it has evoked. We actually find persons who profess to have read and thought, asserting that currency appreciation cannot be real because it is accompanied by commercial depression. Such a confusion of cause and effect is, let us hope, unusual. Were we told that the specie value of *Kinsatsu* had risen twenty per cent. in eighteen months, but that the course of trade remained unaffected by the change, then, indeed, we should be justified in saying that the so-called appreciation was fictitious and partial.

H.E. Iro, formerly President of the Privy Council, returned to Japan by the M.M.S.S. *Tanais* on Friday at midnight and proceeded by special train to Tokujo. The vernacular journals, whose exaggerations, after all, are not so extraordinary considering that in a majority of cases they appear to be obliged to speak from pure conjecture, have been telling their readers that the Government Departments are unusually active preparing to carry out the reforms which Mr. Ito is expected to suggest. It would have been interesting to be told in what these preparations consist. As it is, we are driven to conjecture that in order to get ready for the discussion and inauguration of reforms in general, Japanese statesmen, according to the notions of some of their countrymen, have to go in for a course of training like men who contemplate putting a shot or running a hurdle-race. Meanwhile, it is to be observed that the Mikado has promised the people a Parliament in 1890, and the interval which remains for taking steps to keep that promise is not one day too long. So far as we know, nothing has yet been accomplished. The very nature of the Parliament, whether it is to consist of one or two Houses, and whether or no it will be wholly elective, is still unknown to the public. Rumour points to a partial rehabilitation of the nobility, and we cannot but hope that rumour is not mistaken in this instance. A great deal has been written and spoken about the political

unwisdom of abolishing the *Samurai* and leveling the class distinctions which centuries had set up. But the limits of choice were very narrow. To preserve altogether or to suppress altogether—these were the alternatives. There was no middle route. Had the former been chosen by the Government, the people would never have suffered it. They had long made up their minds that taxation ought to have another object than the support of worthless *fainéants*, and the only fact that seemed to impugn this verdict was the excellent good-sense with which the *fainéants* submitted to be extinguished. Insignificant, however, as were the active functions they personally performed, they had become an integral part of the country's political machinery, and if there has been no break down since their removal, it is because their places have been virtually filled by others. The question that now arises is whether the Government is to be carried on without an aristocracy, or anything resembling one, after 1890, and it must be confessed that the experiment seems somewhat hazardous. We regard this as one of the most interesting points in the immediate outlook. It was probably decided, in the main, before Mr. Ito undertook his last tour, and if, as is reported, his studies has been for the most part confined to Germany and England, we may conjecture that the formation of an Upper House finds a leading place in the schemes he brings back with him.

THE long deferred river festival in Tokiyo took place on Wednesday, the 1st instant. The attendance was not as large as usual nor could the display of fireworks compare with that of former years. Whether two postponements had proved too much for the vitality of the affair, or whether the pleasure-seeking portion of the Tokiyo community had gone in search of cooler quarters, or whether the dullness of commerce damped the public's spirits, it was universally agreed that a less successful *Kawa-biraki* had not been witnessed for many years. We are inclined to suspect that all fêtes of this sort have seen their palmiest days in Japan. They cannot survive the spirit of hard practicality which has been imported with Western civilization, and which is daily driving out the romance of old Japan. On the other hand, the advantages which the Sumida river offers for evening picnics remain to be recognised. Let the summer be ever so hot, there is always a cool breeze on the river at sunset, and considering that a large boat (*yakata-bune*)—none of your low-roofed things, in which a man can never sit upright, but a spacious lofty arrangement permitting the comfortable use of chairs and tables—can always be procured at Shinbashi, while the conveyance of provisions by train from Yokohama presents no difficulties whatsoever, it has always seemed strange that the neighbourhood of Rijogoku is not a more favorite resort. An appetite may be found there as well as a refreshing breeze, and the drift home with the tide by moonlight is not the least enjoyable part of the affair, always provided that the boatmen

are compelled to go round by the sea—a route which they never voluntarily choose—instead of creeping through the narrow, devious and odoriferous canals which lead from Shinbashi to the river.

At a public meeting held in the Yokohama United Club on Monday afternoon it was unanimously resolved that a farewell entertainment should be given to Sir Harry Parkes before he leaves Japan for Peking, and further that he should be presented with a memorial to which not only the present foreign residents of Japan, but also all those who have at any time resided there, should be invited to subscribe. The chairman, Mr. A. J. Wilkin, told the meeting that Sir Harry Parkes had expressed a wish that all unnecessary expense should be avoided, but this suggestion was quietly put aside. In most matters the community of Yokohama would be willing to defer to Sir Harry Parkes' wishes, but the case in point is eminently an exception. The desire, indeed, was characteristic, and, coming from Sir Harry, signifies something more than an empty formula; but certainly this is an occasion on which a little selfishness may be forgiven. It is not often that the people of Yokohama have an opportunity of doing anything which gives them so much pleasure. Sir Harry's return from Hakodate is expected about the 13th instant, and his departure for China will probably take place within a fortnight from that date.

NOTES.

A CORRESPONDENT asks for information with regard to the possibility of travelling without passports on the Tokiyo-Takahashi railway. His question is very pertinent, but we do not find ourselves in a position to say anything positive on the subject. There is certainly no reason why the treaty limits should be extended simply because a Japanese company has constructed a line bringing Kumagai within two and a half hours' ride of Tokiyo, though it is equally certain that the irksomeness of restriction on travel increases with the facilities for avoiding them. We presume that the system pursued here will be the same as that followed on the Kobe-Otsu line—persons asking for tickets to places beyond treaty limits will be required to hand in their passports to the booking clerk. A departure from rule in the case of a Tokiyo line of railway would of course necessitate similar action everywhere. There is not much, however, to attract tourists in the country opened up by the new road. The scenery is monotonous, and there are no hills offering escape from summer heat. Foreigners who use the line will probably be, for the most part, tourists to Nikko or Ikaru, and to them the necessity of procuring passports will not be a hardship. It may be because the prospects of such traffic are very small that the Directors of the new line have not thought it worth while to advertise the opening or the details of service in the foreign local press, but the neglect does not indicate much solicitude on

behalf of public convenience. Were the matter in the hands of the Tokiyo-Yokohama Railway authorities it would doubtless be differently managed.

A "CURIOUS SURVIVAL" is shown in one of the practices of the London Mint as exemplified in the thirteenth annual Report of the deputy master of that institution. The facts are fully set forth in an appendix to the Report by Prof. Chandler Roberts, who has recently and successfully advocated the adoption of the decimal system in the bullion transactions of the Mint. In order to make the matter clear, it may be well to state that the Troy pound, still used in England for weighing the precious metals, is believed to have been derived from the Roman weight of 5759.2 grains, the 125th part of the large Alexandrian talent; this weight, like the Troy pound, having been divided by the Romans into 12 ounces. The earliest statute of the kingdom in which the Troy weight is named is the 2 Henry V. st. 2, c. 4, but the Troy weight is universally allowed to have been in general use from the time of King Edward I. The most ancient system of weights in England was the Moneyer's pound or the money pound of the Anglo-Saxons, which was continued in use for some centuries after the Conquest, being then known as the "Tower pound," or sometimes the Goldsmith's pound. It contained 12 ounces of 450 grains each, or 5,400 grains, and this weight of silver was a pound sterling. The Tower pound was abolished in 1527 by a statute of Henry VIII., which first established Troy weight as the only legal weight for gold and silver, and from this time to the present the English system of coinage has been based on the Troy weight, the Troy pound containing 5760 grains.

The bullion transactions of the Mint have hitherto been based on an Assayer's weight termed the "carat pound," the final division of which corresponds with the number of grains in the Troy pound, and side by side with this system a curious method of expressing the "standard" or composition of ingots or coins of gold and silver has been retained until the present year. For instance, the ordinary conception of the composition of a sovereign would be that it is an alloy or mixture of the two metals gold and copper in definite proportions, and the most simple way of expressing its contents would be to describe them as consisting of 91.66 per cent. of gold and 8.34 per cent. of copper. An assayer or bullion dealer, on the other hand, using the old system, would simply consider the composition of the coin to be gold of "standard fineness," that is to say containing two carats of alloying metal in the pound; and in dealing with any particular alloy of gold and copper would in no way regard its centage composition, but would consider it as being so much "better" or "worse" than the one definite and legal standard, according as it contained more or less of the precious metal. The French 20-franc piece, which contains 90 per cent. of gold, would thus be described as

"worse 0 carats 1½ carat grains," and the Austrian ducat, which contains 98·61 per cent. of gold, as "better 1 carat 2½ carat grains." The cumbersome nature of this system is evident; it has the disadvantage of being unintelligible to those who employ the decimal system, and who are therefore in the habit of mentally referring to pure gold as 1000. It is even found wanting in clearness by many who are conversant with the ordinary operations of coinage and bullion transactions generally. For instance, the meaning of "worse 0 1½ + 1" as the assay report of an ingot is at least obscure, while the equivalent statement that the standard fineness of the ingot is 900 at once suggests that 1000 parts of the metal contain 900 parts of gold.

Nature, from whose columns we borrow most of this information, goes on to remind us that the ancient system of reporting the results of assays possesses, however, many points of interest, and Professor Roberts adds a few details respecting it, taken from a work by Snelling, an authority on the computation of the value of bullion, who, writing in 1799, observes that "by the word silver we understand not only the metal so-called, pure and unmixed, but also when in a mass with copper; and if but one-half, two-thirds, or any other proportional part of it be silver, yet the whole bears that name. The same is to be understood of gold, when by itself, or in a mass with silver and copper together, or with either of them alone." "This is the reason that inquiries are not made, what quantity of fine gold or fine silver is contained in any mixture, which seems to be the most natural inquiry; but how much standard." Thus it is that the Assay Master, in reporting the result of an assay, does not give the absolute fineness or the quantity of fine silver or fine gold present, but only the relative quantity or fineness, this is, how much the mixture is more or less than standard. In the case of gold of 20 carats fine (or 20 parts of pure gold in 24 parts of the alloy) the assayer puts down mere symbols, which, as in his other descriptions, are caviare to the general.

The point in favor of this antiquated system in that the quantity of "betterness" or "worseness" in an ingot being added to or subtracted from the weight of it, gives the quantity of "standard metal contained in it," and that therefore the "betterness" or "worseness" affords a ready means of determining the amount of copper or gold required to standardise the whole. Further, if a number of ingots of varying weights and fineness have to be dealt with, a similar result will be arrived at by taking the algebraical sum of the several products of their weights and "betterness" or "worseness." These advantages, however, apply to individual calculations, and become unimportant when standardizing tables adapted to the decimal system are available. In a letter to Mr. Fremantle, Prof. Roberts advocated the abolition of this old system of carats and grains and the adoption of the decimal

system. This has accordingly been carried into effect. Gold of the value of two millions sterling has recently been imported into England for coinage, and the simplicity and accuracy of the new system has been abundantly demonstrated.

As *Nature* says, the facts above stated may seem comparatively unimportant in themselves, but the Mint may at any time be called upon to coin (as was the case in 1872) fifteen millions sterling of gold in a single year, and extreme care has to be taken to insure accuracy in the standard fineness of the metal. It is curious that the old system described above should not have given place before now to that which has long been adopted in other countries.

ACCORDING to the *Choya Shimbun*, the port of Yang-hwa-Chin in Korea is an excellent one. Its inhabitants have ceased to exclaim against its being opened to foreign commerce, the advantages of which they are beginning to recognize. They are said even to desire that the villa belonging to the Dai-on-Kun, in the vicinity, be placed at the disposal of the Japanese and American Ministers on their way to and from the capital.

A KOREAN Embassy to the United States seemed, a month ago, one of the least likely events that could be predicted, yet it appears that the Ambassadors, three in number, are already on their way to San Francisco. What the object of their mission may be nobody appears to know. It can scarcely be a desire to obtain more favorable tariff terms. Their difficulty in this respect is not with the Cabinet of Washington, but with Governments which do not care to see their nationals engage in a commerce where large discriminations are made in favour of Chinese and Japanese subjects. Under any circumstances Korea can't hope to get better terms by going to America to ask for them than she would have obtained from General Foote upon the spot. The Ministers of the young King have had no reason to complain of the treatment accorded them by the first foreign Minister to Korea. General Foote has lost no opportunity of showing them that foreign relations may be conducted with courtesy and liberality even when one of the parties is entirely without experience. Had the Envoys been chosen from the chiefs of the anti-progressionists we should have conjectured that Korea, acting, perhaps, under Japanese advice, was about to inaugurate the plan which proved so successful in this country—namely, that of administering the physic of foreign travel to old-fashioned sceptics who refused to believe that Japan had anything to learn from the Occident or anything to gain by extending the circle of her national acquaintances. But the head of the Mission is Mr. Min Yong-ik, Adviser to the Board of Foreign Commerce in Korea, who so far from holding Conservative doctrines, gets the credit of being an advanced Liberal. After all, then, the solution of the enigma may be that the Korean statesmen mean to lose no time in

enjoying the opportunities they have helped to create, and that their trip to America is nothing more than a trip. They will certainly make a sensation in New York, though how they are to communicate their ideas to the good people of the United States we are unable to conjecture. Possibly they have made some double-barrelled arrangement for interpreting similar to that resorted to by General Foote.

THE sober *Nichi Nichi Shimbun* mentions a curious incident of His Excellency Matsukata's last visit to Kiushiu. When entering Hida, in the province of Bungo, a crowd of persons (presumably young) of both sexes, welcomed his arrival in the old style—kneeling and brow bent to earth. Naturally, the Minister inquired the reason of such a demonstration, and was informed that the obeisance was a testimony of the gratitude of those present for their being. This means that, had it not been for a beneficent piece of penal restriction introduced into the administration of the district by Mr. Matsukata, shortly after the Restoration, the extraordinary ceremony could not have been performed at all. *Le combat cessa faute de combattants*, says Corneille's Cid. If infants are not allowed to be born they cannot well in maturer years participate in a public demonstration.

SEA-BATHERS in Yokohama may congratulate themselves on the practical immunity from marine monsters which is enjoyed in this neighbourhood. That other places, not very far away from us, are, at times, less fortunate in this respect appears from a report which reaches us from Nagasaki to the effect that, within the last few days, a shoal of large sharks entered the harbour there, and that, as a consequence, all bathing has been put a stop to.

THE birthday of the Emperor of China Kwang-su (the Continuation of Glory) was celebrated on Tuesday by the Chinese of the Settlement in the usual manner. The young Emperor now enters upon the 13th year of his age, having succeeded to the Dragon Throne whilst quite a child, on the death of his predecessor Tung-chi, who died of small-pox in 1875.

It would be premature to comment as yet upon the proceedings at the trial of the Fukushima suspects, but the case has proceeded far enough to inspire a very strong hope among foreigners that the Government will see its way to treat the prisoners with the greatest possible leniency. They are evidently men of noble impulses and uncommon ability. That they transgressed the lines of legitimate agitation seems to have been the result of pardonable impetuosity rather than of criminal intention, and it would be difficult to define clearly the purpose of their association, if indeed it had any definable purpose. The occasion, so far as we can judge, is eminently one for clemency. The unfortunate men have already suffered severely, and although it scarcely seems permissible to mention prospects of popularity in the same breath with the

dictates of Justice, we cannot but think that a conciliatory attitude would go quite as far towards the preservation of the public peace at this juncture as the most rigorous measures of repression.

THE prospects of the Tokiyo-Kumagai Railway appear to be of the rosiest description. The receipts at the booking office at Ueno, on Friday morning, the day when the line was opened, were 110 *yen*, an amount which was not regarded as particularly satisfactory. On Sunday, however, the number of passengers reached a thousand, and we now learn from the *Hochi Shinbun* that the receipts on the 30th ultimo were 700 *yen*, and that the terminus at Ueno is blocked up with immense quantities of goods waiting for transmission. It is plain that the Company will soon be obliged to increase the number of trains. Two passenger, and one service, train per diem will be quite insufficient to satisfy the public requirements. The directors may confidently expect to monopolize all the passenger and goods traffic of the district as they are not obliged to compete with any water carriage.

AMERICAN holidays have of late been greatly enlivened by one of the most ingenious and characteristic of Japanese inventions. No Republican jubilee is now considered complete without a display of the clever day-light fire-works which have long been familiar to visitors and residents in this country. The fourth of July just passed was celebrated in hundreds of towns with the aid of pyrotechny derived from these outlying islands of Asia. The Chinese "cracker" has for generations been the American small boy's approved medium of patriotic expression, and now the more complicated and artistic contrivances of Japan have become essential to the fulgurant fancy of trans-Pacific children of larger growth. New York dealers in these articles state that more than fifty varieties were sold, in that city alone, for the recent national anniversary. The prices in that market were \$6.25 for the largest single specimens, and \$18.00 per dozen for the smaller. When combined in set pieces, however, they sometimes sold for \$250.00.

An impression appears to prevail in certain quarters,—or, at least, an attempt is made to disseminate the impression,—that the action of the United States authorities with respect to adulterated teas is directed particularly against the exportations from this country. This is by no means the case. The apprehensions of American merchants were excited chiefly by the knowledge that large quantities of impure tea were stored in England, awaiting the opportunity for transportation to other regions. Of these worthless wares, it is next to impossible that any could have been sent from Japan. All that goes hence is landed at San Francisco, and reaches no markets more distant than those of the Western continent. Of course the recently established rules apply as well to deleterious goods arriving in California as to those admitted

in the Eastern Atlantic ports; but it is an error to suppose that any legislation was originally instituted with the purpose of excluding or retreating the Japanese product. The precautionary measures were due entirely to the fear of derangement of the New York trade by a sudden influx of spurious tea, known to have been lying for years in the bonded warehouses of Great Britain.

THE resolutions adopted by the Public Meeting at the United Club, on Monday afternoon seem to us most felicitous. There are doubtless many considerations which render it expedient that this community should proceed with extreme circumspection in a matter of this sort; but they are considerations of a somewhat subtle nature, scarcely calculated to have much weight as against the universal and strongly felt desire to convey to Sir Harry Parkes some token of esteem more substantial and enduring than a farewell party. Nothing could be happier than the idea of getting over this difficulty by inviting former residents of Yokohama, wherever they may be, to add their names to the list of subscribers. The testimonial will thus be freed from any questionable features it might otherwise have presented, while at the same time it will derive additional value from the widened scope of its signification. We venture to suggest that since the presentation has assumed these large and cosmopolitan dimensions, the Japanese also should be given an opportunity of joining. There is no valid reason why they should be excluded, and we imagine that their coöperation would be a point of much value in the eyes of Sir Harry Parkes himself.

THE latest number of the *Maru Maru Chimbun* has a cartoon representing three pools,—one on the right, the other two on the left—marked Hongkong, China, and Japan respectively. In the centre is a masked man, riding on the back of a large tortoise, and holding in his left hand a fishing rod, and in his right a box inscribed "Astonishing Reform." His attitude is apparently intended to allegorize the retired life of old Urashima Taro, the Rip van Winkle of Japan, whose love of fishing enabled him to hold intercourse with supernatural beings. The angler exclaims:—"I am now on the point of starting from the Dragon Palace at the bottom of the ocean, to return to my own country. My voyage has given me immense pleasure, I have passed my days in amusement; but alas, I must no longer wander. I must return and exhibit the contents of my marvelous box at home." The intention is probably to suggest that His Excellency Ito, Privy Councillor, who is expected shortly to arrive in Tokiyo from Hongkong, devoted a great deal of his time to diversion, whilst sojourning in Europe, and, in order to obscure the fact of his revelry, intends to open his box and show what miraculous reforms ought to be introduced into the Japanese Government.

THE *Choya Shinbun* mentions that the jinrikisha was first invented in 1870. Its popularity was

so great that there were 140,400, 157,000, and 177,000 of these vehicles in the Empire in 1880, 1881, and 1882, respectively. Since the recent introduction of coaches and railways, in the provinces, and tramways in the capital, the number of hand-cabs plying has rapidly diminished.

PASSENGERS by the *Nagoya Maru* which arrived here on Wednesday from Shanghai were His Excellency Ming Yong-ik, Korean Ambassador to the United States and his official suite and attendants. The Envoy carries autograph credentials from his Sovereign to the President, and expects to make a stay of some duration in the territory of the Great Republic.

We read in the *Rising Sun* and *Nagasaki Express* that a malicious attempt has been made by some of the crew of the American ship *Wildwood* to burn that vessel in Nagasaki harbor. Some of the sailors having refused duty, the U.S. Marshal went on board to arrest them, and upon approaching the fore hatch saw flames issuing from the hold. The alarm was immediately given, and a boat was sent with all speed to the *Monocacy* for assistance, but before she returned the fire had been extinguished. Upon examination, it was found that one of the cases of kerosine with which the vessel was loaded was burnt completely through, and several other articles were badly burnt. A strict enquiry is being held at the U.S. Consulate. The *Wildwood* had almost the whole of her cargo on board at the time of the fire.

PERUSING the ill-judged and ill-digested comments recently made by "Sinensis" in the columns of *Nature* with regard to the comparative advantages of Japanese progress and Chinese immobility, and reading, at the same time, the astonishing records of almost brutal immorality which reach us from the Middle Kingdom, we are compelled to confess that no man ever proposed to himself a more unworthy or mischievous task than that of applauding, however indirectly, the barbarous inhumanity of the social and criminal codes which obtain in the latter country. Among daily occurring abuses of authority and outrages on the rights of the subject, none seems to call more urgently for reform than the case of females sold by their parents into families where wives for the male children are required. Commercial transactions of this nature, so far from being confined to marriageable girls, generally involve the transfer of children, sometimes of mere infants, the ruling idea being, evidently, one of economy. The little girl passes into the hands of strangers at an age when a mother's care and affection are most needed to develop the finer instincts of her nature, and from that time forth, though not a slave in name, she is the inalienable property of her purchasers, who make it their business to recoup their original outlay by forcing her to perform every species of labour. Possibly she may be fortunate enough to find favour in their eyes, but the odds are terribly against her, and

in nine cases out of ten, aye, in ninety-nine out of a hundred, the sharp misery of her lot is never softened by any touch of pity or lightened by any ray of hope. To what devilish atrocities she is sometimes exposed will be understood from the following story, which forms the subject of a memorial from the Province of Hunan recently published in the *Peking Gazette*:—"The child in question was six years old, and had been bought or adopted at the age of three. Being sickly and suffering, she had incurred the hate of her mother-in-law, and kicks and cuffs were her daily bread. The nature of the complaint from which she was suffering had left her clothes in a soiled condition, and by way of punishing her for what was probably an involuntary offence—if in a child of six it could be called an offence at all—her cruel mistress took a piece of lighted joss-stick and deliberately seared her in several places on both arms. The girl screamed, as well she might, and by way of stopping her cries the inhuman fiend next got hold of a pair of hot tongs and burned the skin and flesh about the head and neck. This treatment had the not unnatural effect of making the girl scream more and more, and her tormentor, getting more and more angry, resolved to put an end to her. She seized a wooden scoop, dipped it into a pot of boiling water and poured the contents over the head neck and chest of the poor wretch, whose cries were then soon effectually silenced for ever."

Our readers will be prepared to hear that the perpetrator of this atrocity was condemned to death or life-long imprisonment. The penalty actually imposed upon her was a fine of three mace, seven candareens, and five cash, that is to say, something less than half a crown. The *China Mail*, from which we extract these particulars, says that "nominally the penalty for killing a child, grandchild, or other young person *in potestate*, if done wilfully and maliciously, is 100 blows and banishment to a short distance—if done by way of correction or for disobedience there is no penalty at all—but in this case the offender, being a woman, is entitled to commute for a fine." It may be presumed that even in China such cruelty is condemned by public opinion, and in fact, the case under consideration led to the presentation of a memorial praying for an amendment of the Criminal Code in the sense of imposing severer penalties on the perpetrators of such acts. Doubtless it would be well that people who burn children to death should be taught to remember that the gratification of their fancy entails something worse than the payment of half a dollar, but even if their punishment were increased to crucifixion, the evil would remain virtually without remedy. That evil is that girls should be placed in such a position at all. The criminal code may extend to them any protection it pleases, but it can never make their lot tolerable. Searing with lighted joss-sticks and nipping with red-hot pincers may go on with entire impunity so long as these processes stop just short of murder. The evil, too, is self-productive. Girls who have passed through such a

terrible apprenticeship will not be troubled by many merciful impulses when their own turn comes to educate unfortunate children who are to serve ultimately as wives for their sons or brothers. Let it be recorded to the honor of Japan that among the very earliest reforms which succeeded the abolition of feudalism was the enactment of a law making all sales of females, whether children or adults, a criminal offence. We have never heard that such atrocities as that described in the *Peking Gazette* were perpetrated here. Only to those who have studied with more than common care the history of Japanese society before the Restoration of 1868, is it known how largely the provisions of the written law were supplemented by the action of tribunals over which the people themselves presided. Whatever restraining influence these may have exercised, the fate of children and adults sold into virtual slavery doubtless presented many revolting features, and there could be no better evidence of Japan's ability to appreciate Western codes of morality, than her speedy and effectual abandonment of so inhuman a proceeding. China, meanwhile, remains as far as ever from any radical reform in this direction, and yet there are intelligent writers who venture to commend the deliberation of her movements, and to draw favourable auguries from her dogged adherence to systems which suffer the most barbarous abuses to flourish unimpeded.

There is also another side to this terrible picture. Chinese parents in straightened circumstances must know well, when a female child is born to them, that in all probability long years of misery and pain are before it. The mother, perhaps, has herself served the cruel apprenticeship which too often precedes marriage, and the notion that a similar fate awaits her child may be intolerable to her. What wonder, then, if she seriously debates with herself the expediency of putting an end at once to a career destined to so much unhappiness? Chinese historians tell of a time when every morning before dawn carts traversed the several districts of Peking for the purpose of removing any living or dead infants whose parents wished to get rid of them, and travellers have described harrowing details of infanticide as practiced in other parts of the empire. But we have never read anything sadder or more inhuman than the following record of things as they actually are at present in Hongkong (we quote from the *China Mail* of 21st ultimo):—

A fortnight ago yesterday, in the afternoon, Police Sergeant Butlin was in one of the narrow, reeking, slums of Taipingshan. Apparently he was on the look-out for gamblers. He entered what he knew to be an uninhabited tenement, and found himself almost in darkness. Round about him, however, he could dimly discern empty coffins, some lying on the floor and others standing on end against the walls. Thinking that possibly he might make some discovery, the Sergeant groped about and presently noticed what looked like a bundle of clothes lying alongside one of the coffins. He touched it, and finding that under the clothes there was a body, he hastened to an adjoining house and obtained a light. Then he ascertained that the object which had specially attracted his attention was a Chinese girl, six or seven years of age, in an extreme state of exhaustion. She was so weak, or so ill, that she could neither speak nor make signs. The only piece of clothes she was wearing was a jacket, but she was lying rolled up in a portion of an old red blanket, with her knees almost up to her chin. There was no food in the room. It was a

close, damp place, with an earthen floor. The Sergeant removed the child to the Civil Hospital, where it died three or four days afterwards.

An inquest was held concerning the death, and resulted in some rather extraordinary disclosures being made. A Chinese undertaker stated in evidence that a woman had agreed to pay him \$4 for allowing the child to lie in the room, and for burying her in case she died. The following conversation then took place between the Coroner and witness:—

The Coroner asked whether the \$4 would include the cost of a coffin.

Witness—Yes. The price of such a coffin as she would require would be about \$2.40. The \$4 would cover all the expenses of the coffin and burial at Mount Davis.

The Coroner—If the child got better would it have been taken away and nothing paid?

Witness—That would be my chance. It would only remain in the place a few days.

Do they ever recover?—Yes, sometimes they do get better there.

I suppose they are never brought unless they are pretty sure to die?—Yes.

How long have you had this house?—Two months.

And during that time how many have been taken there?—Three, including the deceased.

And have any recovered?—No, only some is a house I had before.

Were they all children?—Yes.

Female or male?—Either.

What did you get for the other two?—One three dollars, and one five dollars. This is about the amount I usually get, the lowest price being about two dollars. We do not always get such jobs, only our friends bring them to us. I used to carry on the same business in Pound-lane.

What is about the average per month of children you get thus?—Only just enough to cover the expense of the house; we very seldom get these cases.

Chi Achai, hawker, living next door, gave evidence that the child was brought to the house and left by two women.

The Coroner—How many children have you seen taken to this house?

Witness—During the two months the same owner has had it, I have seen three, including the deceased.

How long does it usually take for them to die there?—About three or four days.

And after that are they taken out in coffins and buried?

—Yes.

They are not taken there unless they are very ill, are they?

—No.

They don't require any food there, do they?—I don't know; when they are taken there it is supposed that they will die, and that there is no hope of their living.

Do they make any noise there?—No, I never heard them cry.

Is anything given them to keep them quiet?—I do not know.

Does the undertaker carry them away?—Yes.

Medical evidence, based upon a *post mortem* examination, was given at the inquest, showing that the child actually died from disease, but Dr. Wharry expressed an opinion that death was accelerated by the treatment the deceased had received. The jury returned a verdict of "death from natural causes," and the two women concerned in the case on being brought before the Magistrate on a charge of endangering the life of the child by exposing and neglecting it, were discharged. So ended the matter.

It is impossible to conceive a mother more completely dehumanized than the woman who can deliberately abandon her sick child to a lingering death under such circumstances. We have no heart to conjecture the thoughts with which the life of a woman possessing the ordinary maternal instincts must be haunted after such an act. But there can be no second opinion about the social conditions of a country where these things are possible. Humanitarians may maintain that even with this knowledge of Chinese civilization we have no right to compel reform. It is a curious problem.

REPORTERS of American newspapers have discovered the presence in that country of numerous agents from China, who are engaged in purchasing war material on an extensive scale. Large orders, it is declared, have been distributed among the principal manufacturers of arms and ammunition. By instructions from the Chinese authorities, the details of these transactions are kept as secret as possible. It is nevertheless stated, "on assured authority," that eight thousand stand of rifles, with all accompaniments, have been shipped by one firm to Canton, *via* San Francisco, and that much larger orders are

in rapid preparation. Two thousand cases of cartridges are also on the way to the scene of possible hostility. Furthermore, we read that at least two of the great New England factories will be exclusively occupied for several months in supplying the immediate demands of the Peking government. Cannon have been purchased, but not in great quantities, the belief being that these weapons will be sought chiefly in Germany. Efforts are made, however, by the rival ordnance establishments of the United States, to secure a portion of this trade; and their representatives are said to be as busily occupied in China as are the purchasers of small arms in America. One prominent merchant gave a writer of the *New York Sun* the rather remarkable information that, according to his experience, war munitions for China "are usually bought by mandarins through missionaries."

The estimate placed upon China's military and naval resources by the best American judgment may be seen in an article which we reproduce elsewhere from a leading New York journal. It is needless to say that we neither accept nor dispute the writer's opinions, but present them merely as interesting and appropriate in the existing condition of affairs. As to the war-making capacity of the neighbouring empire, residents in the East will probably prefer a more direct authority than the opinion of a New York newspaper. Upon one point, however, we may be guided to some extent by the utterances of our American contemporary. Questions have been raised, not for the first time in this locality, concerning the right of citizens or officers of the United States to take service under the Chinese Government, in the event of war. It will be observed that such engagements are incidentally spoken of, almost as matters of course, and that no idea of any objection thereto seems to be entertained. Indeed, it is expressly anticipated that "the navy of the Celestial Empire, when placed on a war footing, will be substantially a European force." That the word "European" is used in a general sense, including Americans, is obvious from the context. It is evident that no interference with United States citizens who choose to fight under the Dragon banner is looked upon as probable, from the New York point of view. Our own impression,—which we are unable at the moment to verify by reference to the latest enactments,—is that all Americans actually engaged by a foreign power previous to, or at the time of, a declaration of war, may legally take part in hostilities against any other nation, even if the latter be at peace with the United States. To join the forces of a belligerent after hostilities have commenced, may be, and probably is, unwarranted by the laws of the Republic; but we are by no means convinced that the rule of prohibition would be stringently enforced, unless some special influence could be brought to bear to secure the non-participation of the putative offenders.

The French in Tonquin show no signs of activity. They seem to be waiting quietly until

the arrival of reinforcements enables them to assume the offensive, though their ability to undertake any extensive military operations at this season of the year is very questionable. The heat is described as so intense that it has not been found possible even to review the troops recently arrived from Saigon. A reconnaissance undertaken by the garrison of Hanoi in the early part of July failed to unmask the enemy and resulted in the death of six French soldiers from sun-stroke. Latest intelligence is dated July 17th, at which time 1,400 troops had arrived, viz., 1,200 from Saigon and 200 from New Caledonia. The reinforcements appear to have been distributed pretty equally between Haiphong, Nam-dinh, and Hanoi. There can be no doubt that they will be totally insufficient to attempt anything decisive. The country, though traversed by rivers and canals, seems to be virtually without roads, and if the Tonquinese really intend to resist a military occupation, France has her work cut out for her. Throughout the first half of July the garrison at Haiphong appears to have been virtually in a state of siege. The Annamites and Black Flags were known to be assembled in force in the vicinity, and the ability of the garrison to assume the offensive may be gathered from the fact that a feeling of security was entertained when the proximity of the transports was definitely ascertained. The citadel of Nam-dinh had to sustain an attack on the 11th of July, but it was a very desultory species of fighting, the record being two hundred shots fired and no casualties. The new Commander-in-chief, General Bouet, and his staff are chiefly occupied in superintending the erection of additional fortifications at Haiphong and Hanoi, and in making roads at the former place. The opinion of outsiders is to the effect that it will be impossible for the French to take the field before the end of the rainy season, late in September, but on the other hand, it is not thought likely that General Bouet will remain inactive for so long a period after the arrival of the reinforcements.

At 3 a.m. on the 1st instant a fire broke out in a shed adjoining the temple of Gokokuji, at Odzuka, Koishikawa, Tokiyo, and subsequently spreading to the main edifice, completely destroyed it. We extract from the *Hand-book for Central and Northern Japan* the following account of this celebrated temple:—

The Buddhist temple of Gokoku-ji, though the actual buildings are now falling into decay, is worth looking into if the visitor is in the neighbourhood, as the extensive grounds, the beautiful situation, the perfect quiet, the magnificent trees, and the now silent belfry, will call up before his mind the image of days when Buddhism was still a mighty power in the land. Founded in 1681, it was taken under his special patronage by the reigning Shōgun Tsuna-hoshi, who caused a variety of useful medicinal plants to be sown in the temple precincts. Azaleas (which bloom early in May) line the broad flight of steps by which the enclosure of the main hall is reached, and fine cherry-trees are dotted about the grounds. The *hon-san* is a Kwan-non of agate said to have been sculptured by nature. The chief treasure of the temple is a gigantic *zō-monō* of Shaka's "Entry into Nirvana" by Kano Yasunobu (b. 1613, d. 1685), which is shown during the month of April. E. of the Main Hall is a bronze sitting figure of the Buddha, on a stone pedestal in the open air. It is about 8 ft. high, and composed of bronze plates soldered together, the largest casting being a plate about 3½ ft. by 3 ft. The head is in 2 pieces. Close to this is a little bronze pagoda of the

shape called *ta-kō-tō*, "great treasure stūpa," originally intended to contain the relics of a saint. Next to Gokoku-ji is the small shrine of Go-ji-In, which, though insignificant in itself, must be noted as the 25th of the "Thirty-three Places" sacred to Kwan-non in the Eastern Provinces. The idea of these "thirty-three places" is taken from a similar number of shrines in the provinces surrounding the old capital, Kiōto, the pilgrimage to which was instituted by the Emperor Kwa-san, who after losing his tenderly loved consort, abdicated in the year 966, and, becoming a monk, gave himself up to devout practices. One of them, undertaken in obedience to a vision, was a pilgrimage to the temple of Fudaraku-ji at Nachi, in Ki-shū, and thence to thirty-two other shrines dedicated to Kwan-non, ending with that of Tanigumi-dera, in Mino.

THAT there should have arisen any necessity for the disclaimer made by our correspondent "Employé" is to us a matter of considerable surprise. "M.'s" letter, to which "Employé" replies, was couched in very strong terms, but if it was written under the influence of an impression such as that now referred to by "Employé," we cannot but endorse every word of it, always excepting the unworthy motives it attributed to the latter gentleman. It seems almost ludicrous to suppose that any respectable person could be found to pen, or any newspaper to publish, remarks about the cleanliness of ladies' dresses! "Employé's" first letter was doubtless open to such a construction, but that it should be so construed seemed to us impossible and still seems extraordinary. The fact is that, quite independent of the Maharajah's party, there were two or three individuals who came to the funeral to amuse themselves, and to whose costumes "Employé's" remarks were not inapplicable. Truly the misconception would be a laughable episode were it possible to regard lightly even an erroneous charge of such extreme rudeness against this journal and its correspondent.

THE counsel for the defence of the Fukushima suspects cannot be congratulated upon the part they are reported to have played at the sitting on Wednesday. Toby, in his "Essence of Parliament" tells of two honorable members who had prepared several smart things to say about a certain bill which was unfortunately relegated to the ranks of the "slaughtered innocents." The would-be orators were much disappointed, but consoled themselves with a hope that they might "get off" some of their *facétie* on another, though wholly inappropriate, occasion. Somewhat similar seems to have been the case with the counsel for the Fukushima prisoners. They had prepared a thunderbolt to launch at the head of the Judge, and when their chances of launching it appositely seemed to be growing fainter, they let it off in desperation without any regard to its utility or propriety. Both Judge and Assessors were conducting the case with admirable candour, patience, and impartiality, when one of the gentlemen engaged for the defence appears to have risen and solemnly warned the Court that "as the case had an important bearing upon the abolition of exterritoriality, the proceedings had better be conducted with the utmost frankness and publicity." Such exhibitions dispose us to doubt whether the Japanese in general have any serious sense of responsibility. If there were anything against which counsel ought

to have protested strongly, it would have been an attempt to import political considerations into a case of this sort. It is very praiseworthy that the Japanese should spare no efforts to inspire public confidence in the impartiality and thoroughness of their law courts with a view to recover their judicial independence, but that they should profess to make this their principal object is the best way to defeat their purpose. Justice inspired only by such a hope is a very untrustworthy sort of affair. The language of the counsel for the defence was not alone injudicious, but an open insult to the integrity and dignity of the Court. We only regret that the Judge did not administer an immediate and unqualified rebuke. It is, perhaps, too much to expect that Japanese Judges should yet be able to combine with patience and impartiality that unwavering sense of what is due to the representatives of Justice, which, we are happy to think, distinguishes the English Bench above that of all other countries. The disgraceful license permitted to an American barrister in the Da Rosa case is still fresh in the minds of the public, and we look with impatience for the time when counsel venturing upon such courses will receive the punishment they deserve. A Japanese lawyer who can permit himself to warn a Court of Law that the penalty of partiality and concealment will be a failure to enlist foreign confidence, shows that he has no adequate conception of the foundations upon which alone Justice can solidly rest. These are the things that sometimes inspire doubts in the minds of those who truly wish Japan well. They are of a piece with the spirit which induces her to make the employment of Western judges in her Courts contingent on the recovery of a certain portion of her jurisdiction over foreigners, instead of taking that step at once in the Courts over which she has entire control and by which cases where foreigners are plaintiffs have always to be decided. We want to see her do what is right, never mind whether it pleases or displeases foreigners. One honestly independent effort is worth a dozen conditional displays of virtue.

THE scheme for deepening the Sumida, and enlarging the channel from the mouth of that river along the North-western shore of Yedo Bay, —so as to supply a satisfactory harbour for the capital, and render it approachable by ships of deep draught,—is once more becoming a topic of discussion, and is believed, by many whose interests are nearly concerned, to have received fresh consideration from the Government. Plans have been drawn up by Japanese engineers in the service of the Tokio Fu, and estimates submitted of the probable cost of providing a permanent watercourse, and lining the right bank with a succession of docks, extending altogether for a distance of five or six miles from the neighborhood of Asakusa downward toward Shinagawa. The details of this project are said to be similar to, if not identical with, those proposed several years ago by a foreign contractor. Whatever may result from this present revival of the subject, it is certain that Tokiyo must, sooner

or later, be supplied with proper facilities for shipping. That city will not be satisfied forever with the existing anomalous methods of exportation. Yokohama desires to see no change, we may presume, and is ready to demonstrate, to its own satisfaction, that no other arrangement for traffic can possibly be so beneficial as one which would leave the foreign settlement to the perpetual enjoyment of its privileges as the natural port for the whole surrounding region. But if it be definitely shown that a system now involving wastefulness and needless loss can be replaced,—even at the cost of a tolerably heavy outlay at the beginning,—by the simple plan of enabling merchants to send out their wares directly from the great central depository, and not circuitously through a town twenty miles distant, the protest of Yokohama is not likely to be very effective. As we have said, we have no means of knowing what amount of vitality, if any, attaches to the new movement; but the conversion of Tokiyo into an actual and practical seaport can hardly be anything but a question of time.

• • •

An example of the restlessness with which large cities, unprovided with water approaches, regard the superior position of more favoured neighbours, is given in the recent determination of Manchester to escape from the state of dependency to which it has long been subjected by Liverpool. Manchester is in fact, an inland city, without any of the physical advantages which Tokiyo possesses for the facilitation of so great a task. But it has been found that although the distance from Liverpool is only a few miles, the cost of transportation between the two places is actually heavier than the charge for carriage of freight from the western cities of the United States half way across the American continent and thence over the Atlantic, to Liverpool. So eager and resolute is the latter city in making the most of its hitherto undisputed opportunities, that the Manchester merchants are able to save money by sending their produce abroad by way of Hull, Southampton, London, Glasgow, or Aberdeen, rather than through the nearest outlet. They have therefore decided, in the face of extraordinary obstacles, to make their city virtually a seaport, by opening a ship canal to the River Mersey,—on which Liverpool is situated. Of the particulars of this design we may speak at some future time. Our purpose now is merely to indicate the energy with which an English community grapples with a problem of similar nature to that which occupies, and must continue to occupy, the thoughts of the mercantile fraternity in the capital of Japan. Comparisons, in such cases, are neither necessary nor desirable; yet we may mention that the expected cost of the Manchester enterprise is about twenty-six millions of dollars, while we are assured, on competent authority, that the necessary operations at Tokiyo can be accomplished for a little more than one-tenth of that sum.

• • •

The importance of not only securing good harbourage, but also of maintaining it in proper

order, has been brought home in a rather startling way to the merchants of the chief city of the United States. Within the last few months it has been discovered that all the channels leading from New York are becoming so shallow as to seriously interfere with the ingress and egress of the large European steamships. No less than nine of these in succession have run aground within twenty miles of the metropolis. The obstructions are caused solely by deposits of garbage from the city;—a cause which at first glance would seem too insignificant to threaten serious danger, apart from the fact that no difficulty in dealing with it by local authority would be supposed to exist. But, while the magnitude of the evil is fully recognized, and its disastrous consequences thoroughly appreciated, the government of New York appears to be utterly incapable of taking the necessary preventive steps. Hundreds of scavenger scows are sent out each night, laden with the city's refuse, which is dumped overboard wherever a convenient place can be found; and the official inspectors of the harbour are unable to fulfil their duties of investigation into this nefarious business, for the reason that those engaged in it have so terrorized the respectable boatmen of the neighbourhood that they dare not take part in any expedition for the detection and punishment of the malefactors. The condition of affairs, as described by the New York journals, would be set down as incredible, but for the facts brought forward in evidence. In proof of its gravity, we are told that the question whether New York can expect to permanently maintain its commercial supremacy, has already been discussed by parties largely interested. The managers of the great steamship companies have been invited to give their opinions, and some of them have acknowledged the expediency of looking elsewhere for a safe and satisfactory point of arrival and departure. Others, however, declare their belief that means will be found of obviating the present difficulty. They all agree that there is no likelihood of limiting the size and draught of ocean steamers, and that the progress of naval architecture cannot be held in check to accord with the conditions of any single port, however important. A plan is said to be entertained in certain quarters for establishing a new harbour at the eastern end of Long Island, but the competition of ports already created would probably render that enterprise superfluous. Boston might be stimulated to the work of clearing and deepening her channels, the increasing impediments in which caused, several years ago, an indefinite suspension of the splendid traffic which she once enjoyed. Portland, also, might be moved to reassert her advantages as the possessor of the finest harbour in the north-eastern states of the Union, and as being nearer to Europe than any rival. Or the faded claims of Philadelphia, which long after the beginning of this century was the commercial mistress of the Republic, might revive and flourish with the decay of her powerful rival. But it is useless to speculate prematurely on such contingencies.

New York is a wretchedly misgoverned city, and the iniquities practised there in defiance of law are such as would bring ruin upon any place less bounteously endowed with natural elements of prosperity; but when a real peril impends, and the material prospects of the community are visibly menaced, the force of a determined public opinion manifests itself, and roguery is defeated,—at least for a day, if not, unhappily, for all time. Before the necessity arises for seeking a new grand outlet to the Atlantic trade, the people of Manhattan, we may confidently believe, will have found a method of ridding their streets of rubbish without encumbering the difficult sea passages of the harbour, or making the approach to their piers a matter of such danger that the most experienced pilots shrink from, instead of welcoming, the duty of taking forth or bringing in the first class steamships which were once the chief prizes of their vocation.

THE public is beginning to gather, here and there, specimens of the diplomatic methods employed by the Special Envoy of France in the recent Annamese negotiations. A telegram from Paris to *The Times*, under date June 14th, says that at one of his interviews with the Viceroy Li, M. Tricou declared that China "might possibly be no stranger to the fate of Commandant Rivière." The Viceroy protested strongly, as well he might, against such an unjustifiable and unbecoming remark, and also repudiated the suspicion that the Chinese were capable of having joined the Annamites to fight the French in Tonquin. M. Tricou's reply is reported to have been:—"I desire sincerely that you should hold aloof, for our officers have orders to shoot every Chinaman taken with arms in his hands in the Annamite ranks." The Viceroy is said to have been considerably impressed by this declaration. He had reason.

HAVING had occasion to speak with some severity, at times, of the looseness with which certain departments of the Japanese press are managed, we are the more gratified to have an opportunity of expressing cordial approval of another feature, which has of late assumed considerable prominence. We allude to the practice of notifying readers where persons in want and suffering may be found, and undertaking to act as mediums between the deserving sick and poor, and those of the public who are willing to bestow bounty when it is thus needed. Hardly a week passes without announcements, in some of the family journals,—which naturally give more attention than the political sheets to subjects of this kind,—of appropriate objects for compassion and relief. In most instances, the addresses of the afflicted are given, so that those who desire to offer aid privately and unostentatiously may seek them out and, after learning their real necessities, may make immediate bestowal of the requisite remedies. But for the convenience of those who are unable or disinclined to make a personal examination, the newspapers are always prepared to receive donations and to superintend their transmission

to the proper destination. This is generally done thorough the agency of the *Ku yaku-sho*, or municipal district offices. From careful inquiry, as well as from direct observation in not a few cases, we have reason to believe that excellent results follow this simple and unpretending system of charity, and are willing to hope that the objectionable characteristics of native journalism are in some measure atoned for by this exercise of the virtue which covers a multitude of sins.

PUBLIC attention has to a great extent been withdrawn lately from the South African continent and directed to the performances of the French in the big African island and Tonquin, and the fact that Cetewayo was again on the war-path excited but little interest in view of greater events on the *Tapis*. An occasional item, however, reached us of desultory skirmishes in South Africa, but we have now received a telegram announcing the death of Cetewayo in battle and the burning of Ulundi. This will probably restore peace to a region which has been in a more or less disturbed state for some years.

AMONGST the passengers by the French mail steamship *Tanair*, which arrived here about midnight, were His Excellency Ito Hirobumi, Messrs. Ito Miyoji, Saionji, Karahashi, Iwakura, and Toda. The party landed last night and proceeded at once to Tokiyo by a special train which had been ordered for the purpose.

THE French are taking a high hand in Madagascar, their authorities having arrested a British Consular official and imprisoned an English Missionary. The matter has been brought before the House of Commons.

THE latest Hongkong papers received this morning contain no mention of any movement being made yet in Tonquin.

THE Rev. Arthur William Poole, M.A., has been appointed Missionary Bishop to the English Church in Japan.

A LAMENTABLE accident has occurred on the Clyde. At the launch of the *Daphne* the vessel overturned and 131 persons were drowned.

BOSTON newspapers state that the finest and most tasteful entertainment at Harvard University, last "class day," was given by a party of young Japanese graduates.

A SWATOW correspondent writes to the *Amoy Gazette* on the 9th inst.:—"I am sorry to have to record that this port is put in quarantine by the Hongkong authorities on account of cholera. It has been carrying off as many as 6 or 7 victims in separate families within a few hours. In this neighbourhood, Mr. Crowell, chief officer of the steamship *Toonan* died this morning suddenly, and I hear that there are two more cases on board steamers. The symptoms vary in different individuals. In some they are diarrhoea without pain; in others soreness of

the bones and pain in the bowels. Others are taken suddenly ill as if with sunstroke: they drop down, and in two or three minutes are dead. These last cases have been on the Swatow side principally.

At a public meeting the residents, of Hongkong have decided to erect a monument to the memory of a gallant gentleman who was only lately their governor. A writer in the *Daily Press* thus alludes to the determination:—"There was but one opinion as to the result of the Sir Arthur Kennedy memorial meeting, viz., that it was a gratifying success. The theme for the various speakers was a limited one, and yet one and all seemed to infuse a wonderful amount of variety into their respective speeches in honour and praise of the late fine, courteous, old English gentleman. Sir George Phillippo's opening speech was the delivery of a practised orator. The Hon. J. M. Price's arguments in favour of a public statue were felicitous. . . . as to a statue in bronze being the most suitable form for the memorial to take, and the Kennedy Road being the most appropriate spot to erect it on. . . . The last official act of Sir Arthur was to sanction the annexation of New Guinea to Queensland, subject to the approval of the Colonial Government. This approval has not been given, much to the discontent of the Australian Colonies.

OF Mr. P. G. von Möllendorff, the *Shanghai Mercury* says that he was recommended to the King of Korea by Li Hung-chang, but received his appointment direct from the King of Korea, in whose employ he is. He is in a position completely independent of China.

At a recent meeting in London favoring the disestablishment of the Church of England, Mr. Spurgeon said that out of a population of 36,000,000 in the United Kingdom, only one-third are in the communion of the Church of England.

News was brought to Nagasaki by the U.S.S. *Monocacy* of the death of Captain Mott, who was in command of the American barque *B. Aymar* wrecked on Amakusa. In company with Mr. T. Scott, he went to Korea about two months ago, in a small Japanese schooner, which was chartered by Messrs. Lake & Co., of Nagasaki, to take over a quantity of stores, for trading purposes. The Captain of the schooner has also died, and when the *Monocacy* left, Mr. Scott himself was ill.

THE French frigate *Triomphante* arrived at Singapore on the 9th, and left the same night for Saigon. The *Straits Times* says the *Triomphante* is a second-class ironclad of 4,000 tons, 380 men, and 13 guns, and was the flagship in the Levant of Rear-Admiral Coute, when an order was telegraphed to her from Paris to proceed to Tonquin waters. She is a sister ship to the *Victorieuse*, flagship of Rear-Admiral Meyer on the China station.

JAPANESE LAW COURTS.

A DENSE cloud of mutual ignorance separates foreigners and Japanese. It would be difficult to determine which side knows less of the other's ways. Of social intercourse there is very little, and what there is must be described as essentially superficial. Whether this be due to insuperable incongruities or simply to the barrier of language, we need not pause to discuss here. Our object is simply to note the fact. Then, again, if it were not for translations which appear occasionally in the columns of the local foreign press, we should know absolutely nothing of the history of contemporaneous life and thought in Japan. Those translations do some good, but it may be doubted whether they are widely perused even by the foreign communities at the open ports. Translations are not attractive at the best of times, and the exceedingly crude affairs presented to the Yokohama public require an earnest wish for information on the part of those that peruse them. The originals convey a very different impression, but unfortunately the resources of local journalism render the employment of really first class translators impossible. It would be easy to multiply examples of similar difficulties, but they are already familiar to our readers. One of them, however, demands special notice, because of the important influence, it exercises upon the nature of our mutual relations. We allude to the ignorance of the foreign public with regard to the procedure of Japanese Law Courts. Upon this subject we have already commented at some length, and a correspondent draws attention to it again to-day. The fact is no longer to be concealed that the future of our relations with this country depends to a great extent upon the continuance of extritorial jurisdiction. Whether the Japanese be unduly impatient or foreigners unjustly tenacious in this matter, the fact is indisputable that there never can be any real cordiality of intercourse until all restrictions upon its freedom are finally removed, and that they cannot be removed until extritoriality ceases to exist. Diplomacy may find some middle route out of this dead-lock, but the most expert diplomacy must be prepared to cede something or fail in everything. Meanwhile, the chief point to be achieved is some improvement in our mutual knowledge, and, above all, in our knowledge of Japanese legal procedure. Foreigners will never be willing to submit to the jurisdiction of Japanese Courts until they know what the terms signifies. At present every possible effort is made to mislead them and to represent the practice of Japanese law

as a veritable travesty of justice. No story of judicial eccentricity is too unlikely to be seized and published as a trustworthy index of what may be expected when extritoriality is abolished. The intention of all this may not be dishonest. It may perhaps be felt that to expose everything resembling an abuse in the systems we are asked to accept is an imperative duty with those who concern themselves about our interests. Whether in the performance of this duty they are entitled to neglect strict enquiry and be guided entirely by rumour, is another question. At all events, the upshot is that what little foreigners hear of Japanese justice is confined to its reported failures. The need of the moment is an accurate report of all cases tried before Courts administering the new Criminal Codes. If there are faults, let them be honestly published without exaggeration or palliation; if there are merits, let them be similarly treated. To accomplish this our correspondent "L." suggests that some journal should devote itself entirely to the work. He is, perhaps, too severe in his remarks about the prospect presented by newspaper enterprise in this country at present. The trial of the Fukushima suspects, as reported by the *Hochi Shimbun*, leaves little to be desired in point of accuracy. But the public wants to be informed about trials of every sort, not about those of a political nature only, and the vernacular press is not in a position to supply information sufficiently full to be satisfactory. Its hands are to some extent tied by the press-laws even in this respect, and its readers do not appear to appreciate this class of information. Yet we cannot reasonably hope that "L."s suggestion will find favour. We fear that the desire of removing foreign misapprehension will not prove strong enough to move Japanese patriotism to any pecuniary sacrifice. And some pecuniary sacrifice would be necessary, in the beginning at all events. The only practical resource is that the vernacular press should follow the example of newspapers all over the world, and keep its readers regularly posted about everything that goes on in the native Courts. If the public does not interest itself about such things, so much the worse for the public. Next to a defective administration of justice, the least hopeful trait that could be attributed to a people, is indifference to that misfortune. The Japanese press will do a doubly good work when it takes this matter up seriously. It will not only help to establish mutual confidence, but it will also show the world that the Japanese nation really watches the conduct of its jurists and judges, and submits them to that public surveillance which is the surest guarantee against misconduct and corruption.

CHINA AND JAPAN.

IT has been remarked by careful statisticians that everything in nature has its period; moves, as it were, in an orbit, and may be expected to occur at a particular point after a particular interval. There are men who hold that this is true of prosperity as of pestilence, of religious manias as of climatic changes. Even of public opinion, it may be possible hereafter to predict the phases when the scientific grouping of historical facts shall have been carried sufficiently far. One can be tolerably sure that in England, for example, after the Liberals have been in power three or four years, the country's inclinations will begin to drift in the direction of Conservatism. There is no apparent reason for these fluctuations. They would seem to be the result of mere waywardness were it not for their regularity. So, too, of good and evil report. Individuals, communities, peoples, have their seasons of favour and disfavour. They go out of fashion and come into it, like clothes of a certain cut or language of a special construction. Only in such cases, it is generally easy to discover a cause other than pure fickleness. It ought to be so with regard to Japan. We should find no difficulty in determining why she receives as much abuse to-day from one section of the public as she formerly received applause; whether she has brought this entirely upon herself, or whether some of it may be referred to circumstances beyond her control.

One of the favourite lines of criticism recently brought into fashion is a comparison between China and Japan. The contrast between the two countries has always been sufficiently marked to attract attention, but until a very short time ago the advantage was pronounced to be wholly on Japan's side. People were wont to applaud her quick appreciation of the benefits of Western civilization; her readiness to sacrifice all the heir-looms of tradition and prejudice at the shrine of progress; her admirable power of adapting herself to changes which elsewhere had required a century to mature. Against this they used to set China's dogged adherence to the grooves in which the feet of her people had travelled for a hundred generations; her blind refusal to see good in anything outside the Middle Kingdom; her ineffably supercilious assumption of superiority to all the world, and her intolerant exclusiveness. So unanimous was public opinion on these points and so out-spoken was its applause of Japan, that thinking men professed to see peril for the latter in an over-dose of

popularity. They fancied she might lose her head a little, and they were probably right. Had she not been taught to despise her neighbour, the two might be on better terms to-day. But the danger no longer exists. By an easy process of verbal legerdemain the aspect of the comparison is completely changed. Japan's appreciative assimilation of European nourishment has become a mere love of change for change's sake; her liberality is said to be superficial; her versatility, pure fickleness.

For China's moods, on the contrary, gentler epithets are discovered. Her bigoted conservatism is constancy of the highest type; her contempt for everything not Chinese is traditional self-respect; her insolent isolation is dignified contentment. She will not leap before she has looked. Her course will be marked by no rash essays and consequent back-slidings. Like the tortoise in the fable, her slow persistence may ultimately carry off the prize from the fitful celerity of her rival.

This, in effect, is what a writer in *Nature* told us the other day. Why he should have chosen an eminently scientific journal for the ventilation of his views, we are not in a position to explain. Accuracy is a distinguishing feature of science, properly so called. Inaccuracy is a distinguishing feature of the writer in question. Early in his essay the critic says:—"China remains pretty much what she always was. She is now, with some exceptions, what she was twenty, two hundred, perhaps two thousand, years ago." A little farther on he says:—"China dislikes change, and will only adopt it when it is clearly demonstrated that it is absolutely necessary." Advancing yet a little, he adds:—"When China once makes a step forward it is generally after much deliberation and is never retraced." Perhaps the author of these opinions had not room to set forth his data for them. But it is a pity that he was circumscribed. We should have been interested to discover the grounds for his assertion that a country which "remains pretty much what it always was"—a country which "is now what it was twenty, two hundred, perhaps two thousand years ago"—nevertheless "adopts change" when its absolute necessity is clearly demonstrated. If this is a hypothesis, it is a bold one; if it is an inference, it is curiously inconsequential. But let us follow our author again. "Japan," he tells us, "is constantly undertaking new schemes with little care or thought for the morrow, but with the applause of injudicious foreign friends. In a short time she discovers that she has underrated the expenses or ex-

aggerated the results and her projects are straightway abandoned as rapidly and thoughtlessly as they were commenced. SWIFT suggested, as a suitable subject for a philosophical writer, a history of human projects which were never carried out; the historian of modern Japan might find these at every turn. Where, for example, are the results of the great surveys, trigonometrical and others, which were commenced in Yezo and the main island about ten years ago? A large, expensive, but highly competent foreign staff was engaged, and worked for a few years; but suddenly the whole Survey Department was swept away, and the valuable instruments are, or were recently, lying rusting in a warehouse in Tokiyo. The same story may be told of scores of other scientific or educational undertakings in Japan." Here again regret is the dominant sentiment which survives the perusal of these lines; regret that their author did not continue his description, and give us some particulars of the "score of other scientific and educational undertakings" which were so flippantly inaugurated and incontinently abandoned. We cannot conscientiously say that his typical case is a good one. Its fault is that it lacks foundation. It depends chiefly upon a false assumption, that "the whole Survey Department was suddenly swept away." The Survey Department was not swept away. It exists to-day, and is doing very excellent trigonometrical work. The editor of *Nature* may further be interested to learn that a geological survey, under the able management of two German scientists, is also progressing rapidly. He may be surprised to hear, too, that "a large, expensive, but highly competent foreign staff" was never engaged for the purpose he mentions. A very small staff was engaged, its principal, and only highly paid, member being a gentleman who had come out to Japan in the Lighthouse Department and been removed from it at his own request. How much, then, of the typical case remains? One item only—that foreign assistance was dispensed with. And even that is not quite true. So far as the Japanese were concerned, nothing was contemplated but a change of staff; and that project, instigated by a dishonest foreigner was aborted through a foreigner's bad faith. Thus we do not find ourselves arriving at a much clearer perception of the "scores of other scientific and educational undertakings" referred to by the writer in *Nature*. But we do find ourselves beginning to speculate about the writer himself. Japan's harshest critics are those whose advice she has declined to follow. The materials for a thousand mira-

culous achievements have been offered to her by nomadic enthusiasts, and at first she put some faith in their suggestions. But with experience she has acquired caution, and each fresh exhibition of the latter quality procures her another enemy in the man whose hopes it destroys. Her chances of restoring order in her finances disappear at once from the vista of the gentleman whose scheme of currency redemption she is foolish enough to reject; her commercial prospects have not a ray of light for the mentor at whose exhortation she fails to throw open her coast-wise trade to all the world; her political institutions and all things connected with her polity, are depraved and pitiable in the judgment of the charlatan whom she hesitates to appoint her parliamentary adviser; the travelling agent of a menagerie undertakes to prove every Japanese blacker than a Hot-tentot because an acrobatic speculation which was to make a dozen fortunes "wouldn't wash" here, and the foreign employé who leaves the country "in spite of the Government's consuming anxiety to retain his services" pens essays about, it may be, Japanese fickleness and Chinese constancy. Of course we do not propose to assign the writer in *Nature* to any of these categories. But, speaking frankly, he lays himself open to suspicion. He must have been goaded by some chagrin when he set himself to build a fabric of bias on a cloud of inaccuracies, and to base a score of general deductions on a single misconception.

There is, however, another and a more subtle method of drawing comparisons between Japan and China, to the latter's advantage. The commercial morality of the Chinaman is said to be of a much higher order than that of the Japanese. The latest exponent of this theory is a peripatetic lecturer in the United States, whose testimony is especially valuable because it is free from the bias of experience. Had he ever traded in silk in Yokohama, his own misfortunes might have blinded him; had he ever trafficked in tea at Canton, some particularly trustworthy Celestial might have inspired his verdict. But his mind is virgin. He never transacted business in either country, and is consequently fully qualified to pass judgment on the commercial moralities of both. We remember once to have heard the chief partner in the largest commercial house in the East—a man whose twenty years of Oriental experience had been pretty evenly divided between China and Japan—deliver himself of an unqualified opinion that the Japanese merchant is infinitely more worthy

of trust than the Chinese. But that was an old-fashioned variety of trader. The proper person to go to for ideas on such subjects is the clerk who has spent from three to five years in Japan and who has never been to China at all. Next to the peripatetic lecturer, his is the least impeachable evidence. He will tell you that there is not an honest man in Japan, except his own servant, and that is conclusive. To be sure, his friend next door will tell you the same story, and you may be a little perplexed to determine which of the two is maligning the other's domestic, but you cannot venture to ignore the consensus their statements otherwise exhibit. As to the universal knavery of the Japanese race, there need be no question with such evidence before us. Now this, too, is a comparatively modern phase of opinion. Being merely an opinion, however, to discuss it were idle.

Opinion's but a fool that makes us scan
The outward habits by the inward man.

More interest and profit may be derived by considering the phase of opinion that preceded it, and enquiring when and how the change commenced. The old annals of Dutch and Portuguese intercourse with Japan relate that the captain of THUNBERG'S ship was in the habit of going ashore in breeches so large and so tightly packed with articles of contraband that he required the support of two sailors to enable him to walk. Being discovered, he had to reduce the size of his trousers and submit to the indignity of having his legs felt when he landed to visit the factory. Another honest Dutchman was betrayed by an indiscreet parrot talking in his pocket, and another was found with dollars sewn up in his drawers. Commenting on these things, LAURENCE OLIPHANT says:—"Thus has commercial dishonesty and political subserviency worked to the prejudice of the foreigner in the mind of the Japanese, whose confidence in us can only be restored by the adherence of the merchant to a high code of mercantile morality, and by the maintenance, on the part of those who represent our country, of its national dignity." Twenty-five years ago, then, there was question of re-establishing European reputation in Japanese eyes. To-day the text of our sermon is quite different. It is they who have to win our confidence and remove unpleasant impressions of chicanery and unfriendliness. It is proper, however, to observe that even in OLIPHANT'S time opinions were not unanimous on this point. Commodore PERRY, who started on his treaty-making mission, congratulating himself that "fortunately the Japanese and many other islands of the

Pacific were still left untouched by the unconscionable Government of Great Britain," and that there was, consequently, an opportunity for the exemplary Government of the United States to lay hands on something, concluded, by the time he reached Riukiu, that the Japanese were "vindictive, cruel, and unnatural rulers" and that to take the Riukiuan under American protection was "a duty." He therefore set himself to "adopt every possible means of conciliating and bringing into some degree of social intercourse the authorities and people of the islands," and six weeks later he was able to report "considerable progress," though at the same time he concluded that the Riukiuan were "almost identical in appearance, language, religion, customs and last of all, *in consummate deceit*, with the Japanese." It thus appears that Commodore PERRY went to Japan with a mind quite decided as to what he should find. In point of practical prejudice he was superior even to the three years' clerk or the peripatetic lecturer. Being, however, a versatile man, he resolved "to practice upon the Japanese a little of their own diplomacy." "I was well aware," he says, "that the more exclusive I should make myself, and the more exacting I might be, the more respect these people of forms and ceremonies would be disposed to award me." In pursuance of this scheme he "made up his mind to confer personally with no one but a functionary of the highest rank in the empire," and appointed two commanders and a lieutenant to receive everybody else. Bearing this in mind, observe the Commodore's first experience of Japanese "consummate deceit." From Uraga there came to the flag-ship an official announcing himself as the "vice-governor" of the place. He said he was the proper person to visit the ship, and on being "peremptorily refused admission," suggested, as an alternative, "that he might be allowed to confer with an officer of rank corresponding with his own." "To this," writes the Commodore, "I consented, *after some intentional delay*, and my aid, *Lieutenant Contee*, was appointed to receive him. "The Commodore, it will be seen, was progressing satisfactorily. Making intentional delays, and declaring an American naval lieutenant of equal rank with a Japanese vice-governor. He was paying this "consummately deceitful people" in their own coin. The next morning, however, the Governor himself came on board, and now the Commodore's judgment received final confirmation. The appearance of the Governor "gave the

lie to the vice-governor, who had declared himself of the highest authority in the city." What revolting duplicity! A man declaring himself of the highest authority and yet saying he is only *vice-governor*. And this to an American Commodore, who was at the same time declaring himself of the rank of the highest functionary in Japan. It was a game of bluff in which the Japanese played with cards on the table and were naturally worsted.

Some day or other the exquisite humour of Commodore PERRY'S proceedings and conclusions will be appreciated at their real worth. We doubt whether his method of "gaining important points" has ever been surpassed in simple efficiency. We find him sending armed boats to disperse Japanese sight-seers, who on being menaced with muskets and cutlasses, disappear, leaving the Commodore to congratulate himself on having gained "the first important point." Next we find him sending armed boats to survey a Japanese harbour, and on being informed that the Japanese laws do not allow such examinations, he replies that "the American laws command them;" and that Americans "are as much bound to obey American laws as Japanese to obey Japanese." So the survey proceeds, and the Commodore again congratulates himself on having "gained a second and most important point." We have not space, however, to follow him through a series of "points" purposely opposed to "the rules of ordinary diplomacy which could not have the least effect upon these sagacious and deceitful people." There is much to study in the character of an official who at one moment urges his Government to "extend its vivifying influence and protection over Japan's royal dependency, Riukiu," and the next, reports, as "a source of gratification" to that Government, that "the U.S. steamers are the only ones in these seas provided even with a limited supply of coal." It would be a pleasant study to catalogue these vagaries, but our present business is confined to the moral obliquity of the Japanese. One more instance, then, of the Commodore's metaphysical analyses must suffice. Revisiting Japan, and having duly "out-Heroded Herod in assumed personal consequence and ostentation," he learns that the EMPEROR has by special decree appointed Uraga as the place of conference, and that a large council-house has been erected there. But Uraga does not suit the Commodore. He means to have his own way even to choosing in what part of Japan the Japanese shall receive him. The Japanese, unaccustomed, perhaps, to visitors who dictate to their

host the room of his house in which he shall give them audience, held out for ten days against a change of programme. They were instructed by the EMPEROR "to receive the Admiral with the highest honor and treat him hospitably" but the Imperial orders were—Uraga. The Commodore, however, was obdurate. He had determined, he wrote, "to establish for himself a character for *unreasonable obstinacy*" (the italics are ours) "rather than that of a yielding disposition." At last the Japanese gave in. They would make fresh preparations at Treaty Point, if the Commodore pleased. Then the triumphant Commodore became metaphysical. "Now let us look," he cried, "into the *deceitful* conduct of these people. For the last ten days they have interposed all possible objections to the movements of the ships higher up the bay, and endeavoured, by every means, to persuade me to return to Uraga; and when they found that I could not be *deceived* by their *cajolery*, and had actually approached within eight miles of the capital, they suddenly abandoned the position from which they had so often assured me that they could not be moved, and proposed unconditionally to concede what I had with *equal but more successful pertinacity* contended for." The *naïveté* of this is charming. The Japanese, in deference to the Commodore's pertinacity, obtained a modification of their EMPEROR'S orders, and immediately stood convicted of deceitful cajolery because they had not violated those orders at once. In their eyes, the Commodore's objections must have seemed simply capricious. "It is probable," he says himself, "that arrogance may be charged against me for persisting as I did, and against the judgment of all about me, in changing the place of conference, and thus compelling four Princes of the Empire to follow the squadron, and subjecting the Government to the trouble and expense of erecting another building; but I was simply adhering to a course of policy determined on after mature reflection." In other words, he was simply seeking to establish a character for "unreasonable obstinacy," and because the Japanese did not immediately fall in with his scheme, he is filled with indignation against the "deceitful conduct of these people." There are a great many entertaining studies to be made of Western and Japanese behaviour in those early days; but it is pretty evident that if Commodore PERRY'S verdict as to Japanese integrity represents the phase of public opinion which preceded the more exhaustive analysis of Mr. LAURENCE O'LEPHANT, that phase must be pronounced whimsical and illogical in the extreme.

Putting aside Commodore PERRY, however, and others whose judgments are warped by prejudice, disappointment, or a desire to earn the credit of being more sharp-sighted than their neighbours, there still remains a mass of testimony which cannot be gainsaid or disregarded. The experience of foreign merchants in Japan is almost unanimously opposed to any general confidence in Japanese commercial probity. Things may be better or worse in China, but that is a point of little moment. To possess a *comparatively* good record is not a very worthy ambition. Japan's record is bad, and what we are interested in finding out is, not whether worse records exist, but whether hers is to be regarded as an evidence of generally depraved national morality, or to be attributed to exceptional causes which do not affect the bulk of the people. We believe, ourselves, that the latter is the case, and we shall endeavour briefly to explain the grounds of our faith.

Apologists for this want of strict morality generally take one of two lines: they maintain either that foreigners themselves are no better than those they criticize, or that the class of Japanese frequenting the treaty ports is not representative. Now, it would be idle to deny that Western commercial morality is a very anomalous compound. In the management of commissions and the processes of adulteration there is much that will not endure a moment's scrutiny. The "custom of the trade" too often refuses to be reconciled with any acknowledged principle of integrity. For information upon these points and scathing denunciations of English lapses from English codes, it is only necessary to consult the writings of our greatest ethical philosophers. But by a curious, though not incomprehensible, elasticity of conscience, men who do not scruple to sell cotton stuffs weighted with clays or to appropriate discounts to the whole of which they have no just title, will nevertheless be guided by the most rigid rules of probity in all transactions that come entirely within the scope of their personal control. The individual is strictly honest, though the system of which he is an agent sometimes compels him to be a participator in dissimulation. If the history of countries having protective tariffs could be written with perfect accuracy, it would reveal a state of affairs little creditable to the public conscience. The upshot of the matter is that circumstances have not yet adapted themselves to the standards which men individually recognise; and men, being still the creatures of circumstances, are

collectively compelled to live below those standards. But in Japan the personal standard seems to be no loftier than that prescribed by circumstances. The Japanese trader, in his dealings with foreigners, appears to be guided wholly by opportunity. He acknowledges neither the value of practical consequences nor the restraints of abstract morality.

Here, if anywhere, the apology has force that the Japanese trader as we know him, is the very worst of his class: that circumstances, the result partly of foreign intolerance, partly of native prejudice, have allowed the commerce at the treaty ports to be monopolized by men unfitted both socially and morally for such a position.

The time has gone by when this excuse possessed any sterling value. Japan's foreign commerce has assumed dimensions and developed attractions which preclude the possibility of its monopoly by the rank and file of her merchants. The majority is doubtless formed of men who originally possessed none of the higher qualities demanded by the position, but were enabled to occupy it owing to the deterrent effect its environment exercised upon others. But improbity does not of necessity accompany humble birth, and unless we can show that Japanese traders at the open ports are released from some of the moral restraints which are known to be elsewhere chiefly conducive, if not absolutely essential, to honest dealing, we shall gain little by pretexting obscurity of origin or social inequality.

However infinite may be the degrees of moral susceptibility in different peoples, it will readily be admitted that the efficiency of the moral instinct in individuals is mainly determined by the force of public opinion. There are men, let us hope, who would continue to be guided by noble principles though their lot were cast among savages incapable of appreciating any but the most vicious exercises of the human faculties. But to recognise the difficulty of such an achievement we need only ask ourselves how much admiration we should be disposed to accord it. Now a little reflection will show that public opinion is virtually powerless to guide or restrain the commercial conduct of Japanese towards foreigners. The general public does not attempt, and in fact is quite unable, to follow the course of the dealings which take place within the limits of the treaty ports. If a native trader violates his agreements with his foreign clients or otherwise deceives them, he does not lose caste with his own countrymen, for the obvious reason that a vast majority of the

latter know nothing about his goings on; while of those that do know, some few are content to think that he only acted in self-defence, and the rest are ready to credit any explanation which shifts the blame to foreign shoulders. If he be cited before the Saibansho and cast in a suit, the details are left unnoticed by the vernacular press and those that learn them are glad to believe that the man has been more sinned against than sinning. Two creeds are almost universally prevalent among the Japanese. One is that he must need be more than commonly wide awake who engages in commercial transactions with foreigners; the other, that a successful appeal to Western law is not to be contemplated by Orientals. Neither of these fancies is extraordinary. The extensive training of the foreign merchant, the delicate and complicated mechanism of his transactions, his command of resources, his range of information, his very manner of living, all combine to inspire an exaggerated notion of his abilities. To this must be added an uneasy feeling that every advantage is fair in his eyes so long as the letter of the law is satisfied. It cannot be pretended that the mercantile transactions of foreigners in this country defy scrutiny. If an whole they have been honourable and above-board, there have, nevertheless, been cases which from a Japanese standpoint are quite indefensible. The writer has heard a Japanese argue thus:—"You tell me that Westerners are governed by a moral code which refuses to admit the influence of circumstance or occasion, and I am willing to go with you so far as to allow that the individual lapses which my countrymen are fond of instancing against yours do not invalidate your assertion. But I would ask you to consider what happened in the early days of our foreign intercourse. Your people came here and found that we had established between the values of gold and silver a ratio which enabled you to export the former at a large profit to yourselves and a corresponding loss to us, until we discovered and rectified the error. Now that, I say, was nothing more or less than taking advantage of our ignorance and inexperience. You may urge that it was all in the route of ordinary commerce, but by doing so you commit yourself to an admission that European commercial codes sanction everything to which buyer and seller mutually agree, no matter how ill either side fares in reality. That is, perhaps, the only practical definition, but it involves a great deal which you will not, I fancy, be willing to admit." Ideas of this sort prevail among the Japanese

and persuade them that, in dealing with foreigners, it does not do to be over-scrupulous. As for our administration of justice, however honest in intention, it appears to them such a maze of form and quibble, and so dependent upon adventitious issues, that the protection it affords is not worth the hazards it involves. In short, they think that when one of their countrymen enters the arena of foreign trade at an open port, he must fight with every possible weapon, and if he sometimes hits below the belt or otherwise violates the rules of the ring, they are ready, as we, too, in their places would be ready, to believe that the trespass was compelled by the stern laws of self-defence.

The further we carry our examination the more thoroughly will it be demonstrated that public opinion exercises no sort of restraint upon Japanese commercial dealings with foreigners. Did space permit us to go into special practices which indirectly promote this result, we might point to the fact that the names of the Japanese principally concerned in the silk and tea trades are never heard beyond the limits of the open ports, and that their interest in acquiring a reputation for skill or probity is consequently nil. But we have said enough to make it clear that all the conditions of the case are favorable to the practice of a loose morality, and that one of the most puissant tribunals to which men are elsewhere responsible for the fashion of their dealings is absolutely impotent. We cannot of course argue that, because under these circumstances duplicity flourishes, its growth is entirely attributable to their existence, but we may fairly admit some degree of connection between the two. Certainly we shall not be justified in assuming that, because improbity co-exists with exceptional conditions among a section of Japanese tradesmen, the whole nation is naturally deficient in the moral instinct.

If there be any truth in these remarks, it follows that the best hope of improvement lies in extended intercourse. When we shall have ceased to be a community apart, we shall also cease to be the objects of exceptional treatment.

NOTIFICATION NO. 26 OF THE COUNCIL OF STATE.

It is hereby notified that the opening of the Third National Industrial Exhibition originally fixed by Notification No. 83, dated December, of 1877, for 1885 is postponed till 1889.

SANJO SANETOSHI, Prime Minister.

SAIGO YORIMICHI, Minister for Agriculture and Commerce.

July 13th, 16th year of Meiji (1883).

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I think the public would thank you if you could supply information to the following queries. As the Tokio-Takahashi Railway has now been opened the question arises—will it be necessary for foreigners to obtain passports to travel on the line in its entire length or in part? And if so will it be necessary for nationals to apply to their Minister, to obtain a passport from whom occupies three days, or will the Kencho issue such documents? I think the public will avail themselves of the opportunities offered by this new railway if no great obstacles intervene, and I for one should be glad of any information you may be able to give on the subject.—Yours, &c.,

EXCURSION.

Yokohama, July 27th, 1883.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—One of the most reasonable of the several objections which foreigners usually make to the natural desire of Japan to have all residents on her soil under her jurisdiction is that, however good her laws may be, the proceedings of her Courts are not sufficiently public to inspire confidence. It is understood that some, at least, of the Courts are open, but it seems to be a fact that the public rarely, if ever, visit them. Various reasons for this may, no doubt, be suggested, but the fact that the proceedings are practically unwatched and unchecked by the public is all that now concerns us.

In England and America it is also rare to find great audiences in Court, except when some remarkable case is on trial. But publicity, the great security of every people that Justice is properly administered, is there secured by the custom of reporting all cases in the newspapers, and by the comments which the press is free to make on judicial proceedings and decisions. It would be idle to expect the vernacular newspapers here to render the public any similar service. Most of them are too much engaged in the manufacture of *canards*, or in the dissemination of petty gossip, to occupy themselves with any matter so serious as the administration of Justice. Besides, they not only fear to offend and to incur penalties by any comments, but they probably lack the means to obtain or to publish reports of Court proceedings.

In this way a species of news which is really more important to the public than any other news whatsoever, is withheld from general knowledge; the wholesome check of publicity is not applied to the Courts, and neither natives nor foreigners know how Justice is administered in Japan. As long as this state of thing prevails, it is idle to expect that foreigners, while they have any option in the matter, will entertain the idea of submitting themselves to Japanese jurisdiction.

I know of several important trials in recent times, which would have afforded valuable examples of the administration of the law in Japan, and some of which would have exhibited Japanese Justice in a very creditable light. But these cases remain practically unknown beyond the Courts and the parties.

The publication of the trial of the Fukushima conspirators (if they are so) is a new departure,

which suggests the question, why should not all Court proceedings be similarly reported?

It would probably not be a difficult matter for the Government to establish a Reporting Department, which should be wholly independent, and whose duty it would be to publish full and accurate reports of all judicial proceedings. A special journal devoted to the publication of such reports would probably ultimately cover its expenses, and that of the corps of reporters, by its sale.

But whether it did so or not, and however great might be the difficulty of obtaining good and true reports, the undertaking should be attempted for the sake of its results. For it would tend to familiarize the public with judicial proceedings and with the new code of laws, while it would give to the world such light on Japanese habits and character, and on the conceptions of Justice in this country, that the question of exteriority might be solved in one way or the other.

I am, Sir, Your obedient servant,
July 28th, 1883.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read the communication that appeared in the *Daily Mail* of Saturday last, and am surprised that any one could be found despicable enough to pen for publication such a scurrilous assault, and I must express my indignation that ladies and gentlemen of this community can be thus viciously assailed in the columns of a journal supposed to be respectable. The object of your correspondent was doubtless to gain favor with his employers by this excess of zeal, but he assuredly missed his mark, as the Government Officials were extremely courteous on the occasion referred to, and must, I am certain, condemn this wanton attack on the Maharajah of Johore and his guests.

Enclosing my card, I am, your obedient Servant,
M.

[We regret that our correspondent should have thought it expedient to attribute such unworthy motives to a gentleman whom he does not know, and who is quite incapable of the action here attributed to him.—Ed. J.M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—My letter published in the *Mail* of Saturday last seems to have been strangely misconstrued. Because I called attention to the fact that there were persons present whose clothes stood in need of the laundress's services, your correspondent "M." immediately puts the cap (which in this case does not fit) on the heads of the ladies and gentlemen from Yokohama who were at the ceremony. Such an interpretation of my remarks is absurd on the face of it; but still I would ask space to disclaim having made any comments whatever on the ladies' dresses, except that they were not of the colour usually worn at funerals; while as to the unclean garments, the three or four men who made themselves conspicuous by wearing them, were, I now understand, not of the Maharajah's party, though they were at one time difficult to distinguish from it. I should be the last person to wish to wound the feelings of any one; and, since at the melancholy (in all senses) occasion referred to, there was some want of good taste, due I believe to an unfortunate mistake, I would suggest that it is unwise to make a more than "nine day's wonder" of an affair which had much better be consigned to oblivion.

I am, Sir, yours, &c.,
Tôkiyô, August 1st, 1883.

EMPLOYEE.

SPECIAL COURT, TOKIO.

SATURDAY, JULY 18TH, 1883.

Before Mr. Justice TAMANO, and Messrs. HAYASHI, KAWADA, and NAGAOKA, Assessors.

THE PROSECUTION OF THE FUKUSHIMA SUSPECTS.

The continuation of Kono's speech is as follows:—The danger to my life was a murder plotted by the instigation of a certain man, whose name I will not mention here. I was informed of the plot by my friends; but I did not take any notice of it. Later on, the rumor got abroad, and even children talked about it. Naturally, I felt myself in peril and refrained from visiting the houses of my friends. When the covenant was drafted, affairs assumed a very critical condition: our party (Liberals) were on the verge of ruin and had no hope of resuscitation. Accordingly, a few of our friends decided to form a Radical party. I happened to attend their meeting and interrupted their plan, saying that no good would accrue from such a combination. I suggested that it would be to their advantage to draw up a kind of covenant whereby to bind together men having the same political opinions and thus to save the trouble of obtaining the sanction of the police authorities. If we formed a radical party publicly, we must have had very hard times of it. Our leaders would have been arrested and imprisoned one after another, or we should have been assaulted by the Monarchical Party. The loss of able men would produce the same effect upon our association as the loss of its wings would have on a bird. I told my confederates that it would be judicious to avoid the threatened danger and confine ourselves to promoting the good of the whole nation instead of occupying ourselves with trifling matters. They all approved my suggestion and retired from the meeting. (Here the prisoner remarked that he caused the covenant to be drawn up in order to avoid the danger impending over himself; and that his conscience tormented him for persuading his comrades to give up forming a political combination, under the pretence of securing their safety.) The gravest of the causes that led to the hostility between us and the local Government was the trouble between the Prefect and Local Assembly. At one time, I was the president of the Assembly. Whilst staying in Tokyo, I was recalled to the prefecture by a telegram from the Governor. On returning, I found that a great change had taken place in the Assembly. My former colleagues had nearly all resigned, and the rules of the House had undergone considerable change. All these events occurred since the nomination of the present Governor, Mr. Mishima. By the time I returned, the new Assembly Hall was completed, and I was ordered to be present at the opening ceremony. In the evening when I went there, I found the prefect represented by a secretary who said that he (the prefect) was prevented from attending at the ceremony by important business. In course of conversation, some one whispered that Mishima was indulging in drinking and revelry at a certain restaurant. This news caused great indignation among those present. That he did not attend the opening ceremony, where both officially and socially he ought to have been, and was meanwhile carousing, was felt to be a proof that he held the Local Assembly in great contempt. This being the case, of course he did not do anything like inquiring into the condition of the people. On a certain occasion, when he submitted to the Assembly a proposal for repairs of roads at Wakamatsu, the majority voted against it. Popular indignation reached a high pitch and loud clamours were raised. Occupying, as I did, the chair of the Assembly, I did everything in my power to settle the dispute, and asked the members to postpone their decision for a short time. The reason of my so acting was that, as the prefect was visiting the hot springs some three *ri* from Fukushima, I desired to wait for his return and then to endeavour to persuade him to withdraw the proposal. But the members were all against him, and on learning that the Governor was away, were filled with intense indignation and disgust. They unanimously insisted that their responsibility, as members of

the Assembly, was to promote the interest of the people who elected them, and that they could not waste their time in an idle fashion. Thus, I could do nothing to being about a reconciliation. The members decided upon rejecting the proposal. This and other things rendered our relations with the Governor exceedingly bitter. He treated the people as though they were slaves: in fact he was worse than the cruellest functionaries of the Tokugawa Government. The people complained to him; but he did not listen to them. He increased their burdens by repairing and constructing roads at Wakamatsu which work he commenced without the sanction of, and indeed in spite of its rejection by, the Assembly—arbitrary conduct which kindled the indignation of all true men. He did not hesitate to dismiss any officers for the least plausible pretext, for instance, if they read the *Choya Shimbun* and *Kinji Hyoron*; and once because the person concerned presented a petition to the Government for the establishment of a National Assembly. It may be mentioned also that one day a man suddenly came to the district office at Nihomatsu and said to the clerk that he was appointed chief district officer of Nihomatsu and introduced himself to the other officers. The clerk thought that the man was crazy and ordered him to quit the office as soon as possible. He instantly produced the certificate of his appointment as chief district officer, and rebuking the clerk for his impertinence, called his attention to the contents of the document. The clerk found that it was genuine and begged his pardon. This is how Mishima acted for the advancement of his own selfish purpose. Imagine appointing a new officer while the original occupant was still holding the place! I cannot but express surprise. So many times did the Governor travel beyond his power, and transgress the rules in utter disregard of the Assembly and in defiance of the members, that I cannot enumerate them all. In the ordinary sessions, he submitted many intolerable proposals, and sent officers of the 15th or 16th class to preside at the meetings. They could not give any satisfactory answers to the questions we put, and excused themselves by saying that they had lately come from Satsuma, and therefore were ignorant of local affairs. If Mishima had been possessed of any sense of his duty, he would have personally attended the meeting and studied the wishes of the people. How could the administration run smoothly under such conditions? Indeed, the Local Assembly had to encounter many hardships. At one time, the prefect sold the site of the old Assembly without the sanction of that body. At another, he disposed of 1st class Government forest-land at ridiculously low prices, and advanced Government money to his friends or started a bank under the auspices of the local authorities. Again, he deprived a printing office of the work which the local Government had entrusted to it for many years past and transferred it to another. The former establishment was of course ruined. These things were all done to gratify some selfish object. Nothing can be truer than the maxim that says, "what the superior likes the inferior adores." The police insulted the people in every imaginable manner. They suppressed freedom of speech and arrested the lecturers without cause. The whole province was in a state of wild excitement; the discord between the governing and governed classes was grievous. During the suspension of the Assembly, the officers exerted themselves to form the monarchical party and extirpating the Liberals. In these circumstances, the business of the Assembly was greatly obstructed; and while the struggle was going on, the season for silkworm breeding arrived to the great embarrassment of the members of the Assembly. As the whole province depends upon its silk industry, the Assemblymen were bound to attend to it. Finally, we appealed to the *Sanji-in* for its decision. I incurred the hatred of the prefect and was threatened with assassination. I was informed of the plot by a district officer with whom I am intimately acquainted. I was on the alert, because, though to die for the sake of our principles was nothing to me; yet to fall by the hand of cowardly assassins was not desirable. All these circumstances caused me to draw up the covenant. In fact, it was partly designed for promoting the good of the nation, partly to put an end to the exercise of arbitrary power by the prefect, and partly to

protect my own body against danger. (The prisoner remarked that the preparation of the covenant for the protection of his own person was cowardly and he was ashamed of it. He said that he had left a mother aged above seventy, and two sons aged respectively nine and six, at home. They had no one to look after them but himself. He had lost much of his energy since he was imprisoned. He amused himself by reading the New Testament in his cell. The Judge listened to this speech with evident interest, and from time to time encouraged the prisoner to go on with his statement). In attempting to reach a golden age, we are destined to encounter many difficulties and dangers. The peoples of Asia are wrapped in ignorance, and have not seen the light of freedom. It is by no means an easy task to implant occidental civilization in this dormant continent. To transplant it bodily, we must copy all its institutions. But we do not care for improvement merely in one province or district; for the improvement of a small place is best derived from a larger sphere.

The first article of the Covenant was based upon this conviction. Some years ago, I delivered a lengthy lecture on the subject in a certain place. I have a report of it printed in book form. In this book, profuse use is made of the words "overthrow the government." This is offensive language, but in case of necessity we must carry out the meaning of the words convey. Our aim is to effect improvement in the community; therefore, we must endeavor to remove all the obstacles. Orientals talk about right, but do not carry it out practically. Our learned men are not free from blame. We embodied our principle in the first article of our covenant and pledged ourselves to carry it out practically. We hoped to hold communication with the political parties of Europe and America and participate with them in attacking the policy of the Russian Government towards its people and that of England in India. We are bound to awaken the drowsiness prevailing in Japan, Korea, and China, and establish a solid foundation for liberalism that men may enjoy their own rights to the fullest extent. This is our main object, and whether we overthrow the government or no does not concern us in the least. We must overthrow it in case of great necessity, but we do not mean to do so to-day. As regards the second article, we were obliged to suppress the words "we will sacrifice our lives and property." The third article requires no explanation. The fourth article, saying that we will not dissolve our confederation, etc., is a matter of course. Men who are not idiots, are not going to say that they will dissolve their combinations before their object is accomplished. The fifth article maintains that, in case we reveal the secret of our league we will commit self-despatch. Originally, we wrote that those who reveal the secrets of our party should be cut down; but as this expression was against the very principle of Liberalism, we changed it. This same article leaves a doubt in the mind of the public. In struggling with our opponents, we are required to observe privacy. If any one of our party should give information to our enemies about our scheme, our efforts would be frustrated. To prevent this mishap and punish traitors, we inserted that clause. It is not against the law. As I have already stated, there was an element of cowardice in the covenant that troubled my conscience. Consequently, I decided upon cancelling it, and mentioned my wish to my confederates when I visited Tamano. I think I have said enough to show that I had no nefarious design. If we had really intended to overthrow the Government, we should not foolishly have written the covenant, thus furnishing evidence of our criminality, but should have contrived our plot with great caution. Even though we had written it after maturing our plan, we should not have found any difficulty in tearing it to pieces at the time of our arrest; nor should we have delayed cancelling it when the idea first occurred to our mind. But the reason why we delayed annulling it, and busied ourselves about the construction of roads, etc., was that the convention was not criminal at all. When all these facts are taken into consideration, you can judge my intention. Since the Restoration up to the present, I have zealously participated in national affairs; and consequently wasted my resources, and subjected my family to privation. Notwithstanding, I have not regarded hardship but have worked diligently. I

was threatened with assassination, and imprisoned by the police. Trouble is of no avail to change my mind. Heaven and earth are witnesses of my motives! Although I must not claim any public sympathy, yet my memory will survive in history and be illumined in future ages.

MONDAY, JULY 23RD, 1883.

The examination of prisoner No. 4 (Kono), was then resumed:—

Judge Tomano—You gave, the day before yesterday, as causes of the covenant being made, the trouble between the Local Assembly and the Prefect, and danger to your life. But I cannot understand what effect these had upon the real issue of the affair. Tell me plainly.

Prisoner—I believe that I explained sufficiently the day before yesterday. But I will explain again. The whole province of Fukushima was in a state of ferment, and popular feeling was turned upside down. Poor defaulters were compelled to sell their property to allow of with the construction of roads. Our opponents assaulted us bodily; and owing to several other difficulties, matters grew into that condition.

Q.—What do you mean by "that condition." A.—I mean the difficulties I mentioned just now.

Q.—What you state now is different from your statement of the day before yesterday. I understood you to say that such is the cause of such an affair; and such the effect, and so forth. But you now mix cause with effect. I am at a loss to comprehend the facts. Speak plainly. A.—This affair was originally due to the difficulty that occurred between the Prefect and the Local Assembly.

Q.—Your statement is altogether confused. Your speech of the day before yesterday was long, and there were many points which I could not digest. As there is danger of injury being done to your side through your want of clearness, you had better fully consider and tell me exactly what you mean. A.—I believe there is nothing contradictory in my speech.

Q.—Well, then, let me know what your statement means that you are not criminal in law but you are morally criminal. A.—Because, I persuaded my friends to give up forming a Radical party and to subscribe to the covenant instead. I did not intend to carry it out practically at the time it was drawn up. I resorted to subterfuge to persuade my friends to give up their intention. For this reason, I considered myself morally criminal.

Q.—You are not morally criminal at all, because you have prevented others from forming a bad party. Your action is rather in accordance with moral principles. A.—Because I caused the covenant to be drawn up to avoid the danger impending over my own life.

Q.—Then do you mean that, when it was drawn up, you had no conception of the dormant condition of Asia and felt no regret for it? A.—Just so, when viewed from an extreme point of view.

Q.—I presume you mean to say that you have deceived Hanaka and others. But your explanation appears to me a little inconsistent with the facts. Hanaka and others are men of energy. Their manner and language show that they are very able men; and they do not appear likely to have been entrapped by you. What I mean is that your statement is characterized by inconsistency. I cannot regard your statement as a sufficient explanation of the facts. A.—I do not concern myself about it. What I mean is that, because I stopped the formation of a Radical party by resorting to subterfuge, I am morally criminal.

Q.—If so, why did you cause the covenant to be cancelled? If it is cancelled, a radical party will be formed again and do mischief. What can be the reason of this? A.—I cancelled it because I repented having resorted to subterfuge.

The report of this accused's third preliminary examination at the Special Court was then read.

It was as follows:—"I (Kono) think that there is not much inaccuracy in the statement I made at the Police Station and the Court of First Instance at Wakamatsu. In case there is any contradiction between the statement I made at this Court, and that which I made in the Provincial Court, please cancel the latter. The words overthrow the government, etc., mean all the governments of the world, including that of Japan. It is not in accordance

with our aspiration to overthrow the Government of Japan alone." (The prisoner remarked that he confirmed the above statement).

The following report of his hearing was then read:—Question—You met, on the 1st of August, with four men. When did the other men sign the covenant? Answer—Two or three days after that date. Hiroshima signed one or two days later than Aizawa.

Q.—In whose presence did Aizawa sign the covenant with his blood? A.—In my presence.

Q.—In whose presence, did Hiroshima sign? A.—In my presence.

The prisoner confirmed the above report and his examination was brought to a conclusion.

The examination of prisoner No. 5, Aizawa, was next proceeded with.

The following report of his preliminary examination at the Wakamatsu Court was read:—

Question—Have you entered into the league with Kono, Hanaka, and others for the purpose of overthrowing the bureaucratic Government of Japan and spreading Liberalism, and signed a certain document with your blood, pledging yourself to the penalty of death? Answer—I never signed any such document.

Q.—What document then did you sign? A.—I signed a document advocating the propagation of Liberalism, but not the overthrow of the bureaucratic government.

Q.—What was the motive that induced you to sign the document? Tell me its contents. A.—I do not remember them exactly. I am willing to tell you all about it from the copy you have.

Q.—I cannot show you the copy. You had better write down what you remember. (Accused then wrote what he remembered and handed his manuscript to the judge. He demanded that the statements of his friends be read. His request was acceded to).

Q.—Which one of these statements most resembles your own? A.—Kono's declaration is most similar to mine. But I observe some discrepancies, so I will write from memory what I think is different. (Here he handed in his corrections to the Judge).

Q.—I observe but little difference—or rather I see a close resemblance—between his and your statements. A.—That is all I remember, but I am not sure of my accuracy.

Q.—In what place and on what date did you sign the covenant? A.—I signed it at Mumei Kan, in the beginning of August, 1882. Kono showed it to me, so I signed it. I found there the bloody signatures of Kono, Hanaka, Tamano, and Sawata.

In proof of the accuracy of the above, we hereto affix our signatures.

AIZAWA KENKEI, Accused.

YUKISHITA TSUNEJIRO, Clerk.

HASEGAWA YASUTOSHI, Judge.

The prisoner gave similar evidence to that of his fellow prisoners, insisting that their only object was to spread Liberalism in Asia and that the words "overthrow the government" were cancelled. He retracted his former declarations on the ground that the lower Court had extorted them from him. He said that his political antagonists, named the Mishima party (so called after the name of the Governor of the prefecture), plotted to assassinate the Liberals. In proof of his assertion, he said that on one occasion Tamano was wounded by their foes. These dangers induced his friends to draw up the covenant, which was afterwards cancelled according to the suggestion of Kono, who had caused the covenant to be drawn up in order to test the fidelity of his friends but ultimately felt ashamed of having resorted to subterfuge.

Judge Tamano—Do you mean that, though the covenant is cancelled, yet you still maintain your resolution, or that both have been annulled?

Prisoner—Nothing of the sort. We cancelled it because it is drawn up according to the false ideas of Kono.

Q.—I was not aware of the fact that you were deceived by Kono. Did the covenant in question coincide with your own idea? A.—At first, I was unaware that I was entrapped by Kono. When he confessed it to me, I still doubted. But as he himself confessed the fact, I agreed to his suggestion to cancel the covenant. And, of course, my idea coincided with his.

Q.—Have you anything more to say? A.—No.

TUESDAY, 24TH JULY, 1883.

The Court opened at 8.30 a.m., when prisoner, No. 1, Hanaka, begged His Honor to be allowed to speak again. Judge Tamano told him to wait until after the examination of the last prisoner, No. 6, Sawata.

Sawata was arrested this year and was not subjected to any examination at the court at Fukushima. The report of his preliminary examination by the Special Court was read. It was as follows:—

Question.—Did you sign a covenant with Kono and others with your blood at Mumei Kan in July or August of 1882? Answer.—Yes, I signed it on the 30th of August.

Q.—What did it contain? A.—In our conversation, we used to speak about our doctrines and that man's mind is apt to change. On the 30th of August, when we were conversing together as usual, the conversation turned upon political topics and we then remarked that man's mind is subject to caprice through avarice or personal volition, and that, therefore, it was necessary for us to pledge ourselves to uphold the principle to which we had vowed allegiance—namely Liberalism. Thus, I pledged myself to the covenant. The first article said that we should improve the bureaucratic government which is the enemy of Liberalism and establish a liberal constitution; the second that we would sacrifice our lives and property to attain our end if necessary, abandon the ties of gratitude and love, and not suffer ourselves to be deterred by any reflection from the execution of our project; the third article was that we should not dissolve our combination till our object was accomplished, whatever dire difficulties we met with and however many years elapsed; the fourth article that we should act in union irrespective of the opinion of others; and the fifth that we will should put to death those who revealed the secret of our party. I think this took place on the 30th of August. I know nothing more.

Q.—Where did this take place? A.—Where the office of the *Fukushima Jiyu Shimbun* stands.

Q.—Is that the place called Mumei Kan? A.—Yes.

Q.—Did you sign the covenant with your blood? A.—Yes, I signed with my blood that I would not repudiate my allegiance, however dire the difficulties I might encounter.

Q.—Was it in the evening or the day time that you signed? A.—It was about 7 p.m.

Q.—Who were present on that occasion? A.—It was an exceedingly busy day with me, so I do not exactly remember all who were present; but I am sure that Tamano, Hanaka, and Kono were there.

We have conducted the above inquiry in accordance with Article 378 of the Code of Criminal Procedure at the Special Court.

S. TAMANO, Judge.
M. TAKEBATA, Clerk.
R. ARARI, CLERK.

The prisoner, after replying that there was no inaccuracy in the record of his statement, proceeded to say that, since the illustrious Sovereign promised that a National Assembly should be founded in 1890, it was but the duty of every unit among his subjects to make due preparation for it and that the covenant was drawn up in order to spread Liberalism over all the continent of Asia. He alluded to the trouble between the Governor Mishima and the local assembly and the hostility between his party (Liberal) and their opponents (Monarchical or Mishima Party) who assaulted bodily the Liberals. The following report of his preliminary examination was again read:—

Question.—Who penned the letters of the covenant? Answer.—I penned the characters but did not make the draft.

Q.—It appears to me that the covenant is different from an ordinary one, since it is signed in blood. A.—As regards that, I have nothing to say except what I know of it and under what impression I was when I wrote it.

Q.—So long as there is any inconsistency in your declaration, I am bound to investigate further. Your statement is different from the others. I suppose, if you saw the original, you can speak exactly to the point. A.—Certainly, I saw it at Mumei Kan.

Q.—Kono deposed that he took the covenant from the drawer of the safe on two occasions only—

when Aizawa and Hiroshima signed it. Kono kept the key. How could you then see it? A.—I saw it when the door of the safe was left open.

Q.—Was there any other document with the covenant when you saw it? A.—Yes, there was.

Q.—Kono said that he left a document stating that he had changed the words "overthrow the government" to "improve the government?" A.—Yes, that was the document I saw.

Q.—When did that happen? A.—The 1st of September, just after the office of Mumei Kan was removed.

Q.—You are sure that you saw two documents. A.—Yes, I am sure.

Q.—Did you then observe the words "overthrow the government" changed to "improve the government?" A.—No.

Q.—But Kono said that he changed the words in question, so that he had two documents. If you have seen them, you must have seen the words "overthrow the government." A.—The first document Kono wrote was wrapped in paper. The document I saw when the safe was left open was that which Kono wrote afterwards.

Q.—What did the second document contain? A.—I do not know.

Q.—Do you mean that you only saw a piece of paper? A.—I mean that I have forgotten its contents.

Q.—What do you mean by saying that you forgot the contents, while I asked you if you had only seen a piece of paper? A.—The document which I signed might have contained the words, "overthrow the government." But after I had signed it, Kono changed it, and left it together with the corrected document.

Judge Tamano.—Is there no inaccuracy in the report just read?

Prisoner.—I will prove that the first article of the covenant did not contain the words "overthrow the Government." People may think it strange that, whilst five men testify to having seen the said words in the covenant I alone declare that they were not there. Our original intention was to improve an oppressive administration, so it was natural that we should "improve the Government." I am sorry that the original is not produced in the Court; otherwise I should have been able to prove which side is right. At the preliminary hearing I said that I saw a document accompanying the covenant. But now I am convinced that it was the memorandum written by Kono. When I saw it I was exceedingly busy, and only glanced over it but did not read it. Therefore I cannot tell exactly what it was.

Q.—If what Kono said is correct, then you must have made a mistake in writing the covenant? A.—I believe that the original did not contain the words "overthrow the government."

Judge Tamano then caused the report of the third preliminary trial to be read, which was to the effect that the covenant he originally wrote contained the words "improve" instead of "overthrow."

This prisoner's trial was here concluded.

THURSDAY, 26TH JULY, 1883.

Prisoner No. 1, Hanaka, in his defence, spoke at great length as to the hostility existing between Governor Mishima and the people of Fukushima. Hanaka's party came into collision with the Monarchical Party, the latter being organized by official inspiration. The police intrigued with the latter to exterminate the Liberals who were subjected to every sort of injustice and harsh treatment. The prisoner severely censured the selfish and arrogant conduct of Governor Mishima in terms calculated to kindle indignation in the heart of all true men. He attributed the cause of the covenant to the encroachments of the Mishima (or Monarchical) party.

The Public Prosecutor twice demanded that the audience should be dispersed, on the ground that the prisoner's speech was subversive of national tranquility, but each time his objection was overruled.

Prisoner No. 2, Hiroshima, referred at great length to the arbitrary conduct of Governor Mishima, and declared that he had entered into the league with a view to defend his own person against assassination plotted by the Monarchical Party.

Here again the Public Prosecutor interposed,

and demanded the dispersion of the audience on the same ground as before; but Judge and Assessors opposed the objection, and allowed the prisoner to proceed with his statement.

Prisoner No. 3, Tamano, corroborated the evidence given by the two former prisoners.

The Counsel for the defence then attacked the prosecution, pointing out that, as the case had an important bearing upon the abolition of exterritoriality, the Court would do well to conduct the case with the utmost candor and openness.

TUESDAY, 31ST JULY.

The Court opened at 8.30 a.m. and, in accordance with the request of Mr. Hoshi, Counsel for Hanaka, two witnesses, Sasaki and Kamada, who are at present imprisoned in the Kojibashi Jail were called. Judge Tamano commenced their examination by making the usual inquiry as to their age, profession, etc.

Mr. Horida, one of the public prosecutors, suggested to Judge Tamano that the reading of the statements given by each prisoner should be dispensed with as the Counsel had only to prove a few facts and as the prisoners should be excluded from the Court during the examination of the witnesses. Accordingly, the prisoners were ordered to retire from the Court in conformity with Article 345 of the Code of Criminal Procedure. During the trial of Kamada, the witness Sasaki was ordered out of Court.

Judge Tamano.—Tell me all the particulars about your having found the covenant and given it to Sasaki.

Prisoner.—On the 2nd of December last year, I returned from Wakamatsu to Fukushima, and on visiting the Mumei Kan, found the walls broken in many places presenting a most desolate aspect. I thought this very strange, and on entering the building, I was accosted by the wife of Sato Kiyo, who informed me that the night before a number of armed policemen had broken into the place and carried away Kono. I was surprised, and did not know what to do. Next morning, I proceeded to the residence of Sasaki Usaburo and borrowed a sum of money from him, which I gave to the woman to enable her to quit the place. After this I started for Wakamatsu, and when I reached, Kohama-mura, I met with an acquaintance of mine named Miwa. He told me that Hiroshima was staying at Nihonmatsu, whither I went at once to see him. He told me that there were a number of important documents in the Mumei Kan, but which, he said, were not in violation of the law. I found the documents in a safe. I took them out, and, leaving them on a table, went to the house of the owner of the building used by the Mumei Kan to get a refund of the rent which Kono paid in advance. The landlord refused to restore the money until the receipt he had given to Kono was restored to him. Returning home disappointed, to my great surprise, I found the documents scattered over the table and a piece of paper marked with the word "covenant." I concluded that this was the important document referred to by Kono, so I hid it under the mat. Early next morning, I took it out and sent it to Sasaki by a man called Higuchi. Sasaki put the paper in a bottle. This is all I know about the affair.

Q.—What words did the paper contain? A.—When I was examined at the police station, I pretended to be ignorant of the existence of the covenant. One day in January when the snow fell heavily, I was ordered to stand amid the snow and was beaten by the police with a heavy club. I remonstrated with them for this inhuman treatment. They told me to sign an oath with my thumb, and then I should not be beaten. I refused to sign. Then they beat me again, and I signed. They said that Tamura Kiyoun, a servant of the Mumei Kan, testified to having seen a covenant containing the words "overthrow the Government." I replied that I had lost it while going from place to place on business. Then they questioned me as to whether Kono had procured a supply of provisions and firearms and whether he had three hundred confederates ready to rise in arms against the Government. I said the idea was entirely without foundation. Again, I was put to harsh treatment—beating and no supply of food. Unable as I was to endure the pain, I confessed that the covenant was in possession of Sasaki. The

police immediately went to the residence of Sasaki and searched for it. But they could not find it. Accordingly, I was ordered to accompany them and assist them in searching it. This time, they engaged seven coolies and dug up every part of the garden of Sasaki's house. But they could not find the covenant.

Q.—Why did you not tell that you were subjected to harsh treatment on the occasion of the preliminary hearing? A.—Because there was no necessity for telling it.

Q.—How many copies of the covenant were there? A.—About twenty, and there was a document accompanying them.

This concluded the examination of Kamada.

Sasaki was next brought up.

Judge Tamano.—Have you received a copy of the covenant from Kamada? A.—I received it from Kamada and put it in a bottle which I buried under a willow tree. Later on, when certain rumors got abroad, I dug it up and, after cutting it into pieces, threw it into the river.

Q.—Do you remember to contents? A.—I do not remember them.

Q.—On what kind of paper was it written? A.—It was written on a paper commonly known as *iwaki*.

Q.—Was it only one or many sheets? A.—About twenty, and there was a document inserted between them.

Q.—What did the document in question contain? A.—I did not read it, so I have no idea of what it contained. But it was something like the correction of an original.

This concluded the examination of Sasaki.

The Counsel for the defence observed that, as the facts of the case had now been thoroughly gone into, they would, at the next sitting, enter upon the legal argument.

The Court rose at 11.30 a.m.

"FAREWELL TO SIR HARRY S. PARKES."

Under the above heading a public meeting has been convened. At first it was proposed to hold it in the Chamber of Commerce Rooms; later, in deference to the public convenience, the *venue* was changed to the Y. U. Club. Accordingly, on Monday afternoon the leading representatives of the commercial and social community met at four o'clock in the Club Dining-room to discuss what measures should be taken to offer a suitable valediction to the British Minister, who for more than eighteen years has represented his country at the Court of the Mikado, and now, on well deserved promotion, is about to leave Japan, to the great regret of all those who have known him. About fifty gentlemen in all were present.

On the proposal of Mr. WHITTALL, seconded by Mr. KIRKWOOD, Mr. A. J. Wilkin was unanimously voted to the Chair. At the request of Mr. Wilkin, Mr. Kirkwood consented to act as Secretary.

Before proceeding to the business of the meeting, the CHAIRMAN asked whether it was the wish of those present that the matter discussed should be reported in the public press.

Mr. J. H. BROOKE stated briefly that this was a "public meeting," convened by advertisement: that it would be peculiar in the circumstances to exclude reporters: that there could be no doubt that the public not present would expect to learn the results of whatever discussion might take place; and, finally, that the representatives of the press would, doubtless, furnish fair reports.—(Applause.)

Mr. WILKIN explained that the question had been mooted to him, and then proceeded to state the object of the meeting. He alluded in appropriate terms to the excellent qualities of Sir H. Parkes, to his eighteen years of service in this country, his intelligence and untiring zeal. Even when otherwise unrepresented, members of other nationalities found their interests safe in his hands; and those seated on the opposite side of the diplomatic Board to himself have had occasion to acknowledge his integrity and anxiety for their welfare. As for members of the commercial community, they had ever found in him readiness to listen to complaints, to endeavor to redress grievances, and to represent their interests. They were grieved that he was leaving before the adjustment

of the question of treaty revision. Concerning the object of the present gathering, it was a question how to arrange the manner, most congenially to Sir Harry Parkes himself, of bidding him farewell. He was leaving on promotion, but the sorrow of the community at his loss and that of his family circle would be none the less felt. The speaker recommended the appointment of a Committee, large enough to include all classes of the community and all nationalities, to decide and provide what form the public farewell should take, consulting the inclinations of the Minister, who is now in Hakodate, but is expected to return to Yokohama about the 12th of August, and to leave for his new post on the 22nd of the same month.

Mr. BROOKE asked whether there was any list of the gentlemen present at the preliminary meeting, and the Committee of management then appointed. It would save trouble if what had already been arrived at were now announced.

Mr. WILKIN remarked that he might, briefly, state that about thirty persons had been present at the preliminary meeting, and that the general sentiment was in favour of a garden party. Sir H. Parkes had deprecated any expensive entertainment being provided in his honor. He particularly desired that it should not take the form of a banquet, which had been proposed by some. The question of subscriptions was discussed; and some were in favor of the presentation of a testimonial as well as giving an entertainment.

Mr. BROOKE asked for the names of the gentlemen who had been acting as a Committee until this time, and was informed that they were seven in number, namely, the Chairman himself (Mr. Wilkin), and Messrs. Gay, Evers, Fraser, Mollison, Walter, and Kirkwood.

Mr. BROOKE remarked that the executive machinery of a Committee for the present purpose demanded to be represented by all interests and nationalities. A Committee of fifteen would, he thought, meet the case. More would be unwieldy: fewer unrepresentative. He would propose, "That the present provisional Committee be asked to act, with power to add to their number so as to make the full Committee consist of fifteen members."

Mr. MACDONALD proposed, as an amendment, "that the present business of the meeting be proceeded with."

This was seconded by Mr. MITCHELL.

Mr. BROOKE explained that the business of the meeting was the "election of a Committee and deciding upon the necessary arrangements." However, it did not matter whether the nomination of the Committee came now or after.

It seemed to be understood that the general business of the form that the proposed entertainment should take should be proceeded with, and Mr. Brooke's proposition was held in abeyance.

Mr. THOMAS suggested that the minutes of the previous meeting should be read; some conversational discussion ensued.

The CHAIRMAN appeared unwilling to read the minutes of a meeting which was "informal." He stated, however, that a proposal, made by Mr. Dodd, and seconded by Mr. Thomas, had been generally approved. It was to the effect that the farewell should take the form of an entertainment in the Bluff Gardens and the presentation of a testimonial. It had also been decided to wait on Sir Harry Parkes and discover his wishes in the matter (which had been done). The provisional Committee, as above mentioned, had been elected; and the limit of individual subscription had been fixed at \$5.

The Rev. E. C. IRWIS, coming to the question before the meeting, proposed, and was seconded by Mr. BARLOW, "That the farewell take the form of an evening entertainment and a testimonial."

After a long and desultory conversation as to evening and afternoon, an amendment, proposed by Mr. KIRKWOOD and seconded by Mr. ABBOTT, was approved to the effect, "That an entertainment be given in the Bluff Gardens, the time to be left to the Committee, who will decide upon the hour after consultation with Sir H. Parkes."

The question of the testimonial was next discussed; and it was finally settled that this matter should be kept apart from the entertainment: that the subscription should be unlimited, and open for six months to friends in Great Britain on the Continent of Europe and in America.

Then what was the real business of the meet-

ing" was gone into and satisfactorily adjusted. In fine a farewell entertainment is to be offered to H. E. Sir Harry Parkes in the Bluff Gardens previous to his departure, when an address will be presented to him. Subscription to the party is \$2; and the arrangements, as well as the privilege of inviting guests, is to be left to the Committee, who certainly may be trusted to do their work efficiently even in the normal condition of the seven gentlemen informally appointed. Mr. Brooke's original proposition, that the provisional Committee should continue to act, with power to add to their number, was put to the meeting and carried, with the alteration (made by Mr. Brooke himself) that the full Committee shall be twenty-one. Thus, there are fourteen members to be selected; and there can be no question that, weather permitting, the arrangements will be alike agreeable to the foreign community of Yokohama and the distinguished and honored diplomatist to whom they will then bid farewell.

THE DETAILED FINANCIAL ESTIMATES FOR 1882-83.

Our readers are requested to make the following corrections and additions in the translation of the Financial Estimates published in our issue of July 7th:—

P. 229.—Under the heading, "Manufactures under the Agricultural and Commercial Department," for *Mongame* read *Mombessa*.

P. 230.—Under the heading, "Mining under the Public Works Department," for *Kasaka* read *Kosaka*.

Under the heading "Mining under Finance Department," for *and carbolic acid* read, *Soda and Carbonic acid*.

Under the heading "Expenditure for Fu and Ken" expunge the words as enacted by *Notifications Nos. 48 and 50*.

In the heading "Kuchi Penitentiary," for *Kuchi* read *Sorachi*.

Under the first heading "Miscellaneous Expenses," read:—*The increase under this item is due to the fact that an increase has taken place in the expenses connected with decorations, medals, and other grants, in accordance with Notification No. 1 of this year.*

Before the second heading "Miscellaneous Expenses," insert the following:—

Expenses of Public Works under Public Works Department.—In consequence of discontinuing various works.

Expense of constructing gash in Hskaido. In consequence of the completion of the work.

Expenses for providical erection of Shrines in Ise.—In consequence of the diminution of the works.

Cost of Issue of New Paper Money.—In consequence of the diminution of the quantity issued.

After the above heading, "Miscellaneous Expenses" insert the following:—

Capital for Maintaining Industries and for Temporary Advances.—In consequence of an increase in the item "Redemption of Paper Money," and of the non-requirement of the fund for ship-building materials under the Navy Department.

Adding the two remaining items to the twenty above enumerated, and deducting the total thus obtained from the total increase, the net estimated increase of expenditure for the present fiscal year is found to be yen 8,791,937.

TRANSLATIONS FROM NATIVE JOURNALS.

ON THE DIRECT EXPORT OF JAPANESE TEAS.

(Translated from the *Bukka Shimpo*.)

Some time since we expounded our views on the necessity of improving tea, which occupies the most prominent position among our exports, and, calling the attention of manufacturers to this point, urged that prompt amendment can only be attended with profitable results. Our readers may be aware that our foreign trade in tea continues to decline, and that we are likely to lose the advantages of amelioration unless we institute immediate reform. Some of our manufacturers may have desired to adopt remedial measures for the express purpose of restoring the reputation of the staple as well as reviving trade, but none of them have given effect to their intentions. Mr. Matsuyama, of the port of Kakedsuka, in the province of Toio, regretting the indifference of the tea producers, has suggested the direct export of the staple and determined to put his scheme into practical operation. He writes to us to elicit an expression of public opinion. His letter runs as follows:—"The downward tendency of the price of teas for some time past appears to have induced the provincial, as well as the Yokohama, wholesale merchants to dispose of their goods at any price, apprehension being entertained of further depreciation. It seems that they are unwilling to exert themselves in the work of amelioration. This is regrettable. Moreover, they are utterly ignorant of the actual cause of the depreciation in the value of tea this year, and merely raise vague complaints. We hear provincial merchants say to each other: 'Our teas this year find no customers and we suppose that the trade ought to be abandoned.' It is plain that producers have fallen into a deplorable apathy. What do our tea dealers think of the present time? Is it not true that some years have elapsed since the opening of the path of foreign commerce, and that now is the time to adopt measures for the increase of our export business? It is for this reason that some of our wealthy mer-

chants have opened shops in foreign countries, or embarked in other mercantile operations, thus working toward the extension of our trade; while the Commercial and Agricultural Department affords, both directly and indirectly, ample encouragement to trade and husbandry. All these methods have had their origin in a desire to increase our national productions and foreign commerce. Many of our compatriots have devoted their energies to devising schemes for the growth of our national wealth and power. But, unless our productions increase and our commerce prospers, how can we succeed in enriching the Empire and augmenting its prestige? The best course for our merchants to pursue is to export their teas directly, so as to gain themselves their legitimate profits. The shortest way to this end lies in merchants taking frequent excursions abroad. We have always wished that we could make such a tour; but regret that we have not been able to be so. However, we cannot bear to think of the decline of our tea trade. Teas are regarded as merely secondary among our exports, but they realize considerable returns. Hence recent the extraordinary fall in their value must be looked upon as a source of great misfortune to the Empire. When we look at the condition of the market in America, and the settlements of tea made there, we find that the depreciation is due to the promulgation by the American Government of an enactment forbidding the import of adulterated material from China and Japan. This could not fail to produce a pernicious effect upon our commerce. The mercantile community of America appears to have no definite idea as to what sorts and qualities of teas are prohibited. It hesitates to buy beyond what is necessary for immediate use. It first supposed that there was a deficiency in the amount of teas imported this year from Japan and China, but has since become convinced that, in view of actual sales, there may still remain a surplus. These circumstances have tended to depreciate the value of the leaf. A glance at the condition of local foreign establishments shows that the heavy losses they have sustained since last year and the enforcement of the new regulations in America, have deterred them from making large purchases, and induced them to buy only fine qualities at the lowest possible rates. On the other hand, our own provincial dealers, recollecting the losses incurred during the past two or three years, have endeavored to sell their goods as fast as possible. All this has contributed in a great measure to the depreciation in the value of teas. Those who are at present engaged in the trade are mostly regarded as fools or idiots. Is not such an anomaly cause for lamentation? For our part we have resolved to buy only medium qualities of tea and export them direct to America. We commenced purchasing on the 25th ultimo. What do our fellow dealers think of this year's crop? We suppose that the average yield throughout the empire will exceed sixty or seventy per cent., while there will be a considerable decrease in the out-turn of the second crop. There is no reason why we should regard the whole production as exceeding the proper amount for supply. Indeed, we need entertain no apprehension in this respect; and our statement is justified by the fact that our teas are adapted to the taste of Americans, our chief customers. Of late, however, the exportation of coloured teas has interfered with the demand; but should measures be adopted to prevent fraud, and maintain the normal

excellence of our staple, it will not be very difficult to restore its old reputation. In fact, we might augment our trade to an extent which would put both China and India out of competition. How pleased we should feel then! Our provincial merchants, when bringing their goods to Yokohama, are astonished at hearing about the decline of the American market and finding difficulty in disposing of their consignments. They cannot escape the imputation of thoughtlessness, and are actually lacking in true mercantile qualities. Therefore we propose to export, in combination with associates, half the stock of teas now in Yokohama, direct to the United States. We suppose that the present stock is somewhere about 1,500,000 catties, the half is 750,000 catties, worth about *yen* 200,000. It is our earnest desire to export these 750,000 catties at once, but being unable to do so with our limited resources, we request other merchants to assist us. Failing them we will petition the Government to purchase half the stocks in Yokohama or to advance money on their hypothecation. We believe that the Government will not demur to assist such a scheme of direct export, inasmuch as trade in exports like tea cannot be profitable unless it is conducted by people who are possessed of considerable experience and are familiar with the sentiments and customs of the countries which they supply. In order to acquire a knowledge of these specialities, which alone can ensure ability in a merchant, it is necessary that the trader on his part should be willing to encounter hardship. Those who entertain undue apprehension as to the difficulty of the sale of their goods, or brood over previous losses, or ignore the necessity of direct export, must be regarded as stupid sluggards. We are merely uninfluential men, yet we have resolved to purchase largely Japanese medium teas, hoping thereby to accomplish some good. We trust that our fellow dealers in the Empire, sympathizing with our motives, will not hesitate to follow our example. Business requires promptitude; and specially is this the case in the present instance. Accordingly, we shall arrange to proceed to America with any associates as early as possible. If we find that the tea we take with us finds no customers, we shall endeavour to investigate the causes, and take swift steps to export what will best suit the American taste. Care in the improvement of the staple will scarcely fail to restore its former reputation. Indifference to remedial measures may be looked upon as neglect of the gifts of Heaven."

We do not altogether agree with the above statement. It is worthy of notice, however, that Mr. Matsuyama, the author, appears to hold far higher views than other tea-merchants, who are notorious for procrastination and selfishness. For ourselves we are convinced that the plan of direct export will encounter many difficulties, and cannot be accomplished as easily as he thinks. Great perseverance is absolutely essential to the attainment of the end in view. Obstacles have to be removed, and the work must not be abandoned half way. We believe that Mr. Matsuyama's design has not originated in any desire to acquire large profits from a speculative enterprise. If we are mistaken, we should advise him to abandon his resolution. But, as we think of him, he deserves approbation; yet his aim can only be achieved by perseverance. Temporary success or failure must alike be disregarded.

THE KOREAN INDEMNITY.

(Translated from the *Mainichi Shinbun*.)

The public may be familiar with the fact that after the disturbances which occurred in Söul last year, Japan addressed vehement remonstrances to the Korean Government and compelled it to open its ports, extend treaty limits, and consent to pay an indemnity of five hundred thousand *yen*. We have not obtained accurate information as regards the period at which payment will be made, but it is quite certain that the disbursement will not be in one sum. It is supposed that the indemnity will be defrayed in five yearly instalments in conformity with terms agreed upon in Söul last year, and by others that an arrangement has been made to liquidate the debt in ten yearly instalments. In the former case, Korea has to pay a hundred thousand *yen* a year, and in the latter, fifty thousand. An account of the estimates of revenue and expenditure for this year, which we have lately perused, contains at the end an item of a "special fund of eight hundred thousand *yen*," with a note to the effect that the amount has been reimbursed by America. Through the same estimates we are enabled to understand the arrangements actually made in regard to the Shimonoeki indemnity. We are, however, utterly ignorant of all matters concerning the Korean indemnity, which is somewhat similar in its nature. Whether the instalments were fixed at fifty thousand *yen* or at a hundred thousand, we expected that the amount would be mentioned in the estimates if it was to be paid by Korea. But according to intelligence received on the 26th instant from our correspondent in Korea, the mistrust that we have felt toward our authorities was simply the outcome of our ignorance of the actual relations of the Japanese and Korean Governments. It must be remembered, however, that the reason why we were suspicious of the proceedings of the Government is because we have heard that the Korean Envoy Pak Yong-ik who arrived in Japan last year, concluded his negotiations with a promise to pay a sum of three hundred thousand *yen* in five or ten yearly instalments, and because, if such be the case, the recent estimates should contain an item of the receipt of at least fifty thousand or a hundred thousand *yen*. It seems probable that an agreement has been made for the payment of the indemnity in annual instalments. Should this be true, our doubts are not unreasonable. Information received from the peninsula on the 27th instant states that Ko Yöng-hwi started from Pusan on the 11th instant for Söul in the steamer *Moshun Kan* to explain Korea's inability to provide the indemnity to be paid to Japan, and to ask for a reasonable delay. From this simple statement it is impossible to discern the exact state of affairs, but when we consider it in reference to the fact that there is no item in the estimates regarding the Korean indemnity, we can plainly comprehend that the Government did not purposely arrange to leave out the item in question, but was obliged to do so, as it has not received the money. It may be regarded as a strange course of things that intelligence received from Korea across the ocean has served to dispel doubts concerning our financial estimates. We stated last year that negotiations between Japan and Korea should be carried on in such a manner as to secure the future prosperity of commerce, and consolidate mutual friendship, and that any question of indemnity should be regarded as injudicious. A sum of five hundred thousand *yen* cannot enrich our Empire, any more than the loss of the same amount would impoverish it; while to the Korean Government five hundred thousand *yen* is an enormous amount. If Korea has to resort to extreme measures to provide for the payment of the annual instalments of her indemnity, not only this year, but next, and next in succession, it must inevitably happen that she will feel more or

less enmity towards the Japanese Government. She will, at least, regard Japan as an unfriendly neighbour and one who has compelled her to pay an indemnity of five hundred thousand *yen* out of a depleted Treasury. In ordinary cases of loan the debtor is easily exasperated by the pressure of his creditor. Much greater must be the indignation of the debtor who, having humbly apologized for his default, is still compelled to pay. According to the statements of our correspondent, it seems that the districts of Kyöng-kwi-do and Kyöng-sang-do are suffering from drought. Chölla-do appears to suffer also from the same calamity; and the district of Chhung-chöng must have shared the same fate. If there is no rain in three or four days, this year will witness a terrible drought, and both Government and people will be distressed by famine. The districts of Kyöng-sang-do and Chölla-do may be regarded as the granary of Korea. Korean prosperity hinges upon the success of the rice and corn crops. What will happen if drought forbids the filling of the granaries? It is obvious that the Korean Treasury is more and more ill supplied year by year. For this reason we cannot sympathize with the negotiations at Söul, concerning the exaction of an indemnity. But they are already concluded; and it is useless to say anything more about them. What we ought to do for the Koreans in future is to adopt such measures as may enable them to fulfil their contract without great difficulty. And such measures will be best completed by establishing a Custom House in each of the Korean open ports with a tariff consistent with our own. We have heard that America, as well as other powers, which have concluded commercial treaties with Korea, have agreed to the imposition of reasonable duties upon the exports and imports of any port opened to foreign trade. While foreign powers have already permitted Korea to levy Customs duties upon their goods, is it not dissonant with any legitimate method of consolidating friendly relations between her and Japan that the latter alone should be allowed to do business without paying any such duties? We must remember that now is the time for Japan to demand the revision of her existing treaties with various foreign powers. Hence we should the more readily allow the Government of the peninsula to enforce its own tariff as soon as possible. Such a proceeding cannot fail to be the most potent aid to our diplomacy. Does our Government intend to exact any indemnity from Korea? If it does not, it had better refrain from negotiation. Should it be determined to receive the indemnity, it must teach Korea the best way to pay. Recourse to any pressure for the exaction of the money must weaken the friendly relations between Japan and Korea.

METEOROLOGICAL REPORT.

For Week Beginning Friday, July 27th, 1883.

Observatory of Daigaku, Moto-Fuji-cho, Hong, Tokyo, Japan.

REMARKS.

Heavy line represents barometer.
 Light continuous line—maximum and minimum thermometers.
 ————— represents velocity of wind.
 ————— percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.
 * Rain in inches. † Direction of Wind. ‡ Weather.

Maximum velocity of wind 13.1 miles per hour on Thursday at 3 p.m.

The highest reading of the barometer for the week was 29.96 inches on Thursday at 11 a.m., and the lowest was 29.56 inches on Monday at 6 p.m.

The highest temperature for the week was 89.8 on Friday, and the lowest was 72.0 on Sunday. The maximum and minimum for the corresponding week of last year were 94.2 and 71.2 respectively.

The total amount of rain for the week was .138 inch, against .021 inch for the corresponding week of last year.

LATEST SHIPPING.

FREIGHTS.

The Freight Market remains much as last reported, several vessels have accepted a reduction in rates, and are coming here from Nagasaki with coal at rates that have never before been touched. To induce business a still further reduction would have to be submitted to, and \$1.25 is quoted as the rate at which charters would be effected. On the China coast rates are even proportionately lower; off coast nothing offers, nor can a change reasonably be expected till later in the year, when perhaps Newchwang may offer a slight advance on present quotations for the last voyages of the season before winter sets in.

ARRIVALS.

Wakanoura Maru, Japanese steamer, 1,342, A. F. Christensen, 29th July,—Kobe, 27th July; General.—Mitsu Bishi M. S.S. Co.

Toyoshima Maru, Japanese steamer, 956, Thomas, 30th July,—Kobe, General.—Mitsu Bishi M. S.S. Co.

Oceanic, British steamer, 3,700, Davison, 30th July,—San Francisco 10th July, Mails and General.—O. & O. S.S. Co.

Stillwater, British barque, 1,090, Goudy, 30th July,—New York 12th March, Kerosene Oil.—Smith, Baker & Co.

Zambesi, British steamer, 1,540, L. H. Moule, 30th July,—Hongkong, 21st July via Nagasaki and Kobe, General.—P. & O. S. N. Co.

Gembu Maru, Japanese steamer, 670, F. J. Brown, 31st July,—Hakodate, General.—Kiyodo Unyu Kwaisha.

Nagoya Maru, Japanese steamer, 1,015, Wilson Walker, 1st August,—Shanghai and ports, Mails and General.—Mitsu Bishi M. S.S. Co.

City of Peking, American steamer, 3,129, Friele, 1st August,—Hongkong 26th July, Mails and P. M. S.S. Co.

Tsuruga Maru, Japanese steamer, 580, Dithlefsen, 1st August,—Kobe 30th July, General and Specie \$270,000.—Mitsu Bishi M. S.S. Co.

Furness Abbey, American barque, 1,048, G. T. Marcy, 2nd August,—New York 11th March, General.—R. Isaacs.

Tanais, French steamer, 1,750, Vaquier, 3rd August,—Hongkong 28th July, Mails and General.—Messageries Maritimes Co.

Taganoura Maru, Japanese steamer, 448, Matsumoto, 4th August,—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.

DEPARTURES.

Ferdinand, German barque, 416, Westergard, 27th July,—Seeking.—Captain.

Hiogo Maru, Japanese steamer, 866, R. N. Walker, 27th July,—Hakodate via Oginohama, General.—Mitsu Bishi M. S.S. Co.

Annie H. Smith, American ship, 1,502, R. B. Brown, 28th July,—San Francisco, Ballast.—China and Japan Trading Co.

Cyprus, British ship, 1,390, Johnson, 28th July,—Kobe, General.—Simon, Evers & Co.

Mensaleh, French steamer, 1,276, B. Blanc, 29th July,—Hongkong, Mails and General.—Messageries Maritimes Co.

R. R. Thomas, American ship, 1,332, P. Nichols, 29th July,—San Francisco, Ballast.—China and Japan Trading Co.

Sooloo, British barque, 473, Baikie, 30th July,—Nagasaki, Ballast.—Mitsu Bishi M. S.S. Co.

Evangeline, British 3-masted schooner, 345, Bell, 30th July,—Nagasaki, Ballast.—Captain.

LATEST COMMERCIAL.

IMPORTS.

There has been rather more doing in Yarns during the last week, and the sales amount to some 925 bales. In Shirtings, too, there has been rather more enquiry for special chops, but sales effected are but small. In other Goods there has been more doing in silk-faced Satins and Mousselines. Woollens generally are quite neglected, and there is but little doing in Metals.

COTTON YARNS.

| | PER PICUL. |
|-----------------------------------|------------------|
| Nos. 16 to 24, Common to Medium - | \$25.00 to 28.50 |

| Nailrod, assorted - | 2.25 to 2.50 |
| Nailrod, small size - | 2.85 to 3.10 |

KEROSENE.

No sales of Oil have been effected during the past week, and the Market is somewhat weaker in Tokijo. Deliveries have amounted to 22,000 cases. The *Still Water* and *Furness Abbey* have arrived with 78,500 cases, making our present Stocks some 613,000 cases of sold and unsold Oil. Quotations are quite nominal at:—

| | PER CASE. |
|----------|-----------|
| Devoe - | \$1.70 |
| Comet - | 1.65 |
| Stella - | 1.56 |

SUGAR.

Small sales at low rates have been the principal features during the past week in the Sugar Market, and most of the lots moved off have been Brown Formosa sorts. Stocks of White, already large, are accumulating, but prices are unaltered notwithstanding the exceedingly small transactions.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$8.50 to 9.00 |
| White, No. 2 - | 8.00 to 8.50 |
| White, No. 3 - | 7.25 to 8.00 |
| White, No. 4 - | 6.25 to 6.75 |
| White, No. 5 - | 5.25 to 5.50 |
| Brown Formosa - | 5.00 to 5.25 |

EXPORTS.

SILK.

Business has now commenced in earnest, and recorded settlements for the week under review are nearly 600 piculs. In spite of the business doing, prices generally do not advance, especially

for Hank sorts. All kinds are now beginning to come in, and we only require O hia and Hamatsuki kinds to make a full list. Arrivals have exceeded settlements, and we have a Stock of about 1,000 piculs. Export to date is 1,710 bales against 1,669 bales last year, and the *Zambes* leaving this afternoon should take a few.

Hanks.—During the last few days a large business has been done in these at quotations. Arrivals begin to come in freely, and sellers are disposed to be current.

Filatures.—Good sorts are in request at full rates. Medium kinds are neglected, and comparatively dear at quotations, the size being unreliable.

Re-reels.—These have made an appearance: a little business has been done on the basis of \$615 for "Tortoise" chop and \$610 for "Five Girl."

Kakedas are commencing and some extras have been taken at \$635. Full supplies expected shortly.

QUOTATIONS.

| | |
|-----------------------------------|--------------|
| Hanks—No. 2 - | \$500 to 510 |
| Hanks—No. 2½ - | 450 to 460 |
| Hanks—No. 3 - | 460 to 470 |
| Hanks—No. 3½ - | 440 to 450 |
| Filatures—Extra - | 650 to 665 |
| Filatures—No. 1, 10/13 deniers - | 640 to 650 |
| Filatures—No. 1, 14/16 deniers - | 630 to 640 |
| Filatures—No. 1½, 14/17 deniers - | 610 to 630 |
| Filatures—No. 2, 10/15 deniers - | 600 to 620 |
| Filatures—No. 2, 14/18 deniers - | 600 to 610 |
| Re-reels—No. 1, 14/16 deniers - | 610 to 620 |
| Re-reels—No. 1½, 14/17 deniers - | 600 to 610 |
| Re-reels—No. 2, 14/18 deniers - | 550 to 560 |
| Kakedas—Extra - | 625 to 635 |
| Kakedas—No. 1 - | 600 to 610 |
| Kakedas—No. 2 - | 550 to 570 |

TEA.

During the early part of the week now under review, Settlements continued on a liberal scale, and prices somewhat hardened; but within last two days buyers generally have been holding off, and the Market closes quiet, although as yet no decline can be quoted. Settlements aggregate 4,370 piculs, consisting of the following grades:—Common 280, Good Common 1,035, Medium 1,170, Good Medium 1,050, Fine 445, Finest 125, Choice 150, and Choicest 15 piculs. Settlements here and at Kobe show a falling off of 13,667 piculs compared with this date last year. Total arrivals at Yokohama are 118,431 piculs against 125,879 piculs at the corresponding date in 1882. The *O. & O. steamship Arabic* is advertised to leave here for San Francisco on the 18th of August taking Tea at 2½ cents per lb. gross to Eastern States and Canada and at \$12.00 per ton of 40 cubic feet for San Francisco.

QUOTATIONS.

| | |
|---------------|--------------|
| Common - | \$12 & under |
| Good Common - | 13 to 14 |
| Medium - | 15 to 17 |
| Good Medium - | 18 to 20 |
| Fine - | 22 to 24 |
| Finest - | 25 to 27 |
| Choice - | 28 to 31 |
| Choicest - | 33 & up'ds |

EXCHANGE.

Only small transactions have to be recorded for the week, and rates close steady.

KINSATSU QUOTATIONS.

The following table shows the rate of the day, and the fluctuation during the past week:—

| | |
|-------------------------|------|
| Monday, July 30th - | 124½ |
| Tuesday, July 31st - | 125 |
| Wednesday, August 1st - | 124½ |
| Thursday, August 2nd - | 124½ |
| Friday, August 3rd - | 123½ |
| Saturday, August 4th - | 123½ |

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c., is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

BARNET & FOSTER, Engineers,

23c, Forston Street, London, N.

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

Apply to the *Japan Mail Office*,
Yokohama, May 2nd, 1883.

NOTICE.

THE "JAPAN DAILY MAIL" is now the largest newspaper published in Japan. The paper is issued every morning and immediately delivered in the Settlement and Bluff.

A new rate of charges for Advertisements has been devised on a very moderate scale, and the Paper has a good and increasing circulation.

The "JAPAN DAILY MAIL" is the principal Morning Paper published in Yokohama in the English language, and is delivered at places of Business during Office Hours on the day of publication. Advertisers will therefore see that the "JAPAN DAILY MAIL" offers unusual facilities for public announcements.

White Rose, Ylang-ylang, Staphanotis, Opopanax, Jockey Club, Has Bouquet, Treval, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S GOLD MEDAL EAU DE COLOGNE

is strongly recommended, being more lasting and fragrant than the German kinds.

ATKINSON'S OLD BROWN WINDSOR SOAP,

celebrated for so many years, continues to be made as heretofore. It is strongly Perfumed, and will be found very durable in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR,

a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,

and other preparations and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers.

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.
PRICE LIST FREE ON APPLICATION.

CAUTION.—Beware. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 11TH, 1883.

BIRTH.

On the 9th instant, the wife of Rev. E. CHAMPNEYS IRVING, of a Daughter.

DEATH.

August 10th, at No. 31, Bluff, Cary, infant son of Mr. and Mrs. J. POTTER, aged seven weeks and five days. Funeral private.

WEEKLY NOTES.

LATEST advices from Shanghai bear out our recent estimate of the state of the Tonquin affair. The recall of the Viceroy Li and his re-appointment to his former post have been followed by a report that Tso Tsung-t'ang has been summoned to Peking. The fair inference is that the War Party's ascendancy is for the moment established. It could not well be otherwise, indeed, unless China was prepared to admit publicly that her opposition to French aggression had been, from the first, an empty farce. This or to fight were the only alternatives M. Tricou's diplomacy appears to have offered. The *North China Herald* thinks that, as things stand at present, the claims of China are simply set aside. She is to be left to her own devices, warned only that "any interference in the impending struggle will be interpreted by

France as an act of war." This estimate, however, is scarcely credible, unless it be understood as referring to a position which has arisen out of the perplexity, rather than the deliberate resolve, of France. We cannot believe that even M. Challemel Lacour would wittingly offer China her choice between a possibly disastrous war and peace at the certain price of finally sacrificing her prestige. But it is quite intelligible that pending the receipt of explicit instructions from home, M. Tricou, unable to suggest any reasonable exit from the dead-lock, may have been in a manner compelled to dismiss the question temporarily by a general warning of *noli me tangere*. Meanwhile, the instructions given to General Bouet point to the assumption of offensive movements in Tonquin on October 1st. The forces at the General's disposal only amount to 3,000 infantry, three batteries of artillery, and 500 Annamite sharpshooters, and of these not more than 2,000 will be available for service in the field. Such an army can scarcely hope to accomplish much. The lowest estimate hitherto published places the force necessary to establish French ascendancy in Tonquin at ten thousand men, and nothing has since happened to show that this calculation is exaggerated. The nature of the country is opposed to military operations, and as the French penetrate into the interior, the difficulty of preserving communications with their base will constantly increase, while the enemy will probably confine themselves to guerilla tactics. It is plain, too, that the Annamites have no intention of yielding quietly. That they occupy the delta of the Red River in very considerable numbers is shown by the latest report from Nam-dinh, where one of their out-posts, variously estimated at from five to ten thousand men, was dislodged with heavy loss on the 18th of July. The operation seems to have been conducted with no little skill by Colonel Badens, who is in command of the Nam-dinh garrison. On the night preceding his intended attack, he embarked 200 of his men in twelve junks with orders to place themselves in rear of the Annamite position. This they succeeded in doing, and when the French troops marched out of the citadel on the following morning to attack the enemy's camp, the latter found themselves between two fires. The result was that they fled pell-mell with a loss of from 200 to 1,000—both estimates are given with equal assurance—and leaving behind them seven cannon as well as a thousand stand of small-arms. Colonel Badens is to be congratulated on

this dextrous and successful manoeuvre, but while we have pleasure in recording his reported victory, we cannot lose sight of the fact that the Tu-duc's troops are evidently in great force, and that a couple of regiments of Frenchmen, however brave and however skilfully handled, may not hope to effect the conquest of a country in the face of such obstacles. It is very much to be desired that if the military occupation of Tonquin is undertaken at all, it should be undertaken after a fashion that will not encourage Chinese opposition or unnecessarily prolong the sufferings to which Tonquin must inevitably be subjected during the campaign.

THE hot weather seldom comes and goes in Japan without throwing Yokohama into a ferment of some sort. Last year it was a fit of virtuous indignation. Somebody discovered that the wine shops on the road leading to the Bluff carried on a business more profitable though less reputable than that of vintner, and somebody else, under the influence, perhaps, of that ecstasy so notably fatal to reason, the ecstasy of recent repentance, opened a newspaper crusade against these disgraceful exhibitions of immorality. The excitement subsided with the thermometer, leaving no consequences except a languid curiosity on the part of the Bluff residents, who had not previously been conscious of the scandal which rendered them objects of public commiseration. We do not remember at the present moment whether exterritoriality was tacked on to this grievance. Probably it was. Exterritoriality is ubiquitous in Yokohama. Everything serves to illustrate its benefits. If a heap of stones is badly located, we are reminded that were we not exempted from Japanese jurisdiction, every road round the Settlement would be thickly strewn with jagged boulders. If a jinrikisha coolie is insolent, we are told that could he get the treaties revised, he would make our lives a burden to us. If a scavenger is unpunctual, we are warned that to satisfy his political aspirations would impel him to devote his days to carrying buckets of night-soil to and fro before our houses. If the philanthropy of youthful gallants attracts some soiled doves to our neighbourhood, we are informed that all the Phrynes in Japan would be shot at our heads were we not shielded by Orders in Council. Exterritoriality, in short, is propped and buttressed by such a multitude of pleas, that men are constrained to pity its tottering decrepitude. It is a good old fossil which has survived the disappearance of the stratum it belonged to, and will

soon be buried under the ridicule its advocates hysteria excites. But in the meanwhile the hot weather has given it the usual fillip. On this occasion, however, the movement of support comes from a direction diametrically opposite to that of last year. Then the police were charged with incompetence because they permitted what police in other countries have never succeeded in preventing. Now they are held equally culpable for attempting to prevent it. At Homoko there is a house where gentlemen go to bathe, and where they are waited upon by four children, from sixteen to twenty years of age. One of the bathers, under the influence of an access of paternal tenderness, took a child on his knee. He was espied by the police, and that evening the poor children were marched off to the police-station and confined in a lock-up, which, unlike the lock-ups of police-stations in civilized countries, was not provided with cushions and mosquito nets. Coarse questions were also propounded to the innocent children; their faces, *they say*, were slapped and their arms twisted behind them. Naturally public indignation boiled over. Half a dozen letters were addressed to the local press denouncing the cruel tyranny of these official "brutes," and one gentleman who ventured to enquire in what respect the houses at Homoko differed from those on the Camp Hill, and why the latter should be suppressed and the former winked at, received a reply which will make him careful of venturing into print again. Whether the police were right or wrong is, however, a secondary consideration. The grand result is that another prop has been applied to exterritoriality. It has been shown that Japanese policemen are capable of running a woman in because she sits on a gentleman's lap. The inference is that, were it in their power, they would run the gentleman in because he took her on his lap. It is quite proper that such contingencies should be guarded against. Life would not be worth living if it were shorn of these soft attractions by tyrannical myrmidons of the law.

ALLUSION is made by the home journals to a possible alliance between Japan and France in the event of war between the latter and China. We are not surprised that this rumour has found its way across the sea. Such rumours generally travel pretty fast, and it is not impossible that special assistance was given to accelerate the speed of this particular *canard*. It is the echo of what must be described as a questionable piece of diplomacy. There seems to be little doubt that throughout the course of the embroglio between France and China, Japan has been used as a cat's-paw, and her willingness to take part in a quarrel against her neighbour represented to the latter in terms more diplomatic than truthful. It might, perhaps, have been too much to expect that no advantage would be taken of the temporary estrangement between the two empires. This species of moral suasion has constantly been employed in international conferences, nor need it be denied that to represent the perilous contin-

gencies of an opponent's position in the strongest light consistent with truth comes fairly within the province of diplomatic craft. But unless common report is much mistaken, something more than this was essayed in the instance under consideration. Between Japan and China there still unfortunately exist some unsettled questions which have engendered mutual soreness. They are not serious questions, nor need they, except under extraordinary circumstances, necessitate any appeal to force. Certainly their submission to the arbitrament of the sword will not be of Japan's election. To place her relations with her neighbour on a sincerely friendly footing is the constant wish of those to whose care her destinies are at present entrusted. Behind all China's momentary sensation of pique and resentment, there must exist a consciousness of this fact. She knows, too, perfectly well that Japan has no shadow of reason to quarrel with her. The somewhat romantic claims of the Middle Kingdom to the Riukiu Islands still remain outstanding, but so far as Japan is concerned, they are, to all intents and purposes, settled. The islands form an integral portion of her empire. She would probably surrender them to-morrow could she be well assured that their cession would permanently restore Chinese good-humour, but in the meanwhile her title to them rests on the practical basis of possession and stands in no need whatever of armed assertion. For the rest, she cannot reasonably be credited with any covetousness of Chinese territory. The days are past when her troubles at home were sharp enough to render foreign conquest a possibly desirable counter-irritant. Territory acquired beyond her borders, above all Chinese territory, would now be not only an encumbrance, but also a serious impediment to the reforms which she has in progress and whose consummation is essential to her internal peace. All these things are very well known to China, and some exceptionally cogent argument would be needed to persuade her that opposition to France's designs in Tonquin might signify opposition to a Franco-Japanese combination. It seems apparent that an attempt to provide such an argument was made by endeavouring to rouse in Japan the aggressive spirit which her good sense at present holds in check. Efforts were made to persuade her that her honour was concerned in bringing to a speedy and final issue the so-called complications existing between herself and her neighbour, and there is reason to think that the Annamese embroglio was represented as an exceptionally favorable opportunity to strike a decisive blow. It is satisfactory to know that this unworthy device met with the fate it deserved. It is not impossible, indeed, that some minds in Japan may have been considerably unsettled by the prospects thus presented to them, and that a partially renewed vigour may have been imparted to the difficulty bequeathed to her by centuries of military existence—the difficulty of holding in check her own martial spirit. But beyond this the mutual dispositions of the two empires have not been altered, and the only

outcome of the affair is an assurance, if any were needed, that intrigue and bluster have ceased to be the most efficient factors of Western diplomacy in the East.

THE return of Sir Harry Parkes from the north is expected about the 18th instant, after which the date of the farewell party given in his honour by the communities of Yokohama and Tokiyo will be fixed. Sir Harry leaves for China, according to present intentions, on the 22nd instant. No definite news of his successor's movements has yet been received. Private intelligence, however, fixes the end of the year as the probable time of Mr. Plunkett's arrival, but an idea is gaining ground that possibly he may not come to Japan at all. The First Secretary of Embassy at Paris is generally credited with a title to an appointment in Europe, and it is known that at the end of the present fiscal year one or two vacancies, more eligible than Japan, will occur. The uncertainty as to Mr. Plunkett's movements suggests a corresponding uncertainty of intention, and we shall not be much surprised to find that the Legation at Tokiyo ultimately falls to somebody else.

THE Minister for Foreign Affairs has notified the corps diplomatique that the port of Swatow is to be considered as a port infected with cholera, and that all vessels arriving thence will be subject to the Regulations for medical inspection promulgated by Imperial Decree, No. 31, of 1882. It is curious to note the different methods employed by different Foreign Representatives in conveying this information to their nationals. The U.S. Consul-General inserts an advertisement in the local journals, briefly announcing that official information has reached him to the above effect. He says nothing about the means that will be employed to carry out the medical inspection, or the penalties that will be imposed in the event of any attempt to evade it. A space of four inches in the advertising columns of a newspaper suffices to convey all the necessary information to his countrymen, as well as to let them know, by implication, that Japan's foreign treaties have not deprived her of the power to enact and make binding upon all those residing within her territories whatever regulations she may deem essential to the health and well-being of her people. Her Majesty's Minister, on the other hand, requires more than a column of space to convey a portion of this information. He begins by publishing a long Notification citing his various powers, and then proceeds to enact a Regulation of Urgency calling upon all British subjects to observe the rules for medical inspection as issued by the Japanese Government, and warning them that any wilful contravention or infringement of those rules will be deemed an offence—against what? Against the Medical Inspection Regulations, one is naturally inclined to reply. Not so. Against the Regulation enacted by Her Majesty's Minister. Not only is this distinctly stated, but the penalty to be imposed for such infraction or contravention is given in detail. There is here

a difference of system which time does not help to reconcile. So far as phraseology is concerned there is almost absolute similarity between Japan's treaties with England and the United States. The difference, then, is in their interpretation. Which reading is correct? One or other must be wrong.

NOTES.

It is interesting to note that the French claims in Madagascar are of the same family—though somewhat distant relations—as her claims in Tonquin. The grand *point d'appui* of her title is the treaty of 1841, by which certain territories in the north of the main island were ceded to her. This treaty is now interpreted as conferring on France a protectorate over the portions ceded; a protectorate over all the northern part of the island; a protectorate over all the western side of the island, and finally, general rights over the whole of Madagascar. Nothing special seems to be gained by this progressive fashion of statement, unless it be that the mind is not shocked by an abrupt declaration, but is gradually led up to the claim over the *whole* island by a process of cumulative acquisition. The point of the matter is, however, that no rendering of the text of this treaty can dispose of the ugly fact that its Malagasy signatories were the representatives of two Sakalava tribes in the north-west of the island, who were then in open revolt against the authority of the Hovas, and who seem to have been persuaded by the captain of a French war-vessel which happened to be cruising off the coast, that in return for these concessions they might count on French protection against their rightful sovereign." That that Sovereign was Queen Ranavola I. does not admit of any question. The territory claimed had been fairly conquered in 1824 by King Radama I., who established his authority over the whole of Madagascar, a portion of the south-west coast alone excepted, and if two of the conquered tribes, after quietly submitting to that authority during 17 years, elected to revolt from it in 1841, though their power to dispose of the territory they occupied may have been momentarily established, the notion that they had any right to be similarly liberal with regard to the territory of the Sovereign from whom they had revolted, is a new interpretation of international law. No such notion was entertained by France in 1862 and 1868, when she made two treaties acknowledging the then Queen and her predecessors as sovereigns of Madagascar without any reserve whatsoever. In addition to these reasons, sufficiently conclusive in themselves, eight others are advanced on the Malagasy side. They are as follows (we quote from an interesting article by the Rev. J. Sibree in the January number of the *Contemporary Review*):—

1.—Military posts have been established there, and customs duties collected by Hova officials ever since the country was conquered by them, and these have been paid without any demur or reservation by French as well as by all other foreign vessels. Some years ago complaints were made by certain French traders of overcharges; these were investigated, and money was refunded.

2.—All the Sakalava chiefs in that part of the island have at various times rendered fealty to the Sovereign at Antananarivo.

3.—These same Sakalava, both princes and people, have paid a yearly poll-tax to the Central Government.

4.—The French flag has never been hoisted on the mainland of Madagascar, nor, for forty years, has any claim to this territory been made by France, nothing whatever being said about any rights or protectorate on their part in the treaties concluded during that period.

5.—The Hova governors have occasionally (after the fashion set now and then by governors of more civilized peoples) oppressed the conquered races. But the Sakalava have always looked to the Queen at Antananarivo for redress (and have obtained it), and never has any reference been made to France, nor has any jurisdiction been claimed by France or by the colonial French authorities in the matter.

6.—British war-vessels have for many years past had the right (conceded by our treaty of 1865) to cruise in these north-western bays, creeks, and rivers, for the prevention of the slave trade. The British Consul has landed on this territory, and in conducting inquiries has dealt directly with the Hova authorities without the slightest reference to France, or any claim from the latter that he should do so.

7.—The French representatives in Madagascar have repeatedly blamed the Central Government for not asserting its authority more fully over the north-west coast; and several years ago, in the reign of Ranavalona I., a French subject, with the help of a few natives, landed on this coast with the intention of working some of the mineral productions, and built a fortified post. Refusing to desist, he was attacked by the Queen's troops, and eventually killed. No complaint was ever made by the French authorities on account of this occurrence, as it was admitted to be the just punishment for an unlawful act. Yet it was done on what the French now claim as their territory.

8.—And, lastly, France has quite recently (in May of this year) extorted a heavy money fine from the Malagasy Government for a so-called "outrage" committed by the Sakalava upon some Arabs from Mayotta, sailing under French colours. These latter were illegally attempting to land arms and ammunition, and were killed in the fight which ensued. The demand was grossly unjust, but the fact of its having been made would seem to all impartial persons to vitiate utterly all French claims to this territory, as an unmistakable acknowledgment of the Hova supremacy there.

The plain truth is that France's last treaty with Madagascar—that of 1868—"makes no admission or allusion to any of the rights now alleged by the former, much less to any protectorate; and is simply a treaty of friendship and commerce between two nations, standing, so far as power to make treaties is concerned, on an equal footing." Having regard to these facts it is somewhat difficult to justify France's very high-handed proceeding as reported by our latest telegrams. She does not appear to possess in Madagascar any rights distinct from those of other European nations, except such rights as are conferred by the superior dimensions of her commerce with the Malagasies. Whether those rights extend to the arrest of a British Consul's secretary, the expulsion of the Consul from his residence, and the forcible detention of British naval officers who had gone on shore to attend the Consul's funeral, are questions which Her Majesty's Government are evidently resolved to examine carefully.

A REPORT in the *Yiyu Shimbun* is to the effect that many of the *Kwasoku*, who desire to take a position among their countrymen similar to that enjoyed by the nobility in England, and to have a defined place in the National Assembly of 1890, have arranged to hold weekly meetings each Saturday in the Nobles' School. They are credited also with a desire to augment the extent of the Sovereign's prerogative at the same time as complying with the aspirations of the people. The *Yiyu* has the air of sneering at the programme, no part of which, however, need be inconsistent with another.

SEVERAL Japanese newspapers publish a statement to the effect that a number of Americans residing in Kobe propose to erect a monument

in memory of the Regent Ii Kamon-no-Kami, who was assassinated at Sakurada Gate, Tokiyo, in the early part of 1860. The report has probably no foundation, for it is impossible to conceive what interest any association of Americans can have in perpetuating the recollection of that once powerful but now nearly forgotten Daimyo. There is, however, a slight incidental connection between his name and the early Japanese relations with the United States. As an anecdote, it will bear recital. The first Embassy, or Commission, sent in modern times from this country to any Western nation, was travelling in America in 1860, and sojourning in Philadelphia, when the news of Ii's death reached that locality. The Oriental visitors,—some twenty *Samurai*, with a following of forty odd servants,—had been placed in charge, at Washington, of three navy officers,—Captain Dupont, who died a score of years ago; Lieut. Porter, now Admiral of the United States; and Lieutenant Lee, who subsequently disappeared beneath the surface of the Southern rebellion. It was a pleasant ornamental service for at least the two first-named of these gentlemen, and they were not at all disposed to lose any of the distinction attached to it, either by sinking their own identity, or by allowing that of the Asiatic guests to become too prominent. Among their quaint theories as to the treatment of the Envoys, they held that no disturbing or exciting intelligence, of any description, should be permitted to reach them from their native land. Upon the appearance of the report concerning Ii, they issued orders that no newspaper should penetrate the Japanese section of the Continental Hotel, without being first submitted to them for inspection, and, if necessary, excision. It was a ridiculous decree,—ill-advised and unwarranted in every respect; but the profoundest diplomatic sagacity is not always to be expected from the gallant sons of Neptune. Rumours of the intelligence were inevitably caught up by the attachés of the embassy, who flew with them in hot haste to their masters; but these latter could learn nothing authentic on application to their guardians, who defended their reticence with the plea that upon the first hint of what had occurred, the commissioners would insist upon a precipitate departure from America, without carrying the splendid programme of travel prepared for them, to its triumphant climax in New York. It happened, however, that a clever young interpreter, sent privately forth by the principal envoys to learn the truth, succeeded in getting and imparting to his superiors an exact statement of the facts. Thus far, we have narrated what was known to everybody, at the time. The sequel rests upon a narrower authority, for which we cannot vouch. *Si non e vero*, etc. The story ran that the two over-discreet naval gentlemen were requested to favour the Japanese leaders with their presence, and were asked in direct terms whether they had, or had not, any knowledge of the alleged tragedy. They replied that they had nothing to communicate; whereupon the senior envoy expressed astonishment that

He should be able to supply information upon a subject which had evidently escaped the watchfulness of the American officers. Through the interpreter, the complete details were then revealed, with much precision and circumspection, the countenances of the listeners betraying their utter discomfiture, while those of the messengers from the East preserved more, if possible, than their accustomed imperturbability. This was not all. The gallant chaperons were furthermore informed that, if the ambassadors had been fortunate enough to learn this interesting news from them, it would naturally follow that the advice of Captain Dupont and his colleague should be sought and deferred to in this unexpected crisis; but as they, their appointed guides, philosophers, and friends, were obviously in the dark, it would be useless to burden them with such an addition to their labours. The ambassadors would only ask if it were not desirable for them to send a message to the State Department at Washington requesting that some person acquainted with the subject be appointed to come at once and consult with them. Beyond this point the tale has never been unfolded; but it is a matter of notoriety that, from that time forth, no attempts were made to restrict the range of interrogation of the strangers or otherwise to hold them in leading-strings, by the committee of Uncle Sam's mariners.

By the last mail from the United States, intelligence was received of the approval, by President Arthur, of the sentence condemning Commander Muljan to dismissal from the American naval service. The case has excited considerable attention, owing to the well known antecedents of the deposed officer, and the peculiar circumstances under which he was entrusted with the command of the *Ashuelot*. According to the regulations of the Navy Department, officers below the grade of commodore are ineligible to promotion unless, at the period when promotion falls due, their "mental, moral, and professional fitness to perform all duties at sea" shall be "established to the satisfaction of a board of examining officers appointed by the President." This stipulation is intended to meet extreme and exceptional instances of incompetency, and is enforced only under conditions of grave necessity. Candidates for promotion are generally passed by the Board without severe scrutiny, and are never rejected, excepting when some serious imputation is fastened upon their character. The officer in question was, in 1876, the senior lieutenant-commander of the service, but on presenting himself for advancement in rank, he was pronounced disqualified, and summarily dropped from the register. It is needless here to repeat the charges brought and sustained against him. Nothing further is requisite than to show that he was removed from his post, after due consideration, by a body naturally inclined to leniency, and slow to exercise the punitive powers pertaining to it. There might be reasonable ground for supposing that, with these proceedings, the public career of any citizen would terminate; but it appears

that opportunities may be found, in the mysterious workings of Congress, for the rehabilitation of such individuals as are fortunate enough to possess or procure political influence. During two years, the dismissed lieutenant-commander remained in obscurity; but in July, 1878, an act was passed by the federal legislature, and signed by President Hayes, restoring him to his original position. Six months after, he was raised to the grade of commander, and the fatal consequences of that step are known to the world. Comment is entirely unnecessary on our part; but we are not surprised to find it, in the severest form possible to language, in the principal American journals, some of which do not scruple to attribute to Congress, the ex-President and his Naval Secretary, rather than to the improperly restored officer, the responsibility for the wreck of the *Ashuelot* and the death of a number of her crew.

A REMARKABLE paragraph is floating about the American newspapers, to the effect that a young Japanese gentleman, whose name is given as a graduate of Cornell University last year, and who is said to have married a young lady of Indianapolis, has since taken a position in the Agricultural Department of this Government, with an annual salary of thirteen thousand dollars. This is a climax of good fortune to which few Japanese students, however deserving, can hope to attain. To graduate from Cornell is a happy and honourable distinction; to secure the hand, heart, and companionship for life of "a young lady of Indianapolis" is a still more gratifying achievement; but to secure, in addition, an office in a government department, the stipend of which is more than twice the amount received by the highest functionaries of State, is a piece of luck so far beyond precedent as to bring the fortunate holder within the circle of those for whom supernatural favours are reserved. This being the case, we fear that congratulations might not be altogether appropriate.

A TOKYO newspaper announces that the new palace will be built in that part of the castle grounds formerly occupied by the Shogun's mansion, and not in the more retired division where the Mikado lived during the first years of his residence in Tokiyo. It cannot be doubted that the *Hon-maru*, as the locality now said to be selected is designated, affords many advantages which the adjoining section, called the *Nishi-maru*, does not possess. It contains one of the most elevated plateaus in the city, commanding a singularly beautiful view of the bay and its borders, and immediately overlooking on one side a succession of garden terraces the picturequeness and varied charm of which have not been obliterated by years of neglect and decay; and on the other the broad moat which separates the two enclosures, and the more delicately cultivated and graceful landscapes of the Fukiage Park. There is not another site so majestic in the whole capital, and its healthfulness should be unrivalled. The cost of restoring it to order, however, will be necessarily large. The lower slopes and levels have grown into a

little wilderness, through long disuse, and the numerous walls, some of which were of stately dimensions and admirable construction, have been in many cases torn in pieces, in order that the huge stones of which they were composed might be put to more practical uses. The fine gateways, of which there could not have been less than fifty, have generally fallen to ruin, besides being ruthlessly mutilated for the sake of the copper with which they were heavily covered. Finally, the place has been for a long time given over to instructors in engineering, as a field for experimental fortification, in the course of which operations its superficial aspect has undergone many changes. Nevertheless, in spite of these and other partial deteriorations, it has not its equal in Tokiyo, and the lofty square chosen nearly three centuries ago for the citadel of the Tokugawas remains to this day the spot above all others suited for an imperial dwelling. The familiar resorts of the *Nishi-maru*,—the cascade, the lake, the embowered hill, the legendary fountain,—are easy of access by private passages, so that the attractions of the more secluded region are available, in addition to the excellent qualities of the superior station. If it be true that the *Hon-maru* has been decided upon, pains should be taken to secure the nearest attainable approach to architectural perfection. The position is too splendid to be sacrificed, and defects which might escape notice in other localities would there become glaringly conspicuous. Let us pray that the artist, on this occasion, will be inspired by his magnificent opportunity.

A NOTE in the *Official Gazette*, translated elsewhere, speaks of the development of the pastoral industry in the Mito district, province of Rikuo. At the same time a complaint is formulated, on the part of the farmers, that the improvement in their stock is not properly recognized by the butchers in Tokiyo, who decline to give the new breeders good prices on account of a prejudice in favor of "Kobe beef." This is a matter which time will regulate. Only by staunch endeavor and resolute conscientiousness in the production of a good article, despite temporary dislike and opposition on behalf of vested interests and established trade, can a new enterprise hope for ultimate success. That with patience the Mito farmers must succeed is evident, in view of the fact that the supply of "Kobe beef," to whose generally excellent quality and succulence most foreign residents in Tokiyo and Yokohama must testify, is alarmingly likely to fall short of future demands. This alone ought to encourage the Mito farmers to persevere in their undertaking. Scarcity of capital will injure them far less than lack of industry and courage.

A MEETING of the Provisional Committee of seven originally appointed to arrange for the farewell to H.E. Sir Harry S. Parkes was held on Saturday last, when those gentlemen, Messrs. Wilkin, Gay, Evers, Fraser, Mollison, W. B. Walter, and Kirkwood, nominated other gentle-

men, the following fourteen of whom have, we understand, kindly consented to act with them as provided at the public meeting of the 20th of July. The representative Committee is thus full and consists, in addition to the gentlemen above named, of Messrs. Beretta, Blakeway, Boyes, MacDonald, Mitchell, Pereira, Rickett, Townley, von Hemert, J. Walter, Whittall, Wolff, and Drs. Hepburn and Wheeler. The Committee suggest Monday, the 21st instant, as the date of the party. Sir Harry is expected to return from Hakodate about the 14th, and proposes to leave Yokohama for his new post at the Court of Peking by the mail of the 22nd instant.

THE Paris correspondent of *The Times*, writing under date, June 21, is at some pains to show that China had up to that time been perpetually protesting, not against French enterprise in Indo-China, but against French attempts to set aside Chinese rights of sovereignty. In fact the three last despatches addressed by the Representative of the Middle Kingdom to M. Challeme-Lacour remained unanswered at the above date. Thus the suspension of negotiations between the two Powers did not rest with China but with France. However true this may have been six weeks ago, a different description seems applicable to the present state of affairs. The interruption of negotiations has come, this time, from China's side. There can be little doubt that the conduct of the conference was entrusted completely to Viceroy Li at the time of his nomination to the command-in-chief of the Southern forces. He was empowered to settle the complication, and his fashion of settlement would probably have received the endorsement of his sovereign. His recall, therefore, while the negotiations were still in progress, must be interpreted as an expression of dissent from his views. During his absence from Peking different counsels seem to have gained the ascendancy. Apparently the greatest difficulty with which a Chinese statesman has to contend at present is the mutability of his source of authority. Since the death of the Empress Regent last year there is no stability of purpose at Peking. At one time the voice of one party, at another that of another, is dominant. Li Hung-chang is emphatically in favour of a peace policy, but, like all prudent statesman, obeying the maxim, *si vis pacem, para bellum*, he does not hesitate to devote large sums to the purchase of warlike material and the strengthening of coast defences. It may be doubted, however, whether his countrymen comprehend the spirit of such proceedings. They think that these acquisitions represent an idle outlay unless they are used when the occasion offers. This inference is not unnatural, and probably becomes a very strong argument in the mouths of the Viceroy's political opponents. "To what purpose," they may ask, "does this immense expenditure on account of warlike preparations serve, if China is always to offer her cheek to the smiter? Surely now, if ever, is the time to give a practical demonstration of the country's ability and resolution to defend its rights?"

The posers of these queries might not have become inconveniently clamorous at Peking during Li's absence had he found in the French Envoy a reasonable *vis-à-vis*. But M. Tricou does not seem to have appreciated either China's position or the true interests of his own country. His so-called "inflexibility" and thrasonic phrases might have proved very serviceable in an encounter with General Tso, or some other chief of the war faction, but they were altogether out of place in the treatment of a statesman whose earnest desire was to discover for his country some honourable exit in the direction of peace. While, then, M. Tricou raised difficulties and delivered humiliating *ultimata*, Li's political opponents were doubtless becoming more and more noisy at Peking. If, however, the Viceroy's apparent failure strengthened their remonstrances sufficiently to procure his recall, it seems probable that the task of substituting an emphatically belligerent policy was still beyond the compass of their ability. The Cabinet at Peking is irresolute, and we are disposed to think that the same may be said of the Cabinet at Paris. M. Tricou's reported attempt to demonstrate that his visit to China was purely a work of supererogation, does not demand serious consideration. He went there to negotiate, and the T'sung-li Yamen was his natural *vis-à-vis*. But instead of proceeding to Peking and placing himself in communication with the T'sung-li Yamen, he appears to have settled down quietly at Shanghai—a proceeding which is obviously irreconcilable with the hypothesis that he possesses definite instructions from his Government. There has not been any superfluous ambiguity about M. Challeme-Lacour's utterances in the Senate, but we know that President Grévy is opposed to an aggressive policy, and that there is a very strong party in France of the same way of thinking as the President. It may very well be, therefore, that both Peking and Paris are puzzled, and that a mediator's task would be comparatively easy. In the meanwhile, the best thing that can happen is that responsible Chinese statesmen should keep away from Shanghai.

FOR a comprehensive illustration of injured dignity, misplaced confidence, dire foreboding, unavailing remonstrance and agonized perturbation,—with possibly a few other distracting emotions,—no figure in animated nature is so appropriate as the unfortunate hen which, having hatched a nest of ducks' eggs, sees her brood take to the water in joyous defiance of every warning, threat, or entreaty derivable from her instinct and experience. Often as the idea has been used in caricature and satire, it comes irresistibly forward again, in connection with the latest results of Chinese policy as applied to the development of Korea. That ancient conservative fowl of the Asiatic continent, whose capacity for stretching her wings over all the neighboring barn yards has only recently been interfered with, took in hand, not long ago, the process of incubating her last remaining egg, and, with due ceremony of cackle and cluck, helped the

little stranger out of its shell, and instructed it in the delicate art of appearing to stand alone, while actually relying for support upon the maternal care and judgment. All went well until the venturesome creature caught sight of the water, and then the period of tutelage came to an abrupt end. The consternation with which China must have witnessed her wayward pupil—as represented by a plenipotentiary commission—taking literally to the treacherous element—as represented by the Pacific Ocean,—and swimming away upon a perfectly independent course of observation, inquiry, and foreign association, may be easily imagined by all who know the intensity of her desire to keep every off-shoot of the great celestial family folded securely within her impenetrable pinions. Of all conceivable slings and arrows of outrageous fortune, none could have been sharper or more unexpected than this sudden development of enterprise on the part of the most immature of tributary fledgelings. The subject ought to send an inspiration through the ranks of humorous draughtsmen, all over the world. Never since eggs were eggs,—liable to pre-natal accidents of exchange and to burst into vitality with utterly unsuspected propensities, striking consequent chill and terror to the breast of aged responsibility,—has the opportunity been given of a more perfect application of the familiar legend to facts of current history.

THE complaint of a *soi-disant* Japanese student who writes an indignant letter to the *New York Herald* is not, supposing the communication to be genuine, by any means unreasonable. The writer objects generally to the rudeness of remarks frequently called forth by his appearance in the public thoroughfares, and particularly to the habit of confounding him with "John Chinaman,"—an epithet which he says is incessantly repeated by those whom he encounters. This confusion of the races is an old grievance with the Japanese, and it does indeed seem strange that Americans should not have learned, by this time, to distinguish at least the outward characteristics of two such different types. A single test should be sufficient;—every Japanese wears the costume of the country in which he happens to dwell, whereas no Chinaman ever puts aside the dress of his native land or dispenses with the long braided tail of Tartar origin. By looking a little beneath the surface, other and more important discrepancies could doubtless be discovered; and it is the consciousness of these, we presume, which makes the native of Japan resentful of the indiscriminate grouping of all Orientals. But, although the feeling of dissatisfaction exists, and the occasions for remonstrances similar to that published in the *Herald* are abundant, the authenticity of this especial protest, which has been pretty widely copied, appears open to suspicion. In the first place, it is signed "A. Nipponyin,"—which, even assuming it to be a misprint of "A Nippo Jin," is not a form of subscription likely to be adopted by an English speaking Japanese. It is much more likely to

have been written by some American acquainted with a few words of the language of this country, and its conversion into a proper name is probably an unconscious typographical joke. In the next place, the people of Japan are spoken of by the correspondent as Mongolians,—a circumstance to prove, at any rate, that he ought not to be a Japanese, whatever he really is. However, the epistle is a good one, and, if not precisely what it professes, may take an humble place among well intended imitations of the style invented for his own amusement by Mr. Laurence Oliphant, who puzzled a great many readers of the *North American-Review*, six or seven years ago, by a couple of essays entitled "Political and Moral Reflexions," and signed "Sionara;" in which, adopting a method of expression fairly appropriate to a Japanese student abroad, he indulged in sundry sharp criticisms on public life and private society in America. Those productions were not quite worthy of Mr. Oliphant's brilliant powers, but they served a certain purpose, and perhaps set the fashion of a species of fictitious literature which, if not in the highest degree amusing, is entirely harmless, both to author and readers.

A disturbance is reported, by the *Choya Shim-bun*, to have occurred in Kiyoto on the 27th ultimo, a French missionary named Villion having been assailed and beaten by a band of students, said to have been 120 in number, from the seminary attached to the Eastern Hongwanji monastery. The lads are said to have visited the Catholic Church and demanded to be instructed in the essence of the religion there taught. Abbé Villion was promptly sent for, and arrived as soon as he could in jinrikisha, accompanied by a Japanese Christian. The mob of boys immediately began to pelt and hustle them, an amusement from which they were only restrained by the arrival of the Police who rescued the missionary—what became of his native attendant is not mentioned—and arrested the principal rowdies who had maltreated him.

A French journal declares in so many words, that the unique object of English legislators in pushing forward the bill legalizing marriage with a deceased wife's sister, is to enable the Queen's youngest daughter, the Princess Beatrice, to marry her brother-in-law, the Prince of Hesse-Darmstadt. Writing immediately after the passage of the law, a correspondent of the journal in question, says that nothing is talked of in London except this marriage and that it will take place in six months. The Prince of Hesse-Darmstadt became a widower in 1878 by the death of the Princess Alice, and it is said that the Princess Beatrice has been willing to accept his hand for the last two years. To most Englishmen this story will sound like a good joke, but it seems not at all improbable that some special case of more than ordinary importance has sufficed to turn the wavering balance of opinion in favour of the measure. The *Saturday Review*, with its colours still nailed to the mast, after declaring that the effect of the Bill will be

to relax "the frail but important ties of convention which keep back society from promiscuous concubinage," goes on to describe it as a concession to the supposed desire of a minority of the nation, and denounces the logic of its advocates by saying that "the spirit merchants of the United Kingdom might with almost as good a face urge the abolition of the spirit duties on the plea that they have been smuggling." We wonder whether the possibility of marrying a deceased wife's sister has proved such a terrible perverter of public morality in those communities where it has long been legal.

ONCE again we counsel our Japanese friends who are interested in the tea trade to give no heed to reiterated statements that the recently enacted United States law, forbidding the importation of spurious teas, was directed expressly against the produce of this country. The assertion is frequently repeated, and appears in so many different forms, that it may not unnaturally deceive the unwary. But it is entirely without foundation. There is no evidence to show that the teas of Japan were ever thought of, by those who framed the restrictive statute. It was to ward off danger from another quarter; that their proceedings were instituted. Apprehensions were entertained that a large quantity of the adulterated article, which had long been accumulating in England, where it could not be sold, would be forced upon the New York market during the present year; and this was the principal, if not, as we believe, the sole, ground of legislative action. The Japan trade has troubles enough of its own to encounter, without having burdens fastened upon it for which it is in no degree responsible.

THE line taken by the *Jiji Shimpō* with regard to the Korean indemnity savours somewhat of romantic reasoning, but is not without a dash of sound common sense. The indemnity is a mere bagatelle. It does not represent the cost of a second-rate ironclad; and, to make it still more insignificant, Korea has obtained her creditor's consent to divide it into dribblets of fifty thousand dollars per annum, thus spreading the payment over a space of ten years. It would seem, however, that even these concessions have not brought the feat of discharging her debt within the compass of her ability. The effort to pay the very first instalment is too much for her strength. Yet if rumour be credited, she has already borrowed from this country more than half of the whole sum. Among gentlemen of fashion and morality, to put off an importunate tradesman by ordering some more of his wares, is not an uncommon device, but the notion of borrowing from a man to-day six times the amount you have promised to pay him to-morrow, and then telling him, when the morrow comes, that you can pay nothing, is a scheme which commands admiration by its noble disregard of precedent. We do not know whether it be a fact that Korea has asked for another respite, but if it be so,—and the *Jiji Shimpō* says it is—the Hermit Kingdom has

nothing to learn from any nation in point of financial ingenuity. Meanwhile, what is Japan to do under the circumstances? What sort of pressure can she bring to bear upon such a pauper without compromising her own dignity and imperilling her friendly relations with Korea? The *Jiji Shimpō* tells us, in effect, that the second of these questions is unanswerable, and that the only wise response to the first is—waive the claim altogether. Half a million dollars is a trifle to this country, but apparently a very serious sum to Korea. Her impatience at having to pay the money will be in proportion to her difficulty in finding it, and she cannot feel any sincere affection for a Power which compels her to make such sacrifices. There is, we repeat, much good sense in these arguments. The habit of expressing international troubles in dollars and cents, though almost unexceptionally sanctioned, is open to frequent objections. Most of all this true in the case of fines imposed upon a government for failing to reconcile its subjects to the sudden subversion of a policy which has received the sanction of fifty generations. A large portion of the indemnities levied by the Treaty Powers in Japan, came out of the pockets of their friends, and thus indirectly strengthened the hands of their enemies. The present rulers of Korea are sincerely friendly to progress. They suffered at least as much as Japan by the revolt of the Tai-on-kun, and their ability to prevent similar mishaps can only be crippled by having to pay an indemnity to a foreign power. It would be a grateful and politic act to forego these ten yearly payments of ten thousand pounds sterling each, and let Korea make her *entrée* into the society of nations with a tolerably clean balance-sheet.

If the arguments in favour of remitting the indemnity partake, to a certain extent, of sentiment, nothing similar can be said of the tariff question. That stands on a basis of plain morality. Japan knows what it is to be deprived of a right which every other independent State enjoys, and she is therefore thoroughly competent to appreciate Korea's desire to avoid like coercion. It is not very probable that the desire will be fulfilled. Korea is too small to have any rights—especially pecuniary rights—*vis-à-vis* the Great Powers of the West. But whatever trifling chance she has of obtaining a voice in the management of her own commercial affairs will be finally destroyed if she attempts to discriminate in favour of Japan or China. In virtue of the treaty of 1876, the subjects of the former carry on with the peninsula a trade which, for all practical purposes, is free. If this is to continue, it will be impossible to avoid extending the privilege to all Korea's new treaty friends. Japan had better not incur the responsibility of assisting to bring about such a result. She has complained so much and so justly of the hardship suffered by herself, that it would ill become her to join in contriving the same position for another Oriental State. It seems absurd to speak of any gain accruing to a nation from a policy of isolation; yet Korea, by the lateness of her consent to foreign inter-

course, can reap the benefit of her neighbours' experience, and thus avoid divesting herself of power which, if once temporarily signed away, cannot be recovered without infinite pain, if at all. We have confidence that these considerations have already presented themselves to Japanese statesmen, and that they will gladly help Korea to obtain whatever terms seem most conducive to her prosperity. But while entirely agreeing with the *Fiji Shimpō* that the exceptional privileges enjoyed by this country under the Trade Regulations of 1876 have the effect of heavily handicapping Korea in her negotiations with foreign Powers, and ought to be surrendered without any unnecessary delay, we cannot forget that Japan is not alone in this matter. However well and justly disposed she may be, she must be careful to do nothing which will leave China a monopoly of Korean trade. That would be the inevitable result if she agreed to remodel her tariff upon the lines laid down in the Shufeldt Treaty without first taking care that China should be similarly liberal. It is with the latter country that the difficulty really rests. So long as her viceroys are empowered to issue trade regulations determining the conditions of their countrymen's commerce with Korea, it would not only be quixotic but useless that Japan should surrender the advantages she possesses.

Nothing—we are told by educational experts—is more fatal to real progress than self-gratulation. Faith in this precept induced the teacher in the story to obliterate the picture over which its youthful painter was bending in satisfied admiration. The Japanese, therefore, have reason to be thankful that they are not abandoned to vain-glorious introspection. They must continue the motion of reform in humble obedience to their generous preceptors. They have had a memorable lesson in the matter of finance. For three or four years they constantly enjoyed the advantage of most emphatic counsels. They were warned in Spartan terms that ruin and riot dogged the nation's footsteps, and that to escape these horrors it was absolutely necessary to grapple resolutely with the inflated currency; to reduce its unhealthy obesity and to prepare for replacing it by good sound silver. Then, when they stoutly set about these processes of reduction and preparation, they were soon exposed to a new peril. The specie value of *Kinsatsu* grew rapidly higher and firmer, until, in the course of two years, the whole volume of money in the country, as well as the national revenue, appreciated more than twenty per cent. This they had been taught to regard as a most triumphant result, and seeing it so far attained, they might have become self-opinated. But their humane preceptors were on the watch. The crisis demanded a caustic remedy, and the Japanese were, therefore, peremptorily informed that they had no business to touch the currency. Their duty was to leave it to itself, and devote their energies to developing commerce. Thus they were kept healthily moving on, a little bewildered, perhaps, but guaranteed

against the immorality of fancying they could ever be right. Another instance is still more recent. Ladies of easy virtue in Japan have drifted into a most erroneous idea that they possess some title to a share in the proceeds of foreign commerce. Under the influence of this hallucination they repair in large numbers to Yokohama and take lodgings in the environs of the Settlement. It does not appear that they have yet conceived the fancy of imitating or emulating the courageous hardihood of their European representatives, but they certainly do venture to occupy houses in the neighbourhood of the Settlement—notably round the New Road—where there are visited by a great many philanthropic and unprejudiced foreigners. The thing is scandalous and doubtless well deserves scathing denunciations such as those levelled against it a year ago. Careful critics demonstrated, in the summer of 1882, that the morals of Yokohama had been so seriously injured by the influence of these misguided females, that nine persons out of ten were actually unconscious of the disgraceful condition of Yatai-zaka—unconscious that these waylayers of virtue had their haunts even on the side of the road leading from the Settlement to the Bluff. Naturally and properly the police were loudly censured. Some idle excuses were offered on their behalf. It was urged, for example, that without paying perpetual domiciliary visits to the inmates of private houses, or keeping a constant watch over them, so that, whenever a foreigner entered or came out, the object of his visit might be immediately investigated, no practical result could be obtained. It was also stated that in many cases the ladies were possessed of documents declaring them to be foreigners' servants with whom the police could not interfere, and it was further pointed out that in no part of the world do the police succeed in effectually checking this social evil. Nobody was weak enough to be moved by these paltry evasions. It was not for the censors to say how the thing should be done. That was the business of the police. And the police made it their business. Nothing more was heard of the Phrynes of Yatai-zaka. The guardians of the peace were not equally successful in the case of the New Road, however. But they made the mistake of imagining that duty pointed in that direction also. They set themselves to "lurk like cur-dogs" in the vicinity of suspected domiciles; to perform the "thoroughly despicable" rôle of spies. Had they been competent policemen, they would have known how to discriminate, and would have retired quietly from the vicinity of houses where respectable foreigners play with girls upon their knees. But no Japanese policeman is competent. These poor innocent girls were "dragged to the police-station," "exposed for several hours to the mercy of the mosquitoes" and then compelled to answer "questions of too disgusting a nature to appear in print." Unfortunate doves! Their sufferings must have been appalling. Crushed and weary, they returned to their tea-house, and with all the beautiful abandon of innocence retailed verbatim to their foreign

gentlemen friends the revoltingly indecent terms which had been addressed to them. The "brutes" of policemen had slapped their soft cheeks, twisted their tender arms behind their backs, and spoken to them in "language of so low and vulgar a nature as to be a disgrace to the whole police force." Would the kind foreigners allow these things to be done without protest? Did they not see that the police cared nothing for the public morals but only desired to subject foreigners to a little adventitious bullying? If any proof of this were needed, the Homoko doves could furnish it, since they themselves had heard the police speak of the "red-headed foreigner," and make remarks "highly derogatory" to him, remarks "showing enmity and malice and evidently intended to lower Europeans in the estimation of those present." Could the manly Tojins suffer their gentle friends to be tortured and themselves to be disparaged by "brutes" whose object was to replenish the coffers of the local magistracy out of the doves' earnings? No! indeed they could not. The spies! The Black-Mailers! The cur dogs! What was the use of having newspapers, if outrages of this sort were not to be ventilated? Did the police imagine that because they had been abused for not clipping the wings of the Yatai-zaka doves, they were to extend the range of their spying operations to Homoko and the New Road also? That was always the way with these Japanese police. They had no discrimination: couldn't let a gentleman take his ease in his inn or his lassie on his lap! Write to the papers at once. It would be an admirable opportunity of demonstrating the independence of the foreign press, seeing that these very journals, a few months before, had been calling on the police to clear out the dove-cots everywhere. Exterritoriality, too! Talk of abolishing extrterritoriality! Why, if it were not for that glorious institution of civilized liberty, the Black Mailers might extend their brutalities from the young ladies who sit on gentlemen's knees even to the knees they sit on. No doubt it would give them infinite satisfaction to slap red-bearded cheeks and twist Tojins' arms. They'd better try it! If they do they'll soon understand what foreigners mean by the "utter demolition of a police station and a severe belabouring of the constables." Hurrah for extrterritoriality! Yet, as we said at the outset, the Japanese ought to be very grateful for all this. There is no danger of their getting into a groove or imagining that they are giving satisfaction.

• • •
Apart, however, from the merriment this quaint outcry inspires, it is worth while to ask seriously whether the anti-foreign motives attributed to the police are not a little far-fetched. Suppose correspondents and editors of the vernacular journals were to declare that the proceedings of the Consular Constables in Yokohama are dictated wholly by "enmity and malice" to Japanese, and that their object is not to uphold the law but simply to subject the people of the country to petty annoyance—what would be our

immediate rejoinder? Would it not be that they judge us by themselves? That people who are so ready to attribute hostility and ill-feeling to others, cannot be either very friendly or very well disposed themselves? A similar deduction would doubtless be quite unjustifiable on the side of the Japanese, and being fair-minded and far-discerning people they are not likely to make it! Nevertheless we do not quite credit the sentiments ascribed to the police in this instance, because it so happens that they are equally strict in Tokiyo. The most strenuous efforts are made there to confine the social evil to quarters of the city where the law permits it to flourish. Elsewhere its public existence is checked by methods which often seem to trench upon the liberty of the subject. Opinions will differ as to the utility of all this. We believe we are right in saying that in the United Kingdom the law has ceased to extend its functions in this direction. It takes no cognizance of anything less than a public nuisance. In the English colony of Hongkong, on the other hand, a system exists which is efficient, but which has more than once owed its efficiency to devices that amount to espionage of the pettiest description. In fact no question has excited greater controversy, and the world is still very far from an unanimous reply. One thing, however, is certain, that whether attempts to deal with the evil be wise or unwise, the conduct attributed to the Japanese police in this particular instance admits of no defence. But it does admit of denial. We do not implicitly believe that the young ladies' faces were slapped and their arms twisted simply because they themselves affirm that they were thus treated. Upon these points we prefer to reserve judgment. Of this only we are persuaded, that any attempts made by the Japanese police to put a check on the abuses which flourish in the environs of this Settlement, and which flourish because of the support they receive from foreigners themselves, cannot possibly be successful unless recourse is had to measures of a harsh and questionable character. It might be supposed, for example, that instead of arresting the girls themselves the proper course would be to impound their masters or mistresses. But on what grounds? Evidence of wrong-doing must be furnished. How is it to be procured? Any person who sets himself to answer these questions seriously will be compelled to conclude that the Yokohama police are trying to grapple with an evil which scarcely comes within the proper scope of the law. The English rule seems the best in the long run. Let the thing alone unless it becomes publicly offensive. Homoko would then enjoy immunity. It is a comparatively retired place, and the bathing houses there are frequented by foreigners of a class not requiring police surveillance. In other parts of the world young girls are not employed to attend on gentlemen bathing. The Japanese might very well put a stop to that part of the affair. But the worst mistake they can make is to be pragmatical. There still survives in this country a tendency, handed down from the feudal times, to combine the duties of

constable and magistrate in one person. It is a bad tendency, and ought to be eradicated as speedily as possible. Nevertheless, the people have only good words for the police, whose value they have learned to appreciate, and it seems truly regrettable that foreigners should permit themselves, on the strength of *ex-parte* evidence, to speak of them in terms which cannot fail to bring them into discredit and certainly will not increase their good-will.

JAMES CAREY, the Dublin informer, has been shot dead at Port Elizabeth. The last news we had of him was dated June 28th. It said that much excitement had been caused at Queens-town by a report that he was among the passengers who had embarked at that port for America, but that his whereabouts could not be traced. Five days previously the telegraph told us that he was believed to have gone to the north of Ireland and that the Government would eventually send him to Canada. Another rumour, however, said that he had been carried over to Liverpool and thence taken across country to Hull. In fine, nobody seemed to know what had really become of him, and it may be presumed that the police took every possible means of perpetuating this ignorance. Africa, at all events, was not suggested by anyone as his probable destination, yet to Africa he apparently went—for we presume that the Port Elizabeth mentioned in the telegram is the place recently brought into notice during the troubles at the Cape. The Fenians, however, do not appear to have been thrown off the scent. They must have telegraphed information of Carey's movements, as he had scarcely stepped on shore when the assassin's bullet reached him. Thus once more the law has been signally worsted. Public opinion, perhaps, will not greatly blame Carey's murderers. No man could possibly have played a rôle more repugnant to all the better instincts of humanity, and few men would have played it in a more repugnant manner. But we cannot help feeling that this sudden, signal vengeance argues the existence of an organization which the Government's efforts have done little to suppress. The Irish informer will henceforth know that the first purpose of his treachery may not be attained, and that the fate he betrays his comrades to avoid is not averted but only altered.

It is a common occurrence in Japan to have to place on record slight shocks of earthquake, but we trust we may never have to chronicle such a disaster in this country as has just reached us by wire, a small town in the south of Italy, Casamicciola, having been, apparently, swallowed up by an earthquake, as no less than five thousand persons are reported killed. No such calamity has occurred in that quarter of the globe since Castale Nuovo suffered a somewhat similar fate, when 4,000 persons were engulfed.

REFERRING to the trial of the Fukushima suspects, the *Choya Shimbun* says, that in consequence of this investigation Liberalism in

the province where the agitation culminated has been entranced in terror, while the (so-called) monarchical party has increased in vigor and influence. The recent visit of an ardent reformer from Sendai, who has been giving a series of lectures in Fukushima, has in a measure revived the spirit of those who look for a complete emancipation from the thralldom of effete tradition.

ONE who peers into the old church registers of England meets with many curious things. This, in the Record Office of Winchester Cathedral, dated A.D. 1182, is certainly unique. It is a paid workman's bill, and this is a literal copy:—

| FOR WORK DONE. | | s. | d. |
|-----------------------------------------------------------------------------------------------------|-------|----|----|
| In Soldering and repairing St. Joseph. | | 0 | 8 |
| Cleaning and ornamenting the Holy Ghost. | | 0 | 6 |
| Repairing the Virgin Mary and cleaning the Child. | | 4 | 8 |
| Screwing a nose on the Devil, putting in the hair in his head, and placing a new joint in his tail. | | 5 | 6 |

IN the list of honors conferred by the Emperor of All the Russias upon the representatives of foreign powers who were present at his coronation, we observe the name of H.E. Ito, Special Envoy from Japan, who has received the insignia of the First Class of the White Eagle.

THE sporting public of Yokohama, as well as that of Tokiyo, will regret to hear of the death of the well-known and courageous Japanese pony Kamakura. It succumbed on the 3rd instant after a brief attack of cholera. His winnings during his short career are stated by the *Mainichi Shimbun* at yen 30,000.

THE Japanese steamer *Ise Maru*, a new vessel of 738 tons register, purchased in England by the Kiyodo Unyu Kwaisha, left Cardiff on the 22nd of June with a cargo of coal for this port.

THE Japanese Minister at Seoul reports that the Korean Government has already founded an arsenal: that a big steam-engine to be used therein has been ordered from Shanghai; and that skilled Chinese artisans are to be employed to superintend the work in twelve different departments.

A NOTIFICATION has been issued from the Home Department announcing that in consequence of cholera cases having been reported at Canton and Swatow, vessels from those ports arriving at Yokohama, Kobe, and Nagasaki will be subject to quarantine regulations.

PASSENGER traffic on the Tokiyo-Kumagai railway is steadily on the increase. Excursionists to Oji are so numerous that a special train is now running daily to and fro for their benefit.

It is said that in view of the auguration of a postal service in Korea, the Government of that country has applied for competent staff of assistants.

THE *London Gazette* announces the appointment of Mr. J. J. Quin, late of Hakodate, and recently gone home on leave, to be Vice-Consul at Tokio.

JAPANESE AND FOREIGNERS.

A SUGGESTION made some time ago by the *Trade Journal* (*Bukka Shimpo*) deserves more consideration than it seems likely to receive. The Tokiyo editor commented forcibly upon the estrangement which exists between the foreign and Japanese merchants of this Settlement. He is thoroughly frank about his own countrymen. After twenty years' acquaintance, he says, they do not entertain any very warm feelings of friendship for their foreign *confrères*. On the contrary, they have begun of late to regard Westerns with absolute hostility. They believe that an exorbitant profit is made out of them by the quick-witted foreigner, and he, on his side, thinks that he comes off second-best in his dealings with the Japanese. Thus both parties look at each other askance, and make no effort whatsoever to place their intercourse upon a frank and cordial footing. The *Trade Journal* thinks that the Ito-gwaisha complication afforded a significant illustration of this animosity. Rightly or wrongly, the Japanese believed that he had become the victim of an unjust and arbitrary system; and, rightly or wrongly, the foreigner fancied that his privileges and prospects were threatened. So complete and immediate a deadlock could never have taken place had there been any common inclination to smooth away difficulties and arrive at an understanding. But from the first each was ready to believe the worst of the other, and there was nothing for it but a fight—a fight which did not even bring with it the one benefit commonly ascribed to open combats, namely, a clearing of the atmosphere. The peace ultimately patched up was a hollow one. The old feelings of hostility still survive. The Japanese trader still looks upon the foreigner with an invidious eye, and the foreigner still "regards the Japanese much as he would regard dirt or a savage."

We cannot, of course, dispute the verdict of the writer in the *Bukka Shimpo* with respect to the sentiments of his own countrymen, but his ideas about foreigners require to be modified. It is not correct to say that they regard Japanese as "dirt or savages." That may be a true description as applied to a fraction of this community, but if used of the whole, it is an unfortunate hyperbole. The editor of the *Bukka Shimpo* is doubtless aware that in all countries the strength of the national prejudice is inversely proportional to the degree of education and experience. It exercises a greater force among insular, than among continental,

peoples, because the former's intercourse with their neighbours is more restricted; but in either case it will be found to grow more and more powerful as the social scale is farther descended. To the English rustic who has never travelled beyond the limits of his own parish, every Frenchman is a frog and every Russian a bear. Were you to tell him that the only difference between Frenchmen, Russians, and Britons is that they do not speak the same language or live in the same place, he would simply set you down as an ignoramus or as a "frog" yourself, for he believes in his heart of hearts that the veriest boor in the "tight little island" is incomparably superior to any foreigner that breathes. A similar prejudice exists among the lower orders of France and Russia against Englishmen and other strangers. Happily it is gradually yielding to the force of education, but the world is still separated from its total disappearance by a very long interval. In Yokohama its influence is marked, but essentially partial. The anti-Japanese section of this community—the section which regards all Orientals as savages, or, to use the common epithet, "niggers"—is not in any sense representative of educated opinion. There are roughs everywhere, and their ability to make themselves conspicuous is unfortunately great in a place so peculiarly circumstanced as this. But the editor of the *Bukka Shimpo* falls into a serious error when he interprets the mood of the whole community by the vulgar intolerance of its rowdy element. It is recognised here, just as distinctly as anywhere, that generosity stands high among the distinguishing traits of a gentleman, and those who, totally deficient in this quality, thrust themselves into notoriety by vilifying Japan and the Japanese, have long ago become objects of contempt and dislike to the respectable part of the community. It is not surprising that the Japanese should be misled. They can only judge by what they see or hear, and unfortunately the rowdy element among us is also the noisiest. But they are surely over sensitive when they discover cause for offence in such a paltry matter as the employment of the term "native town." The *Bukka Shimpo* describes this as an epithet "suggestive of thorough contempt," whereas in truth it is simply antithetical. So long as that portion of the settlement inhabited by Westerns is known as the "foreign quarter," so long will the portion inhabited by Japanese be termed the "native quarter." By what process the result has been attained it were perhaps wiser not to discuss, but the word

"native" has unquestionably acquired in the Orient a signification more or less opprobrious. As used here, however, no such meaning is intentionally attached to it. To that rudeness, at all events, we do not plead guilty.

If the belief described by the *Bukka Shimpo* really prevails among the Japanese, little good can be done by mere disavowals on this side. It must have been long foreseen that the abusive and acrimonious nature of the criticisms constantly published in Yokohama would ultimately produce the effect which our Tokiyo contemporary records. Whether, and how much, business suffers in consequence, we do not pretend to determine. The course of trade may be quite independent of friendly feelings. The *Bukka Shimpo* is of opinion that both sides are seriously injured by their want of mutual cordiality, and even goes so far as to compare them to cormorants, whose squabbles, blinding them to other perils, furnish an opportunity for their capture by the fishermen. In other words, the Chinese alone benefit by existing conditions. They know perfectly how to take advantage of an opportunity, and as they are content to play the rôle of go-betweens, it is rather to their advantage than otherwise that their principals should be on bad terms. This is a somewhat humiliating analysis, but we do not care to discuss it. Our concern is rather with the remedy proposed by our contemporary, namely the establishment of a Club at which both Foreigners and Japanese may meet, and learn to regard each other as human beings with similar feelings and aspirations. At present, he says, the virtues of hospitality are entirely neglected; the congenial influences of tea and wine disregarded. And in this diagnosis he is unquestionably right, whatever be the worth of his prescription. It would be difficult to conceive two communities more complete strangers to each other, so far as social intercourse is concerned, than are the Foreigners and Japanese living side by side in Yokohama. They have been within arms length of one another for a quarter of a century and yet they have never shaken hands. That they would do so now, however, if a Club were provided for the purpose, seems most unlikely. The source of the trouble lies too deep to be reached by such superficial expedients. If the disunion of the two communities becomes daily more marked, it is because the time when the distinction between them ought to have disappeared altogether becomes daily more distant. There is neither sense nor reason in the idea that Foreigners are

to remain in perpetual banishment from the Japanese nation; that they are to live at the point of a promontory virtually ostracized from Japan and the Japanese. This is the real *origo mali*, and so long as it exists the prospect is hopeless. If we are ever to live on frank and cordial terms with the people of the country, we must have something in common with them other than the mere operations of buying and selling. Little if any good is done by inviting each other to dinners and balls, which serve rather to emphasize our disjunction than to remove its causes. The day is not far distant when these conditions, if suffered to continue, will render the life of the Foreign merchant in Japan intolerable. Already his energies are so cramped, his opportunities so restricted, that men of ambition or ability must often be visited by a feeling akin to despair. From year's end to year's end nothing comes to relieve the monotony of littleness. The same weary routine of ever narrowing transactions, the same slender margin of paltry profits, the same perpetuity of enforced inertness, until the Golden Age seems to have been left irrevocably behind, and "the mighty hopes that make us men" forget altogether to visit us. Anything like moral vitality is incompatible with such a state of affairs. The notion that matters might be mended by a partial expedient like the establishment of a Club is scarcely serious. What is wanted is unrestricted intercourse and free access to the opportunities which the country offers. For there are opportunities, whatever may be said to the contrary. So long as banks, rice and stock exchanges, railway and tramway companies and so forth can declare the dividends we constantly read of in the vernacular journals, there is business to be done which Western experience and Western capital might develop profitably to both Japanese and Foreigners. But we seem to be no nearer this happy result than we were fifteen years ago. When a Japanese newspaper undertakes to discuss "our mutual estrangement" and to propose such finikin remedies as a Club where we might meet if we pleased—which we certainly should not—there may be some reason to appreciate the spirit of the suggestion, but the chief impression conveyed is one of regret that the Japanese should have so little real conception of the situation. Truly, it is but a poor evidence of our own ability to balance advantages that we should prefer certain and universal inconvenience, discomfort and ill-success to the very hypothetical danger that, once in the course of three or

four years, one in a thousand among us may be sentenced to two months' imprisonment where six weeks would suffice, or be fined a sovereign where fifteen shillings would atone for our trespass. This nervousness would be intelligible were we living in China, where arbitrary violence seems frequently to take the place of law, and property as well as life are held subject to official caprice. But in Japan, where nothing of this exists, where the rights of the individual receive quite as much respect as in many countries which we call civilized; where, with insignificant exceptions, whatever ills the people suffer make themselves equally felt among ourselves, and where the country desires nothing better than to adopt and follow all the systems we respect, it is strange, incomprehensible, that we should persist in living apart, and pride ourselves upon maintaining an isolation which is fatal to our interests and not less unbecoming to our professed liberality than was the most bigoted phase of Japanese seclusion in former years.

NECESSARY REFORMS.

'Tis worth a wise man's best of life,
'Tis worth a thousand years of strife,
If thou canst lessen, but by one,
The countless ills beneath the sun.

IT was written by an intellectual giant of the eighteenth century, whose lightest fancies often carried a deeper meaning than the weightiest arguments of his contemporaries, that the producer of two blades of grass where one had grown before was a benefactor to the world;—The import being, it is almost needless to say, that those whose efforts at progress are confined to an humble range may claim an equal recognition, and may, perhaps, as effectively promote the general welfare, as those who aim at mightier achievements. The great movements of history have been led by men of preternatural force and energy, and their work has seldom been performed without social upheavals as startling as the physical cataclysms which change the face of Nature. Vast alterations in the government, forms of authority, and established political usages of a nation are rarely accomplished by purely peaceful means, although the recent annals of Japan supply at least one example of such phenomena. But there are hundreds of reforms possible in every community,—attainable by quiet resolution, courage, and industry,—which though not so daring and comprehensive in scope as these that go hand in hand with revolution, may, nevertheless, lead the way to lofty and noble results. Not one of these should be

thrown out of consideration because of its supposed unimportance, or set aside as unworthy the attention of those who have at heart the amelioration of their fellow beings. Nothing is trivial which tends, in however slight a degree, to the benefit of humanity. From the smallest apparent causes, effects have sprung which civilization reckons among her brightest triumphs.

In no country are opportunities more abundant than in Japan for labors of this description. The need of amendment in certain social practices, conventionally and often unreflectingly adhered to by the majority, is too obvious to have escaped the notice of any who concern themselves with the growing reputation of this land and people. That the knowledge of what is required is not acted upon, may be easily attributable to a general indisposition to disturb settled habits, and more particularly to the circumstance that those who are most keenly alive to the evils are among the youth of the nation, whom the traditions of unquestioning respect for their seniors would deter from offering criticism or admonition. But it happens that there is in Japan a class precisely fitted for these tasks,—a class which holds a position entitling its members to speak with something approaching authority, and warranting them in exerting the influence which, on subjects relating to social refinements and proprieties, they are acknowledged to possess. This class is qualified by experience and by intelligence to detect the errors which too largely disfigure the everyday life of Japan; to point out the irreconcilability of persistence therein with a true civilization; and to suggest, if not to apply, a practical remedy. We refer, of course, to the body of young students who, during the past three or four years, have been returning in considerable numbers from the foreign countries in which they completed their course of education, and where they must inevitably have acquired, as part of their training, a familiarity with the principles of morality and domestic order upon which the best society of Europe and America is based.

Of these students, the larger proportion were sent and maintained abroad by the liberality of the Government. Others were supported by their own resources or the kindness of friends. But, under whatever conditions they pursued their course of foreign culture, a leading purpose of their present lives should be to utilize at home every advantageous particular of their experience elsewhere, and to strive for the introduction of every element which may contribute to the instruction of the populace,

and to the comfort, happiness, and dignity of family institutions and relationships. By the improvement of individuals, the elevation of the multitude is gradually attained, and the best hope of realizing essential benefits for the masses, lies in the salutary example that may be given by the advanced students of whom we speak. Most of them are between twenty-five and thirty years old,—an age when neither personal vigour nor the spirit of philanthropic enthusiasm should be lacking. The Government being ill provided with native experts in any department of science, responsible positions have been offered to most, if not to all, of their number, and they have to that extent the opportunity of redistributing the profit they have acquired. We should be sorry, however, to believe that they imagine their whole duty to be fulfilled in performing a few hours of daily service at public offices, and drawing substantial salaries each month. Was it for this, alone, that they were allowed to live and study, under circumstances of exceptional ease and good fortune, during their ripening years? The returned scholar who assumes that nothing more is demanded of him than to follow a technical routine, in accordance with the special study to which he may have devoted himself abroad, betrays a melancholy misapprehension of his obligations, and opens himself to the suspicion that the indulgence accorded him was largely undeserved. Nothing need compel him to neglect his particular functions. The engineer, the chemist, the architect, the mathematician, may each serve in his respective sphere, but all can find broader and more sympathetic labors ready to their hands. And in order that we may not seem to leave the subject in obscurity, we will offer a few suggestions of what may be undertaken, and with zeal and determination accomplished for the general good, by a cultivated and united body of young reformers.

To begin with, it should be their pride and loyal resolve from the moment of their arrival home, to keep their lives as free from uncleanness as we believe they generally were during their sojourn in other lands. Being at an age when wholesome influences were most likely to be effective, and having for the most part the advantage of healthy, upright surroundings, their collegiate careers were honorable and blameless, and, with very rare and unfortunate exceptions, they gained for themselves a character which gave them an enviable position in the communities where they dwelt, and would have proved of ines-

timable value, had it been their destiny to remain permanently on the same ground. To preserve this character unstained should be one of their foremost objects. The student who welcomes the relaxed conditions of Japanese society as a relief from the restraints imposed upon him in a sturdier atmosphere, and who celebrates his return hither by entering upon courses which the public opinion of Japan may not condemn, but which he knows would disgrace him in the places from which he has come, and are offensive to decency and ruinous to health anywhere,—such a student should be put under rigorous ban by his fellows, and made to understand, at least, that the liberty he craves is not the kind which philosophers wish to extend over the world. It is undeniable that a systematic abstinence from the meaner vices and more degrading revelries which occupy too much of the thought of Young Japan, would enable the class of higher students to assert a strong influence, and establish a standard of moral salubrity for the encouragement of all who are not naturally disposed to evil. The active declaration of their opinions, in this case, would not be necessary; the example alone would suffice. Are we justified in assuming that the example exists;—that even this simple incentive to amendment is uniformly given by those who are best capable of giving it? Is not the weight of evidence, rather, toward a contrary conclusion?

For active measures, numerous paths are open, some of which would naturally lead to a conflict with current prejudices, while others are free from that inconvenience,—if it be so regarded. The least combative of reformers need find no difficulty in devoting some time and toil to hygienic improvement among the lower and perhaps the middle classes. Much might be done to ward off epidemics, to destroy the germs of disease, to promote comfortable cleanliness, by organized investigation and exertion. Medical proficiency is not essential to all who engage in such works, for the greater part of which the average course of foreign education affords sufficient information. Where the skill of the physician is needed, it can be supplied by those who have been trained to that profession. There is not a ward in the City of Tokiyo, for instance, where infinite benefits might not be conferred by visitations from helpers and advisers, even if armed with no greater authority than that of intelligence and friendly intention. No urgent persuasion is needed to ensure the abandonment of many injurious habits

or the adoption of sensible precautions. The first disastrous cause of disease among the poor Japanese is ignorance. Kindly instruction is often more potent than official decrees, in removing the sources of peril. Connected with this service,—in which we believe the coöperation of hundreds of assistants might easily be enlisted,—there should be an examination into the pretended remedies cheaply sold by shopkeepers as uninformed as the purchasers, which the tests of chemistry would probably prove to be poisonous, and which, by proper representation, could be in great measure, if not entirely, suppressed. The endeavour to diminish sickness among the people is now left in the hands of a few alien missionaries. Some of these have sacrificed their lives in this struggle. How many educated Japanese have sacrificed a single leisure hour to the same end?

A task which many might shrink from approaching on account of its disagreeable character, but which would well repay an earnest effort, is the purification of the Japanese press. The noisome quality of much of what passes for amusing reading, in the newspapers of Tokiyo and other cities, is too well known to require exposition. It is the one offensive blot upon an otherwise commendable institution. That it is irremovable we can hardly bring ourselves to believe. The editors of most of the respectable journals—respectable, that is to say, but for the blemish to which we allude—are men of good position, who claim and obtain intercourse with well-bred citizens. They meet frequently with representatives of the student class upon which, as we assure ourselves, many hopeful expectations may be founded. If these dispensers of foul literature can be convinced that their practices are repugnant to the sense of the best informed body in the country; if they are taught that only by discontinuing that branch of their trade they can be admitted to association with reputable scholars, we shall soon see the end of it. It will not do for those to whom we appeal to say it is no affair of theirs,—that they do not read, and are not concerned with, the objectionable matter. In a broad sense, it concerns every man who believes in keeping the natural mouthpiece of the public unsoiled; in a nearer sense, it concerns all who have young brothers, mothers, or sisters, that can read. By a strange and scandalous perversity, the papers most addicted to this species of depravity are those ostensibly prepared for sale to women. In this arrangement, the worst kind of libel is implied. It is not true that the women of Japan have any

interest in such nastiness. It suits the stronger and coarser sex to cast that stigma, with many others, upon them, but all who have taken pains to acquaint themselves with the truth, in this and kindred matters, are fully aware that it is the masculine readers alone who are responsible for the continuance of the grossness.

One of the most astonishing spectacles to every stranger who visits the large cities of Japan, and one of the most painful to all foreigners, either new or old residents is the treatment to which beasts of burden are habitually subjected. The cruelties visited upon them are in one sense difficult of explanation, for the people are in most respects of a tender and kindly disposition, and the fondness lavished upon domestic animals is frequently extravagant. But the abuses inflicted on draft-horses seem almost incompatible with the commonest sense of humanity. It is next to impossible to walk from one end to the other of the principal thoroughfare of the capital, without witnessing barbarities enough to tarnish the reputation of any civilized community. Every Japanese who has travelled, and especially those who have lived in the United States, must be familiar with the methods there employed to prevent these debasing practices. If not acquainted with the details, they certainly know the result, and understand that wanton persecution of all animals is guarded against by a severe and watchful authority. They are not unacquainted with the fact that the officers of the societies devoted to this compassionate work are invariably ready and glad to explain the machinery of their system to inquirers, and that the establishment of a similar institution in this country would be made easy by the transmission of all the requisite information, with ample counsel as to the plans of organization and operation. We have reason to believe that these outrages have indeed attracted attention; but the response to outside suggestions that an attempt be made to put an end to them has taken the discouraging form of assurances that the populace at large would not sympathize with the proposed movement, but rather with the owners of the tortured beasts. "The average citizen," we are told, by some who are certainly not inclined to regard this question in a flippant light, "could not understand the idea of interference with the right of a stable-keeper, or omnibus proprietor, to use his horses in any way that should suit him; and the person arrested or punished for violence thus done to his own property would infallibly be looked upon as a victim

of official tyranny." This, if true, might render the task more difficult than it ought to be in an intelligent community, but does not at all disprove the necessity for endeavouring to meet and overthrow the evil. So long as it remains unredressed, the streets of Tokiyo supply each day a record of shame too flagrant to escape reproach not only here, but in distant lands, where the name of Japan ought for many reasons to be kept free from such stains.

While dealing with these subjects, we are constrained to bring into prominence an obligation of far greater importance,—perhaps, indeed, the most important of all which rest upon those who hope for the healthy progress of the State, and the true welfare of its inhabitants. Among the hundreds of Japanese who have journeyed or resided in countries where the English language is spoken, and where the ordinances of English morality are recognized, not one can blind himself to the wrongs connected with, and growing out of, the sorrowful social position of women throughout the empire. Not one who has seen what women are and may be, where a just respect is accorded them; where their inherent privileges of equality are conceded; where their beneficent influence is permitted to manifest itself unrestrained by ignorant prejudice or a brutal and unreasoning force, but knows and feels the weight with which Japan is hampered in her march toward enlightenment. Not one is honorably free to shirk the duty which his better judgment must impose on him, of discountenancing by example, and opposing with heart and soul, the unjust and oppressive customs which are suffered to darken the happiness of households and which may weaken the elements of confidence, integrity, and purity in every family circle. To deal minutely with this momentous question is not now our design. To what extent the future interests of Japan are bound up with it, the educated class to which we chiefly refer needs no warning, and he who sanctions by tacit approval the prevailing system, is destitute of genuine concern in his country's welfare. He who encourages it by imitation, in his own person, at once degrades himself and betrays the trust which devolved upon him when he was sent forth to gather the fruits of foreign culture for reproduction in the native soil. The forms of conventional submission to household authority become fictions when they forbid remonstrance against oppression, immorality, or cruelty. To excuse inaction on the plea that traditional propriety forbids the son to admonish his father, or the

younger brother to reprove his elder, when every instinct proclaims the need of admonition and reproof, is a shallow evasion. Fathers and brothers have had their undue supremacy long enough. Let the advocates of mothers, sisters, and daughters now be heard.

These are hints,—hastily and imperfectly set down,—as to what may be attempted for the common benefit by those who, as we have stated, possess both the knowledge and the influence requisite for such undertakings. It is with a deep regret that we fail to discern the desired signs of intention, on their part, to redeem the full promise of the years they passed in remote preparation for worthy work at home. During their term of absence, assurances were frequent of their resolution to apply themselves enthusiastically to the dissemination of upright and honorable principles, no matter at what cost, from the moment of renewed contact with their countrymen. Why are these resolutions forgotten? What has become of the pledges so fervently and spontaneously proclaimed? Is the task harder than it seemed? Is the opposition too formidable? Are the agents too few? Or is the fear of ridicule, the weapon to which Japanese are most sensitive, too deeply rooted? Poor pretences, all; no one of which should stand an instant against the impulse of a generous spirit or the mandate of a steadfast conscience. And if a glow of inspiration from without be needed, let it be recalled from LOWELL's fiery verse, fixed in the memory of most of those who have passed their term of youthful scholarship in either of the Anglo-Saxon nations:—

They are slaves who fear to speak
For the humbled and the weak;
They are slaves who will not choose
Hatred scoffing and abuse,
Rather than in silence shrink
From the Truth they needs must think.
They are slaves who dare not be
In the Right, with two or three.

THE DANGER OF BEING INTERVIEWED.

WE have had frequent occasion to comment in strong terms upon that most objectionable adjunct of modern journalism, the interviewer. Inaccuracy and recklessness seem to be his chief characteristics, and his comparatively brief career has been prolific mainly of mischief and misapprehension. In America the social tyranny of Republicanism enables his trade to find a place among recognized professions, but its worst dangers are generally avoided by the simple process of submitting the interviewer's notes to be read by the interviewed. Even this precaution, however, excellent as it is in itself, has one

evil result: it imparts a fictitious air of truth to all reports of interviews. Readers not unreasonably assume that no responsible public man will suffer his own version of his opinions to be ventilated in the columns of a newspaper without first assuring himself that he is not credited with some notion entirely foreign to his thoughts; or, again, that no honest writer will publish an avowedly verbatim record of this or that person's ideas without previous verification of its accuracy. Were these conditions always satisfied, the interviewer would cease to be a propagandist of error and become simply a nuisance. At present he is both, and as Englishmen we confess to a feeling of considerable satisfaction that he has not yet succeeded in invading the precincts of respectable journalism in the United Kingdom.

There are, however, exceptions even in England. A notable instance is now before us. The Vienna correspondent of the London *Standard* seems to have conceived the idea of interviewing His Excellency ITO during the latter's visit to Austria, and submitting him to a cross-examination calculated to elicit many interesting replies. Mr. ITO would probably have declined the honour had he foreseen its object, but Japanese statesmen are seldom difficult of access, and on this occasion there was no idea of anything beyond an ordinary conversation. It could not have been anticipated that a brief and casual interview was to furnish the columns of the *Standard* with a lengthy verbatim report, so full of inaccuracies and misrepresentations, that, were these eliminated, there would remain little if any of the original. Such, nevertheless, is the fact. By those who know anything about Japanese affairs in general and Mr. ITO in particular, the *Standard's* version was doubtless at once set down as an amusing, though unintentional, joke. But for the sake of those not equally well informed, it may be useful to furnish some corrections, premising that we do so with authority.

Mr. ITO is made to say that Japan "increased her army, introduced compulsory conscription, and remodelled her defences" at the time of the Riukiu complication, and that she "keeps prepared for a Chinese attack whenever it comes." The connection here indicated between Japan's military organization and China's action with regard to Riukiu is, perhaps, accidental, but neither in fact nor in any utterance of Mr. ITO has it the smallest foundation. The military system of this country, as it exists now and as it has existed even since the Restoration, was

an integral part of the administrative reforms introduced in 1870. That the Riukiu question cropped up shortly afterwards can only be regarded as a coincidence. Mr. ITO did not tell his interviewer that preparation against a Chinese attack had ever motivated Japan's military organization. What he said was that the purpose of that organization is purely defensive; that Japan is ready to repel attack from whatever quarter it arrives, but that to deliver any assault in an aggressive sense is the last thing she contemplates. He further explained that, while frankly desiring to be on friendly terms with her neighbour, China, and to remove every possible cause of umbrage, it was not for Japan to take any step with regard to the Riukiu islands. They are a part of her empire. If China has any grounds of complaint, it rests with her to formulate them, not with Japan to anticipate them. As for the Chinese army, what he said about it was of the most meagre description. He did not pretend himself to have any knowledge whatsoever of its actual condition, nor had he heard of any reforms in the methods of conscription and organization. The depreciatory opinions attributed to him by the interviewer are absolutely fictitious.

These are errors which, though they betray an extraordinary amount of carelessness on the part of the *Standard's* correspondent, are of a less flagrant and mischievous description than what follows:—

Does the Tonquin dispute bear any resemblance to your previous disputes with China?

Yes, but with this difference. When some six years ago we intended to make a treaty with Corea for the opening up of her ports, we were cautious enough previously to inquire in Peking whether Corea was considered an independent State with power to conclude international treaties. The reply was that Corea, although not independent, had such treaty-making power. Such a previous inquiry on the part of France before the 1874 Treaty was made with Tonquin would have prevented the present difficulties.

Inasmuch as there has never been any "dispute" between Japan and China about the treaty concluded by the former with Korea in 1876, it is needless to observe that this question was neither proposed nor answered in the above terms. Mr. ITO was asked whether he saw any resemblance between the treaty relations of France with Tonquin and those of Japan with Korea, *vis-à-vis* China. His reply was that, judging from the newspaper reports of China's attitude towards France and from his knowledge of recent events in Korea, there seemed to be a certain similarity between China's claims of suzerainty in both cases. But he explained that, so far as Japan's treaty with Korea was concerned, no doubt had been entertained of the latter's independence, and the

preamble of the treaty contained an explicit acknowledgment of the fact.

It will be seen that whatever resemblance may exist between Chinese relations with Korea and Tonquin, there is certainly no resemblance between Mr. ITO's real answer and that attributed to him by the correspondent of the *Standard*. The latter gentleman, indeed, appears to have imagined that Japan had been seeking to establish a protectorate over Korea or otherwise interfere with its independence, whereas the truth is that Korea virtually owes its independence to Japan.

Gross as they are however, these misrepresentations appear insignificant by the side of the motives which the interviewer attributes to Japan in the event of a war between China and France:—

You would then remain neutral during a Franco-Chinese war?

It would be rash to promise that. All, of course, depends on circumstances, and on the offers that might eventually be made to us. (After a pause.) We have nothing to gain from China.

Could any French offer induce Japan to form an alliance?

That depends. I repeat that we have nothing to gain from China. The differences of race, habits, education, and public institutions between the two nations are so great that no annexation of Chinese territory could be advantageous to Japan. Besides, I do not believe in war between France and China.

If Mr. ITO really made use of this language, his opinions would only admit of one interpretation—namely, that Japan sets little, if any, store by Chinese friendship, and that she is prepared to join, at any moment, in an attack on her neighbour provided a sufficiently high value be set on her assistance. That such ignoble motives should be soberly attributed to a Japanese statesman, or that he should be deemed so reckless of his country's reputation as to give them public expression, is almost inconceivable. What Mr. ITO really said was, that it was impossible to predict with certainty Japan's action in the event of war between France and China; that she would prefer neutrality, but that if her interests were seriously imperilled, action might become unavoidable; that a war with China, however it eventuated, could confer no benefit on the Japanese either commercially or territorially, the former for obvious reasons, and the latter because Japan neither desired, nor could profit by, any redistribution of her neighbour's possessions. In short, the whole tendency of Mr. ITO's replies was to make it clear that a quarrel with China would be most repugnant to Japan's feelings and could not contribute to her material interests. If the correspondent of the *Standard* had deliberately set himself to convey a false impression, he could not have succeeded more thoroughly. The only saving clause

is that he overdid the business. None but persons who are willing, if not anxious, to believe the worst that can be said of Japan, are likely to accept the *Standard's* version of Mr. ITO's opinions. Those who have taken the trouble to learn the truth know that this country desires nothing more sincerely than Chinese friendship. One barrier—and one only—stands between the two countries. They are treading divergent paths. Japan has irrevocably elected to adopt Western civilization and to place her relations with Western States upon the closest possible footing. China is apparently resolved to preserve her isolation and to persist in looking at the outer world by the light of her ancient prejudices and philosophies. Such radically incompatible purposes render sincere amity impossible, but need not, and so far as Japan is concerned do not, inspire enmity.

Finally, the statements attributed to Mr. ITO with regard to Japan's paper currency and the tariff are not less inaccurate. He did say that the depreciation and fluctuations of *Kinsatsu* had sensibly embarrassed the people of this country, but he explained that the Government had adopted, and were steadily pursuing, a scheme leading to a resumption of specie payments, and that success seemed to be already within measurable distance. A revision of the tariff in the sense indicated in the protocols of the revised treaties would, he added, assist to bring about the desired result, but as yet no decision upon this point had been indicated by the Treaty Powers.

THE DETAILED FINANCIAL ESTIMATES FOR 1883-84.

| | | |
|------------------------------------------|-----------|--|
| Total Expenditure of Public Works | | |
| Department | 468,294 | |

APPENDIX.

The total amount of the domestic and foreign debt remaining unredeemed on the 31st of May 1883 was yen 335,366,186.30.

This amount when compared with the sum of yen 349,771,176.50 mentioned in the Budget of the last fiscal year shows a decrease of yen 14,404,999.20. Such decrease has been effected in the following manner:—By the issue of bonds against paper currency an increase of yen 348,800 was effected, and yen 780 by the adjustment of Voluntary Capitalized Pension bonds and Hereditary Pension Bonds, but a diminution of yen 7,003,094 was effected by the redemption of Hereditary and Capitalized Pension bonds, and of bonds sold for the Encouragement of industries, &c., and yen 402,600 by the redemption of the foreign debt, and yen 7,348,800 (of which a sum of yen 348,800 was for bonds issued against paper currency), by the redemption of paper currency, and yen 76.20 by the withdrawal of counterfeit paper currency.

The total amount belonging to the part of the Reserve fund was yen 53,415,490.442 on 31st of May, 1883. The amount compared with that of the reserve fund of yen 55,854,207.876 mentioned in the budget of the last fiscal year shows a decrease of yen 2,438,717.434. This decrease was caused in the following manner:—Although more than yen 226,000 and yen 92,000 were added to the fund derived from the surplus of the 13th and 14th fiscal year respectively, and more than yen 434,000 by the interest on National Bonds on the part of the reserve fund and by various other receipts, yet a decrease of a sum of over yen 3,192,000 has been effected by the purchase of specie.

The total sum of Advances (Loans made by Government) was on the 31st May, 1883, yen 19,061,559.297, showing an increase of yen 6,007,589.792 when compared with last fiscal year, namely yen 13,053,969.505. This increase is due to the fact that, although the amount advanced has been

reduced by more than yen 512,000 from the repayment of loans made for relief, &c., and more than yen 290,000 from the repudiation or adjustment of loans to the former Han, of advances to the Han in proportion to the *Aoku-daka* (quantity of rice production) and other loans, yet the sum of yen 1,294,000 was newly advanced in the last fiscal year, and yen 3,980,000 already advanced out of the "Reserve Fund," was classed as an advance out of ordinary revenue; and the sum of yen 1,543,000 advanced for the improvement of Industries from the Fund for the Encouragement of Industries and those advances made by the former Colonization Department have been included in this part together with other advances herein mentioned.

The total amount of the Fund for the relief of Agricultural Distress was yen 1,897,695.238 on the 31st May, 1883. This sum when compared with last fiscal year's yen 1,598,248.134 shows an increase of yen 299,447.104. This increase was caused in the following manner. Although the sum of yen 552,896 has been disbursed on account of the great inundation in Kumamoto Ken during June 1882, yet yen 150,000, and yen 150,000, which are respectively a part of the fund for the last half of the 14th fiscal year and the first half of the 15th fiscal year, were added.

The sum of yen 884,508.02 mentioned at the end of the Budget of the current fiscal year is silver yen, the Shimonoseki Indemnity returned by the United States Government of America in U. S. Gold coin \$785,000.87.

THE BOUREE TREATY.

(Translated from the French of Gabriel Charmes in the *Journal des Debats*).

Three months ago it was maintained that Mr. Bourée had recognized by formal treaty the suzerainty of China over the Kingdom of Annam. To-day the aspect of matters had changed. There is no earthly question of such suzerainty in the draft of the treaty that the Minister of Foreign Affairs showed from the tribune. He had to refer to a letter of earlier date from Mr. Bourée, and, according to our opinion, interpreted it incorrectly. We should like some one to prove to us that Mr. Bourée did recognize, in the draft treaty, the suzerainty of China. We should be very much surprised to receive such proof, but we should admit it. Let it be produced. Instead of that an entirely different accusation is made. People say that Mr. Bourée and those who defend him are the advocates of a more or less illegal partition of Tonquinese territory between China and ourselves. As far as we are concerned, we utterly repudiate such a reproach. As far as Mr. Bourée is concerned we also repudiate it. For, after all, what has our former Minister in China done? We will say; but, first, we should like some one to explain to us an expression, in the Senate, of the Minister of Foreign Affairs. "We wish to be friends with China!" cried Mr. Challemeil Lacour: "and it is precisely for that reason that, far from cherishing the thought of making any attempt on her territory, we do not desire even to be her immediate neighbours." . . . Indeed! If this be so, what error has Mr. Bourée committed. When we possess, or desire to possess, Tonquin, if we do not wish to be the immediate neighbour of China, there is only one method, namely, to recognize between her and ourselves a neutral zone. And that is all the easier because that zone, which has never been officially determined, naturally exists. A belt of territory which does not belong, in any definite manner, to either of the two countries stretches between Tonquin and China. Along that line, the frontiers are, in a fashion, floating. They have never been precisely

established; and China desires that they never shall be precisely established. These intermediate regions, very mountainous, are inhabited by scarcely civilized populations, whose very nationality is *quasi* indeterminate. Numerous revolts and local troubles occur; and then it is not from Peking or Hué that orders of repression and gendarmes arrive. Prefects of the districts, be they Chinese or Tonquinese, arrange in a friendly way between themselves to stifle the movement in its origin and to re-establish order. Sometimes the Chinese, sometimes the Tonquinese, take the matter in hand: sometimes both act conjointly. However defective may be this administrative and political system, it constitutes a sort of Chinese wall peculiar to itself: a human wall, to the maintenance and preservation of which the Chinese attach an extreme importance, inasmuch as they see in it a guarantee of the security of their territory.

We ask: was the recognition of the existence of this neutral zone to partition Tonquin? Mr. Bourée has done no more (than recognize the belt). He has consented to the maintenance of the existing order of things, and that is all! But he has consented with so many precautions, that he has taken particular care not to determine beforehand the breadth of this neutralized zone. When people say that its width is excessive, they know not that they are speaking on the authority of some "little papers" ignored by the public; for the Minister of Foreign Affairs has told us that nothing had been settled. Nothing would have been more simple than to remove from the subject any points having strategic or industrial importance. These would have been the subjects of future negotiations which would have occupied the attention of China, while we were conducting and achieving our campaign in Tonquin. We should afterwards have seen what circumstances allowed us to do; but in any case, and for all those who are familiar with the language of international law, the establishment of a neutralized zone has never meant that that zone was ceded as absolute property (*en toute propriété*) to one of the two parties. The idea of partition has no place here.

True it is that, if Mr. Bourée had confined himself to neutralizing a belt of territory between Tonquin and China, he would have ceded to the latter the town of Lao-kai. It is not, we admit, without surprise that we learned, quite lately, that this city was the "key" of the Red River. We had thought up to then that the key of a river was its mouth and not the point where it ceased to be navigable. We have just arrived from Egypt, where we found the English, very ignorant people no doubt in matters of commerce, making the greatest possible efforts to obtain possession of the Delta: not one of them thought for a moment that the key of the Nile was at Assouan. In France we are better versed in commercial geography. Hence Lao-kai has assumed such importance in certain minds that the mere thought of seeing it fall into the possession of the Chinese excites an indignation in which we can hardly participate, failing to see exactly how the possession of that place could be of any advantage to us. Furthermore no one seems to remark that Lao-kai is, for the present, in the hands, not of the Tonquinese—from whom, it is said, it would be a disgrace for us to take it—but of the Black Flags, who use it both as a citadel and a refuge for their piracies along the Red River. And there again, Mr. Bourée—irreparable crime!—took existing facts into his calculations. Up to the present time the Chinese, without being in love with the Black

Flags, have shown them deplorable condescension. Mr. Bourée thought it a good move to hand over to them the capital of these river-rovers, whom they would very certainly have dislodged and massacred, unless the Black Flags, menaced with such a catastrophe, had preferred—and this hypothesis is the most probable—to renounce their manner of life and submit to Chinese domination. In one way or other the security of the Red River would have been assured: in one way or other Tonquin would have been cleared, almost without effort on our part, of those dangerous bandits who have just massacred Commandant Rivière and his companions. For our unfortunate compatriots, therein, was safety. And again, according to the expression of Mr. Bourée, the Chinese guaranteed to assimilate Lao-kai to an open port—that is to say, that Yunnan would have ceased to be closed to our commerce and our industry.

It is impossible, on the other hand, to establish a grievance against our former Minister in Peking, on the ground of his having acted without due authority; for nothing is more inaccurate. What? If he was unauthorized, what was the meaning of the despatch in which Mr. Duclerc, after having acknowledged the overtures of China, wrote to him that the draft of the treaty was presented in acceptable terms? To write thus, in diplomatic style, was assuredly to authorize Mr. Bourée and encourage him to negotiate. It is said, as we are aware, that the summary telegram in which Mr. Bourée announced to the Minister of Foreign Affairs the projected arrangements with China conveyed an "imperfect, inaccurate, and false" idea of them. We are surprised at this assertion, having read the speech of the Minister of Foreign Affairs; and it is in this very speech, and not at all in the unimportant papers (*petits papiers*) to which Mr. Challemeil Lacour alluded, that we read the following telegram:—

I sent you a draft convention arranged with the Viceroy of Pechili and affirmed by the Tsung-li Yamen, acknowledging the protectorate of France in Tonquin, save a zone, the limits of which are to be fixed, along the Chinese frontier. Reciprocal guarantee of this state of things against all external enterprise.

What difference is there between this telegram and the directions given by Mr. Challemeil Lacour upon the memorandum that followed it? We look for them, but fail to find them. The telegram is the faithful résumé of the points the development of which was indicated in the memorandum. Mr. Duclerc approved the telegram: Mr. Challemeil Lacour rejected the memorandum. There is the difference: no need to look for it elsewhere! Mr. Bourée, thus formally encouraged to pursue negotiations, nevertheless carried prudence so far as to limit himself to send to Paris, not a draft of the treaty, but, as the Minister of Foreign Affairs expressed himself, "a species of memorandum," intended to serve as the basis of the draft of a treaty. It was then only a question of propositions that one was free to discuss, to modify, to reject; but which in any case ought not to have been rejected but discussed with a view to necessary modification. Mr. Bourée had heard the ideas of the Chinese: then he had transmitted them to his Government with explanations, commentaries, and it appears "justifications." What could be more modest? What more correct? Verily one is forced to ask to what rôle our representatives abroad would be reduced if they could not take any such steps! If the simple fact of having discussed with the Governments to which they are accredited the conditions of a potential arrangement—and that with the approval of their own Government—were to render them liable to the most unforeseen recall?

SPECIAL COURT, TOKYO.

Before Mr. Justice TAMANO, and Messrs. HAYASHI, KAWADA, and NAGAOKA, Assessors.

THE PROSECUTION OF THE FUKUSHIMA SUSPECTS.

WEDNESDAY, AUGUST 1ST, 1883.

The Court opened at 8.20 a.m. and Counsel for the defence commenced, before entering into the legal arguments, the examination of their clients on certain points concerning the declarations made by them.

Mr. Yamada remarked that, as the evidence adduced by prisoners No. 1 and No. 2, that the administrative officers participated in the examination of the accused, had an important bearing upon the case, he would like to examine those two prisoners.

Prisoner No. 1.—I was examined seven or eight times in the Police Station, including two occasions when I was charged with having libelled the functionaries. Many administrative officers took part in my examination. I do not know their names with the exception of one, Mr. Shibayama. He said that when Saigo Takamori rebelled the Government was aware of the plot, and that as the case was the same with us, it was impossible for us to conceal our plans.

Counsel—Were you examined on the premises of the Police Station or in any other place?

Prisoner—Of course, in the Police Station. But as the room was too small to hold all the prisoners, a temporary shed was erected and all the police inspectors in the province were called to assist in the examination.

Mr. Yamada proceeded to examine prisoner No. 2, who gave similar evidence to the former, adding that his examination took place between 8 and 12 every day.

Mr. Oi then questioned prisoner No. 3, Tamono, as to the declaration made by him that circumstances point to the fact that the covenant was drawn up under temporary pressure, but that he was only zealous to promote the welfare of his country.

Counsel said that statement was incomprehensible and he wanted to know its exact meaning.

Prisoner—The reason why I referred to the political condition of Fukushima, was that I wanted to show that even in the face of any possible difficulty I would not neglect my manifest duty.

A lengthy discussion ensued between the Judge and Counsel for the defence as to whether or no the reading of the indictment, in accordance with the Code of Criminal Procedure, should be dispensed with. It was finally decided that a synopsis of the indictments should be compiled.

THURSDAY, AUGUST 2ND, 1883.

The Court opened at 8 a.m. and the Judge called upon Hanaka for his defence.

Prisoner—I fully explained myself on the 19th and 24th of last month, so it is hardly necessary for me to go over the same ground again. There is only one thing to which I wish to refer. It took three days in the Police Station at Fukushima to examine me; yet my statements are written in a few pages. Thus it is impossible that the police should have given a trustworthy account of the facts of this case. For instance, the version of my explanation of the words "Oppressive Government" is all wrong. Once, the Judicial Court of Wakamatsu pronounced a lenient judgment, in a case on libel upon Govern-

ment officers. The Governor Mishima communicated with the Minister of Justice, accusing the Judge of partiality and the Minister rebuked the Judge. Hence in my examination extreme harshness was resorted to. Two judges, Messrs. Akashi and Hasegawa, examined me one after the other. The former officer asked me whether I had sent a letter to Mutaguchi Gengaku to effect a combination of the Liberals and Constitutional Liberals with a view to overthrow the present Government. On another occasion, a police inspector said to me, when I appeared in the Court in the prison uniform, that though I was a Liberal (*Jiyu-to*) in name, yet in fact I was a *Ju-jiyu* (one destitute of everything). He advised me to apply for a position under the Government. This incident, though of no importance in itself, is sufficient to show the manner in which my trial was conducted.

The Clerk then read the indictment of Hiroshima. The Counsel for the prisoner, Mr. Oi, demanded that a copy of the indictment should be given to each prisoner as it was impossible to commit the whole statement to memory.

The Judge said he would consult the wishes of the prisoners in the matter.

Kono—I have already explained my views fully. I do not care to have a copy.

Mr. Hoshi—I am of the same mind as Kono.

Mr. Oi—I wish to have a copy of Tamano's statement, because it is exceedingly long and I cannot remember all that he said.

Mr. Nakashima—The statements are very long and full of repetitions. Nobody can remember them all, so it is very desirable that a copy should be handed to each prisoner.

Prisoner No. 3—As my counsel has remarked, I cannot remember the statement, and I wish to read it.

Mr. Kitata—The preliminary trials of the prisoners have a most important bearing upon the final issue of the affair, especially that portion which concerns the cruel treatment of the accused in the Court of First Instance. And what the defence has to do is simply to disprove the charges preferred by the prosecution. I do not, therefore, think it necessary that each prisoner should be furnished with a copy of the indictment.

Mr. Horida, the Public Prosecutor remarked that a synopsis of equal value to a full copy; and that as the business of the Court was to decide upon discrepancies between the evidence and the charges preferred, the defence had to answer any questions addressed by the Court.

Mr. Hoshi—It will be better to give a copy to such prisoners as wish to have it.

Kono—On the 21st of last month, I gave full explanations of the case in Court. To avoid confusion, I will make a short explanation of the facts. In my answer to the question about the words "Oppressive Government" I discover an error: I wished to correct it, but had no time to do so. When I was arrested, I was scantily clothed. It was a very cold day, snow having fallen 3 to 4 feet deep. My life was in a great peril through exposure. In the prison, I could not take my meals regularly, and after giving a portion to the rats, I ate, because I had to eat something to preserve my life. I was compelled to stand in the snow exposed to a bitter wind. Subjected as I was to such harsh treatment, I had no chance to demand the correction of my statements.

Judge Tamano informed the Counsel for the prisoners Tamano and Hiroshima that they should be furnished with copies of the indictment.

The Court rose at 11.30 a.m.

FRIDAY, AUGUST 3RD, 1883.

The Court opened at 8.30 a.m., when Judge Tamano announced that some delay had occurred in procuring a synopsis of the report of the examination from the prison authorities. The indictments of Hiroshima and Tamano were read. The prisoners were cautioned not to refer to irrelevant matter.

Hiroshima—The reports of our trials are very confused and in some parts even appear contradictory. Therefore some explanation from me is necessary. What I wrote in the Wakamatsu Police Station on the 14th of January this year as a statement of the covenant according to my memory, is insufficient, so I corrected it on the 17th of the same month. I wish the Court to take the second copy as correct. The report of my examination contained an expression to the effect that the covenant was drawn up to resist oppression in this country. I never said any such thing. The mistake may have arisen from some statement that the covenant was drawn up in consequence of oppression in Fukushima. That I sealed the report of the trial with my thumb, was simply due to my not having detected the mistake when the document was read to me. I am at a loss to account for such an error, though it is but natural that the statement should be full of inaccuracies, because the report of my examination which lasted for four days is condensed into one or two pages. The report makes me say, in reply to the police inspector, that I plotted a revolution. This is inconceivable. I dislike to see even the characters which mean "revolution." It was my aim to warn our youth against so dreadful a word. The statement must be wrong somewhere. When I was examined at the Wakamatsu Court, I replied, to a question from Judge Akashi, that there was no inaccuracy in the report of my trial. This answer I gave because at that time I was under the impression we were not accused on account of the covenant, but on account of being suspected of mustering a band of liberals. I first became aware, on being sent to the Special Court, of the fact that we were indicted on account of the covenant. Therefore, I then corrected my statement carefully. My answer to Judge Hasegawa, given on the 1st of February, is correct. At the preliminary hearing before Judge Hiyo in the Court on the 24th of February, I replied that there was no serious inaccuracy in the report of my trial at the Fukushima Court. This answer was very vague. I intended to correct it, but I had no chance to do so verbally. I made a written statement of what I wanted corrected. It was not, however, at first accepted by the Court. But on sending it again, it was received, to my great satisfaction, and I was examined on the 2nd April. At that time, I gave a full explanation of the covenant and all affairs connected with the enrolment of the band of Liberals to which were suspected of belonging. I declared to the Court that the copy of the covenant written by me in Wakamatsu Court was full of errors as I wrote it from my memory. Though I have modified it several times, yet it is essentially the same throughout. The reason why I made corrections so often was that the report was not rendered accurately.

Tamono—I have fully indicated the errors in the report, so I need make no further explanation. During the preliminary hearing at the Wakamatsu Court on the 27th of January, the Judge said that he thought we had plotted to overthrow the Government. On that occasion, I replied, "Yes?" interrogatively. This answer appears as though I had confessed a design seeing the impossibility of con-

cealing it from the Court, but such is not the case. What I meant was that we had not plotted against the Government, but that the Judge could think what he liked.

SATURDAY, AUGUST 4TH, 1883.

The Court opened at 8.30 a.m., when prisoner No. 5, Aizawa, demanded that the letter he sent to Yoshida Koichi should be read to him. It was read, and runs as follows:—

Sir,—I presume that the Cabinet will not arrive at a speedy conclusion about the appeal from the Local Assembly. Mr. Murakami, Secretary, has not yet returned from Tokyo. Lately, many rumours have got abroad concerning the affair, and though I have tried to ascertain the facts, I have not as yet succeeded. The meetings of the Local Government are conducted with so much privacy that even the messengers are prohibited from entering the room. I am, however, informed that during this month the election of new members will take place, and that those elected will convene a regular meeting in August next. The Speaker has been already selected. The chief district officers of Date and Shinobu-gori will be represented by supernumerary members and supported by some of the local functionaries. Government interference is said to be conspicuous in the affair, the members of the Assembly being selected from among those who act on official inspiration. This measure was decided upon in at late meeting. I am of opinion that the influence of our antagonists will preponderate in the coming struggle. If we do not take precautionary measures, our former efforts will be rendered fruitless. Not only this, but public interests will be seriously injured. The Prefect has not changed his mood and is bent upon oppression. He has persuaded the chief district officers to support him in the proposal to construct roads on the same system as that resorted to in Wakamatsu—namely every resident to pay, per woman, 15 *sen*, and per man, 30 *sen* toward the road fund. He has contrived to attain his own selfish object by pretending that his desire is to reconstruct the shrine of Itakura. He has disposed of first class Government forest land at a low price. He has allowed his favorites to fell trees in the Government forests. All these things have been done to promote his own interest. Blame must attach to the representatives of the people if they do not chastise him. I am informed that he is greatly embarrassed, and that he has to resort to all sorts of artifices to maintain an influence which is merely superficial. This being the case, if you aim at the mark, you will surely come off victorious, etc.

I am, Sir, yours respectfully,

AIZAWA KENKEI.

To Yoshida Koichi, Esq.

P.S.—Mr. Kono is detained in this place by business connected with the publication of the *Fukushima Jiyu Shimbu*. The *Kenkai Nisshi* (daily report of the Local Assembly) is out, and will shortly be distributed. The public may be anxious to receive the paper; so I wish that you would help me in selling it.

Aizawa—There is nothing in this letter that indicates anything like a plot to overthrow the Government. The words "coming struggle" simply refer to the language of one of the members of the Assembly, who was wont to say, "prepare for the struggle," on almost all occasions. I sent the letter to Yoshida wishing him to take a firm attitude in the coming convention when the collection of taxes was to be discussed. In the latter part of the epistle, I find the words "chastise him." This means nothing but to admonish the Prefect for his misconduct. I did not use the words as a hint at assassination. I will now proceed to explain a few matters in connection with the report of my examination at Wakamatsu which took place on the 28th January last. It is full of inaccuracies. As I have already explained before this Court, I was sometimes obliged to sign a document under compulsion. The officer left out some words. I wish particularly to call the attention of the Court to this fact.

Judge Tamano caused copies of the covenants written by all the prisoners to be read in accordance with the request of Hanaka, and asked if any one of the accused observed any inaccuracy in the reports.

Kono—There is a slight difference in the wording, yet it has essentially the same meaning throughout. I observe that the name of Aizawa is put before that of Sawata, but as Aizawa was tried last, his name should be put after that of Sawata.

Aizawa—I have nothing to say.

Prosecutor—I wish to hear the evidence of Kamada read; but, as it is excessively long, I will point out what parts I particularly want to refer to.

Hanaka—I wish to hear the whole evidence of Kamada read, as I suspect him very much.

Prosecutor—It would be better to read first the whole indictment and then such portion of the evidence as requires explanation.

Hanaka—I want to hear both indictment and evidence read from beginning to end.

Mr. Hoshi—As the documents have a bearing upon the trial of all the accused, it would be expedient to lend to each of them a copy supplied to counsel, and allow them to read it in their cells. The documents are very long and no one could commit them to memory.

Mr. Kitata—The plan suggested by Mr. Hoshi is excellent.

Hanaka—It we may read the documents in our cells it will be a great convenience.

Mr. Hoshi—I wish the Court would arrange the matter at its own discretion, as it will cause unnecessary trouble for us to consult the rules.

Judge Tamano—The Court will allow the accused to read the documents in their cells. (Here the clerk read such portions of the documents as were required to be read by the prosecutors.)

Judge Tamano—Does any one of the accused find discrepancies in the documents just read?

Hanaka—I observe that it is stated that Kamada was threatened with starvation, and consequently confessed the plot on the 24th of February. Hiroshima and I were examined in the Police Station on the 14th of January, when the police inspector told us that, as Kamada had confessed the plot, we could not conceal our complicity with it. If Kamada was tried on the 24th of February, how could the police inspector know about the affair from him on the 14th of January. I am given to understand that this is all invention on the part of Kamada. I must, therefore, say that his evidence is unworthy to be accepted as testimony.

Hiroshima—I want to read the report of the examination of Kamada at this Court.

The Court then rose.

MONDAY, AUGUST 6TH, 1883.

The Court opened at 8.20 a.m. when Judge Tamano told prisoner No. 3, Hiroshima, that he might speak, as he had expressed a wish to do at the last sitting.

Hiroshima—I want to see the report of Kamada's examination in this Court. (Judge ordered the Clerk to hand the document to the prisoner who pointed out a few passages which he requested the Clerk to read to him. The Clerk read them.) In one part, deponent says he visited Sasaki's place on the 10th of January, and elsewhere he says that he paid the visit on the 19th of January. This difference of date is proof that his statements are inventions. The fact that the police took Kamada to Sasaki's residence to search for documents shows that the officers resorted to threats and deceit. Therefore their evidence cannot be relied upon.

Sawata—Kamada was examined for the first time on the 19th of January. The report of his examination says that he gave the copy of the

covenant on the 14th of January. This is a very doubtful statement.

Prosecutor—The evidence of Tamura ought to be before that of Sasaki. Sasaki's evidence is similar to that of Kamada. It is just as well to read his testimony first. (Read accordingly.)

Judge Tamano—Does any one of the accused find any discrepancies in the documents just read?

Prisoners (unanimously)—We have nothing further to say. (The Clerk then read the evidence of Tamura.)

Hanaka—Tamura says that Kamada had the copy of the covenant on the 5th of January. This is inconsistent with fact. Kamada met Hiroshima at Nihonmatsu on the 6th of January. If he really had the covenant on the 5th, he ought to have told Hiroshima about it at the time of the interview. Hiroshima requested Kamada to look after the important documents he had left at Mumei Kan and yet he said nothing to Hiroshima about the copy of the covenant. This shows that Kamada could not have been in possession of the copy on the 5th of January. My belief is fully confirmed by the statement Kamada made in this Court that he only saw the covenant after he was told by Hiroshima to look for it. His statements are contradictory in many respects.

Hiroshima—Tamura was my servant.

Prosecutor—Read the letter which Tamano sent to Mumei Kan.

The Clerk then read the epistle. It was as follows:—

August 15th, 1883.

To the Mumei Kan—The inhabitants of Kitagata district are as dolls compared with the people of our locality. The local Government and district officers are bent upon oppression, and treat them as though they were beasts of burden. At first, I did not believe this, but after personal observation, I found that such is really the case, and I am filled with indignation that shakes my whole frame. Alas! the people are apathetic and do not take any step to resist oppression. I paid a visit to the head-quarters of the local Liberals and was surprised to find the officers were only delivery men of the *Jiyu Shimbu*. I cannot but lament this state of affairs. That being the case, the influence Yasuse Keizo enjoyed can easily be accounted for. While he was in this place, things presented a better aspect. Of political problems, the people have no idea; they are endeavoring to form a local combination to argue political matters that are seven or eight years old. They do not know what a political party is. How much more, then, must it be natural that they should take no interest in the publication of a political journal. I told them that our Government was carrying out oppressive measures as every edict that is issued shows; and that it is high time to exert ourselves to resist it. I pointed out to them the dangers by which they are surrounded and the nefarious designs of the Monarchical Party, who are trying to destroy the Liberals. This intelligence of their own danger appears to have impressed them, and they seemed willing to subscribe towards the fund for publishing the newspaper; but beyond this, they showed no sign of recovery from their apathy. It is, however, gratifying to me to inform you that a series of political lectures were given at Kitagata and every time they were attended by immense crowds. I myself took part in them.

It will take many days to get up the full subscription, because just now the people are suffering from oppressive taxes and money is scarce. I fell short of travelling expenses, and was put to great inconvenience. Please send me information whether the formation of our party (Vehement Party) has been sanctioned by the local authorities or not. Mr. Ando is willing to help us. I advise you to entrust the sale of shares to him. I am informed that the Government granted 20,000 *yen* to the unemployed of Wakamatsu wherewith to start a useful industry. The people sent a petition to the district officers to convene a special meeting of the Assembly to discuss certain matters connected with the construction of roads, but they refused and sent back the petition.

TAMORO HIDEAKIRA.

Judge Tamano.—Is this your own letter?

Prisoner—Yes. I wrote it.

Hanaka—That letter has nothing to do with this case.

Kono—I have not seen that letter.

Aizawa—I have not seen it.

Sawata—I have not read it.

Here the Prosecutor demanded that the prospectus of the journal should be read. It was as follows:—"It is not by mere accident that humanity has founded nations and formed administrations. Nature has endowed men with freedom. Were it not for efforts to preserve that in a perfect form, they would not have been able to protect their lives and secure their happiness. Hence, the desire to enjoy freedom and it is their duty to augment it. The fact that we have established this nation as it is and formed an administration is due to this desire. Human power sometimes restrains or reverses our desires. Since, however, the main object of mankind is happiness, care for the welfare of each individual must be considered. This cannot be effected otherwise than through national freedom. The acquisition of freedom involves alteration in the administration. Without improving the administration and inviting all human beings to take a share in freedom, it is impossible to secure happiness. How can we hope for the safety of our lives in the present state of affairs? We must strive hard. But there are tigers and wolves that try to gratify their own avaricious purposes, to mould the nation to their own schemes, to make laws to defend their designs and to curtail freedom. We must exterminate such beasts. There are also ruffians who oppress the weak, take wrong for right, and offend the national authority in utter disregard of reason. We must chastise them. Knowledge is not as yet thoroughly diffused; and political ideas are not yet developed. Consequently, we cannot recover our rights. Our aim is to encourage the desire for the extirpation of abuses and to secure freedom and happiness. In carrying out our programme, we are destined to encounter numerous difficulties. Our responsibility is great. The first step we intend to take for the consummation of our object is to spread the doctrine of Liberalism and morality. To do this, the publication of newspapers and books, and lecturing are most necessary. These undertakings require the combination of many patriots, and first of all we intend to publish a journal. We shall thus be enabled to express our views and give an impulse to public opinion. We can put a stop to the existence of ruffians and beasts of prey. Not only this, but we can secure perfect freedom and happiness. We shall establish the seat of our organ at Fukushima, etc., etc."

September, 1882.

Hanaka—I drafted this prospectus at the request of Hiroshima. But it has nothing to do with this case.

Kono—I do not see what that prospectus has to do with this case.

Hiroshima—That prospectus plainly indicates our real aim and dissipates the idea of our desire to overthrow the Government.

Judge Tamano—Now the examination of the is concluded. Has any one of the accused anything to say?

Prisoners—We have nothing to say.

Mr. Hoshi—I understood that the Prosecutor has something to adduce beyond the evidence. I wish to hear all the evidence read, in order that there may be no confusion afterwards.

Prosecutor—There will be no confusion whatever, whether all the evidence be read now or not.

I do not see why the evidence read now cannot afterwards be used.

Judge Tamano (addressing the Public Prosecutor)—Please let us hear your argument.

Prosecutor—This charge is preferred against these six men on the same indictment. I will, therefore, expound succinctly the charge against them all. They are accused of plotting to raise an insurrection. In August of the 15th year of Meiji (1882), they met in Mumei Kan and made preparations to overthrow the Government. This is clearly proved by the covenant which they signed with their blood. The accused, in their defence, have paraded the conduct of the Prefect (Mishima) and the wrong doing of the police in order to conceal their own crime. They insist that they drew up the covenant under the pressure of the occasion, and that they were justified in inserting the clause subjecting to the death penalty any of those of them who should reveal the secret of their confederacy. But the direct evidence is in the hands of the proper authorities. These documents clearly demonstrate their culpability. They cannot blot out the criminality of their designs. For this reason, I have laid my charges against them. I should advise you (addressing the accused) not to refer to irrelevant matters.

Hanaka—The Public Prosecutor has said that the evidence clearly shows our culpability, but he has failed to show what point is strong enough to incriminate us. His statement is absurd, and is unworthy of refutation by me. He has said that we mentioned the bad conduct of the Governor to conceal our own crime. We are not so mean as to resort to so cowardly an artifice. We gave our account of the Governor and the unwarrantable proceeding of the police to elicit the facts. He should tell us what point of the covenant proves our culpability and how. If he wishes me to reply to such vague questions, I have only to reply that I am not guilty.

Mr. Hoshi—This charge concerns all the accused. Is it not, therefore, productive of inconvenience to make the prisoners speak without regard to the order of their indictment?

Judge Tamano—If the first does not speak first, the last may speak first.

Mr. Hoshi—I wish that the prosecution would not base the culpability of the prisoners on the mere wording of the covenant. Some of the accused say that the words "overthrow the Government" were struck out. The prosecution ought first to establish the ground of the accusation and disprove the defence. But when they merely say that the accused are guilty, the latter cannot admit the accusation. If they do not point out what point of the covenant proves the culpability of the prisoners and for what reason, I have no more to say.

Mr. Nakajima—I am of the same opinion as our learned friend. Until the prosecution explains how the covenant proves the culpability of the accused, we cannot proceed with our argument. Although the covenant contained the words "overthrow the Government," yet I cannot see how it incriminates the prisoners in a plot to raise an insurrection. The prosecution must explain how the words "overthrow the Government" mean insurrection. If they cannot point out what part of the covenant proves the culpability of the accused, they have no case.

Mr. Yamada—The prosecution has no case. They have not produced a title of evidence.

Mr. Kitata—The covenant appears to be the cause of the accusation. But it is not produced, and what is called evidence, is nothing more than the "copy"

of the covenant written by the accused from memory. Some say that the original contained the words "improve the administration" instead of the words "overthrow the Government." Others say the words were struck out. The fact is not yet proved. It is premature to say that the guilt of the accused has been established. The prosecution can declare the guilt of the accused only after it has been proved. It is desirable that the evidence of criminality should be given separately in the case of each prisoner, because though the prisoners are all accused of the same crime, yet the facts adduced by each are different, and it is, therefore, necessary to enter upon the legal argument of each separately.

Judge Tamano (to prisoners)—Have you anything to say?

Prisoners (unanimously)—We all rely upon our Counsel.

Prosecutor—I have fully explained the cause of the criminality. The covenant itself is the evidence. I do not, therefore, think it necessary to go over the ground again.

Mr. Kitata—I claim the benefit of Article 300 of the Code of Criminal Procedure.

Here followed a discussion between the Counsel for the defence and the prosecution as to whether or no the evidence had been fully explained.

The Court rose at 12 o'clock.

TUESDAY, AUGUST 7TH, 1883.

The Court opened at 8.30 a.m., when Judge Tamano called upon the accused for their defence, remarking that he would hear Counsel afterwards. They were warned not to use libellous terms in their argument against the charge.

Hanaka—As I stated yesterday, I have not made any effort whatever to conceal our crime. I wish the Court to take note of this.

Mr. Yamada—I am Counsel for Hanaka. The prosecution merely say that the accused are guilty of a plot to raise an insurrection, but fail to show how that is so. In the absence of a definite statement to that effect from the Prosecutor, it is hard for me to proceed with the legal argument. But I will do my best. This case is the most important of any heard since the new Criminal Code came into operation, and is of a most complicated nature. It is not an easy case to decide, but I do not see how it comes under article 125 of the Criminal Code. The reply of the prosecution is vague, for which I can find no reason. In old times, many innocent persons incurred suspicion and languished under false accusations. This was frequently caused by the want of a sufficient explanation of the facts. I must, therefore, make a full explanation of the facts in this case. The prosecution remarked that the accused were trying to conceal their crime. But such is not the case. They have only stated the facts, and we can place our confidence in their statements. To find the cause of the affair, we must refer to the conduct of the police at Fukushima. Their proceedings were unwarrantable and in open violation of the Penal Code. The Article 93 of the Code of Criminal Procedure clearly defines the treatment of persons accused by the police. If they thought Kono and others were guilty of high treason they should have transmitted them to the Commissary. This they did not do, but undertook to conduct an examination of the accused. Hanaka was in prison at the time when the arrest of the suspects took place. He ought to have been immediately transferred to the Commissary, and in not doing so the police did not act in accordance with the Code of Criminal

Procedure. Secondly, the accused were subjected to the utmost brutality and cruelty. This is well proved by the report of their preliminary trial. Please read the report of the hearing of Kono, dated 7th December last. (Report read.) I find a passage in the report which states that the police participated in the examination of persons charged with high treason, etc. This shows that the police violated the Code of Criminal Procedure. Please read the report of Aizawa's trial, dated the 8th December. (Report read.) This report clearly shows how far the intolerable action of the Prefect (Mishima) contributed toward the culmination of the affair in a contest between him and the people. He was ignorant of their customs, and did not study their wishes; the people offered him advice, which invoked hatred from him. Advice either becomes a reproach or a libel, according to the light in which the recipient may look at it. Mr. Mishima apparently regarded the advice tendered in the latter light, and the accused were arrested and imprisoned through the malice of that functionary. In the declaration made by the accused, we find not a few apparently violent expressions. But when we interpret these properly, there is not the slightest element of violence in them. In the report of the examination of Hanaka, dated the 17th February, I find a statement to the effect that he referred to the bureaucratic Government of Japan, and that he thought it better to die than to be subjected to further injury, etc. This he mentioned because he was subjected to cruel treatment during the trial, which he could not endure, and in desperation gave utterance to the expression. (The report of Hanaka's trial at the Special Court was read according to the request of the Counsel.) This report clearly shows how far he was justified in using the expression. (The report of Hiroshima's examination, dated the 2nd January last, was then read.) It says that the police inspector informed the accused that he was mustering three hundred of the Liberals and that, as the evidence was given to the authorities by Tamura (Hiroshima's servant), it was impossible for him to conceal the plot, etc. This was nothing but deceit and intimidation. According to the report of Tamura's examination, dated the 5th January, he said that when Kono was arrested on the 1st of December, he returned to Numei Kan and found a covenant and saw three hundred signatures affixed to it. Hiroshima was examined on the 2nd of January. How, then, could the police know Tamura's evidence before he gave it on the 5th? I do not think they have ability to foretell events. (Here the Clerk read the indictment against Hanaka by Police Inspector Iwashita.) According to this indictment, it appears that the culpability of Hanaka was, for the first time, proved by the evidence given by Kamada. But Kamada was examined on the 19th of January, whilst Hanaka was examined on the 14th. Here again, we find inconsistency of facts. In short, the conduct of the Fukushima police is against the existing law of the land.

Here the Counsel intimated his intention of consulting with his colleague, Mr. Kitata.

The Prosecutor asked if he spoke in regard to a portion of the preliminary hearing of the prisoner.

Mr. Yamada replied that he would state the facts first and then continue his argument.

Prisoner No. 2, Hiroshima.—The prosecution insist that the covenant is evidence of our criminality, but do not show what part of it incriminates us. Their argument is vague. I will explain what insurrection means, and show that our action was not intended to raise an insurrection. Insurrection means rising in arms against the existing Government, and a secret plot is the preparation for the act. To incriminate men, evidence must be given founded on action really taken toward the consummation of the plot. Now the prosecution brought forth something akin to evidence and then accuse us of insurrection. The prosecution doubtless base their charge on the words "overthrow the Government" in the covenant. But in law, men cannot be indicted on a supposition. There is nothing in the covenant that proves our culpability. If the prosecution thinks there is, why do they not exhibit it? There is no reason why we should be punished without cause.

H.E. ITO AS FOUNDER OF THE NEW JAPANESE CONSTITUTION.

(Translated from the *Hochi Shimbu*.)

From the moment of the departure from Hongkong of H.E. Ito, the arrival of the French mail steamer on which he had taken passage was anxiously expected. This means that our people are convinced that his presence at home is important in its influence on the nation's welfare. His Excellency has visited Europe to inquire into the constitutions of various countries, in view of the establishment of one for Japan. His study of the subject must have been extensive, and his name will ever be connected with the new administrative system of Japan. Although it is not in his immediate power to decide what form the constitution shall adopt, yet his intense desire for the happiness of the people, and his profound knowledge of the best forms of constitution must make his opinion preponderant over that of his colleagues, and inspire the respect of his Sovereign. What an enormous responsibility he has! And, so, we should like to submit a few questions for his consideration.

Political changes are so rapid that, looking back only a short way into the past, we find ourselves in quite a different world. Mr. Ito may have studied domestic politics very closely; yet it is very likely that his sojourn in foreign countries may have produced a marked impression on his mind. On his return he must have been struck by the remarkable changes effected in his absence. The Government kept him well supplied with information in addition to all that he could glean from the journals; and yet so many changes have occurred that no description could accurately represent them. One phenomenal change is the growth of political organizations, which have caused men of education and influence to engage in polemical discussions. Another is the dissonance between the Government and the people. Yet another, the press and banking regulations. The Union Shipping Company has been started. Mr. Iwakura, popularly regarded as the pillar of the State is no more. But these things are mere externals. When we turn to internal matters we find that even more important events have occurred. We recommend to His Excellency the careful study of all these occurrences. The Japan of to-day is not the Japan of the day when he started for Europe. Even the administration which he proposed to introduce in the fifteenth year of Meiji is unsuitable to the sixteenth year of Meiji. Thus he has many obstacles in his way. Some people may desire a German constitution. Others, desirous of promoting harmony between Government and people, think that the present is a splendid opportunity to establish a liberal constitution. And the fact is that partisans of all kinds are sanguine that it is Mr. Ito who will achieve their object. Thus he is placed in a serious dilemma. If he should satisfy one party he will incur the displeasure of some other. Most of the period that he passed in Europe was passed in Germany. Hence the public believes that most of his attention was devoted to that country. We have to attend developments. Men make many mistakes, but their errors are soon corrected.

The laws enacted by the Government since March of last year up to the present are no doubt the outcome of necessity. The spirit of the policy is the same as that which has prevailed since October, 1881. The Government is pursuing the old course at the peril of falling into extremes. But, as its members have ability to assimilate themselves to new institutions, there is no doubt that they will change their course if an opportunity occurs to do so. This very opportunity we observe in the return of H.E. Ito. The Government at one time established an office for investigation into the constitution of various countries in the *Genro-In*. But it is without precedent that it should have despatched a Minister to foreign countries to investigate their constitutions. The return of H.E. Ito is the starting point for the introduction of reform. If, therefore, the Minister misses this opportunity, no other will offer. He has to lay full reports of the German and English constitutions and those of other nations before his colleagues. Then they will deliberate upon them and establish the basis of the innovation. But the change cannot be effected at once: it would be judicious to carry it

out step by step. Though the public may desire to see the change effected in a moment, yet weighted as he is with difficulties, H.E. Ito cannot act rashly.

Among the most important steps to be taken toward the accomplishment of the work is the codification of the constitution which is to be promulgated in the 23rd year of Meiji with the opening of a National Assembly. A rumor has it that an office for the arrangement of a constitution is established and will commence its work directly. Whether or no this office was established for carrying out the programme of reform in accordance with the wishes of the public, we are not in a position to say. It is exceedingly desirable that the Government should make known its real intentions to the people. Were it opened for the mere purpose of gratifying public curiosity and not for replacing the old routine, we should regret that the office was ever established. It is through the revelation it makes of the motives of the Government that it will confer a great benefit upon the nation. It is only this revelation that can add to the stability of the Imperial throne and the happiness of the people. Proceeding a little further, let us question, for the sake of argument, whether the reform will be confined to the working of a few Governmental departments or whether all the reforms should be made with a view to the establishment of harmony between ministers belonging to a few favored clans. If the Government entertains even the slightest idea of approaching the subject in the latter spirit, the result will be pernicious in the highest degree. As the fame of Mr. Ito is so closely connected with that of the new administration, he would do well to give frank information to the public.

NOTIFICATION NO. 15 OF THE HOME DEPARTMENT.

It is hereby notified that, in consequence of the prevalence of cholera in Swatow and Canton, the Quarantine Regulations issued by Notification No. 31 of last year shall be enforced on vessels arriving from the aforesaid ports, at Yokohama, Kobe, and Nagasaki.

YAMADA AKIYOSHI,
Minister for Home Affairs.

7th August, 1883.

LATEST TELEGRAMS.

[SPECIAL TO THE "JAPAN MAIL."]

FIVE THOUSAND PEOPLE KILLED.

London, August 4th.

An earthquake has occurred at Casamicciola, causing a terrible destruction of property, in which five thousand persons lost their lives.

AN INFORMER SHOT DEAD.

James Carey, the informer, has been shot dead at Port Elizabeth.

TYPHOON IN SHANGHAI.

Shanghai, August 6th (Morning).

A heavy typhoon has been raging here since yesterday morning.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, AUGUST 3RD, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongk, Tokijo, Japan.

REMARKS.

Heavy line represents barometer.

Light continuous line—maximum and minimum thermometers.

--- represents velocity of wind.

--- percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in inches. † Direction of Wind. ‡ Weather.

Maximum velocity of wind 14.9 miles per hour on Friday at 3 p.m.

The highest reading of the barometer for the week was 29.963 inches on Friday at 10 a.m., and the lowest was 29.635 inches on Wednesday at 6 p.m.

The highest temperature for the week was 69.9 on Friday, and the lowest was 66.5 on Monday. The maximum and minimum for the corresponding week of last year were 82.9 and 63.2 respectively.

The total amount of rain for the week was 0.003 inches against 3.928 inches for the corresponding week of last year.

LATEST SHIPPING.

FREIGHTS.

During the week there have been no charters effected for either coast or foreign. The bark *Valparaiso* sailed for Kobe on the 17th instant to complete her loading for Havre and Hamburg. The steamship *Euphrates* left this for Kobe on the 4th instant, and is supposed to return to secure additional cargo. At present the only steamship on the berth is the *Ascalon*, for New York via Amoy, advertised to depart on the 11th instant. The steamship *Oxfordshire* is shortly expected from Kobe. There is likely to be some business for a handy vessel from Hakodate to Shanghai, but at rates which will hardly induce Captains to go in that direction in ballast.

ARRIVALS.

Hiogo Maru, Japanese steamer, 896, R. N. Walker, 5th August,—Hakodate, Mails and General.—Mitsu Bishi M. S.S. Co.

Wakanoura Maru, Japanese steamer, 1,342, A. F. Christensen, 5th August,—Kobe, 3rd August, Mails and General.—Mitsu Bishi M. S.S. Co.

Seirio Maru, Japanese steamer, 591, 6th August,—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.

Gembu Maru, Japanese steamer, 670, F. J. Brown, 5th August,—Yokkaichi, General.—Kiyodo Unyu Kwaisha.

Akitsuishima Maru, Japanese steamer, 1,149, Frahm, 6th August,—Nagasaki 2nd August, Coal.—Mitsu Bishi M. S.S. Co.

Taganoura Maru, Japanese steamer, 610, 8th August,—Yokkaichi 6th August, General.—Mitsu Bishi M. S.S. Co.

Tsuruga Maru, Japanese steamer, 880, Dithlefsen, 8th August,—Kobe 6th August, Mails and General.—Mitsu Bishi M. S.S. Co.

Bengloe, British steamer, 1,108 Alex. Webster, 9th August,—London via Hongkong, Mails and General.—Mourilyan, Heimann & Co.

Takasago Maru, Japanese steamer, 1,229, C. Young, 9th August,—Shanghai and ports, Mails and General.—Mitsu Bishi M. S.S. Co.

Coptic, British steamer, 2,787, Kidley, 9th August,—San Francisco 21st July, Mails and General.—O. & O. S.S. Co.

Awajishima Maru, Japanese 3-masted schooner, 386, Creighton, 9th August,—Nagasaki 22nd July, Coal.—Mitsu Bishi M. S.S. Co.

Mary Winkelman, American bark, 505, H. O. Alberg, 10th August,—Tientsin 10th July, Ballast.—Mourilyan, Heimann & Co.

Essex, United States gun-vessel, 619, Captain A. H. McCormack, 11th August,—Honolulu 8th July.

J. E. Graham, British bark, 1,384, Cochran, 11th August,—Cardiff 21st March, Coals.—Messageries Maritimes Co.

Minerva, German brig, 319, Duhme, 11th August,—Nagasaki, 21st July, Coals.—Jardine, Matheson & Co.

Niigata Maru, Japanese steamer, 1,091, Hubbard, 11th August,—Hakodate, Mails and General.—Mitsu Bishi M. S.S. Co.

DEPARTURES.

Zambesi, British steamer, 1,540, L. H. Moule, 4th August,—Hongkong via Kobe and Nagasaki, Mails and General.—P. & O. S. N. Co.

Valparaiso, German bark, 486, F. Mayer, 7th August,—Havre and Hamburg via Kobe, General.—C. Illies & Co.

Wakanoura Maru, Japanese steamer, 1,342, A. F. Christensen, 7th August,—Kobe, Mails and General.—Mitsu Bishi M. S.S. Co.

Gembu Maru, Japanese steamer, 670, F. J. Brown, 7th August,—Otaru, General.—Kiyodo Unyu Kwaisha.

Hiogo Maru, Japanese steamer, 896, R. N. Walker, 8th August,—Hakodate, Mails and General.—Mitsu Bishi M. S.S. Co.

Nagoya Maru, Japanese steamer, 1,015, Wilson Walker, 8th August,—Shanghai and ports, Mails and General.—Mitsu Bishi M. S.S. Co.

Taganoura Maru, Japanese steamer, 448, 8th August,—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Wakanoura Maru*, from Kobe:—Dr. K. Rathgen, and 8 Japanese in cabin; and 1 European and 182 Japanese in steerage.

Per Japanese steamer *Seirio Maru*, from Yokkaichi:—189 Japanese in steerage.

Per Japanese steamer *Akitsuishima Maru*, from Nagasaki:—3 Japanese in cabin.

Per Japanese steamer *Gembu Maru*, from Yokkaichi:—130 Japanese in steerage.

Per Japanese steamer *Tsuruga Maru* from Kobe:—Mr. Cook, and 3 Japanese in cabin; and 145 Japanese in steerage.

Per Japanese steamer *Takasago Maru*, from Shanghai and ports:—Mrs. Ellwood, Rev. J. Taylor, Messrs. F. Krebs, F. J. Marshall, F. Retz, S. Strauss, Mayeda, W. H. Kano, Hayashi (2), Asano, Hasegawa, Takaishi, Asai, and Kin Rio Kwan in cabin; and 3 Europeans, 4 Chinese, 2 Koreans, and 187 Japanese in steerage.

Per British steamer *Coptic*, from San Francisco: Messrs. Wm. Binney, G. C. Curtis, Galetzky, and G. Isaacson in cabin. For Shanghai: Rev. M. Greenwood, Messrs. A. W. Danforth, Leang Tazeshick, and W. Sprent in cabin. For Hongkong: Mr. Fritz A. Brockelman in cabin; and 256 Chinese in steerage.

Per Japanese steamer *Seirio Maru*, from Yokkaichi:—7 Japanese in cabin; and 104 Japanese in steerage.

DEPARTED.

Per British steamer *Zambesi*, for Hongkong via Kobe and Nagasaki:—Messrs. R. C. Hannan and E. C. Kirby in cabin; and 1 European, 6 Chinese, and 18 Japanese in steerage.

Per Japanese steamer *Nagoya Maru*, for Shanghai and ports:—Governor and Mrs. Kishira, Governor Sakai, Mr. and Mrs. Mailand, Mr. and Mrs. Gardner and maid, Lieutenant R. B. Newland, Lieutenant Hewison, Lieutenant A. B. Wyckoff, Surgeon W. G. Smith, Captain Mignard, Rev. J. Imbrie, Messrs. M. Z. Martin, Roberts, J. Cadwalader, J. H. Wing, Kasby, Jouat, Murata, Ishikawa, Arimura, Ishii, Okochi, and Sonoda in cabin; and 15 men of H.B.M.'s Navy in second class.

CARGOES.

Per British steamer *Zambesi*, for Hongkong via Kobe and Nagasaki:—Silk for France, 162 bales; for England, 43 bales; Total, 205 bales.

Per Japanese steamer *Tsuruga Maru*, from Kobe:—Treasure, \$18,000.00.

Per Japanese steamer *Takasago Maru*, from Shanghai and ports:—Treasure, \$250,000.00.

REPORTS.

The Japanese steamer *Wakanoura Maru*, Captain Christensen, reports leaving Kobe on the 3rd August, at 6.30 p.m. with light and variable winds and fine weather to Oo-sima; thence to port moderate north-easterly winds and cloudy weather. Arrived at Yokohama on the 5th August, at 8 a.m.

The Japanese steamer *Akitsuishima Maru*, Captain J. Frahm, reports leaving Nagasaki on the 2nd August, at 6 p.m. with fine weather and light variable winds or calm to Rock Islands; thence to port strong northerly winds. Arrived at Yokohama on the 6th August, at 9 a.m.

The Japanese steamer *Tsuruga Maru*, Captain Paul A. Dithlefsen, reports leaving Kobe on the 6th instant, at 6 a.m. with fine weather and strong currents throughout the whole passage. Passed the American flagship *Richmond* at anchor in Kaneda Bay.

The Japanese 3-masted schooner *Awajishima Maru*, Captain Creighton, reports having experienced light easterly winds and calms throughout the passage.

LATEST COMMERCIAL.

IMPORTS.

There has been a moderate business in Yarns during the week, sales amounting to 925 bales. The enquiry for Shirtings has slightly improved, but the demand is not brisk enough to enhance values, except in Medium qualities for which firmer rates are quoted. Silk-faced Satins, Mousselines, and Velvets are in better demand, although transactions are small, and prices remain stationary. Contracts are reported in Satins at a small concession on current rates. There is but little doing in Woollens, and Metals are very quiet.

| Nailrod, small size - | 2.85 to 3.10 |

KEROSENE.

Another week has passed without any business being reported in Oil. Holders now ask the undermentioned prices, but dealers are keeping back in expectation of lower rates. Deliveries during the week have been 15,000 cases, leaving a Stock of some 627,000 cases sold and unsold Oil.

| | PER CASE. |
|----------|-----------|
| Devon - | \$1.66 |
| Comet - | 1.63 |
| Stella - | 1.55 |

SUGAR.

The Market is very flat, and transactions nil, accumulating Stocks having at length had the effect of lowering prices considerably. Annexed quotations are prices demanded, but buyers make no response.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$8.00 to 8.25 |
| White, No. 2 - | 7.50 to 8.00 |
| White, No. 3 - | 6.75 to 7.00 |
| White, No. 4 - | 6.00 to 6.50 |
| White, No. 5 - | 5.00 to 5.20 |
| Brown Formosa - | 4.50 to 4.60 |

EXPORTS.

SILK.

Business in this staple has continued much as last advised; there is no special feature to notice. Settlements are returned as 300,600 piculs for the week. Quotations are about on a par with those of last issue, and the Stock is again slightly increased. Export to date is 1,915 against 2,394 last year, but the outgoing M.M. steamer *Godavery* will go a long way towards equalising the figures.

QUOTATIONS.

| | |
|-----------------------------------|--------------|
| Hanks—No. 2 - | \$500 to 510 |
| Hanks—No. 2½ - | 480 to 490 |
| Hanks—No. 3 - | 460 to 470 |
| Hanks—No. 3½ - | 440 to 450 |

| Kakedas—Extra - | 625 to 635 |
| Kakedas—No. 1 - | 600 to 610 |
| Kakedas—No. 2 - | 550 to 570 |

TEA.

Business during the past week has continued much on the same scale as previously reported, the demand being still almost entirely confined to the lower grades, prices for which are again somewhat dearer. In all grades above "Fine" there appears to be no demand whatever, and it is impossible to form an opinion as to what natives would be disposed to accept. The aggregate Settlements since our last weekly issue are 4,275 piculs, and as arrivals have been light, Stocks are again reduced. The P.M. steamship *City of Peking* despatched on the 4th instant, carried from this port 126,887 lbs. for New York, 61,959 lbs. for Chicago, 43,056 lbs. for St. Paul, 158,517 lbs. for San Francisco, and 31,394 lbs. for Canada, making the total of 421,813 lbs. Tea.

QUOTATIONS.

THE GREATEST WONDER OF MODERN TIMES

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

For the excellence of our Manufactures, we have received following AWARDS:—

Vienna Exhibition, 1873, Diploma of Merit.

South African Exhibition, 1877, Gold Medal.

Paris Exhibition, 1878, Gold Medal.

Sydney Exhibition, 1879, First-class Diploma.

Melbourne Exhibition, 1881, First-class Award.

* The ONLY ONE awarded to any Tin Plate Manufacturer.

Sole Export Agent—BROOKER, DORE & Co., Corbet Court, London, E.C.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 18TH, 1883.

WEEKLY NOTES.

A VERMACULAR newspaper takes occasion, when informing its readers that the cost of the new offices of the Kanagawa Prefecture is fixed at 100,000 yen, to say that the Local Authorities have warned all their subordinates against accepting any douceurs from contractors or other artisans who may chance to be connected with the work. If this veto has any meaning at all, it is a most important meaning. Japan's progress in the matter of public works is doubtless chiefly obstructed by the apathy and inexperience of her people. The story of Mr. Nishima, Prefect of Fukushima, illustrates this fact. His attempt to get roads made by resorting to a system of compulsory labour or fines was denounced by the people of the vicinity as gross tyranny, in spite of the fact that, ever since the Restoration, the Government have been endeavouring, by the bestowal of honours and rewards, to rouse the country folk to a perception of the value to themselves of work of this kind. But it is said that there is another scarcely less radical obstacle to the successful conduct of public

works in Japan, namely—their unnecessary costliness. The system of commissions and squeezes which obtains, to a greater or less extent all over the world, seems to flourish here with exceptional vigour. Probably it is this that has prevented the growth of a responsible body of contractors, capable of carrying out large works in an efficient and conscientious manner. Until such men are available, extravagance, waste, and peculation will be prominent features in the history of public works. The Prefect of Kanagawa has set a good example. We only hope that he may be able to get his injunctions carried out.

The degree of immorality which attaches to the offering or receiving of bribes in the East is very difficult to determine. Japanese history shows that in old times presents of money or goods were a common feature of almost every transaction, social or official, and that they were not regarded as immoral or improper, except when their object was the concealment of wrongdoing. Gifts made in acknowledgment of services rendered were never tabooed in this country any more than they are among ourselves to-day. It must be confessed that the difference between receiving commissions on goods ordered, and receiving a douceur from a contractor whose tender has been successful, is not sufficiently palpable to justify the wholesale strictures we are in the habit of passing on Japanese morality in the matter. On the other hand, one is obliged to admit that a people among whom such things as the Yunnan bribery case occur, are not living up to a particularly high standard of honesty. A recent *Peking Gazette* contains the conclusion of this case, which will well repay perusal. The Censor Ch'en Ch'i-t'ai was the first to draw attention to the wholesale bribery that had been resorted to get the accounts passed. This denunciation was followed by a further representation from the Censors Hung Liang-p'in and Teng Ch'eng-hsin, who stated that Ching Lien and Wan Wen-shao, Presidents of the Board of Revenue, were both implicated in the charge of bribery. A commission of high officers was accordingly appointed to enquire into these charges, whose numbers were augmented from time to time, and finally consisted of Prince Tung, Yen Ching-ming, Pan Tsu-yin, Chang Chih-wan, Lin Shu, Weng Tung-ho, and Hsieh Yun-sheng. Their report has now come to hand, in which they state that all the bribes that have been received have been refunded, and suggest the

penalties which the various actors in the matter should receive. In this case, Ts'ui Tsung-yi was entrusted with the preparation of the accounts, showing the manner in which the money received for military expenses in Yunnan was expended, and Pan Yin-chang undertook to commission Chou Jui-ch'ing to get Lung Chi-tung to explain to Sun Chia-mu, who was the Secretary in the Board of Revenue, who prepared the drafts of the memorials, that there would be Tls. 80,000 at the disposal of the Board if the accounts were passed. The amount was paid over, and the secretaries and clerks received sums varying in amount. Although, on a further scrutiny of the accounts by the Board of Revenue, it was found that all the items of expenditure as reported in these accounts were legitimate, that systematic bribery to the extent of several lacs of taels should have permeated through the ranks of all the secretaries and clerks, of the Board is a matter of very serious importance, and the offence must be met with the severest penalties. Sun Chia-mu, Secretary in the Board of Revenue, already cashiered, who received Tls. 7,000, and Chou Jui-ch'ing, who though he did not undertake to pass the accounts, or take any bribe, was nevertheless the medium through which bribes passed, are sentenced to banishment to the Amoor. The plea of the latter, that his mother is aged and has no one but himself to look after her, will not be entertained. The following officers are sentenced to banishment into servitude on the military post-roads:—Fu Chih, second class Secretary to the Board of Revenue, who, although he was not a party to the preliminary transactions, eventually accepted Tls. 4,000; Pan Yin-chang, who was persuaded to undertake a commission to bribe, and though he was privy to the fact that Ts'ui Tsun-yi had appropriated public moneys, did nevertheless borrow from him Tls. 1,700 and more; Lung Chi-tung, second-class Secretary in the Board of Revenue, who was induced by Chou Jui-ch'ing to make arrangements, and accepted Tls. 300; and Li Yu-hua, Censor, who, although he was not concerned in the Yunnan accounts, made himself feared by the parties who were concerned by reason of his pertinacious enquiries, and finally appropriated Tls. 400, the balance of a purchase he made on behalf of Pan Yin-chang. Ts'ui Ch'en-huam, and Chou Sung, second-class Secretaries in the same Board, who borrowed money from Sun Chia-mu, although they paid it back, were borrowing public money, and are forthwith dismissed. The clerks Ch'u Shih-heng, Chang

Ying, Wu Ching-lin, and Chang Chao-hung, who took the money, are sentenced to a hundred blows with the heavy bamboo, and banishment to a distance of 3,000 *li*. Tsun-yi, formerly Grain Tao-t'ai of Yunnan, who appropriated Tls. 23,200 of the public moneys, is dead, but sentence of dismissal from the public service will nevertheless be recorded against him, and his family will be called on to make good the amount of his depredations. As regards the implication of Ching Lien and Wang Wen-shao in this case, enquiry of P'an Ying-chang, and Chou Jui-ch'ing, as well as amongst the secretaries and clerks of the Board, fails to elicit any testimony of the receipt of bribes by these two officers, nor do the books of the banks show any payments to them on P'an Yin-chang's account. They have, nevertheless, been guilty of carelessness, and are further to blame for not discovering that their Secretaries Sun Chia-mu and Fu Chieh did receive bribes. A list comprising their names, together with those of the Vice-Presidents of the Board in office at the time, as well as those of the Presidents, Vice-Presidents, and Secretaries of the Board of Works who failed to ascertain that their clerks were taking bribes, is to be sent to the Board of Civil Office, who will determine the penalties which each officer should respectively receive. The Governor-General and Governor of the province have rendered themselves liable to a penalty, not only for their failure to discover the appropriation of so large a sum as Tls. 100,000 of public money by Ts'ui Tsun-yi, but because they further placed him in the highest class at the special scrutiny that takes place every six years. They neither discovered that Ts'ui Tsun-yi and P'an Yin-chang were resorting to bribery to get their accounts passed, nor, when the fact was revealed, did they ascertain the correct amount of the moneys that had been appropriated to other purposes. Liu Ch'ang-yu, Ts'ên Yü-ying, and Tu Jui-liên will be handed to the Board for the determination of penalties. Let effect be given to the other suggestions submitted by the Commissioners.

THE Japanese authorities appear to regard with disfavour the employment of their countrymen to draw jinrikisha in a foreign country. We learn that a Japanese tradesman, some time ago, imported three of those vehicles to Shanghai, and "horsed" them with Japanese. No objection appears to have been raised at first, but when he proceeded to develop his speculation by adding thirteen jinrikisha to his stock in trade, he received an intimation from his Consul that the new vehicles must not be drawn by Japanese. One can sympathise with the spirit which dictated this interdiction. The trade of a jinrikisha coolie is degrading not only to those that practice it, but to those also that witness its practice. It is an occupation which the Government may well desire to render as unpopular as possible, though they wisely refrain from attempting to legislate against it in Japan. Yet if we go to the root of the matter, it is difficult to see the difference between rowing a boat

and pulling a jinrikisha. The amount of muscular labour involved is pretty equal in both cases, and if the latter employment can be said to convert its followers into beasts of burden, the former is certainly open to the same stigma. The fact is that, under existing social conditions, men are compelled to do a great many things which are both morally and physically injurious. The jinrikisha coolie is a case very much in point, and yet the jinrikisha coolie regards himself as several patches above the more muscular, but less human, individual whose life is spent between the shafts of a luggage cart, and as an incomparably finer fellow than the scavenger. Anyone who has travelled in Japan and seen men, and even women, yoked to heavy harrows which they painfully drag over the surface of a paddy field, wading knee-deep in mud, with a blistering sun beating down upon their heads, is capable of appreciating the foolish fuss that has been made about the "degrading and deadly occupation of the jinrikisha coolie." These things are inevitable. We shall see them disappear in time, as sedan chairs and the dragging of under-ground tram-cars by semi-nude women have disappeared in England; but it is doubtful whether that most desirable consummation is not impeded rather than accelerated by official interference such as that attributed to the Consul in Shanghai. If men can earn more money and thus command more of the comforts of life by pulling a jinrikisha than by plying any other trade within the compass of their abilities and opportunities, by all means let them pull one. We cannot see any material difference between the performance of that act in Yokohama and in Shanghai. Certainly the Japanese speculator whose operations have been arbitrarily interrupted will see no difference.

It is stated that the Viceroy of Chili, Li Hung-chang, at the instance of the United States Minister, has granted permission for a service of passenger boats on the upper Peiho, between Tientsin and Tung-chow. Hitherto that portion of the river route to the capital has been performed by barges, which, proceeding at a snail's pace and making frequent stoppages, required five days to accomplish the distance. The course of the river is tortuous in the extreme, and the terrible weariness of this monotonous journey through a country singularly flat, barren, and uninteresting even for China, has had the effect of virtually isolating the capital so far as foreign visitors are concerned. Doubtless an important point of national prejudice was concerned in preserving the metropolis of the Middle Kingdom from the direct contact of steamers and other unequivocal evidences of foreign intercourse. Years ago a similar spirit prompted the Sakai outrage, when the men of Tosa, fired with unreasoning indignation at the notion that even the residence of the "Son of Heaven" himself was not to be free from the contamination of foreign presence, set themselves to prevent that, to them intolerable, indignity by massacring a boat-load of unfortunate

Frenchmen, the pioneers, as they thought, of the army of desecration. Probably many of these same misguided patriots lived to travel by rail to Kyoto, and to see the Son of Heaven go about among his people without half the ceremony that marked the goings and comings of a petty Daimiyo in the old days. All these changes were accomplished ten years ago, and now, at last, we learn that the most enlightened Chinese statesman of his day has consented to let steamboats run within a short distance of the Chinese capital. It cannot be charged against China that she is moving too fast for those who admire deliberation. Recently it has fallen to her lot to be rather applauded than otherwise for her stubbornness. The human mind is so constituted that everything resolute, even resolution in wrongdoing, commands a certain amount of reverence. Formerly Japan was the cynosure of all eyes. The thoroughness of her conversion from old-fashioned prejudices, and the remarkably practical evidences of that conversion her conduct displayed, were points which lovers of reform could not choose but extol. Yet there was something to pity rather than to censure in China's lonely attitude of faithfulness to tradition—something even dignified in the unflinching persistence of her obstinacy. She does not, however, display quite so much dignity when she openly chafes, as she has lately begun to chafe, at the lion's share of foreign approbation that falls to Japan's lot. If there was anything that condoned the error of her perverse conservatism, it was her calm faith in the superiority of the part she had chosen, and the indifference that faith enabled her to oppose to hostile criticism. This indifference seems now to have deserted her. She wants to be praised and petted by the very persons she has hitherto professed to despise, and it may be that her new mood is the forerunner of a decided step in the only direction where Western respect awaits her. The United States Minister at Peking has the credit of giving her very sound advice in these matters, and this last concession which he has obtained seems to indicate that his influence is likely to bear practical fruit.

NOTES.

WE have been hearing a great deal about Prefect Mishima of late. Judging from the stories told by the Fukushima suspects, he must be an official of exceedingly resolute, not to say arbitrary methods. The charges preferred against him in the Special Court of Tokyo have been, however, somewhat vague, and it is with a feeling of satisfaction that we find a definite version of his misconduct in the columns of the *Hochi Shimbun*. It appears that he has been seized with a species of road-making mania, and that he carried his fancy so far as to plan two new roads connecting Fukushima with Tokyo and Niigata. To carry out this project his plan was to require that every man and woman in the Prefecture, from fifteen to sixty years of age, should work one day a month or pay a fine of 10 *sen* per woman and

15 *sen* per man. The cruel part of this enactment, according to the *Hochi Shimbun*, was that some of these forced labourers had to travel as much as twenty *ri* to perform one day's work, so that they spent six days journeying to fro. Possibly they preferred this, on principle, to paying a fine of ten or fifteen *sen*, but no reason is assigned for their choice. At the first blush one is inclined to think that the hardship of Mr. Mishima's regulation is mainly attributable to the peculiar temperament of the people he had to deal with. If a journey of six days, varied by one day's road-making, seems to the good folks of Fukushima better than a disbursement of six-pence, their faculty discrimination must be something out of the common. The *Hochi Shimbun* takes no note of this idiosyncrasy, and is equally silent with regard to the part which the Local Assembly took in passing the so-called "Mishima regulation." If the people choose representatives who want to create roads by heroic processes, and having chosen them, choose afterwards to make those processes seven times more irksome than their representatives made them, it seems scarcely quite just to lay the whole blame on the Prefect's shoulders.

SOME months ago, a humane and intelligent captain of a merchant ship had the good fortune to rescue, while on a voyage from New York to this port, a number of wrecked and starving natives of the Gilbert Islands, whom he brought with him to Yokohama, with the intention of ultimately restoring them, if practicable, to their home. In a charmingly simple and unaffected narrative, he told the story of their delivery from death, their return to health and strength, their gratitude for the unlooked for relief, and their humble desire to be reunited to their families, with an effect which few professed writers could have equalled. Finding that his course back to New York would not allow him to approach the Gilbert Islands, he set about the work of carrying out their wishes in another way. Chiefly by his exertions, a sum of money was collected, sufficient to pay all that would be demanded for their passage from San Francisco to their native place,—transportation from Yokohama across the Pacific being furnished gratuitously, we believe, by one of the steamship lines. Few acts, or series of acts, more generous, disinterested and thoroughly honourable than those by which this gallant and true-hearted sailor helped the poor castaways back to the life they had almost surrendered, and sent them, filled with happiness and hope, on their ways to the home they thought they had lost for ever, have fallen within public observation in this part of the world. We mention it at this time, partly because the news has been received of their safe arrival at, and departure from Honolulu, and more particularly because, although frequent allusions to the incident have appeared in American and other newspapers,—the kind treatment accorded to the islanders in San Francisco and Hawaii being liberally reported and abundantly eulogized,—we do not remember to have seen,

on any occasion, the name of Captain Slocum, the prime mover in these benevolent deeds, more than incidentally alluded to,—and that in the slightest and most indifferent manner. It is possible that those concerned in the various publications on the subject, being acquainted with the Captain's modest disposition, and proceeding upon the principle that virtue is its own reward, have thought it best to withhold his share in the transaction,—if that can be called a share which was so nearly the whole,—from the light of newspaper notoriety. Without disputing the value of these motives, we are still inclined to think that no harm will come from presenting, at least for once, the conduct of so worthy a man in its true aspect. Nobody will be injured by it, and there is always the possibility, if the original facts are known, that others may do likewise; whereas from what has thus far been revealed, it would be difficult to discover that a particularly commendable example had been set by any body. It seems a sort of duty to endeavour to repair that omission, and to express the hope that such oversights may not be carelessly repeated.

VIEWED from the standpoint of the telegraph operators, the recent strike in the United States cannot be called a very successful movement. The grievances which caused the demonstration seem to have been real enough. The average wages for commercial operators in the State of New York are only \$54.43 per month, and those of railroad operators \$39.50. No extra compensation is given for Sunday work, and it is said that at many of the stations railroad operators have to remain at their posts from fourteen to sixteen hours a day. This state of things has not been suddenly brought about. It is the final result of three general reductions of wages made during the past ten years. Neither did the operators adopt the extreme measure of leaving the service to take care of itself without giving their employers due warning and ample opportunity to come to terms. On the contrary, it is admitted on all sides that they conducted the affair with frankness and honor, advising the corporations fully of their dissatisfaction, their desire for redress, and their resolve to go off duty unless their demands received favorable consideration. Those demands were four: First—a day's work to be limited to eight hours instead of 9½ as at present. Second—seven hours to be a night's work instead of 8½. Third—no Sunday work without compensation. Fourth—an increase of fifteen per cent. on all salaries now paid. None of these concessions were deemed possible by the companies. They held that they had dealt fairly with their *employés*, and professed to believe that the public would be willing to suffer some inconvenience rather than sustain an unjust demand. In reality, however, they appear to have been confident that no strike would occur at all, and that the operators would think twice before leaving positions that earned them a comfortable living. In this faith they erred: The Brotherhood of operators who had pledged themselves to

proceed to extremities if their demands were refused, numbered no less than thirteen thousand, that is to say, nearly one half of the whole staff throughout the country, and they had estimated that the experts not enrolled in their Union could not possibly satisfy the wants of the public service. Accordingly at noon on the 19th of July the demonstration began in the Western Union telegraph room, several hundred operators laying down their utensils and leaving the building simultaneously. The method adopted to communicate the fact from the head-quarters of the Union to other districts was to telegraph the message "General Grant dropped dead on the street in New York," it being presumed that every operator, whether a member of the Brotherhood or not, might be relied on to spread that story without delay. As the message flashed from place to place each office contributed its quota of strikers to the general body, so that by 3 o'clock in the afternoon the demonstration was complete, having extended even to Toronto in Canada. Everything went on so quietly, however, that outsiders were scarcely conscious of what had happened. At many of the offices the superintendents were taken completely by surprise, their general disbelief in the likelihood of a strike having been supplemented by an idea that a compromise had taken place at head-quarters. Nevertheless, little time was lost in making arrangements to meet the emergency. Most of the old hands remained at their work. Their reminiscences of the strike of 1870 were not of a nature to encourage repetition. The female operators, too, with every few exceptions, took no part in the affair. Very soon substitutes from the branch offices were on their way to New York and other important places, while former *employés* of the Company, now in other lines of business, flocked in and offered their services to tide over the embarrassment. A telegraph college in New York also supplied a number of students, and thus, by one device or another, things were in fair working order at most of the principal places before evening. In short the immense and universal inconvenience which the strike might have caused was virtually avoided altogether, and the Companies are in a position to offer terms at their leisure. The strikers, meanwhile, are reported to be in good spirits and quite confident that the concessions they demand must be made. They are for the most part young unmarried men, who can live for some time without pay as they belong to an association called the "Knights of Labour," which is bound to help them financially and otherwise. It is to be observed, however, that the longer they hold out the less will be the necessity for reemploying them, as their *remplacants* will be acquiring skill all the time. Judging, indeed, from the telegraphic news which has reached us, the trouble is adjusted already, though whether it has been found necessary to accede to some of the striker's demands, or whether the Companies have managed to do without their rebellious *employés* altogether remains to be learned.

THE Silk Association of America tabulates the imports of Raw Silks into the ports of New York and San Francisco during six fiscal years as follows:—1877-8, bales 10,190, value \$5,002,483; 1878-9, bales 15,949, value \$8,080,681; 1879-80, bales 21,741, value \$11,749,943; 1880-1, bales 20,198, value \$10,885,167; 1881-2, bales 21,682, value \$13,177,898; 1882-3, bales 23,927, value \$14,687,584.

The imports of Raw Silk at the ports of New York and San Francisco during the month of June last, were 1,545 bales, valued at \$895,344. Those of Waste Silk and Pierced Cocoons were 126 packages, valued at \$64,709.

For the seven last fiscal years, each ending on the 30th of June, imports of Silk manufactures into the port of New York were in value as follows:—1876-7, \$20,709,585; 1877-8, \$19,078,661; 1878-9, \$23,023,903; 1879-80, \$30,596,509; 1880-1, \$30,501,851; 1881-2, \$36,432,706; 1882-3, \$33,967,141. That is to say that, in seven years, a sumptuary luxury in a manufactured form has been imported into one city of the United States to the enormous value of about thirty-nine million pounds sterling.

Of the total of 23,927 bales of Silk, valued at \$14,687,584, imported into the ports of New York and San Francisco during the fiscal year ended on the 30th of June, 1883, Japan contributed 10,152 bales, valued at \$6,379,115; Hongkong, bales 4,772, value \$1,678,270; Shanghai, bales 5,631, value \$2,768,323. The remainder consisted of:—Strictly European, bales 2,131, value \$3,716,609; re-shipped Asiatic, bales 241, value \$145,267.

To conclude our notices of the Report of the Silk Association, we find a remarkable increase in the quantities of manufactured goods entered for "Warehouse" during the months of April, May, and June. The total increment of the stocks thus stored as compared with the withdrawals is estimated at \$1,149,329; and the cause is evidently the intention on the part of speculators to take advantage of the new tariff immediately on its inauguration.

A MARINE Court of Enquiry has been held at Hongkong into the loss of the *Spark*, the old river steamer late the property of the Hongkong, Canton, and Macao Steamboat Company. The finding of the Court stated that the vessel was lost on Cape Cami through the careless navigation of the master, Archibald Hugh Brooke Rose, whose certificate was suspended for two years. The steamer will be remembered on account of her having been pirated by Chinese, who were on board playing the rôle of passengers, and a large amount in dollars carried off.

In the Netherlands Court, on the 13th inst, Mr. Jan de Boer appeared before the Acting Consul. F. Krien, Esq., at the suit of one Yamamoto, who claimed yen 36 odd in compensation for injuries alleged to have been sustained in an assault

committed by the defendant. It appears that on the 27th of April last Mr. Jan de Boer, when in pursuance of instructions from Mr. Whittall, and acting in concert with Mr. Whiteford, master of the little steamer *Kokusen*, was resisted by Japanese when unmooring the vessel from the English Hatoba. Mr. Whiteford deposed that de Boer merely resisted an assault committed upon him by the plaintiff. His Honor adjourned the case.

For a masterpiece of geographical confusion, we commend the following extract from *Harper's Bazar* of July 21, respecting which it would be interesting to know if the writer himself could explain its meaning:—

A splendid barometer has been given to the Abbot of one of the great Buddhist colleges in Japan by the Prince of Wales, in the name of his sons, who were entertained there while travelling in India.

As an evidence that the feudal spirit is not extinct in Japan, and that the sentiment of devotion to the great families survives the ancient forms of vassalage, we may mention that more than two hundred and fifty followers of the house of Owari came, unsummoned, from Nagoya, to be present at the funeral, on the 8th instant, of their former lord. Although their attendance was quite voluntary, and was intended to be at their own cost, we understand that they were lodged and entertained, during their stay in the capital, by the representatives of the late daimiyo. The majority of the visitors were aged men, who had personally served their master. The ceremonies preceding the burial took place at the mansion in Honjio, near Riogoku Bridge, where the descendants of Owari have resided since they relinquished the immense *Yashiki* at Ichigai.

A FRENCH gentleman in Saigon communicates to the *Independent* an extract from the letter of a compatriot, an officer in the Chinese Customs service stationed in Hankow. The writer gives a shocking account of the condition of the people in the neighborhood, who, in addition to calamities existing on the 8th of July, were threatened with the flooding of the Blue River. He says that the district of Hupeh is a prey to famine, typhus, and other diseases. Only sixty miles from the port the population was living upon the leaves of trees. There has been no harvest for three years; and this year inundation is to be added to the miseries of the poor wretches who fall and die, for want of roads and thanks to the charming imperial administration, from which the people we may remark, *en passant*, would gladly be delivered. There has been a beginning of revolt; and twenty-four heads had fallen to the sword; but the hydra has one hundred heads, and if China declared war against France a domestic revolution might be feared. It was doubtless his that frightened Li Hung-chang. The French writer concludes by saying that he has been assured that peace is secure; that China will not oppose the movements of France, and that the latter will not demand any indemnity

from the Imperial Government. This does not prevent China from arming with all speed; but it is said that there is another enemy than France in view.

We have to acknowledge the receipt, a couple of mails ago, of a volume of reports, by the Medical Staff of the Chinese Maritime Customs, on the health of the districts under their control, for the half-year ended 30th September, 1882. All the papers are technically valuable: many of them contain statements and hints that are of interest even to lay readers. For instance, there is a very common impression that excessive consumption of opium and alcoholic intoxication are rarely simultaneously prevalent among people of the same district. This theory according to Dr. Henry is not justified in Hupeh. The doctor writes from Ichang on the Yangtze, where he says that Szechuan opium is much smoked; while the sight of a "drunken labourer or farmer, reeling home from market, wake, or wedding is com non enough to be suggestive of life in Western lands." Drunkenness and dirt generally go together, and it is the filthiness of these Chinese, rather than their vices, which renders them uncomfortable as regards themselves, and disagreeable to others. Their habits explain the universal plague of parasites and parasitic diseases of the skin,—porrigo, scabies, and tinea representing the latter; pediculus, cimex, and pulex, the former. "But," the writer observes, "a mode of treatment has been devised, which I may term the smoke-bath, and which appears to be an Ichang invention, that might be recommended to the speculators at home in hydropathy, electropathy, and such-like, on the score of novelty. About sundown one may often see on the beach a naked form lit up by the lurid glare of a pile of burning shavings. The form waves a bundle of clothing frantically around in the smoke. This seeming joss-pidgin is merely the recognised and effectual mode of parasiticide." Perhaps it might be satisfactorily imported into Japan and other countries for the removal, other than manual one, of cutaneous parasites. To the looker-on at least it would have a more picturesque effect, than the commoner process upon which one not unfrequently sees a *désœuvré* jinriki drawer or other laborer earnestly employed.

Dr. Henry speaks regretfully of a fine field of anatomy which he is forbidden to till. After recording the objections of the natives to undergo a course of medical treatment, while they are willing enough to take a dose of medicine, he ventilates a more serious grievance:—"Prejudice equally closes the very extensive field that exists here for post-mortem examination. Fatal accidents are common. During the early part of the year, a party of eight beggars, who were sleeping at night in a hollow in the bank of the river, were killed by the falling in of the superincumbent mass of earth and stones. A similar fate not long since overtook a coolie who was excavating clay in a pit hard by the Custom House." This is hard on a would-be dissector,

whose opportunities in cases of suicide also, which is very prevalent, "prejudice" ruthlessly cancels. It is creditable to the Doctor, smarting under disappointment, that he testifies to "the existence of the sentiment of humanity. I may adduce," he says, "two important institutions here, namely, free ferries, and the peculiar red boats, which are often effectual in saving life in the numberless cases of accident on the river at this place, and more especially higher up, in the rapids."

Among the other reports we notice that of Dr. B. S. Ringer, of Amoy, who gives a word of wise counsel applicable everywhere in seasons or imminence of epidemic. He suggests that it would be well "if lay residents could be brought to understand that an outbreak of cholera may commence slowly and insidiously, that cases may at first be few and far between, and that a town may be in imminent danger of a severe epidemic without necessarily a sudden and sensational death-rate occurring. This knowledge might to some extent prevent the apparent surprise caused by the refusal of health certificates and the adoption of other sanitary measures necessary under such circumstances, and pursued by those in a position to form an opinion in the matter."

In addition to his ordinary report on Pakhoi, Dr. Lowry furnishes some notes on an epidemic disease, which prevailed there from April to September, 1882, and which he is not unwilling to identify with the "plague," now supposed to be extinct, which used to ravage both Asia and Europe. On the face of the matter there seems no reason why the two maladies should not be identical. The plague may not have been eradicated but only confined to exceptionally favorable localities. The science of sanitation, cleanliness in living, sobriety, and sense in diet—all generally unknown in Europe three hundred years ago—are unknown in many parts of Asia yet. They drove away the plague and many another affliction from the homes of Europeans. They have not been able to approach those of millions of Asiatics. It is about time that they laid siege to such strongholds of disease and death as is Pakhoi, according to Dr. Lowry's picture of its condition—a picture which it would be useless, if it were possible, to transfer to these columns.

Indeed, personal and domestic cleanliness is not to be found in the category of the Chinaman's numerous good qualities. From Dr. Jamieson's report it is evident that Shanghai, in the native quarter at all events, is not much better than Pakhoi. And, parenthetically, this authority touches a subject which, *ceteris paribus*, is of as much importance in the foreign settlements of Japan as in those of China. It has been alluded to by the Sanitary Boards in times of danger of epidemic, and not unfrequently touched in the columns of this paper. And now from a foreign source we derive an identical moral. Let Dr. Jamieson speak with his accustomed plainness:—"Unless foreign

householders make a practice of frequently inspecting their servants' offices, they have no security whatever against the introduction of the most dangerous forms of communicable diseases within their premises. Their male and female servants will take no precautions whatever, and children are as likely as not to be brought into immediate contact with diseases against which parents flatter themselves that they are protected by the care which is lavished upon keeping them far from known sources of contagion. An unexpected visit to one's servants' quarters reveals many astonishing facts. No doubt it is only exceptionally that disease and death are found sheltered under one's own roof. But the incredible dirt in which the most respectable native servants live, the vermin which they cherish in their rooms, and the overcrowding of quarters calculated on no very liberal scale for the number of persons actually employed, are revealed with a clearness startling to anybody who for the first time undertakes such an exploration as I recommend." Matters are not quite so bad with us in Yokohama; but that they are much worse than they should or need be may probably be discovered without consulting the reports of the local Sanitary Board, composed of foreign and Japanese medical men, after the occasion of their house-to-house visitation in the summer of 1877. Householders are not mindful enough of the comfort of their servants, on which their own health and comfort so largely depend; and probably the majority of the domestics employed hereabout are but too well used to squalor in their homes not to take it with them even to light and airy habitations. But how many of the servants' rooms attached to the average good bungalow will answer to the latter description? It would be well if every master before taking a house would satisfy himself that the offices are in good order, and, by occasional personal inspection and strict discipline subsequently, insist that they are kept so.

HONGKONG papers mention the arrival there of a company of actors known as the "Loftus Troupe," consisting of sixteen ladies and gentlemen, and add that it is the intention of these artistes to visit Japan. It is too late to advise them against the fulfilment of their project now. Visitors to Japan generally manage to pass a very pleasant time in a fine climate amid pleasant surroundings; but fine scenery is with professional actors quite a secondary consideration to a full treasury. Especially at this season of the year is the exploitation of the Yokohama public, in a theatrical sense, a most ungrateful task. However, the Loftus Troupe have very good recommendations, and we can only hope that their trip to this region may not be so pecuniarily disastrous as many precedents would lead us to believe it will.

"CELESTIAL JOTTINGS" in the *Hongkong Daily Press* occasionally contain interesting and instructive items written in a pleasant style. The latest instalment has a note on Chinese supersti-

tions regarding the dead and graves. The writer gives an amusing instance as regards the latter subject. He says:—"I shall never forget the fear depicted on the face of a Chinese official who had from a long distance thoughtlessly fired off a long range rifle of foreign construction at a Chinese grave, little thinking the rifle would really carry so far. He pulled the trigger and, as luck would have it, scored a hit; in fact, he broke the bull's-eye, which proved to be the *liang pai*, or tablet inscribed with name and surname, &c., of the deceased Chinaman whose bones, probably washed clean and carefully deposited in an earthenware pot, reposed beneath. The successful, or rather perhaps unfortunate, marksman grovelled in the dust; with his forehead on the ground he worshipped fully half an hour; then retired, looking behind him and making an obeisance at every few steps for fully half a mile from the grave and remained after this occurrence sad and melancholy for the rest of the day."

The "Celestial Jotter" says that he has been asked to explain the reason why some Chinese take their friends home to die whilst others have so strong a repugnance to a death in the house that they will turn their nearest relatives out of doors to die. An instance in point is cited of a wealthy compradore or merchant whose relatives recently placed him on a bamboo chair in his own backyard to expire. The writer says that he has made inquiries and obtained a simple, if inhuman, solution. The Chinese, as a people, are eminently utilitarian. The dying merchant's relations 'm of *kū ching nan chung chong*, did not want him to make dirty the bed. The house in which deaths have occurred is, according to Chinese superstition, haunted (*lit. dirty*). The moribund was not, however, it may be observed, wholly removed from the care and attentions of his friends; and on actual decease the funeral rites and ceremonies would be duly observed. Here we have the glaring anomaly of grossly cruel neglect of the still living combined with excessive respect and worship of the dead. This is the reason why Chinese do not like their relatives to die in the hospital "because the funeral rites, or at least those of them immediately supervening on decease, cannot be properly observed." When persons as, for instance, young children, are left to die uncared for, it may be assumed that they are friendless or have no immediate relatives on whom would naturally devolve the duty of carrying out the funeral rites and ceremonies of the death-wake. The author holds that the various superstitions concerning life and death, spirits, ghosts, demons, and the unknown, have their origin in the fantastic development of, and excrescences from, the Taoist faith as originally projected by Lao-tsz, enlarged on and amplified by Chuang-tsz, and still further added to and diversified by annotators and commentators innumerable since the time of this last mentioned worthy. Taoism, as it at present exists, seems to be a system of the grossest materialism; the superstitious Chinese believe in the actual material presence of ghosts,

goblins, fiends, or demons; their beliefs and superstitions are, in reality, almost as gross, coarse, vulgar, and absurd as those of the modern American and other spiritualists. It may, however, be said in favour of the superstitious Chinaman that he does not dream or think of putting his ghosts to such mean uses as do our own spiritualists; the awful presence of a disembodied spirit inspires him, as it should do any properly constituted mind, really believing in the actual presence of a being from the land of shadows, with dread and reverential awe. Hence it is intelligible that the mandarin mentioned in the preceding paragraph had a lively fear that the ghost of the occupant of the grave whose tombstone he had unwittingly splintered, might collect his own bones, surge from the earth, and belabor or clapperclaw his insulter. The wonder is that the latter had the courage to point the weapon toward the monument at all.

Our telegraphic news of the 15th inst. indicates that a storm is brewing in a corner of Europe which has enjoyed for some years past considerable quiet. There appears now to be added to Nihilism in Russia, Fenianism in Ireland, and Socialism of a more or less virulent type everywhere else on the Continent, Carlism in Spain. There can be no doubt that the fall of Tolosa in the winter of 1876 did not mean the extinction of the followers of the Duke of Madrid, and that the insurrectionary movement referred to in Wednesday's telegram is simply a reanimation of the old Carlist trouble. This view is amply supported by the recollection of the conditions under which Don Carlos retired from the contest, and from Paris issued this proclamation:—"Being desirous of putting a stop to bloodshed, I forbear continuing a glorious, but at present fruitless, struggle. In the face of a great superiority of numbers, and in view especially of the sufferings of my volunteers, it became necessary to return the sword to the scabbard. I will never sign a *capitulacion*. My flag remains furled until the moment which God shall fix as the supreme hour of redemption."

MR. H. VIKKOT, the able Editor of the little sheet, *L'Indépendant de Saigon*, is writing a lengthy "summary of reforms to be accomplished in Cochinchina, in order to develop there French colonization and commerce," the gist of which is the administrative amalgamation of French colonies in the Far East. He would have all those possessions, including French Cochinchina, Cambodia, Tonquin, Annam, and their dependencies, formed into one great Government, under the authority of a Governor-General of Indo-China, with Governors of the various provinces, much in fact on the system according to which our own Indian Empire is administered.

MR. GLADSTONE, speaking at the Mansion House, said that "fuller advices from Madagascar confirmed the hope that the Tamatave affair would be satisfactorily arranged." This news is by telegraph, and the words could only have been uttered two or three days ago. We pub-

lished, however, a telegram yesterday from a Saigon paper, which translated in the *Hongkong Daily Press* stated that "the affair with reference to English Consul at Tamatave arose from an error. Settled." On referring to the original telegram in the *Indépendant* of the 26th of July we find that the Havas words are:—"Affaire consul anglais Tamatave résultat erreur calmée," which, according to orthodox telegraphic interpretation should read:—"The affair concerning the English Consul at Tamatave arose from an error—calmed," and not "settled" as the *Daily Press* rendered it, the inference being that the excitement in England, consequent on the outrage, has subsided. This deduction is warranted by the Reuter's telegram above referred to.

A COURT-MARTIAL was held on the *Victor Emanuel* at Hongkong, on the 1st instant, for the trial of Henry W. Hill, Lieutenant-in-Command of the *Cockchafer*, 4, screw composite gunboat. The court was composed of Commodore Cum-ling (President), Captain Fullerton (*Sapphire*), Commander Collins (*Swift*) Commander Jones (*Victor Emanuel*), Lieut. Tisdal (*Swift*) Mr. S. W. Wright (Commodore's Secretary) Judge Advocate. Lieut. Hill was charged with drinking intoxicating liquors to such excess between the 2nd May and the 19th June last as to produce an attack of *delirium tremens*, by which he was incapacitated from performing his duty on board ship on the 19th June. The defendant pleaded guilty. The Court was cleared to consider the sentence, which was read by the Judge Advocate on its re-opening. The defendant, having pleaded guilty, the case was considered as proved against him, and the Court adjudged him to lose five years' promotion as a lieutenant, to be also severely reprimanded, and to be dismissed from the *Cockchafer*.

MINISTER FOOTE'S first dispatch from Korea was received by the State Department at Washington early in July. It has not been published in full, so far as we discover, but numerous extracts are permitted to appear in New York newspapers. Considerable space is devoted to the details of official transactions,—the exchange of ratifications of the treaty, formal interviews and presentations, and the like. Already we observe the signs and portents of much confusion in nomenclature of individuals and localities,—the inevitable result of accepting no standard of authority as regards pronunciation or spelling. After long years of experience of the inconvenience of such irregularities in China, and to some extent in Japan, it seems a pity that proper means cannot be taken to provide against their repetition in the lately opened country. In reading Mr. Foote's correspondence, we have every reason to suppose that we are brought into contact with officers and diplomatists more or less familiar to us, through their connection with Japanese proceedings: but it is next to impossible to identify a single one of them. The American Envoy was met, before his landing upon Korean territory, by a "Vice-President of

the Foreign Office" and a Foreign Office Secretary; and upon the arrival of these gentlemen at the port of disembarkation, a Korean flag, "prepared at the suggestion of Commander Cotton, of the *Monocacy*," was hoisted at that vessel's fore, and saluted with twenty-one guns. After the salute, Mr. Foote received his visitors, and "through the medium of interpreters engaged them in a long conversation without the least difficulty." It is not our business, perhaps, to find fault with the phraseology of the "first" dispatch from Korea, but we cannot help feeling and expressing some curiosity as to why there should be "the least difficulty" in carrying on the said conversation, provided the interpreters were competent, which we believe they were, in a very high degree. If the newly arrived plenipotentiary had unfortunately been obliged to conduct his colloquy without interpreters, and had managed his interview, under those circumstances, "without the least difficulty," it would indeed have been an achievement worthy of record. However, the Korean gentlemen had their say, and the most interesting of their utterances was an assurance that "within a few months a decided change had taken place in the disposition of their own people toward foreigners." This is a very valuable fact. The announcement might have carried more significance, undoubtedly, if it had been accompanied by some indication of the exact number of months since the "decided change" began to manifest itself. We could then indulge in speculations, not entirely at random, respecting the cause of this sudden revolution in the feelings of a population of eight millions. If it took place about the time when the Chinese authorities performed a feat of prestidigitation upon the ex-Regent, and transported him from his native shores to a provincial prison in the heart of Chihli, with a marvellous rapidity unrivalled since the days of Aladdin's lamp, it may be that the skill and ingenuity displayed in that performance produced the revulsion. If it were co-incidental with the planting of a certain Japanese colony in their capital, as a standing remonstrance against the sanguinary ebullitions of the multitude, we might trace it to the growth of a wholesome respect for strangers who would not allow such atrocities to pass unpunished. If it asserted itself about the period when the Koreans discovered the facility with which large sums of money could be borrowed from outsiders, without apparent resources or perceptible security on their own part, their conversion would more naturally be attributed to a sentiment common to all the races of the earth,—the financial fellow feeling that makes us wondrous kind. But conjecture exerts itself in vain, owing to the vagueness of the data supplied. All we know is, that the disposition of the people underwent a change, presumably in the winter of 1882-3. Even if we knew more, we might still be confronted with the difficulty of finding a suitable meaning for the word "people,"—which, as every one is aware, has a very different signification in Western nations from that applied to it by Oriental Governments. So, possibly,

the fact enunciated by the Vice-President and the Secretary of the Foreign Office was not so valuable, after all.

As the Envoy's direct intention in coming to the East was to establish himself near the Korean Court, no surprise is excited by the statement that he "accepted an invitation to visit Sôul." But we are justified—in the exercise of the same curiosity that was evoked by the reference to the conversation through interpreters—in asking why it is thought necessary to publish the fact that Mr. Foote, on landing in Korea, "accepted an invitation to visit" the place he had come all the way from America to live in. It reminds us irresistibly of the law clerk's wedding expedition, in "Great Expectations." The party walk forth with the sole purpose of celebrating a marriage. "Hullo, here's a church," says the bridegroom; "let's go in." In the same way, the Foreign Office gentlemen who hasten to the seaport expressly to conduct to the capital the Envoy who has come with no other design than to be conducted thither,—these gentlemen say, as if a sudden and totally unpremeditated idea had struck them, "Oh, there's Sôul; perhaps you would like to visit it." We do not, of course, mean to intimate that anything of the kind actually occurred, but merely that this is the picture called up by the odd manner in which the narrative is given. Well, "having accepted the invitation to visit Sôul," the excursionists set out; including the Minister, his Secretary and Interpreters, and the Commander and eight officers of the *Monocacy*. The route, which was hardly a road but simply "a very narrow path," lay over hills and through valleys, amid villages of by no means neat or attractive aspect, the houses being constructed of stones and mud. The inhabitants were "clothed in white," and exhibited "no animosity." "Their appearance," we are told, "indicated Mongolian characteristics and a stalwart race." We are sensible, at this point, of a recurrence of the curiosity which has twice before seized us, but we stifle it, and pass on. Within four miles of Sôul, the strangers were met by the District Governor and another delegate from the Foreign Office; and from that spot to the city "the way-side was literally lined with people." "Thousands were congregated." Moreover, "having learned the object of Mr. Foote's visit, they became interested spectators." From which we infer that if they had not been told all about it, they would not have been interested at all. But for the fear of falling liable to the charge of a persistent pressure of curiosity, we should certainly pause to inquire whether it is a well considered plan of the Korean authorities, previous to, or upon, the arrival of foreign diplomatists, to acquaint the masses with the intentions of the new comers, in order to make sure of their interest in current proceedings. Whatever the course determined upon, the result in this latest case certainly compares advantageously with the manner in which popular emotion declared itself last year, with respect to the presence of an accredited Japanese agent; for the American

visitors were "treated with the utmost civility, during the entire journey." On arriving at their destination, "all were made comfortable, and every attention (was) paid to them." Numbers of officials, whom we recognize but dimly under their alphabetical disguises, greeted Mr. Foote, and so impressed him, not only with their hospitality, but with their general intelligence, that he lost no time in testifying to the broad range of their understanding. "These gentlemen," he wrote,—after they had "called upon him to express their gratification that the United States had sent a diplomatic representative to that empire (?) " and their "strong hope of happy results from the new relations, apparently appreciating the policy of the U.S. in the East,"—"these gentlemen are well versed as to the condition of other countries." For the last time we repress the impulse of inquiry which rises uncontrollably at the perusal of these lines, and check the desire to be informed whether the apparent *non sequitur* really exists, or is smoothed away in an amiable conjunction of perfectly harmonious thoughts. If we suffered the curiosity, to which we have confessed, to get the better of us to the very end, we might be accused of an ungentle wish to wound by unkind criticism; our true motive being just to glance sportively at a theme which fairly invites good humoured comment. But we would give a good deal to know what "well versed" means.

EARTHQUAKES have been felt in the South-West of England. A correspondent of *Nature*, writing from Woodtown, South Devon, on the 25th June, says:—

I have just felt and heard the shock of an earthquake. The trembling of the earth was very great and the accompanying noise very loud, comparing it with one or two other slight shocks which I have before experienced in this district. I found the time to be 1.38 p.m. The time it lasted was several seconds. It was longer and louder than an ordinary clap of thunder when the lightning is not far off. A man reports that the slates of the cow-house were made to rattle.

As I now write (2.7 p.m.) a second shock has been felt, a little less severe. The weather is very calm, sky cloudy. This place is close to Dartmoor, on the westward side, about 500 feet above the sea-level.

Another correspondent of the same paper, writing on the same day from Bosccastle, Cornwall, chronicles a similar—probably the same—spasms:—

I beg to inform you of the occurrence of two slight earthquake shocks here to-day, one shortly before 2 p.m., the other near half an hour later. The direction of progress seemed to be from north-west to south-east—that is along the line of the deep and narrow valley. The tremor was sufficient to cause a jingling of glass and earthenware, and of the slates covering the house. The usual rumbling noise accompanied the shocks.

A HAVAS telegram from Paris to the *Indépendant* de Saigon states that the Chamber has rejected a bill for the Tonquin Telegraph Cable, because it gave the concession to an English Company. Mr. Blancsube proposes a French cable. The Chamber voted urgency.

ACCORDING to the *Choya Shimbun* the launch of H.I.J.M.S. *Tenriu Kan* in Yokosuka Dockyard will take place on the 18th instant. It is said that the Emperor has signified his intention of presiding at the ceremony. Special trains

will convey the Tokiyo guests to and from Yokohama. We understand that, as on previous occasions, the Yokosuka boats will also be at the disposal of those who are invited to attend.

THE Mitsu Bishi steamship *Tsuruga Maru* which arrived here yesterday brought up the officers and crew from the wreck of the Company's steamer *Sumida*.

WE are pleased to hear that the merit and long services of Dr. A. J. C. Geerts have been gracefully recognized by the Japanese Government, in whose employ he has been for many years. He has received from the Emperor the distinguished decoration of the Order of the Rising Sun.

THE *Mainichi Shimbun* says that the *Adsuma Kan* has orders to proceed on the 18th instant to Kwanonzaki to test, by firing upon them, the fortifications. Three batteries there have now been completed.

WE notice that the Hongkong papers received an additional item in connection with the telegram which announced the dreadful calamity at Casamicciola, namely:—"Mount Vesuvius was in active eruption."

THE telegraph announces the resignation of the French Naval Commander in Madagascar. The reason given is ill-health, but there is just a possibility that, in the settlement of the Tamatave affair, the British Government may have insisted upon the recall of the French Naval Commander in view of recent events.

THE telegraph announces that progress is being made with a view to a settlement of the Opium question with China. It is quite time, considering the period that has elapsed since the conference between the high officials took place at the Northern port.

THE passage after the third reading of the Corrupt Practices Bill, mentioned in our telegraphic news, is a satisfactory announcement. The Bill on doubt will pass the Upper House and receive the Royal Assent at once, and come into operation at an early date.

OUR private advices from the seat of French operations in Annam give assurance that no movement, on an extensive scale, is contemplated before the end of September. This delay, however, does not appear to be owing to the apprehension of intolerable heat, for we are told, in contradiction to the common opinion, that, up to the beginning of this month, there had been no suffering from that cause. Foreigners at Haiphong and the other stations had not then begun to sleep without blankets or other bed covering. As an additional dispensation of good fortune, it is mentioned that no necessity for using mosquito curtains had arisen. In other particulars, also, it seems possible that the extremely adverse reports, hitherto accepted without question, respecting the general character

of the country, may require considerable modification. The soil is pronounced exceptionally prolific, needing only proper cultivation to make it bountifully productive. The whole region is liberally supplied with watercourses, and the Red River is said to overflow each year, like the Nile, fertilizing vast tracts by the deposit of a rich loam. The inhabitants are incapable of availing themselves of these natural advantages, and the much despised territory may yet prove, contrary to expectation, a sufficiently good field for foreign enterprise;—certainly better than the earlier explorers have given us reason to suppose.

THE *New York Times* of July 9th contains an editorial article, entitled "The Opening of Korea," in which the treaty recently ratified between that country and the United States is repeatedly spoken of as the first ever negotiated, by any foreign Government, with the "hermit kingdom" of Asia. Minister Foote is congratulated, upon being the first diplomatist received by the Koreans, whose flag is declared to have been, by his instructions, "saluted for the first time by the guns of a foreign Power." All this is wrong, as every journalist in New York must know, if he would take the trouble to remember. The opening of political and commercial relations between Japan and Korea, seven years ago, was fully reported in the newspapers of America, and the fact that Japan's influence upon her coy neighbour has opened the way to peaceful intercourse with other nations, is as well understood as any passage of Eastern history. To say, as the *Times* says, that "the Government of the United States is the first to enter into treaty relations with Korea," is not only inaccurate, but particularly inconsiderate and unjust.

THE end of the Opium agitation would almost appear to be in view, according to a telegram published in another column. This is a consummation devoutly to be wished. The message runs:—"The negotiations regarding opium have progressed so far that the British Government has intimated its willingness to accept the proposals made by the Chinese Government on certain conditions." The main point of the conditions referred to is probably a term of years at the end of which England will be prepared to agree to the propositions now put forward by China—propositions by the way which could never be entertained by the Government of India without some years in which to prepare for the enormous curtailment which must necessarily follow in the matter of Indian revenue.

WE deeply regret to hear of the death from stroke, at Hakone, of Captain J. M. Batchelder, of Tokijo, one of the oldest and most esteemed American residents in Japan.

WE are informed by telegraph that cholera is on the increase at Alexandria. This is to be regretted, as the cause is apparently indicated by the preceding message which announces that "riots have occurred in Alexandria," on account of the natives' objection to the sanitary measures

taken to prevent the spread of the scourge. It is, however, satisfactory to learn that the riotous fellaheen have been promptly dispersed by the Police, who will probably, after this ebullition, be more strict than ever in assisting the sanitary officers in carrying out the preventive measures ordered to be put into execution.

THE anomalies in the Bankruptcy Laws have for a long period demanded a sweeping reform. The telegraph now informs us that the Bill brought forward this session has been read a third time and passed. The law officers of the Crown are to be congratulated upon this measure, inasmuch as it was hardly expected at the commencement of the session that time would be found to deal with the Bankruptcy Bill, and it was prophesied that the much needed reform would have to be shelved.

WE publish further telegraphic confirmation of the error in the *Daily Press* translation of the Saigon paper's telegram in which reference was made to Madagascar affairs as "settled," the message declaring that "The Under Secretary for Foreign Affairs, in reply to a question in the House of Commons stated that negotiations are still proceeding with the French Government regarding the detention of Mr. Shaw, an English missionary at Tamatave."

WE have received a letter signed "Fiat Justitia" commenting in somewhat severe terms upon certain phases of journalistic amenities in Yokohama. But truly it seems to us that the matter has gone far enough. It exhibits, at this stage, a tendency to drift into personalities, and we have no desire to provoke further exhibitions of the very scandals condemned by our correspondent.

WE understand that the British Fleet, which left Nagasaki on the 10th inst., will proceed to Hakodate and cruise in the North before visiting Yokohama.

A SMALL piece of advice to the numerous practical jokers who pervade this Settlement may be culled from the following anecdote which reached us yesterday, but which is already a day or two old:—Within a few miles from Yokohama stands a certain hostelry, whither those in search of recreation are wont to resort to escape the heat and the dullness of Yokohama. It has hitherto been also a favorite lounge for members of the mercantile marine when in port here. A few days since a certain well-known and popular member of this class entertained a few friends at the said caravanserai. As often happens after an occasion of this kind, a little joke was perpetrated; and the generous entertainer carried off in sheer fun a jar of pickled cabbage, that was discovered in the road after the festivities were concluded. But the results were serious. Upon returning to his vessel the next morning the captain was met by a respectable looking Japanese with a letter from one of our most honored legal

luminaries requesting him to hand over at once \$20, the value of the jar of pickles, or to be at once arraigned before H.B.M. Court on a charge of theft. The \$20 was paid. The joke was a costly one. Of course the hotel-keeper had a right to act as he pleased in the matter; but he might, we should think, in the circumstances and knowing well his customers, have adopted a suaver manner to obtain redress, which more than probably would have come to him without any effort on his part.

THE announcement by telegraph that the Province of Catalonia is declared to be in a "state of siege," and that "Carlist emissaries are active in the North," confirms the view taken by us on our first announcement a few days since of the insurrectionary movement in Spain. The Catalans inhabit a country the physical features of which are such as to make the suppression of a revolutionary rising a most difficult task; and the people themselves are described as differing from the rest of the Spaniards in language, habits, and character, being the bravest and least bigoted, as well as most active and enterprising of the Spanish people. Here all the elements exist for a successful revolutionary movement, and we cannot understand the latter portion of the telegram, which says, "It is officially announced that the Spanish insurrection is suppressed." There must be something wrong about this. Movements having for their end such results are not knocked on the head at the first blow, and this has nowhere been more forcibly illustrated than in Spain.

WE suppose Mr. H. Sampson must be credited with the following, for the reason that there are few men who could perpetrate its equivalent as much as for the fact that it is a cutting from a recent number of *Fun*:—

"LI HUNG-CHANG"—(a strange cognomen)—
China's warlike chief is named;
Fearless he of any foemen,
And for martial prowess famed,
But doubtless France, since "Li" has stated
"China dreads not France's fang,"
Now wishes him more "elevated"—
In fact, thorough-Li Hung-chang.

MR. BOURRER, late French Minister to China, arrived in Paris on the 30th of July. His Excellency sailed with his family hence for San Francisco, en route to Europe, in the *Coptic* on the 25th of June.

WE would draw attention to the sailing notice of the next Mitsu Bishi mail steamer to Shanghai, the *Genkai Maru* having been fixed for Saturday, the 25th inst., instead of the usual sailing day.

THE *Hongkong Daily Press* notes that, among the passengers that arrived by the P. & O. mail steamer *Ravenna* at Hongkong, was Mr. A. R. Colquhoun. Mr. Colquhoun, the *Straits Times* says, is en route to Tonquin, as representative of *The Times*.

Its issue of the 14th of August, the *Hiogo News* relates that, when, the *Nagoya Maru* last passed through the port of Kobe bound to Shanghai, *via* Nagasaki, she had on board, as passengers for the latter port, six Russians accused of being escaped convicts from Siberia or Saghalien. Says the *Hiogo News*:—"We hear that they were taken off a small island by an otter-hunting schooner and landed in Hakodate, where the Japanese delivered them to the Russian Consul. The story told by the men was that they were the sole survivors of the crew of an American vessel, but as they had on prison clothing, and cannot speak a word of English, it does not seem as if they would be able to substantiate their contention. If, as appears only too probable, these men turn out to be escaped prisoners, they will be consigned to the mines, which is equivalent to lingering death." The writer continues:—"One feature in this affair has a strange appearance. The prisoners—who were chained and shackled together in a manner which in England would have ensured the interference of the Society for the prevention of Cruelty to Animals, that is if dumb beasts were so treated—were being escorted to Nagasaki by a person employed in Her Britannic Majesty's gaol in Yokohama. Surely there is something unusual, if not altogether irregular, in this sort of procedure. There are, certainly, a good many things done out in the East that would not be tolerated at home for a single moment, and this escaped convict incident seems one of them. If the British Government are complaisant enough to relieve other foreign nationalities in Japan of the trouble of guarding their criminals, let the fact be known as publicly as possible, a remunerative tariff of charges be fixed, and who can tell but a lucrative business may spring up. At all events it is utterly opposed to common-sense that Great Britain should, through her officials, be smirched with this sort of dirty work, and lose money by it at the same time." The story, as narrated, is substantially correct. The six poor fellows in question were, on landing in Yesso, arrested by the Japanese police, who fed them as they were starving, and handed them over to the Russian Consul at Hakodate, as they, without exception, were clad in the unmistakable uniform of convicts doomed to toil in Siberian prisons. If there could be any doubt as to their nationality, it was removed by the fact that none of them spoke any language but Russian. If any sane person could entertain any doubt as to their unhappy status, it must be removed by the avowal of one of them, here in Yokohama, who said that they had preferred death, or even the chances of recapture, to the ceaseless terrible work and punishment which they had to undergo at the lighthouse that they were constructing. After their arrest, their transfer to Nagasaki, whence they could be conveyed to Vladivostock on board a Russian man-of-war, was ordered by their Minister in Tokiyo. What else could have been done with them? They were brought, on their way to Hizen, on board ship, under an escort of Japanese police, to Yokohama, where

they were lodged in H.B.M. jail. But *why* in H.B.M. jail? Because, under one of the kaleidoscopic phases of exterritoriality, many nations who have consular representatives here have no jails—and happily for them, few and seldom prisoners to incarcerate. In the event, however, of their being troubled with an occasional malefactor, they have an arrangement with the English authorities, in virtue of which they may avail themselves of the convenient premises on Lot No. 155, Yokohama, when occasion requires. Among these nationalities is Russia, who contributes a certain sum, no matter what, but no doubt fairly calculated, toward the maintenance of the jail, and her share of the wages of one jailer. Hence she was, and is, entitled to accommodation for her prisoners in H.B.M. jail, and to her proportionate share of the jailer of whose wages she pays a part. It was possible that the particular jailer might have been a Frenchman or a Russian, Swiss or Belgian, or whatever; for Great Britain is exceptionally cosmopolitan in her choice of servants. As it happens, the jailer who was in charge of these Russian convicts on their voyage to Nagasaki, though not an Englishman is an English subject. This is beside the question though it might not have been so. Briefly, the Russian Consul had to imprison half a dozen of his nationals in his prison for a time, and to convey them to a certain destination, in charge of an officer in the service of his country. The warder in the English jail, in fact, was a Russian officer for the nonce; and for the time Russia had the control of, say, the six-sixths, instead of the one-sixth, of his services. A similar case may occur at any moment with five other nationalities. The manner in which six desperate men, escaped convicts, each serving out a life-penalty in commutation of a death sentence, are to be conveyed from one spot to the other in charge of one officer, must, one would think, be left in some respect to the discretion of that individual. As it happens the Russian Consul ordered his officer, possibly with some view to the safety of the latter, as well as the safe delivery of the prisoners, to keep the men in irons during their passage. The manner in which they were manacled is a matter of Russian taste. Anyone who has seen the transport from prison to prison of a gang of English convicts will not affirm that the predilections of those escorted are particularly consulted, or that they are treated with lady-like consideration by their guard. However, *pseudo* Don Quixotes will endeavour for ever to earn popularity. We may mention, *en passant*, that, if these prisoners had been sent on board an English steamer, our Consular officials, who are not lacking in vigilance, would doubtless have stipulated that they should be conveyed as British prisoners would be under similar circumstances. They were carried on a Japanese steamer; and the duty of their custodian was to deliver them in safety at their destination. Inquiry as to that man's disposition and character divulges that he is not likely to have failed in humanity towards his unfortunate charges. He would not have received many benedictions from the foreign community in

Hiogo, or from the Japanese people and authorities of the locality, if he had tied his temporary wards with silken thread, and they had bid him good bye with a *rendezvous* at Nunobikino Taki or Maya-san. But let us return to the real point, which is that the men are Russian escaped convicts, arrested by Japanese officials on Japanese territory, handed over by the Japanese Government to the Russian Minister, by whom they are lodged temporarily in a Russian jail, whence they are sent, passage paid, on board a Japanese vessel, in charge of a Russian officer to their destination, namely a Russian man-of-war, which is ordered to take them back to their terrible duress. It may be a pathetic story! the men may or may not be criminals; but the hard fact remains that they are escaped convicts, and that their recapture and return has been strictly *en règle*. That an English jail should be a French-Russian-German-Swiss-Turkish-Greek-Swedish-Danish-*&c.*-*&c.* jail, and a British jailer should be a Russian jailer conveying Russian convicts in Russian style, is one of those developments of the perfect system of exterritoriality which grind fresh facets on the lens of the imagination. Does it prove anything? Yes. It proves the vast preponderance of British power and interest in these regions? Does it suggest anything? No. Of course not that that power and interest should be employed in the right, because righteous, direction.

EXCURSIONISTS who pass over the familiar pathway from Miyanoshta to Kiga may notice, a little beyond the bridge which traverses the stream between the two acclivities, a large slab of dark stone, standing erect, and covered with characters of evidently modern inscription. It was placed there, a few years since, to mark the site of a bath house said to have been built and used by the famous Taiko. The spot has been kept in recollection by tradition, and on the occasion of opening the new road to Kiga, it was decided by certain enterprising villagers to erect this monument, with the double design of recalling to tourists the interesting relic which once stood there, and placing on record the completion of meritorious public work,—which was not a government undertaking, but was planned and executed by the people of the neighborhood, on their own account. At the request of all concerned, Mr. Fukuhara Yoshimasu, a member of the Genro In, who was then visiting Kiga, wrote the lines for the inscription, which are to the following effect:—

At a former period there was in this exact locality a stone bathing house for the hot springs, believed to have been erected by Toyotomi Hideyoshi. Also in this place, during the era of Meiji, the villagers here residing opened a new roadway to Kiga Sokokura, for the convenience of travellers. I have written these facts, for the information of future visitors.

In addition to the signature of the scribe, are the names of the stone mason and cutter and the individuals concerned in opening the improved route of communication; so that every one engaged in the transaction is sure of his share of fame, for as many ages as the monument shall last.

THE WORLD'S ESTIMATE OF CHINA AND JAPAN.

AT an evening party in Hartford, Connecticut, some years ago, three or four Asiatic visitors, with others who had long been familiarly acquainted with the East, were among the guests. Of the former, the most prominent was YUNG WING, well-known as an energetic advocate of foreign education for Chinese youth, and honourably distinguished as one of the most liberal and intelligent reformers his country has produced. The conversation turned, naturally, upon the growing intercourse between Western and Oriental nations, and the interest excited by developments in lands supposed to have been impenetrable to progressive civilization. Certain gentlemen declared their purpose of travelling in the localities under discussion, and others expressed a strong desire to imitate their example, if circumstances would allow. The impulse toward exploration and inquiry in these distant regions was shared by all, with evident enthusiasm. But, on looking closely into the object of each individual's concern, it was found that attention was directed to Japan, and to Japan alone. Not one of those present had bestowed a thought upon China, or seemed disposed to extend his field of observation to the Asian continent. The situation was perhaps awkward for the friends and associates of YUNG WING, who himself appeared a little disconcerted at the unanimous indifference manifested for the place of his birth. "I see," he said; "every one's thoughts are fixed on Japan. Nobody cares for my country. I never hear a friendly question about it. I never learn that a friendly traveller goes there. You all flock to Japan,—nowhere but Japan."

Some of the company, thinking that a logical exposition of cause and effect might soothe the smart,—and probably making a mistake in so imagining,—ventured to suggest that sincere alliances between different races were possible only when the amicable instinct was mutual; and that foreigners could hardly be expected to "flock" in great numbers to an empire the inhabitants of which showed no disposition to welcome strangers, their customs, their ideas, or even their good-will. More than this they could not say; and, indeed, if they had felt at liberty to use the extremest arguments in support of their preference, it is not likely that the comfort of China's representative would have been increased thereby. No man of patriotic feeling wants to be convinced, by practical demonstration, that his country's character contrasts disagree-

ably with that of another, its neighbour. But several things were thought, if not uttered; and the thoughts found echoes and responses in numerous quarters. The reasons of Japan's superior attractions,—which had till about that time been rather vaguely acknowledged, without especial investigation,—began to be analyzed, formulated, and presently proclaimed by many whose opportunities of disseminating their views were abundant and frequent. YUNG WING need not have waited long to find, in most of the periodical publications of America, and not a few of Europe, conclusive explanations of the increased favour felt for Japan, and of the continued apathy with which his own empire and its people were regarded.

During the dozen years which have passed since this incidental illustration of the estimate in which the two countries were held, little has happened to diminish the approbation which Japan, through her briskness and activity, succeeded in winning at the outset, and still less, unfortunately, to stimulate a higher appreciation of her sluggish neighbour. As the one empire has stood immovable, while the other has persevered steadily in its course of advancement, the distance between them is constantly growing greater. Yet there are, at this day, men of high position in China, whose privileges of observation are exceptional, and whose means of forming an accurate judgment ought to be sufficient, who profess a naive wonder that the nations should be so differently esteemed, and who querulously insist that the sympathy of the world is unjustly withheld from their side. The irritation produced by this suspicion of unfair usage,—an irritation which asserts itself too bitterly to allow of any doubt as to its genuineness,—is revealed in the most extraordinary manifestations of spite that ever brought discredit on a Government. Trivial pretenses are sought for grave quarrels; transparently fictitious complaints are invested with the solemnity of real grievances; the plainest diplomatic proprieties are ruthlessly violated; the simplest exchange of Japanese courtesy with a friendly Power is distorted into a secret intrigue or hostile combination against the peace and dignity of the Middle Kingdom. But for the self control and wise discretion of one party, the other would have forced matters to an angry issue on a dozen occasions. Only a few weeks ago, in the midst of a foreign entanglement which might well have diverted his ideas from the frivolous fancies of a wounded national vanity, the first statesman of the Chinese empire found it impossible

to discourse upon the anxious and truly ominous questions left to his charge, without a fusillade of petty malice against this, the only Government capable of thoroughly understanding the tribulations which threaten him and his people.

Whether the theory that the Western public discriminates unjustly against China and with undue partiality for Japan is actually credited by those who profess it, or is merely a pretence to preserve their envious susceptibility from utter ridicule, it might be worth while for rulers like LI HUNG-CHANG, and reformers like YUNG WING, to consider that the prevailing respect for this country's aspirations, and commendation of its actions, have not been called forth by direct appeals from the Japanese themselves. They are largely, and almost without exception, due to an intermediate agency. That the intellectual development of the last fifteen years would have received proper acknowledgment, under any circumstances, in course of time, nobody can doubt; but its prompt and universal recognition is owing to the zealous representations of influential advocates who were drawn to Japan's support by a sincere admiration for her spirit and enterprise, and a resolute faith in the stability of her early promise. These were the friends who "flocked to Japan" in order to observe closely and report directly the movements of the revived empire, or who watched from their own homes the course of events, and assisted in diffusing intelligence of the extraordinary endeavors and unlooked for achievements of a people whose destiny was believed by mankind at large to have been wrought out ages before, leaving nothing to be recorded but decay. For many successive years, the stream of approbation ran steadily and copiously,—in newspapers, in magazines, pamphlets, volumes, all tending to the enlargement of public sympathy, and the ready acceptance of this country as a worthy candidate for admittance to the comity of nations. Greater or more disinterested energy has seldom been shown in the pursuit of any generous object. The ardour may sometimes have seemed too little under control,—the pleading may have been tinged with extravagance; but all was genuine and sincere, and the truthfulness and integrity of the testimony was self-evident. Japan's term of probation was reduced to easy limits. Her case was stated, her claims were presented and argued, and her cause was morally established, long before she could gather in the slower harvest of material success,—which, indeed, is even yet withheld from her

grasp, in spite of the world's unconcealed conviction that she has fairly earned it.

Not only during the years of Japan's trial, but for generations preceding, China has had an equal chance to win the approval of Western communities, and to make good whatever title she possesses to enterprise and vitality. Students of scientific and moral progress, investigators into the growth of liberal ideas in places deemed disadvantageous for such observations, would have been glad to avail themselves of so extensive a field of operations. The exploring knight-errantry would as willingly have "flocked" to the continent of Asia as to the outlying islands, if anything to reward their inquiry could have been expected, or even if they could have made good their footing. They might have overlooked the absence of a welcome, and risked the inconveniences of a prolonged sojourn, if any prospect of rendering service to society or humanity had been perceptible. But the temptations were next to nothing, while there were innumerable discomforts and dangers to repel them. The Government, in every branch, was avowedly hostile. The people held all strangers in deadly abhorrence. The very idea of progress was odious to the mass of inhabitants. The amenities of civilization were reviled, and those who practised them contemned. Not one of the genial characteristics by which the Japanese unconsciously exercise a charm over their visitors could be detected by the most diligent searcher though the provinces of the Middle Kingdom. No sign of that desire for mental enlightenment which is always discernible here, was ever apparent in that region. The only classes to which even a temporary residence in China appeared desirable were the merchants, whose interests are confined to a few trades; the missionaries, whose duties are felt to be as imperative in the worst as in the best communities; and the material scientists, whose scope of study does not touch humanity, or, touching it, does not penetrate beneath the surface.

In the face of these facts, we are told that Chinese officials of intelligence and ability profess indignation, grief, and surprise at the different valuation placed, by Europe and America, upon their country and Japan. We do not doubt the report, but we give no credence whatever to the existence of any sentiment on the subject that is not tinged with arrogance and selfishness. All sensible Chinese know that the opinion in which they are held is the work of their own hands. It gives them no surprise, and not much grief that is worth

considering. Indignation, or rather an unreasoning resentment, may possess them when they see the comparative inferiority of their position, but no shame for their own short-comings, nor consciousness of neglected duty, seems to mingle with their jealous rage. They would see Japan crushed and humbled, if possible, solely because she has gained honours which they affect to despise, yet which they cannot bear to see another wear, when withheld from themselves. But they would not lift a foot to follow in Japan's path. They wish to stand on the same level, without making any of the efforts which have raised the successful competitor to her present superiority. There is not a trace of nobleness, manliness, or dignity in the temper they display. It is the petulance of forward children, who scold and storm because their better behaved companions are preferred to themselves. We have said that the vexation they suffer is the work of their own hands, for this reason, among others;—that although the average Chinaman is not endowed with the engaging attributes which enable the Japanese of all classes to make speedy friendships, he has much about him to awaken interest, if he were not encouraged by authority to disclose his worst characteristics, and to reject every genial advance on the part of foreigners. The people, as a whole, have been instigated and trained to make themselves as obnoxious as possible. As regards the rulers, but for their own persistent aversion to those who wish them well; who could have served them in softening external animosities and establishing a relationship the ground-work of which might be a reciprocal good understanding instead of an undisguised distrust; they need not to-day be plagued by the envious torments which they proclaim incessantly to all listeners.

It is worth noticing, incidentally, that an attempt appears to have been made, at the eleventh hour, toward conciliating European and American judgment with respect to China, by the method which proved efficacious in acquainting the world with the movements and aspirations of Japan. Articles have begun to appear in periodicals of good standing, not only asserting the high claims of the older empire to universal consideration, but simultaneously throwing discredit upon the status of this country. These articles are not destitute of rhetorical skill,—that being a probably necessary condition to publication in the columns where they have appeared,—and they show a certain ingenuity which may not be ineffective with readers to whom the

subject is new. But they lack the vital element of sincerity. They are cold examples of special pleading, and their purpose would be betrayed, if by no other evidence, by the elaborate disparagement of everything Japanese, in exact ratio to the exaltation of everything Chinese. That was not the way in which the volunteer advocates of Japan went to their work. No idea of belittling any other country entered their minds, nor was China often alluded to, except in case of some unavoidable conjunction of the two empires. Indeed, the feeling which prompted the maintenance of Japan's cause would readily have been extended to China, at any time, if the latter's attitude had given warrant therefor. But the plan of the recent Oriental essayists aims quite as plainly at Japan's degradation as at China's rehabilitation. The first part of this design cannot under any circumstances be successful. The wholesome seed has been too long sown, and the convictions implanted by a steady course of honest, disinterested labour cannot be uprooted by a few tardy animadversions, the handiwork of which, on close inspection, does not seem over-trustworthy. We took occasion to deal with one of these effusions, some days since,—a fair specimen of its class, from *Nature*,—and our readers can determine for themselves whether such productions are calculated to afford substantial support to Celestial pretensions, or to detach from Japan any portion of the popular favour belonging to her. A more extravagant and audacious species of eulogy has been undertaken by a writer in *Harper*, who calls himself a native of China, and sets out to convince the subscribers to that magazine that in every development of moral culture, social virtue, domestic happiness, political integrity, and judicial probity, the land of CONFUCIUS is so immeasurably in advance of Europe and America that no basis for a comparison can be found. With this comprehensive programme before him, the essayist dashes breathlessly through four or five pages of the most reckless assertion ever adventured. The local magistrate of China, he avers, is "like some venerable parent dwelling amid his children, whom he loves too well to allow of their falling into the ways of error unrebuked." His powers "are never abused;" and if a Chinaman should be driven by hunger to commit theft, although he might be tried and convicted, "think you that additional wrong (!) would be heaped on him by the carrying out of the sentence?" Not at all, says our Chinese monitor. "Should any magistrate dare to

order the punishment, the lookers-on would rise *en masse* and mob him." What would then follow, we are not told, but the writer assures us that the dissemination of justice, as well as every other function in his native country, is so wisely, nobly, and humanely governed, that no complaints are ever heard and no discontent ever aroused. There is only one way in which true happiness can be diffused among less favored lands, and that is by following China's course in every particular. "The sooner Western nations, and especially the United States," do this, "the sooner will the millennial day dawn upon our beclouded vision. By this system, which has stood the test for more than two thousand years, and by this system only, can we ever hope for a pure and upright administration." The persual of this modest and unpretending *pronunciamiento* is not likely to produce instantaneous conviction,—at least in the direction contemplated by the author,—and it may indeed serve an unintentional good turn by illustrating the *reductio ad absurdum* of arguments more warily urged elsewhere. The rhapsodies of the Chinese patriot, in *Harper*, have really just as much solid foundation as the more guarded but not more veracious productions in *Nature* and other London publications. Like the player queen in "Hamlet," they all protest too much. We do not say that the Chinese are without grievances, nor that a disinterested inquiry into her foreign relations might not reveal many just causes of complaint against the Powers which have forced treaties upon her; but she cannot obtain redress by promulgating fictitious eulogies of her own transcendent virtue, any more than she can reverse the world's judgment as to herself and Japan by aspersing the latter's well-earned reputation. Her advocates should be better instructed, or nothing will come of their efforts, however diligently pursued.

THE LATE COUNT OF CHAMBORD.

SINCE the recently rumoured demise of that eminently conservative French Prince who, for his own part, has always preferred to be known as the Count of CHAMBORD; whom his devotees persist in styling HENRY the FIFTH; and whose more correct title is Duke of BORDEAUX, a curious rumour has begun to circulate through the capitals of Europe, giving indication that the ruling spirit of stubbornness which pervaded his career is not only strong to the last, but is likely to exert a certain influence upon public events, even after his death. The obstinacy which, in

the estimation of the BOURBONS of all centuries, "becomes the throned monarch better than his crown," and which has been the one unimpaired heritage handed down through the line from the days of LOUIS XIV., increasing in magnitude and density in proportion to the decline of material appanage,—this ineradicable family attribute has perhaps never been more strikingly developed than in the person of the exile of Frohsdorf. Others did, indeed, preserve and cherish it with inordinate devotion, but he simply made it the guiding principle of his existence. Upon all possible occasions, suitable or the reverse, it has seemed his greatest joy and pride to proclaim his own inflexibility as the glory of his race and the fixed star of his individual destiny. He was never without ambition, and the hope of succeeding to the throne of his fathers has always had a place in his heart, although his sense of dignity has forbidden him to take active steps for the attainment of that object. His partisans aver that, in more than one crisis, he had only to assert his pretensions with energy, and accommodate his rigid doctrines in some slight degree to the changing spirit of progress, in order to realize his highest aspirations. But this latter effort has invariably proved beyond his strength;—or, rather, the strength of his deep-rooted instincts was too positive to permit him to make the effort. At one memorable epoch, his dogged self-will appeared likely, for a moment, to give way, to the extent of accepting the easy conditions necessary to ensure his undisputed possession of regal power. But the spell was too heavy upon him, and the glittering temptation was insufficient to induce the abandonment of a single petty prejudice. He had roused himself to the task of reëntering France, in 1871, and taken up his abode in the fine old castle near the Loire, from which he derived his favourite title. Amid the confusion of parties, at that period, he would have found little difficulty in establishing himself at Versailles, and later at Paris, if he had been prepared to offer a few concessions, which his most zealous followers considered merely nominal. How far from humiliating they were, may be judged from the fact that the most important among them was the recognition of the tricoloured banner which had been the emblem of France for the better part of a century. To this proposition his refusal was peremptory and unconditional. The arguments of his adherents and the entreaties of his family were alike powerless to move him. He would march to the throne under the ancient white standard of HENRY

IV., or not at all. Consequently, he did not march at all, excepting by a retrogressive route back to Frohsdorf, where he remained in gloomy retirement to the end of his days. His versatile ancestor, the first of the BOURBONS, was less scrupulous. Under similar but more embarrassing circumstances, he decided that Paris was "well worth a mass," and unhesitatingly changed the colour of his creed. This modern and less pliable BOURBON would not win a kingdom by changing the colour of a flag.

For many years past, the hopes of the monarchical faction in France have been turned to the Count of PARIS, the eldest grandson of LOUIS PHILIPPE, and the direct heir of the house of ORLEANS. Excepting in the eyes of a few bigoted legitimists, the Count of CHAMBORD was unfitted for the succession by his own impracticable temper. There has been, of late, no unfriendly feeling between the two branches of the family, and it was commonly reported, some years ago, that the Count of PARIS had visited his elder cousin with the express purpose of declaring his intention never to interfere with the latter's hereditary claims. If these claims are now extinguished by death, it would naturally be supposed that the titles and privileges of the late prince must fall to the ORLEANS representative, and that the support of all Royalists would centre upon him. But the rumour to which we have referred at the commencement of this article is calculated to throw a doubt upon this just and reasonable conclusion. It is stated that the troublesome White Flag of Navarre, which the Count of CHAMBORD could not keep out of his head for the sake of getting a Crown, reappears in his will, and waves all the defiance with which that document can endow it, against the idea of any occupancy of the French throne excepting upon the antiquated conditions which have controlled his own narrow and useless course of life. His successor must renounce the Tricolour, whoever he may be; and the Count of PARIS shall not reign, with his cousin's sanction, under a standard which represents so many sentiments offensive to pure BOURBON theories. Thus, the division which has lasted for fifty years,—ever since the abdication of CHARLES X.,—and which, it was supposed, would cease with the disappearance from the scene of that sovereign's grandson, is to reappear in full force; and the question of legitimate succession is to remain as unsettled as before.

There is little probability, however, that the posthumous influence of the Count of

CHAMBORD will be sufficient to cause anything more than vexation or inconvenience among the more fastidious monarchists. If any one ascends the throne of France within the next five years, it will assuredly be the Count of PARIS or his nearest of kin. The Prince's testamentary provision will be impotent, for many good and sufficient reasons. It is quite true that there are plenty of living BOURBONS to be found, to whom his rights might be transferred, if his will could set aside the accepted traditions of the family. PHILIP, Duke of Anjou, and grandson of LOUIS XIV., who became king of Spain in 1700, left descendants enough to misgovern all the States of Europe, even counting them before the wholesale territorial fusions of the last quarter of a century. One of the first difficulties, in attempting such an adjustment, would be the selection of the personage to be so honoured. DON CARLOS, in the natural bent of his humour, would stand in the front rank of pretenders. King ALFONSO would doubtless present himself as a candidate, notwithstanding the fact that he now rules by virtue of a descent which the Salic law of France does not recognize, and which, if strictly examined, would leave him without any paternity at all, to speak of. Then there are the Italian BOURBONS, most of whom have been monarchs out of place and looking for engagements ever since the Sardinian movement began. Whether there are any of the CONDE branch remaining, since the suspicious death of that Duke of BOURBON whose vast fortune found its devious way into the possession of the present Duke of AUMAË, we are unable to say; but some of the CONTIS still linger, and altogether the only embarrassment in choosing a successor to the Count of CHAMBORD would grow out of the number of probable applicants for the vacancy. But, in spite of their undoubted willingness to assume an equivocal position, the historical records of the family would summarily dispose of their pretences. The Duke of ANJOU, on taking the title of PHILIP V. of Spain, formally renounced all claim to the French crown, for himself and his posterity. Moreover, upon the accession of LOUIS XV. it was authoritatively decreed that, in the event of the death of the Sovereign or any of his heirs without direct issue, the House of ORLEANS should succeed without dispute or question. The arrangement then agreed upon has never been disturbed, and it may be accepted as a legal fact that the Count of CHAMBORD had no right or power to set it aside. By every rule of family faith which

the BOURBONS hold sacred, the throne is accessible to the Count of PARIS, and to him alone. That he would accept it regardless of any stipulation as to flags, there is little reason to doubt. The pertinacity which belongs to BOURBONS of the first degree is not an overweening characteristic of the collateral shoots. Humourists would probably hold that there was not enough of that questionable quality to "go around." Philosophers might explain that the practical education and instructive experiences of the ORLEANS Princes have enabled them to guard against the evils of this unhappy birthright. But, although the grandson of LOUIS PHILLIPPE would certainly not refuse to reign, there is no likelihood that he will make any urgent endeavour to obtain the supreme power. What his hopes may be, can be fairly judged by those who look dispassionately upon the present condition of the Republic; who can weigh the chances of popular content and prosperity under an administration which seems to strive, like the cuttle-fish, to exist by fastening its tentacles upon every object within the extremest range, forgetful of the dangers to which its body may be exposed; and who can compare these chances with the prospects afforded by a liberal, prudent, and constitutional monarchy. Each departure of the Republican rulers from moderation and sobriety is a material advancement of Royalist expectations, and it is only by reversing the extravagant system of recent years that the existing organization can hope to compete with the growing inclination for a radical change of government. For such a contingency, the Imperialists acknowledge themselves unprepared; and the voice of one of the most strenuous of BONAPARTIST advocates, PAUL DE CAS-SAGNAC, has just been raised in support of the ORLEANS leader. There has not been a time since the expulsion of LOUIS PHILLIPPE, when the hopes of his descendants appeared so bright as at this moment. The Republic is tormented by feverish excitement, and is fretting itself into a decline. The Empire is hopelessly prostrate, and its revival can be achieved only by some interposition little short of miraculous. The Monarchy waits with a serenity and confidence which no other party to the contest can emulate. There is, to be sure, a powerful hand which may be stretched out from Berlin, at any instant, to overthrow the most trustworthy calculations; but it does not appear, in spite of ominous hints and innuendoes to the contrary, that the Count of PARIS has any substantial interference to apprehend from that quarter.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

PUBLIC CRITICS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The leading article which appeared in your issue of 11th instant, calls attention to a subject which has for a long time so forced itself upon my notice, that I have with difficulty refrained hitherto from expressing my opinions thereon; and that subject having been now accidentally opened, I am determined with, your assistance, to give publicity to my sentiments.

There are in this Settlement certain newspaper Editors who appear to have decided to devote their energies solely to adverse criticism of the Japanese Government, the Provincial Authorities, and the Police.

If this criticism were impartial, no objection could be raised to a fair and moderate censure whenever such appeared to be deserved; but there is nothing but censure, and that of such a violent kind, that all men having any regard for decency must long ere this have become indescribably satiated, and heartily ashamed of the continual stream of invective poured forth by the foreign press of Yokohama.

The tone of some of the articles which have from time to time appeared in one of the foreign newspapers, and the language employed therein, can only be fitly described as *brutal*; and another newspaper, if more refined in its style of abuse, is more persistent in its attacks, and equally unjustified in the course it has for a long period been pursuing.

There may be some excuse for attacks which are made in connection with matters affecting the interests or well-being of foreign residents; but quite frequently the subjects handled are those with which foreigners are in no way concerned; and although I do not desire to convey that such matters are beyond the criticism of foreign newspapers, I maintain that they should be dealt with in a manner which partakes of the character of friendly advice, rather than threatening and dictatorial censure. As an instance of this, I may refer to a report published sometime ago in a Japanese newspaper, that it had been decided to build the new palace for the Mikado half in Japanese half in foreign style; which was immediately seized upon and made the pretext for a furious denunciation by one of the foreign journals, in which the Japanese were positively threatened with some undefined punishments, if they dared to perpetrate so gross an outrage on architectural propriety.

Something of a like nature was indulged in when there was talk of building a new Kencho after the fire, but I should be glad to know what concern these matters have for foreigners, or what right any of them can possibly show that they possess to dictate to the Japanese Government on such subjects. To most persons it would seem waste of time to ask the above question, but as evidence that it is not altogether so, and that some foreigners have a very ill-defined and enlarged idea of their powers, I may adduce the letter signed "John" which appeared in the *Japan Herald* of the 8th inst., in which the writer states "that it is full time the Consuls should take the matter up" i.e., the

Consuls should interfere between the Japanese Authorities and Japanese subjects, more especially in restricting the repression of vice. I fancy that the "tales I have heard of the treatment of the native (female) attendants at the house on the beach by those worthies," might be quite possibly eclipsed by the tales which might be told of the treatment of the same attendants by the foreigners who go there to "indulge in the luxury of a dip."

The letter of "John" is a disgrace to the journal which insulted the Japanese Authorities by publishing it, and the man (if he be a man), who wrote it, can only be excused on the ground that his impudence is exceeded by his ignorance.

Another journal, like the prophet Micah, prophesies no good concerning the Japanese, but only evil; and when there is a lack of subjects the Editor fabricates one for the occasion. Some time ago, this ardent well wisher, as he professes to be to the Japanese people, drew a dreadfully pitiable and heart-rending picture of the terrors of a famine, of—which—by some occult power known only to himself, he had been able to foretell the occurrence this year through a wet and cold summer. Fortunately, under the auspices of a providence kinder to the people of this country than the wishes which apparently fathered the thought of the writer in this journal, there is at present no prospect of his prophecy being fulfilled; but what shall be said of the man who needlessly, and wantonly, endeavours to strike a chill of apprehension and terror into the hearts of the rulers and people of this country by threatening them with the horrors of hunger, and painting a picture of the probable occurrence of a disastrous dearth? Again, the degradation of the jinrikisha driver is a fruitful subject to rant upon, comparing these men to beasts, and insisting upon the certain injury to the health of the men, and consequent deterioration of physique of the whole labouring population. Young men must live; but apart from that, does this writer ever think how many years it is since chairs and chairmen were employed in London? Is it more injurious to draw a jinrikisha in Japan than to carry a fat foreigner up to the Peak at Hongkong? Jinrikishas have been introduced into the British Colonies of Hongkong and Singapore, and also into Shanghai and Calcutta, where they seem to have met with much favour, and no apprehension has been expressed of the evil likely to be produced upon the health of the Chinese, Malay, or Bengali drivers. Why has not the voice of this philanthropic writer, so anxious for the health of the Japanese labourer, been raised in protest and warning to the people of the above-mentioned places? Because it gives no opportunity for abuse, and the people of those places would laugh at him. I am not advocating the employment of human beings in the place of animals, but I desire to show that the clamour is inconsistent and hypocritical. I have resided in the agricultural districts of England, and in Ireland, and have seen men and women employed in labour quite as degrading to the human form divine as drawing a jinrikisha. I seem also to remember having heard at no distant date of something about the employment of women and children in mines in England, under circumstances infinitely more degrading and injurious to health than the occupation of jinrikisha drawing.

Japanese prisons, and treatment of lunatics, form another peg to hang a jobation on; and all humane people must wish to see improvements in these things as well as in other directions; but we who have so recently swept our own houses, are

scarcely justified in devoting a column of vituperation to an alleged case of ill-treatment of a lunatic, when similar cases can even at the present day be sometimes seen reported in the English press.

Inconsistency and intellectual strabismus are the besetting sins of this writer, combined with an overweening confidence in his own infallibility. In commenting on a recent correspondence, he compares me to a steam-hammer employed to crack an egg, and laments that talents which might often be so profitably employed, are wasted on such paltry trifles as a question of the repression of immorality.

How much more worthy of a gigantic intellect is it to cry "Eureka" over an imaginary discovery of a new dish, or the best method of securing an unlimited supply of tomatoes at the lowest current rates, by permitting your compound to be pervaded by an army of peripatetic green-grocers, instead of buying your vegetables in the market.

The last instance in which this writer allowed his mischievous malice to exhibit itself in its full vigour, was on Saturday last, when commenting upon a conversation between H.E. Ito (in the journal in question care is taken to print *his excellency* without capitals) and the correspondent of a London newspaper; and the utmost pains are taken to show that H.E. Ito, and the Japanese Government generally, are a dishonourable set of mercenaries ready to sell themselves to the highest bidder; and an effort is made to create if possible, a difficulty between the Chinese and Japanese Governments, by magnifying this, at least questionable, report of the correspondent, into a *casus belli*. The utmost that could be said, even if the report were correct, would be that H.E. Ito in his desire to be courteous, had not been as cautious as he should have been, but no unprejudiced person will believe that any such meaning was intended to be conveyed as that put upon the reported conversation by the malicious writers in the Yokohama journals.

I think, Sir, I have adduced quite sufficient to show that these newspaper writers are solely animated by a malignant and unreasoning hate, which nothing can satisfy, and of which all impartial and justice-loving men must feel ashamed, and much more than satiated. How long will the respectable foreigners of Yokohama permit themselves to be identified with, and have their opinions represented by, such organs?

I am, Sir, your obedient Servant, TSUJIN.
Yokohama, August 13th, 1883.

JAPAN'S FRIENDS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Permit me to direct your attention to an absolutely unique example of confused thought and contradictory assertion.

In its issue of last Saturday, the *Japan Gazette*, under the heading of "France, China and Japan," devotes the first column of a leading article to an attempt to prove that "selfishness is the only law by which the intercourse of nations is regulated." This doctrine was enunciated originally by the same journal, as a definition of the motives which actuated the United States to return to Japan their share of the Shimonoseki indemnity. A standard of political morality so singularly base does not often find public expression, and is especially out of place in the columns of a newspaper which for years has made itself conspicuous by criticising, in the most unmeasured terms, Japan's supposed failure to regulate her foreign intercourse on the very principles now declared to be "delusive and

fleeing." I was not surprised, therefore, when a correspondent addressed you on the subject and denounced "the low ideal" of the writer in the *Japan Gazette*. To that correspondent's strictures your contemporary now finds what he apparently considers a crushing retort in the utterances ascribed to His Excellency Ito by an interviewer of the *London Standard*. Mr. Ito is reported to have said, in effect, that Japan, having nothing to gain by Chinese friendship, is willing to accept the risks of Chinese enmity provided only some sufficiently desirable *quid pro quo* be offered to her. This venal principle your contemporary parallels by quoting a despatch of Lord Palmerston, and then goes on to say:—"The transient character of international friendships, as defined by Lord Palmerston, is vividly exemplified by the principles of political morality which, according to H.E. Ito Hirobumi, form the standard of national ethics in Japan."

Very well, Sir. So far we are on solid ground. We have a consistent trinity—the *Japan Gazette*, Lord Palmerston, and His Excellency Ito.

But observe; in a moment we have this critic on his stilts again. Commenting upon the utterances of Mr. Ito, who "follows," we are told, "the dictum of Lord Palmerston, a statesman far more distinguished than either Mr. Gladstone or Mr. Bright," the *Japan Gazette* asks loftily:—"What have become of honour, principle, loyalty in Japan? and informs us "that these questions naturally arise from mature consideration of the manner in which a high Japanese Minister announces to the world the disloyalty of his Government to the solemn obligations of a treaty?" But, Sir, if your contemporary may be credited, that was Lord Palmerston's manner also, and it is avowedly the manner of the *Japan Gazette*, which attributes the complexion of all international intercourse to purely selfish motives. Why, then, should the so-called universal habit of all nations be dishonourable, unprincipled and disloyal in Japan's case only?

But there is more, Sir. This miracle of inconsistency is not yet exhausted. We have before us two distinct statements. First; that according to Lord Palmerston and the *Japan Gazette*, international intercourse is motivated solely by "the hope of benefit" or "the fear of consequence." Second; that these motives, in Japan's case, become "criminal treachery of the most heinous character."

To these statements a third is now to be added. It is this:—"If Mr. Ito's words mean anything at all, they mean clearly that Japan is bound by none of the loyal principles on which the intercourse of nations is supposed to be founded and regulated."

Thus we are told in the first quarter of this remarkable article that these principles do not obtain in international intercourse but are there replaced by "the hope of benefit or the fear of consequence": in the second quarter we learn that Japan's assumed neglect of them is "criminal treachery of the most heinous character:" and in the third, we are informed that they do constitute the basis and regulators of international intercourse.

It will, I think, be admitted that a quainter hotch-potch of conflicting notions was never served up for public diversion. The writer appears to play at cat's cradle with his ideas, suffering them to assume whatever bizarre shape best fits the circumstances of the moment. Yesterday, he warned Japan that, in the face of a seemingly unselfish and generous act on the part of the United States, no reliance was to be placed on American honesty or magnanimity because those qualities find no place in international ethics. To-day he

accuses her of criminal treachery because he thinks that she is pursuing the same policy as America.

Were it possible to require obedience to any rule of logic in a thesis which is only consistent in its contradictions, it would be necessary to admit that the sweeping denunciations here applied to Japan were not less applicable to Great Britain under the guidance of Lord Palmerston, whose definition of international friendship is "vividly exemplified by Mr. Ito's principles of political morality;" and not more applicable to Great Britain than to the United States, whose action with regard to the Shimonoseki indemnity elicited your contemporary's first declaration of universal international depravity. Of all alike, we should be obliged to record the verdict now entered against Japan; that she is "henceforth to be regarded as an unprincipled political adventurer, bound by no obligation voluntarily entered into and restrained by no moral law from the prostitution of such influence and power as she may possess to the embraces of the highest bidder."

But my object is not to comment on the brutality of this language, though I doubt whether that has ever been surpassed in journalistic writing. Neither need the attention of your readers be directed to the ingenuousness of a writer who bases these gross and unconditional charges on a newspaper report of utterances explicitly and publicly disavowed by their author. Courtesy and conscience have obviously no place in this context. What I am curious to learn is the purpose of all these contradictions and condemnations. Reading on a little further, I find it stated that the perusal of the *Standard's* version of Mr. Ito's utterances "cannot fail to excite anger and indignation" at Peking; and that if China "is willing to submit to the awful humiliation of this insult from Japan, it is her own affair." Now, Sir, if among the fortuitous concourse of phantasies which ramble in the wilderness of your contemporary's brain, any fixed idea be discernible, it can only be described as a desire to embitter the relations between China and Japan, and if possible to involve them in war. To charge the latter with being lost to the principles of "honour and loyalty"; with "disloyalty to the solemn obligations of her treaty with China"; with "criminal treachery of the most heinous character"; with "an avowed absence of principle and political morality in her relationship with China"; to call her "an unprincipled political adventurer, restrained by no moral law," and then to speak of China's just "anger and indignation"; to enquire what answer will be returned to her "demand for an explanation"; to declare that in formulating that answer "prevarication will serve the purpose of the Japanese Government no longer," and finally to ask China whether "she is willing to submit to the awful humiliation of this insult from Japan"—all this, I say, can have only one purpose, and that purpose is to fatally interrupt the peaceful relations of the two empires.

I do not believe that in the end any benefit accrues from attempts to fetter free speech. Whatever latent causes may influence the action of the Japanese Government, I think that the restrictions they impose upon the Press serve chiefly to alienate their best ally—public opinion. But there is, I hope, some influence capable of checking such pernicious writing as that upon which I have here commented. The purpose of our presence in this country is neither to malign the character of its people nor to involve them in the disaster of a foreign war. We are Japan's friends; not her

bitter enemies. To which class the *Japan Gazette* belongs there can no longer be any reasonable doubt.

I am, Yours, &c., &c.

Yokohama, August 14th, 1883.

S.

TO THE EDITOR "JAPAN MAIL."

SIR,—I have perused with the utmost astonishment two articles in the *Japan Gazette* of last Saturday. The first is an attempt to show China that she has been grossly wronged by Japan, and that unless she resents the wrong, her dignity will be compromised, but that, resenting it stoutly, she will have the sympathy of the civilized world against a country which has been guilty of "criminal treachery." I presume that the relations between China and Japan are not likely to be disturbed by anything which appears in the columns of the *Japan Gazette*, but I trust that neither Chinese nor Japanese will fall into the error of accrediting Englishmen with any share in, or anything but the most unmeasured indignation at, this scandalous endeavour on the part of an English journal to stir up strife between two neighbouring empires.

The second article has reference to H.E. Ito's corrections of the statements attributed to him by the *London Standard*. Inasmuch as those corrections appeared, by Mr. Ito's authority, in your own columns, I shall confine myself to observing, with regard to them, that even before their publication, everybody who had any knowledge of Japanese politics and of Mr. Ito's character, must have been persuaded that the *Standard's* version was incorrect.

My motive in addressing you, however, is to enquire whether we are seriously asked to believe that an interviewer's reminiscences of a Japanese statesman's utterances are more trustworthy than the direct assertions of that statesman himself. For this, in effect, is what your contemporary declares. In his first article he tells us that "prevarication will serve the Japanese Government's purpose no longer;" that "the words used by a Minister 'speaking English fluently' cannot be subjected to modification on the ground of misinterpretation," and that "nothing that H.E. Ito can now say will in any sense shake public belief in the accuracy of the *Standard's* correspondent."

So, then, the *Standard's* correspondent is to be trusted before the gentleman he interviewed! And this, too, in the face of the fact that his account of the interview contains statements which could not possibly have been made by any Japanese possessing even a superficial knowledge of the points under discussion!

On Thursday morning there appeared in your columns an article which your contemporary describes as "either from the pen or the dictation of H.E. Ito." It embodied what you declared to be, and what he avowedly recognized as, Mr. Ito's corrections of the *Standard's* misconceptions. With those authorized corrections before him, your contemporary published, on Saturday afternoon, an article founded entirely on the assumed truth of the *Standard's* version; an article charging Japan with being "an unprincipled political adventurer," and calling on China not to "submit to the awful humiliation of the insult" put upon her. This article, he tells us, was written before yours appeared. Why, then, was it published nearly three days later? Is it consistent with the moral laws and high principles about which your contemporary is so solicitous, that he should base a series of foul

libels and a mischievous attempt to stir up international strife upon statements which had been disavowed three days previously by the gentleman to whom they were erroneously attributed?

This is pitiable and, let me add, disgraceful. But the display is not without diverting incidents. "*The Japan Mail*," says your critic, "undertakes with the authority of H.E. Ito, for it is impossible the authority could be conferred by any one else, to lessen the mischief by an attempt to prove, or rather by totally unsupported assertion to stigmatise, the reporter or correspondent of the *Standard* to be guilty of grave deviations from truth." I am curious to learn what evidence Mr. Ito ought to produce in support of his own version of his own thoughts. It would be charitable to credit your contemporary with complete ignorance of the meaning of words. Otherwise when he describes Mr. Ito's account of his own statements as a "totally unsupported assertion," his motives are apt to be construed in a fashion still less complimentary.

Side by side with this consider the following:—"These incautious utterances of a Japanese statesman have been given to the world and cannot be recalled; and until they are expressly disavowed by the only body capable of doing so, the principles enumerated will remain as the declared principles upon which Japan regulates her conduct towards other nations." One might imagine that the only person capable of disavowing them is Mr. Ito. But no. The Japanese Government is the "body" here alluded to. "Have the Government" your contemporary asks, "telegraphed to London an official disavowal of the language used by H.E. Ito? That is the only course open to Japan to relieve herself of the burden of discredit those damaging utterances of a member of her Government have brought upon her. The telegraphed qualifications of H.E. Ito would have little effect: it (*sic*) would merely be pitting the recollection of one man fifty days subsequent to the event against that of another deliberately recorded in less than as many minutes after that event had taken place." Pitting, observe, Mr. Ito's recollection of his own statements against the version of "an experienced correspondent of a London newspaper." It would be interesting to discover what your contemporary knows about this "experienced correspondent." Could he even tell us his name? I doubt it. And then, imagine, if you can, the Japanese Government telegraphing a disavowal to the *Standard*! What a charmingly naïve idea your contemporary has of the methods and habits of Governments! I can conceive nothing more grotesque than the assurance which induces such a writer to sit in judgment upon official, and national, acts. His rude attempt to charge a Japanese Minister with untruthfulness is worthy of the spirit which prompts him to promote international misunderstandings and to blacken the reputation of a country towards which, with consummate hypocrisy, he declares himself "animated by the best feelings."

I have ventured to address you, Sir, upon this subject because I cannot consent to remain silent in the presence of such an unprecedented exhibition of discourtesy and mischief-making on the part of an English newspaper. I desire, as far as possible, to join in assuring the Japanese that very few Englishmen have anything in common with the insolent abuse daily heaped upon this country in the columns of the English local press.

I am, Sir, Your obedient Servant,

ENGLISHMAN.

Tokyo, August 14th, 1883.

EXTERRITORIALITY.

TO THE EDITOR OF THE "JAPAN DAILY MAIL."

SIR,—In the *Japan Weekly Mail* of the 11th instant, in an article referring to a matter which had been recently under public discussion, you make use of the expression "that another prop has been applied to exterritoriality." I am however, compelled on this occasion to differ with you, for I think several props have been knocked away by recent occurrences.

When the foreign merchants, and the better class of foreigners generally, who wish to cultivate friendly relations with their Japanese neighbours; to see an extended and mutually profitable commerce; to see harmony and good feeling between Japanese and foreigners; and a disappearance of the very strained relations that have for a long time existed; when they see that exterritoriality is used as a shield from behind which to fulminate the basest slanders, and the most criminal charges against the members of the Japanese Government, individually and collectively; to charge one Finance Minister with deliberately hoaxing and deceiving a party of foreign merchants, and others with publishing false statements; to charge another Minister with corruption, and, inferentially in a doggerel rhyme, with robbery; to stigmatise another distinguished member of the Government as a liar and prevaricator; and the whole Government of Japan as a political prostitute; to strike below the belt, and make cowardly attacks from an inaccessible stronghold; when honorable and justice-loving gentlemen (of whom I am sure there are many among the foreign residents of Yokohama and Tokiyo), fully realize the cowardly and wicked nature of the almost daily vilification which fills the columns of some of the foreign newspapers, and the immense evil that it must cause to the interests of both Foreigners and Japanese; they will surely be convinced that, if exterritoriality is not abolished, some modification is urgently needed to check what is working inestimable injury, is grossly indecent, and a public scandal.

I am, Sir, Your obedient servant,

ANOTHER ENGLISHMAN.

Yokohama, August 16th, 1883.

JAPAN'S FRIENDS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your correspondent "Tsujin" deserves gratitude, not for what he has written himself but for what he has been the means of making others write. It is most desirable that the foreign community should distinctly understand the whole extent of the rights conferred on them by the treaties. Those documents are not yet appreciated at their full value. I am quite sure that until "John's" last letter appeared, many of my fellow residents were not less ignorant than I with regard to the meaning of the "decent treatment" of foreigners. They did not know that the term includes exemption of all the Japanese females in our neighbourhood from police supervision. Of course, when one considers the matter carefully, it becomes plain that if "cur dogs" of policemen are to be allowed to put coarse questions to young ladies with whom we associate, we, too, are treated indecently by proxy. The foreign residents cannot recognise too plainly that this is a part of the Government's scheme to drive them out of the country. It is a deep plot, Sir. I fear I shall tax your cre-

dulity when I tell you that, rather than give Yokohama grounds to complain of partiality, the Japanese residents in Tokiyo are still more harshly treated. The tea-houses there are subjected to domiciliary visits at most inconvenient hours, and their inmates are carried off to prison at a moment's notice. Let no one suppose that the object of this system is to suppress vice. It is simply to make things hot for foreigners. The police stop at nothing. They actually have the assurance to declare that the little girls at Homoko were twice detected, a short time ago, *in flagrante delicto*, when, as is well known, one of our most prominent citizens has offered to vouch for the poor children's virtue. The most spotless reputations are not safe from the slanderous assaults of these despicable spies. Of course the Consuls should take the matter up. The Japanese must be compelled to keep their arbitrary government out of our sight, just as they keep any other nuisance, and I am decidedly of opinion that wherever we go in Japan our fashions ought to be followed and our principles respected. That is the only honest rendering of the treaty obligations which this country has incurred towards us. The idea that unfortunate women are to be arrested "simply because they are guilty of the atrocity of waiting upon foreigners" is distinctly opposed to the spirit of the treaties. I cannot conceive a more flagrant instance of returning evil for good. As "John" justly says, we are only doing our duty and seeking to promote "the best welfare of the kind, courteous, and hospitable Japanese people" when we publish their faults in our newspapers and make them out as bad as possible that their efforts to improve may be the more determined. Yet, in return for this good-nature, they bully girls who help us to bathe and who sit on our knees to learn morality. "Tsujin" has chosen his name badly if he does not understand that cordial friendship for Japan is the motive which induces our local journalists to hold up to public execration everything Japanese. The people we denounce are more discerning. They know that when we blacken their reputation, our ultimate aim is to whiten it, and that, when we say we can never like or trust them, we are preparing them to be worthy of our affection and confidence. I am sure, Sir, that they fully appreciate the sterling character of a good-will which does daily violence to its own inclinations, and the constancy of an affection which never suffers itself to be betrayed into any exhibition of regard.

Your obedient servant,

ROJIN.

Yokohama, August 16th, 1883.

TREATY REVISION AND THE CRIMINAL CODE.

(Translated from the *Choya Shimbun*.)

A rumor has lately been set afloat to the effect that, in a certain quarter, the opinion prevails that the Criminal and Penal Codes were issued to facilitate the revision of the treaties, and to bring about such revision as soon as possible. If this be so, it has not yet been responded to by foreign powers. Again, it is said that if they are meant to apply to Japanese alone they are too far ahead of the civilization of the nation, and that, as they have been found impracticable in many respects, they must be revised. At first we thought this rumour had no foundation and laughed at it, but it has since obtained credence in many quarters, some even going so far as to state they could prove the

accuracy of the report. As rumours of this description are likely to mislead the public, we are compelled to show that they are groundless. The *canard* that the Criminal and Penal Codes were compiled to work upon the feelings of foreigners needs no refutation, since the public are well aware that the Government is working to recover the national rights in spite of the interference of foreigners. There is no reason why the Government, having once resolutely commenced the work, should abandon it because they are disappointed at the refusal of the foreign powers to accede to their demands; on the contrary, it should cause them to redouble their efforts to attain the desired end. In point of fact the Codes were compiled for the Japanese people, and not for foreigners. It may be the case that their publication was hurried forward to facilitate the revision of the treaties; but after all, *they were framed to promote the happiness of the people, and, at the same time, to obtain the approval of foreigners, but certainly not chiefly to expedite the revision of the treaties.* If our laws are imperfect, foreigners will not place themselves under our jurisdiction. It is therefore of importance that the laws should be improved in order, among other things, to bring about the revision of the treaties. If the new Codes are altered because the foreign powers have not acceded to the revision of the treaties, will foreigners consent to be amenable to our laws or will their objections be stronger than before? If they are dissatisfied with our new Criminal Code, it would be better to leave it as it is at present, and gradually press our demands for the revision of the treaties as our civilization progresses. There is no reason why, because the foreign powers have not yet agreed to the revision, our Government should alter the new Code or take any other retrogressive steps which might prevent treaty revision being effected. The foregoing clearly shows that the first part of the rumor must be untrue.

Again, to say that the new Criminal Code is in advance of the national enlightenment is irrational. After the Restoration the Government made the most strenuous efforts to introduce the best institutions of the West into Japan. The public is well aware that the Government did not fail to adopt all that was good, and eliminate all that was bad, so as to endow the country with the richest attributes of Occidental civilization. This was more particularly the case as regards the laws, to the improvement of which the Government set itself with energy and zeal. The present Code is the result of this labour. It was not a mere translation from a foreign book, produced in a night without any regard to the civilization of the country or the customs of the people. This being the case, there is no doubt that it is consistent with the present progress of the people, and that it is practicable. The opinion that the Codes are in advance of the times may have originated in the fact that they are more perfect than other institutions. Yet sometimes rumors are founded on some fact, and in spite of the absurdity of the above rumor we cannot state that it has no foundation at all. As we have said our Government will endeavour to augment the prestige of the country, and will not be diverted from its course by a single disappointment. If the delay in the revision of the treaties is caused by the imperfection of our laws, the Government will apply itself to their improvement with greater energy than before. Although our Codes are good, they were compiled to suit our own standard, and therefore may not be deemed satisfactory in the eyes of foreigners. But, apart from the

merits of the Codes, foreigners place no confidence in the practical application of them; the Government, therefore, will do everything in its power to remove the cause of their dissatisfaction so that under its working they may enjoy safety and happiness. It thus appears that, if any alterations were ever proposed, it was in the direction of further improvement. The greatest difficulty the Government has to encounter in the enforcement of the new laws is the different interpretation placed on some of the passages by different individuals. This is so conspicuous, that it sometimes appears as though there were two different laws in the country. It is the intention of the Government to remove this inconvenience. To briefly recapitulate what we have stated above, the rumor that the Government contemplate altering the Criminal Code because the treaties have not yet been revised, and that it is in advance of our present state of civilization, is groundless. If any alteration is contemplated, it is in the direction of further improvement, since the Government is always eager to extend the national prosperity and add to the prestige of the country. If our views are incorrect, we shall be obliged to anyone who is better informed if he will put us right.

INQUIRY INTO LOSS OF LIFE AT SEA.

A Marine Court of Inquiry, acting under Section 269 of the Merchant Shipping Act of 1854, was held yesterday, the 15th inst., before Russell Robertson Esq., Consul, into the circumstances of the death of Alfred Lonsdale, an ordinary seaman of the British barque *J. E. Graham*, official number 83,204.

The *J. E. Graham*, Captain Cochran, sailed from Cardiff on the 21st of March last with a cargo of coal consigned to the Messageries Maritimes Co., and arrived in this port on the 11th instant. During the voyage, on the morning of the 17th of May, in lat. 36° 30' S., long. 19° 34' W., a lad, Alfred Lonsdale, who had shipped as cabin-boy but was shortly after sailing transferred to deck duty, was lost overboard.

George Brison, first officer of the *J. E. Graham*, was sworn and deposed—At about 10 minutes past seven on the morning of the accident (17th May) I told the boatswain to wash down. The next thing I heard was the cry "A man overboard!" I ordered the wheel hard down, hove a life-buoy overboard, and went aft to see who was missing. I was told he was not in sight. The boatswain told me "he was last seen there," pointing to a spot in the water. I started the boatswain to get a boat into the water, and called all hands. The starboard boat was lowered as quickly as possible, the second mate in charge, and search was made for two hours. Then the boat came back bringing a life-buoy. The weather was calm: the vessel going four or five knots an hour: wind on starboard quarter about S.W. I am not sure within a point or two. I do not remember how she was heading. The second mate was in charge of the boat with four men. There were no boats on the davits: all were on the skids. I last saw the man when the relieving watch was called at 4 o'clock: he was then in the waist.

To the Court—The boatswain was the first to call "man overboard." The ship was under all sail. I put the helm hard down, and the ship came right round. I did not see the man in the water.

Georgius Giarasimo, a Greek, whose English was so fluent that it is not astonishing that a subsequent

witness, one of the crew, deposed that he could not understand him, was next sworn—He deposed that he was boatswain of the *J. E. Graham*: that on the 17th of May, at six o'clock in the morning, the lost boy was on the look-out on the top-gallant fore-castle. The witness called him down and sent him to look for brooms and buckets. He went to witness' room, and fetched a broom which he hove on the poop, and then went to the after hatch and brought buckets. Witness did not see him fall into the sea, but heard something fall: saw witness in the sea on the port side, and sung out "man overboard." From that time it was about ten minutes until a boat was got into the water.

In answer to the Court, witness said that he had slapped the boy "as boys are slapped on board ship." The last time was about ten or twelve days before the accident.

On the Court asking if any of the crew wished to give evidence, four or five men rose.

The evidence of Michael Kearny, ordinary seaman, was to the effect that the lost boy, and himself, and others of the crew, had been ill-used by the boatswain; and that after the accident a long time—quite half an hour—elapsed before the boat was lowered.

James Welsh, ordinary seaman, sworn, said:—At the time of the loss of the deceased I had just relieved the wheel on the port watch when I heard the cry "man overboard!" The mate ordered the helm hard down, and the ship came up to the wind. From the wheel I saw the men running about in confusion for half an hour before the boat was lowered.

Mr. Brison, in answer to the Court—I didn't see him (the lost boy) when I threw the life-belt.

Witness continued—The officers were all talking. There was great confusion; and the boatswain was saying all sorts of hard things, and calling the men all out of their names, crying, "hurry up! you son of a b—" and so on. The last time I saw the deceased was about half-past six. He was on the look-out. I don't think any one saw him go overboard. It was dark at the time. Day broke about ten minutes after the accident. Half an hour or more passed from the time of the cry "man overboard" to when the boat was lowered. The lad was ill-treated every day by the boatswain, who kicked and beat him constantly, and threatened to throw him overboard. I often saw the boatswain strike him. The last time was the day before he fell overboard.

The Court—What did the boatswain strike the boy for?

Witness—I don't know. We didn't understand half what the boatswain said; and he thought we were making game of him. He has often beaten and kicked me, and has threatened to throw me off the main-yard. The lost boy complained to the Captain of his treatment. I did not complain, because the lost boy's complaints did not bring him better treatment. I have heard him say that when the ship arrived in Yokohama he would "go to the Consul."

The Court—You say that half an hour elapsed from the time of the alarm to the lowering of the boat. How did you know the time?

Witness—I judged it.

William Cochran, sworn—I am master of the *J. E. Graham*. I was below at the time of the accident. I heard the cry "man overboard," got on my coat, and went on deck, where I found the vessel well in the wind, and the men busy getting ready a boat which was lowered in about ten or fifteen minutes. I could not find that anyone on

board knew how the accident had occurred. I took charge of the boy's effects, among which I found one or two letters, but no paper stating he had been ill-used, or any letter to me. His effects are all on board. I consider that at the time of the accident everything was done that could be done. The men were smart in getting the boat overboard.

In answer to the Court, and after some hesitation, the witness was understood to say that the boy had not complained to him of ill-treatment.

The boatswain (recalled by the Court)—I last saw the boy bringing buckets and brooms from the main hatch. He was not drawing water from the ship's side. We were only getting ready to wash down. We do not draw water from the bulwarks, but by pumps.

Peter Demetri, an Italian, was sworn and examined through an interpreter. He deposed that the accident occurred at about 6 a.m. He had heard the boatswain order the boy to bring buckets and brooms, first to go forward and then aft. He next heard the shout, "man overboard!" Then orders were given to clear a boat, which occupied half an hour or more.

The Court—Why did it take so long?

Witness—The men were excited and running about. No tackles were ready.

Mr. Brison, in answer to a question from the Court, said that the boat was unlashed and turned over from the skids to the davits and that the tackle was at hand and in good order.

Robert Strange, an ordinary seaman of the *J. E. Graham*, sworn—On the morning of the accident, soon after six o'clock, my watch below, all hands were called on deck. We got out in a few seconds, and heard that a man was overboard. There was great delay in lowering the boat. No oars could be found at first. There were no proper tackles, as there are in well found ships. All was confusion. I was first called aft and then sent forward. At last I found the oars under the fore-castle. The boatswain sent me there. I have no opinion as to how the lost boy got overboard. I do not know what is the opinion on board. The lad was constantly threatened and struck by the boatswain. He was shipped as cabin boy, and soon after rated as ordinary seaman; but he knew nothing of the work. He was bright and quick; but much frightened through being constantly struck and threatened by the boatswain.

The Court suggested to Mr. Brison, Chief Officer, that he might ask this witness some questions as to his evidence concerning the tackles.

Mr. Brison commenced his interrogation in so emphatic a style that the Court had to remind him that he must not intimidate the witness. It is due to the officer to say that, with every appearance of respect and honesty, the witness, Strange, said that neither he nor anyone on board had occasion for complaint against him.

Strange, in answer to Mr. Brison, persisted that the tackle was found forward, and said that a boat, inboard, if the ship is properly found, should be put over the side in five minutes. The men on board were constantly struck and beaten and sworn at. To the Court, witness said that the buckets and brooms were kept near the main hatch. One or so would be in the boatswain's cabin.

To Captain Cochran, who, at the suggestion of the Court, also questioned the witness, Strange repeated what he had said about the tackle. The crew were struck and abused, and called "sons of b—s" and "sons of w—s," and so on, by the officers.

Here Mr. Brison indignantly started from his

seat, and was held to order by the Court. He asked the witness if he (Brisson) had used the words in question, and was told "no," in the same terms as before. The officers referred to were the second mate, the boatswain, and carpenter.

At noon the Court adjourned, to hear the evidence of the second officer, who had been left in charge on board, until 2 p.m.

The Court resumed at 2 o'clock, when

Albert Crowe, second officer of the *J. E. Graham* was sworn. He stated—The chief officer came down and said—"Jump up, boys, there's a man overboard!" I was on deck immediately, and gave the order to "turn over, quick!" They turned the boat over on the skids, got the tackles on, and lowered her into the water in fifteen minutes—not more than that to the best of my belief. I went away in charge of the boat, and searched for two hours, but could find no trace of the missing man.

Louis Naragel, one of the crew, was sworn. He said:—The deceased told me on the 9th of May that the boatswain had struck him again, and wanted to throw him overboard. I remember the boatswain singing out, "man overboard!" I jumped out and ran aft. The boatswain told me to "go and get the oars," swearing at me. Nothing was ready to put the boat in the sea. The carpenter was singing out, "you son of a"—this, that, and the other—"come here!" The second mate gave all sorts of contrary orders. It was at least half an hour before the boat was let down. All the men were frightened. A great deal too much striking is done on board. The second mate, the boatswain, and the carpenter beat the crew. I have seen the boatswain strike the deceased with wedges. The boy was a very good little fellow, very obedient, but he had never been to sea before.

The Court then read an extract from the official log of the *J. E. Graham*, signed by the master, the mate, and the boatswain's mate. (The officer constantly referred to as "the boatswain" in the evidence, is rated on the articles as boatswain's mate.) After some necessary literal corrections are made, it runs as follows and was admitted by Captain Cochran:—

May 17, 1883. Lat 36° 30' S, Long 19° 34' W. This is to certify that at about 6h. 15m., a.m., mate called me "man overboard." I was asleep in my berth at the time. I got out, ran on deck, found the ship in the wind, and people getting the boat unlash. I could not hear or see anyone overboard. The vessel had been going about four knots with a light breeze from the S.W. Course S.E. by S., and heavy swell from the S.W. We got the boat out in a few minutes, and sent her in search of the man. [The Court. "You say a few minutes, Captain?" "Yes, Sir."] After rowing round for over an hour, the boat returned to the ship. Could not find the man. They picked up the life-buoy that the mate threw from the stern. Took the boat in and kept the vessel on her course. No one saw or could account for how he got overboard. The boatswain's mate a few minutes before told him to bring the buckets and brooms aft. They were going to wet down the deck. He then came along amidships when he heard the man in the water. He got over the side, [The Court—"Who got over the side?" "The boatswain,"] and tried to reach him but couldn't. He passed him and sunk. The Chief Mate was on the poop at the time. He threw a life-buoy over the stern but could not hear or see him. He had gone down. His name was Alfred Lonsdale, O.S., of York, England.

The Court here asked if the lad could swim, and was informed by one of the crew that he could—a little.

FINDING OF THE COURT.

I find that Alfred Lonsdale, O.S., of the British Barque *J. E. Graham*, Official Number 83,204, met his death by drowning on the morning of the 17th of May, 1883, at about 6.15 a.m. in Lat 36 degrees 30' S., Long. 19 degrees 34' W.: that there is nothing in the statements made before me to show how the man got overboard, it being dark at the time—just before daylight was breaking. On comparing the

different statements made as to the measures taken to rescue Lonsdale, I am forced to the opinion that there was unnecessary delay in launching the boat, and that the means for launching a boat at any time were not at hand in that state of readiness which they should have been in any well-found ship. It appears to me that the time occupied in getting the boat into the water was from twenty to thirty minutes, a delay which would preclude much hope of rescue except in the case of a strong swimmer.

SPECIAL COURT, TOKIO.

TUESDAY, AUGUST 7TH, 1883.

Before Mr. Justice TAMANO, and Messrs. HAYASHI, KAWADA, and NAGAOKA, Assessors.

THE PROSECUTION OF THE FUKUSHIMA SUSPECTS.

On the opening of the Court, the Counsel for Hiroshima addressed the Bench.

Mr. Nakashima—I repeatedly requested the Prosecutor yesterday to give an explanation of his argument, but he has not done so. I will now proceed to explain the case as it stands. The Prosecution alleges that the accused are guilty of a plot to raise an insurrection, and that the prisoners are endeavoring to conceal their crime. But the Prosecutor has put forward nothing to prove this bald assertion. I asked yesterday for what purpose they caused the prospectus of the newspaper and the letter in reference to it to be read. They replied that these documents are a portion of the evidence against the prisoners. I will now prove that the accused have not tried to evade inquiry. The conduct of the Fukushima police was unjust, unwarrantable, and deceitful. They tried to incriminate the accused by threats, and confessions were in this way extorted from the prisoners. My learned friend, Mr. Yamada, has already referred to that, but I will mention one fact which he omitted. Please read the report of Aizawa's examination, dated the 28th of January. (Report read.) We can place no confidence whatever on the reports prepared by the Police, which were obtained by resorting to all manner of brutality and fraud. Look, also, at their carelessness. Such an important report as one bearing upon a charge of high treason ought to be made with the greatest possible care. The contrary, however, is the case, as the police got up the report in one or two pages. (Here Mr. Nakashima pointed out the contradictions in what is called a statement of facts in reports of Hiroshima's examination and that of Tamura, as was done by Mr. Yamada). Hiroshima, he continued, was examined on the 17th of January on which occasion he had given an explanation of the words "bureaucratic government" as referring to the Government of Japan. But we cannot tell with certainty whether this interpretation was really given by him or written by the police themselves, since he presented the copy of the covenant on the 14th, that is to say, three days before his examination on the 17th of January in which he proved the inaccuracy of the wording in question. There is every likelihood that the police willfully prepared the false report. (The report of Tamano's examination, dated February 3rd, was then read in accordance with the request of the Counsel). If my view is correct, this is simply fraud. The police inspector told him that Kono had confessed that he entered into the confederation with Tamano to subvert the exist-

ing Government of Japan, and that as the evidence was already before the Police, it was impossible for him to conceal his complicity in the plot. This well illustrates the fraud resorted to by the police. But, fortunately for Tamano, he discovered the fraud, and stated the fact. The action of the police is against the existing law of the land, and the evidence adduced by them is therefore valueless for the purposes of the prosecution. I will define the meaning of the word insurrection. A case of high treason is treated differently from other offences, as the law does not recognize this particular offence as high treason unless the action premeditated is actually perpetrated. But in deciding as to the existence of a secret plot, great care is necessary. In matters of ordinary occurrence, we might as well call it a private consultation, where two men or more meet together and make an arrangement. But to give the offence the name of high treason, we must first find a sufficient cause. On considering well what high treason really is, we find that it means plotting to overthrow the existing Government of a country, and taking measures to carry out such a plot by evading the law in order to ensure its success. Until such measures are taken, it is impossible to call the offence high treason. If there is an intention only, and no steps have been taken, such offenders ought to be punished according to the Press Law, as in the case of journalists and lecturers who used the words "overthrow the Government." Or, if steps only are taken, while there is no intention of carrying the scheme out, then the case is on a par with that of curio dealers who purchase swords said to be for trivial purposes. Monsieur Boissonade, who drafted our Penal Code, in his interpretation of its passages, speaks of the high crime of treason as a resort to physical power and violence to establish the form of Government one admires. This equally means the harbouring of intention and taking steps. The present case contains none of the above elements. Even though the words "overthrow the Government" were written in the covenant that is no reason why the accused should be guilty, since they have taken no active steps. They cannot, consequently, be punished. They are most certainly not guilty of high treason. I would like now to go through the evidence before the Court, but will wait until the Prosecutor has replied.

The Court rose at 11.40 a.m.

WEDNESDAY, AUGUST 8TH.

The Court opened at 8.30 a.m., when Judge Tamano asked the prisoner Tamano to reply to the accusation.

Prisoner—The Prosecution insist that our culpability has been fully proved by the covenant, the prospectus of the proposed newspaper, and correspondence. We hold that we have already proved that we are not guilty. We have nothing to say further.

Mr. Oi—I am Counsel for Tamano. The Prosecution base the charge on the covenant, the prospectus, and correspondence. The argument of its Counsel is vague; and in spite of repeated requests, we could receive no explanation. The law does not take cognizance except in cases of premeditated action. If human intention were punishable, no person would be free from penal conviction at some time or other. The prosecution holds the opinion that, though the accused did not actually procure supplies of arms and munitions of war, yet they had the intention of over-

throwing the Government. I desire to call the attention of the Court to one point, namely, that Asiatics, generally, have come to look on the word "overthrowing" as conveying the idea of some pernicious design. They use it of persons desirous of wresting violently anything from an opponent. In a wider sense the term can be employed as referring to any ministerial change; and thus the accused made use of it. We have proved substantially that they had no intention of resorting to violence. However strange this may appear, there is nothing at all extraordinary in it. The covenant in question is in no respect in violation of the law; and the conduct of the accused in their every day life bears ample testimony to the fact. Did they even entertain an "intention," there must be some evidence in the numerous letters that passed between them. They were prompted to the draft of the covenant by extreme love for the cause of liberalism. The freedom of the people depends upon the administration; and the accused merely combined to achieve an improvement in the existing system. In what respect, then, are they guilty of high treason? Correctly speaking, high treason consists in a rupture, on the part of those committing it, with the Government—a rupture caused by the Government working in opposition to the popular voice. Here the contrary is the case: the Government has met the desire of the people, and promised to establish a National Assembly in the 23rd year of Meiji. Hence there was no possible motive for the accused to have drawn up an obligation to overthrow the Government or to have troubled the peace of the realm. Politically or otherwise there is no necessity to overthrow the Government. The evidence of the prosecution is without value; there is no ground whatever for the punishment of the prisoners.

Kono, Prisoner No. 4, next addressed the Bench. He dwelt upon the misconduct of the Fukushima police, and the tyrannical behavior of Governor Mishima, to whose actions he ascribed all the troubles that had occurred.

Mr. Hoshi said that he would divide his argument into six heads:—(1) What is the definition under the Penal Code of the word "insurrection?" (2) Is the covenant sufficient to substantiate the charge preferred against the prisoners? (3) What was the character of the accused prior to the drafting of the covenant? (4) What was the real object of that contract? (5) Under what circumstances was it composed? (6) How did the accused behave subsequently to its being drawn up? As regards the first and second headings, he asked that the reports of Aizawa's examination on the 28th of January, Hiroshima's on the 23rd, and Tamano's on the 25th, be read. (Read accordingly.) He continued—"Insurrection" means rising in arms against the Government, implying what the French call *guerre civile*; and our own Penal Code is based upon the French. In English it is called civil war: in English law it is "levying war" against the Sovereign. In fact it means raising an army against constituted authority, and comprises procuring arms, money, and provisions to attack the Government. Talking of and writing about "overthrow" mean nothing, unless arms, money, and munitions have been provided, or steps have been taken to procure them. The law does not punish any secret device as long as it does not disturb the national tranquillity. What evidence is there to prove that the accused ever plotted to raise an insurrection? The covenant only. But does that prove the accusation? Certainly not. The only value of the evidence is that it shows

nothing. The evidence is but the shadow of an object which has no existence, and so is void. Notwithstanding this the instrument can hardly be called a lawful one. On the contrary, it is what in English law would be called an "illicit agreement" which is punishable; but in Japan no provision is made for any such offence; and, according to the maxim that the law cannot punish an offence for which it has not provided, the accused are not guilty. Such is the inevitable conclusion to be arrived at from the evidence adduced against the prisoners. How much the more could I establish this if I were to argue on the demonstrated fact that the original covenant was amended and the objectionable words were struck out. As regards the second point, the proceedings of the Police were illegal and in open violation of the Penal Code. Confessions were extorted by treachery and threats. I can demolish the whole charge brought by the Prosecution. Counsel on the other side argue that some words in the covenant prove the intention of the accused to raise an insurrection. What do those words prove? Nothing incriminatory of the accused. Even did the words "overthrow the Government" occur in the document, their interpretation is simply that the signatories had decided to eradicate bureaucracy by the force of public opinion.

The Court rose at 11 a.m.

SATURDAY, AUGUST 11TH.

The Court opened at 8 a.m. when Judge Tamano asked the prisoner Aizawa to reply to the accusation.

Prisoner—The Prosecution bases its opinion of our culpability on mere presumption. This is against the law, therefore it cannot punish us. We have nothing to say further.

Mr. Kitata (Counsel for Aizawa)—The argument of the Prosecution is based upon the indictment, the principal evidence being the covenant. Article 1 of the covenant is the whole origin of the trouble, or speaking more closely to the point, the four words "overthrow the existing Government" are the sole cause. This passage admits of two interpretations, to wit:—(1) the improvement of the administration by peaceful means; and (2) the alteration of the existing system of Government by violent measures. Recourse to the latter plan would involve the nation in calamity, while the adoption of the former would be productive of benefit to the whole community. That this was the object the prisoners had in view when they penned the characters in question may be easily gleaned from their declaration that they combined to effect an amendment in the administration by the operation of public opinion. They are not guilty in any respect whatever. Even be the words understood in the sense in which their use is imputed, there is still no evidence to incriminate the accused. As my learned colleagues have already explained, "insurrection" means rising in arms against the Government. To rise in arms one must make preparations—procure arms, munitions, money. Had the accused really intended to organize an insurrection they would have prepared for the event, or at least have taken measures to procure what was required for the purpose. They simply did nothing of the kind. Our argument is supported by the interpretation of the term "insurrection" given by Mr. Tamura—one of the Commissioners who drafted the Penal Code. Mr. Boissonade, in his commentary on the Criminal Code, speaks of an attempt to overthrow the Government as hateful; but adds that the law

does not punish intention but only the fact. This is in consonance with our Japanese proverb, "I hate the crime; I do not hate the man." I desire to add something more, but I wish to hear first what the Prosecution has to say.

Prisoner No. 6, Sawata—No doubt the Prosecution proposes to demolish our defence, but it is impossible to do so. We have stated the real facts of the case. Suppose that a man armed with a sword at the time a certain murder is committed. Is that sufficient to convict him of the crime? Surely not. Some investigation has to be made as to the circumstances. We cannot be content with an unfair judgment.

Mr. Uyeki—I am Counsel for Sawata. I request the Court to read the report of Tamano's examination held in February this year. (Read accordingly.) The Prosecution has proceeded against all the prisoners *en masse*. But, as Sawata was arrested in the capital, he was not examined in Fukushima; and consequently no version of the covenant has been furnished by him. Differences of wording occur in the renderings of the document furnished by the other prisoners. In proceeding against Sawata the Prosecution should have indicted him separately. As it has not done so, I must imply that it holds him guiltless; and in that case I request the Court to set him at liberty as promptly as possible. Concerning the general aspect of the case, I have only to say that the confessions were extorted by threats and deceit, and as such are valueless. The covenant requires no explanation, since we have amply demonstrated that the accused framed it with a view to the foundation of a liberal constitution. The report just read will show whether I am correct or not.

Mr. Yamada—I had to break off my argument very abruptly. I wish to address the Court again, but can wait until Counsel for the Prosecution have spoken.

The Judge—You may speak after the reply of Counsel for the Prosecution.

Mr. Watanabe (one of the Counsel for the Prosecution)—I have already referred to the principal features of the case. Accused and their Counsel contend that the argument of the Prosecution is vague, and that the charge is founded on mere assumption. To prove the real facts we must hold to the covenant. In the first place, then, the words "bureaucratic Government" clearly refer to the present Government of Japan. Secondly, the term "overthrow," implies that preparations shall be made for an insurrection. Thirdly, no importance can be attached to the assertion of the accused that the covenant was cancelled. The defence insists that the expression the "bureaucratic Government" refers to all such Governments in the world; and that, as a National Assembly is to be established in 1890, that of Japan must be excluded from the category. Yet facts cannot be gainsaid. Now, two of the accused, Hanaka and Hiroshima, positively admitted that the phrase in question was meant to apply to the Government of Japan. The letter from Tamano to the Mumei Kan contained a passage to the effect that the Government of Japan is bent upon oppression, as is proved by every edict it promulgates, etc. The accused unanimously admitted that they held the same opinion. All this clearly shows that they were conspiring to overturn the Government of Japan. How could they possibly have plotted to destroy "all the bureaucratic Governments in the world?" The word (*tempuku*) means to "upset" to "overthrow." Some effect of force is required to turn anything upside down. How

much the more is this the case when a Government is the object to be turned upside down? The result cannot be achieved without the exertion of some physical energy. Hence we deem that the object of the accused was insurrection. The defence, however, pretends that the meaning intended to be conveyed was that an improvement was to be wrought in the administration by the mere pressure of public opinion. This is a subterfuge invented for the occasion. The two witnesses, Kamada and Sawaki, have deposed that they read the words "overthrow the Government" in the copy of the covenant. It is a task too difficult to believe that the phrase was altered to "improve the administration." The third article of the covenant provides:—"Those who reveal the secrets of our society shall incur the penalty of self-despatch." No one inspired with a strong desire to act in accordance with the principles of justice could have subscribed such a clause. Prisoner No. 4, Kono, protests that, having drawn up the covenant as a measure for his own protection, he felt ashamed of it subsequently and destroyed it. This statement is incredible. Kono requested Tamano to convene a meeting with a view to the cancellation of the agreement; but Tamano did not convene any such meeting, nor did he even inform the other members of the proposal to annul the covenant. Kono next says that he gave information of the matter to Aizawa at Mumei Kan, while Aizawa states that the conversation took place in the District Office. Thus there is a discrepancy of three weeks between the dates stated respectively as the time when the information was imparted. The strangest part of the affair is that no mention of the proposal was made to Hiroshima in whose possession the instrument then was.

Mr. Watanabe, Counsel for the Prosecution, continuing his address to the Bench, said—In repeating the assertion that the Prosecution have fully explained everything necessary to meet the defence set up by the prisoners, I will now add that I can easily upset the arguments of their Counsel, the gist of which is the validity or otherwise of the charge and the interpretation to be placed upon the term insurrection. Though I may be liable to fall into confusion if I attempt to deal *seriatim* with each individual prisoner's defence, I intend to take that course, and will afterwards deal with what their Counsel has put forward on their behalf. To begin with Hanaka (No. 1), his defence amounted to nothing, as all he said when called upon to plead was that he was free from having committed any mean action, whilst his Counsel, Mr. Yamada, asserts that the confession is valueless in his case, inasmuch as it was not a voluntary confession, and that the declaration made by the prisoner later on was the proper statement to be taken, and although some inconvenience might arise were the Court to accept this advice, it must be remembered that the Bench has a large discretion, and no doubt knows well how to use it. Hanaka's Counsel urges that the report of that prisoner's examination at Fukushima and Wakamatsu can have no weight whatever in this Court, inasmuch as the Police at those places are not empowered to take evidence in a case of so grave a nature as that of high treason. This argument is at least premature. Supposing the Police were at first unaware of the nature of the case, and took the evidence in the ordinary course, afterwards, on discovering the gravity of the charge, handing the prisoners over to the Commissary? Supposing, I say, such a case, what then is to be done with the proceedings of the Police? But to go

farther. Even though the Police had conducted the examination of the prisoners and were well aware at the time of the nature of the charge against the accused, the evidence adduced cannot be thrown away as valueless because it happens to be through the Police that the facts are brought to light, and ultimately brought before this Court. The copy of the covenant written by Hanaka bears the date 14th January, whilst the report of his examination is dated the 17th January. At first sight this difference of date appears strange, but not so when it is remembered that this prisoner was under examination for several days in succession, and the value of the evidence is firmly established when it is remembered that Hanaka acknowledged it and signed it with his thumb. In these reports I notice that the accused invariably replied in the affirmative when questioned by the Court, but how is it, I ask, that the prisoners generally, and Hanaka in particular, failed to request that the reports should be corrected when they were offered that opportunity? They did not take it, and from this fact I argue that the reports of the examinations as produced in this Court must be taken to be substantially correct. Mr. Yamada also holds that, as the confessions of the prisoners were extorted from them by threats, they possess no value in law. Of course it is intolerable for judges to use threats to extort a confession. But admitting, for argument's sake, that threats were used in this case, that is altogether beside the question. There is the evidence, which can neither be disputed nor demolished. Coming to prisoner No. 2, Hiroshima, his defence is scarcely worth a remark. His Counsel, Mr. Nakashima, takes a line similar to that adopted by Mr. Yamada as to the worthlessness of the confessions on account of these being involuntary, but this is inconsistent, as the prisoner referred to gave in this Court his own version of his connection with the crime with which he is charged. I need refer no further to the Counsel's argument when he endeavoured to give his interpretation of the term insurrection, as the same in Hiroshima's case was urged on behalf of the others. My remarks apply equally to the rest of the prisoners, Tamano, Kono, Aizawa, and Sawata, and it is unnecessary to go over the same ground again, or to attempt to rebut the defence set up by their Counsel, Messrs. Hoshi and Oi, as it amounts absolutely to no defence at all, or is simply a repetition of the arguments advanced by the Counsel for Hanaka and Hiroshima.

The Court rose at 12 o'clock.

MONDAY, AUGUST 13TH, 1883.

The Court opened at 8.30 a.m. when Mr. Watanabe, Counsel for the Prosecution, continued his speech as follows:—I will now proceed to explain what "insurrection" amounts to. Beginning with Hanaka (No. 1), we find that his definition, like that of his counsel, Mr. Yamada, requires no refutation at all. Hiroshima (No. 2) holds that it means rising in arms against the Government, and intriguing secretly and making preparations to that end. He further insists that, if the accused had done this, there must have been some actual evidence of the facts. This is a mistake. A secret intrigue is a plot in which confederates unite surreptitiously in order to avoid the discovery of their objects. To show that such a plot existed in this case we have only, again, to appeal to the covenant entered into by the accused, and the letters they addressed to Mumei Kan. Insurrection comprises two elements. (1) preparation (*yobi*), (2) secret intrigue (*inbo*). The former, as Hiroshima said, is manifested in outward action; and the latter is intellectual. To this point I will return anon. As regards Mr. Nakashima's plead-

ing, I find his interpretation of "interruption and overthrow" very quaint. Thus, he will "overthrow" peaceably—by public opinion, to wit. Of course he is quite wrong. According to the Criminal Code "insurrection" admits of a wide definition, and includes "overthrowing" (*tempuku-suru*) or attempting to overthrow, see Article 121, wherein, under the head "of Crimes and Delicts against the Domestic Safety of the State," it is provided that all individuals guilty of having taken part in a civil war, insurrection, or armed sedition, having for its object to overthrow the Government of the country, &c., &c. As for the defence of Tamano, No. 3, I find that he proclaims himself a patriot, and therefore unable to take part in any insurrection. Overturning a Government and patriotism are totally different affairs. It does not follow that because a man is a patriot he will not attempt to overthrow the Government of his country, since patriotism itself often prompts men to such an endeavour. Mr. Oi's argument can be divided into four parts. (1) No matter how much or how long an insurrection may be plotted, the conspirators cannot be prosecuted unless they have committed some overt act of insurrection. (2) The overturn of a Government can be effected by peaceful means. (3) The present prosperous condition of Japan does not warrant any one in raising an insurrection. (4) The accused had no intention to seize the reins of power. The first and second points are similar to those put forward in Hiroshima's case, and so are unworthy of serious refutation. Mr. Oi contends that Asiatics have come to consider the word "overthrow" as conveying some pernicious design, while such is not the case with Europeans. This statement is altogether contradicted by facts. The term embodies in the West exactly the same destructive principle as it does with us. As regards the third point I am perfectly in accord with the defence: no necessity exists for rising in revolt; but that is not equivalent to a positive assurance that the accused did not conspire to overturn the Government. Kono says that the prime object of the confederacy was to replace the existing system by representative institutions. This may be true; but to overturn a Government one must resort to such physical manifestations as the law will punish. (Here the orator entered into a long disquisition endeavoring to prove the incorrectness of Mr. Hoshi's rendering of the French term *guerre civile*.) My argument applies to the interpretation attempted to be made of the word "overthrow" by the other prisoners and their Counsel. Mr. Watanabe concluded by ridiculing the argument of the defence that the accusation was founded on mere assumption, and said that the judgment would be nothing more than an assumption founded on matters of fact.

Mr. Hoshi—I previously argued to the second point of my reply. If the argument of the Prosecution ceases here, I should like to conclude my address.

Judge Tamano—The prosecution does not, I believe, conclude its case here. If you desire to speak now, you have the ear of the Court.

Prisoner Hanaka recapitulated his former statements, and declared emphatically that his scheme of political improvement embraced the whole world, and extended through endless generations. His Counsel, Mr. Yamada, addressed the Court on his behalf in much the same terms as those he employed on the previous occasion.

TUESDAY, AUGUST 14TH, 1883.

The Court opened at 8.30 a.m., when Mr. Yamada, Counsel for Hanaka, addressed the Bench as follows:—I will show what the word *tempuku* (overthrow) amounts to. At first sight, it conveys an impression that menace is intended. Therefore the accused changed it to "improve the administration," an expression which is certainly not a violation of the law. Had the accused really intended to overturn the Government they must have given some outward and visible sign of that intention. They had no arms whatever, a conclusive proof that they had no felonious design. Counsel for the prosecution has quoted at great length from the French Criminal Code, endeavoring thereby to establish the culpability of the accused; but there is a wide difference between the French and the Japanese people. The former adore revolutions and are always watching for an opportunity to subvert

their Government, while the latter are docile and law-abiding. It would be the height of absurdity to punish the accused according to the spirit of French law.

Hiroshima (by permission of the Court)—I desire to explain as regards one point. I said on a previous occasion that a judgment based on mere presumption would seriously damage our interests, a proposition that the prosecution took some pains to endeavour to refute. I did not mean any judgment arrived at by a logical process; but one the result of illusion and a perversion of facts. Our lives now depend upon the words *tem-puku*, on the meaning whereof we may be saved or destroyed. Consult the third volume of Mencius, where you will find the following words, *Taiko in no kaiten wo tem-puku-su*; which may be translated "He 'overturned' the criminal sentence passed upon him by Taiko," or, in other words, did not submit to the sentence pronounced upon him by Taiko, as that potentate was immoral. I have proved that the word *tem-puku* may refer either to physical or intellectual demonstrations. As intended in our covenant it refers to the improvement of the administration by the pressure of public opinion and not by deeds of violence. As regards the assumption that, because I always replied in the affirmative to the questions of the Court, I thereby acknowledged my culpability, I must reply that I had no opportunity to correct any errors that I may have made in my statement. That we did not conspire to upset the Government is abundantly proved by our behaviour. For the prosecution to try to establish that the cancellation of the covenant is an invention because of some discrepancy in dates, is cruel. From the time when we were imprisoned, we were lodged in separate cells, and prevented from communicating with each other. Thus situated, how could we concert together to promulgate a falsehood? It must be evident to all that our statements are true. We can only say of the argument of the prosecution that it is incomprehensible.

Mr. Nakashima, Counsel for Hiroshima—I notice a discrepancy in the wording of the covenant, as given by the different prisoners. I should like to know which of the versions the prosecution selects as evidence.

Prosecutor—The Court will take them all as evidence.

Mr. Nakashima—I combat the whole argument of the prosecution. It obstinately holds to the assumption that the words "bureaucratic Government" must refer to the Government of Japan, which is not the case. The statement to that effect in the report of the examination of the accused is due to the carelessness of the Police in recording the proceedings. All the accused maintained that their scheme of political improvement embraced universal society. *Tem-puku* means turning a thing upside down. There are two ways of doing this, peacefully and violently. The accused's method was the former. The prosecution, in support of the contrary opinion, quotes from the letter, written by Tamano, wherein he says that the Government of this country resorts to the extremity of oppression, as every fresh edict shows, &c. This is merely a passing expression of opinion upon a political matter. The prosecution cannot believe that the prisoners might desire to improve the condition of other peoples, and calls the idea sheer nonsense! Our party—the Liberals—wishes to spread liberalism through the length and breadth of the earth; and the accused united to attain that object. They have unanimously declared that by *tem-puku* they mean to convey the same idea as that embodied in *katriyo* (improve). The two witnesses, Kamada and Sasaki, deposed that they saw a paper attached to the original covenant containing the alleged correction. It is, therefore, impossible for the prosecution to dispute the truth of the declarations made by the accused. I must repeat that the accused intended to bring about political improvements by peaceful means. This is quite within the bounds of possibility. Look at Rai Sanyo who contributed toward the downfall of the Tokugawa usurpation by publishing books. Look at Patrick Henry, who roused the Americans by his eloquence to resist British oppression and obtain their independence. These and other instances show that political improvements can be effected by peaceful measures. The accused combined to accomplish their work of reformation without having recourse to violence.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL"]

London, August 13th.

MR. GLADSTONE ON MADAGASCAR.

Mr. Gladstone, in a speech at the Mansion House, stated that fuller advices from Madagascar confirmed the hope that the Tamatave affair would be satisfactorily arranged.

RESIGNATION OF THE FRENCH NAVAL COMMANDER.

The Commander of the French Naval Force in Malagasy waters has resigned on the ground of ill-health.

TROUBLE IN SPAIN.

A widespread insurrectionary movement has been discovered in Spain. The Spanish Ministry is suspended, pending Constitutional guarantees.

London, August 15th.

THE CHEFOO CONVENTION.

The Under Secretary for Foreign Affairs, in reply to a question in the House, said that negotiations are now progressing regarding the Opium clauses of the Chefoo Convention.

THE CORRUPT PRACTICES BILL.

In the House of Commons the Corrupt Practices Bill was read a third time and passed.

INSURRECTION IN SPAIN.

The Province of Catalonia has been declared in a state of siege, and Carlist emissaries are active in the North.

Later.

It has been officially announced that the insurrection in Spain has been suppressed.

London, August 16th.

THE OPIUM QUESTION.

The negotiations regarding opium have progressed so far that the British Government has intimated its willingness to accept the proposals made by the Chinese Government on certain conditions.

THE MADAGASCAR AFFAIR.

The Under Secretary for Foreign Affairs, in reply to a question in the House of Commons, said that negotiations are still proceeding with the French Government with reference to the detention of Mr. Shaw, an English Missionary at Tamatave.

THE NEW BANKRUPTCY BILL.

In the House of Commons the Bankruptcy Bill was read a third time and passed.

RIOTS IN EGYPT.

Riots have occurred in Alexandria on account of the natives objecting to the sanitary measures which have been taken to prevent the spread of cholera.

Later.

The rioters in Alexandria have been dispersed by the Police.

Cholera is on the increase in Alexandria.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 6.45, 8.00, 8.50,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 6.45, 8.00, 9.15,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

Those marked with (*) run through without stopping at Tamurui, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

UYENO-KUMAGAI RAILWAY.

The Trains leave UYENO at 6 a.m. and 1.30 p.m., and KUMAGAI at 9.30 a.m. and 4.30 p.m.

The Fares are:—Special-class (Separate Compartment), yen 2; First-class, yen 1.20; Third-class, yen 60. The distance from Ueno to Kumagai is 38 miles.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, AUGUST 10TH, 1883.

Observatory of Daigaku, Moto-Fujiho, Hongō, Tokyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dotted line—represents velocity of wind.
The barometer is reduced to the freezing point and to the level of the sea.
• Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 10.2 miles per hour on Thursday at 5 p.m.
The highest reading of the barometer for the week was 29.931 inches on Sun eve at 10 a.m., and the lowest was 29.733 inches on Thursday at 6 p.m.
The highest temperature for the week was 90° both on Sunday and Tuesday, and the lowest was 71.4 on Friday. The maximum and minimum for the corresponding week of last year were 89.9 and 44.5 respectively.
The total amount of rain for the week was 1.541 inches against 1.945 inches for the corresponding week of last year.

LATEST SHIPPING.

FREIGHTS.

As usual lately, the freight Market has been without any features of interest, rates for coastwise business have receded lower than have ever been known, while nothing whatever offers off coast; ship masters have many of them decided to "lay up" rather than continue to run at such ruinous figures. For New York via Suez Canal, the steamship *Ascalon* sailed on the 11th instant, leaving the *Oxfordshire* occupying that berth; while for the same port direct, the British barque *Annie T. Marshall* is still loading at Kobe. For San Francisco the American ship *St. David* and the barque *Mary Winkelman* divide the berth, both circulated with quick dispatch.

ARRIVALS.

Louise, French bark, 303, Lemoine, 11th August, —Nagasaki 27th July, Coal.—P. M. S. S. Co.
Taganoura Maru, Japanese steamer, 448, Matsu-moto, 11th August, —Yokkaichi, 10th August, General.—Mitsu Bishi M. S. S. Co.

Essex, American gun-vessel, 619, Captain A. H. McCormack, 11th August, —Honolulu 8th July.

Richmond, American flag-ship, 14 guns, 300 men, 2,700, Captain J. S. Skerrett, U.S.N., 9th July, —Nagasaki 5th July.

LATEST COMMERCIAL.

IMPORTS.

There has been less doing in Yarns during the week, sales reported amounting only to some 550 bales. Prices for Shirtings are fairly maintained, although there have been but few transactions, but there is more enquiry all round. Mousselines have advanced, and there seems a better feeling as regards Velvets. Woollens generally are quite neglected, and there is but a small current business doing in Metals.

COTTON YARNS.

| | PER PICUL. |
|----------------------------------|------------------|
| Nos. 16 to 24, Common to Medium- | \$25.00 to 28.50 |

| Nailrod, small size - | 2.85 to 3.10 |

KEROSENE.

A barter sale of 5,000 cases is reported, otherwise no business has been done in Oil during the past week. Deliveries have been 21,400 cases. The *F. V. Troop*, *Normandy*, and *Antelope* have arrived with 135,350 cases, making our present stock some 740,000 cases sold and unsold Oil. Quotations must be taken as quite nominal.

| | PER CASE. |
|----------|-----------|
| Devoe - | \$1.65 |
| Comet - | 1.60 |
| Stella - | 1.50 |

SUGAR.

Although there is little or no business being done in any kinds, holders would no doubt make a concession to buyers if the latter could be found. Brown Formosas have been offered during the week at as low a figure \$4.35 without a transfer being effected.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$8.00 to 8.25 |
| White, No. 2 - | 7.50 to 8.00 |
| White, No. 3 - | 6.75 to 7.00 |
| White, No. 4 - | 6.00 to 6.50 |
| White, No. 5 - | 5.00 to 5.20 |
| Brown Formosa - | 4.35 to 4.47 |

EXPORTS.

SILK.

Trade in Silk has been active during the week, especially in kinds suitable for America. Settlements for the week 700 piculs of all descriptions, and prices generally are well maintained. Export to date is 3,045 against 3,081 last year, and the *Kashgar* leaving this afternoon should take some.

Hanks.—Some Shimomita and Shinshu have appeared; a few transactions have been entered into, but the quality of the Shinshu at present is not

very good, the parcels on offer being mixed and ca-ed.

Filatures.—A fairly current business has been done in these, and *Re-reels* of good quality are in demand.

Kakedas, have been taken to some extent for the United States markets, for Europe but little doing.

Hamatsuki, sorts have been eagerly taken at quotations, presumably to supply an imagined deficiency in coarse silks from China.

QUOTATIONS.

| | |
|-----------------------------------|----------------|
| Hanks—No. 11 - | \$5.50 to 5.50 |
| Hanks—No. 2 (Shinshu) - | 5.15 to 5.25 |
| Hanks—No. 2 (Maibash) - | 5.00 to 5.10 |
| Hanks—No. 2½ - | 4.90 to 4.90 |
| Hanks—No. 3 - | 4.60 to 4.70 |
| Hanks—No. 3½ - | 4.40 to 4.50 |
| Filatures—Extra - | 6.50 to 6.65 |
| Filatures—No. 1, 10/13 deniers - | 6.40 to 6.50 |
| Filatures—No. 1, 14/16 deniers - | 6.30 to 6.40 |
| Filatures—No. 1½, 14/17 deniers - | 6.10 to 6.20 |
| Filatures—No. 2, 10/15 deniers - | 6.00 to 6.20 |
| Filatures—No. 2, 14/18 deniers - | 6.00 to 6.10 |

| Re-reels—No. 1½, 14/17 deniers - | 6.00 to 6.10 |
| Re-reels—No. 2, 14/18 deniers - | 5.50 to 5.90 |
| Kakedas—Extra - | 6.25 to 6.45 |
| Kakedas—No. 1 - | 6.00 to 6.10 |
| Kakedas—No. 2 - | 5.50 to 5.70 |
| Kakedas—No. 3 - | 5.20 to 5.30 |
| Hamatsuki—No. 1, 2 - | 4.50 to 4.70 |
| Hamatsuki—No. 3, 4 - | 4.40 to 4.50 |

TEA.

There has been only a moderate business done since our last weekly issue. Settlements reaching about 2,040 piculs; of these the greater portion is presumably intended for the Pacific Coast Trade, and consists principally of grades below Fine. Arrivals have been on a larger scale, and the unsold stock is somewhat augmented. The market at the close is quiet, and quotations remain much as last given. The following are the shipments of Tea to the United States and Canada since last report. Per steamship *Enphrates*, sailed on the 3rd August, 35,640 lbs. Tea, viz:—6,595 lbs. for New York and 29,045 lbs. for Canada. The steamship *Ascalon*, sailed on the 11th August, 1,119,763 lbs. Tea, viz:—1,010,264 lbs. for New York and 109,499 lbs. for Canada. The only steamer on the berth for New York via ports is the *Oxfordshire*, rate of freight 50 shillings per ton of 40 cubic feet. The overland rate for the next three steamers has been reduced to 2 cents per lb. gross for the Eastern States and Canada, and \$9 per ton of 40 cubic feet for San Francisco. The sailing vessels *Saint David* and *Mary Winkelman* are loading for San Francisco, the former with despatch about the 28th instant, and the latter on the 7th proximo, both at \$6.00 U.S. Gold per ton of 40 cubic feet.

QUOTATIONS.

| | |
|-------------------------|------------|
| Common to Good Common - | \$13 under |
| Medium - | 14 to 16 |
| Good Medium - | 17 to 20 |
| Fine - | 21 to 24 |
| Finest - | Nominal |
| Choice - | Nominal |
| Choicest - | Nominal |

EXCHANGE.

A moderate business has been done during the week in Private Paper. The demand for Bank Bills has been small, and rates closed steady for the week at the following quotations:—

| | |
|-------------------------------------------|----------------|
| Sterling—Bank Bills on demand - | 3/7½ |
| Sterling—Bank 4 months' sight - | 3/8 |
| Sterling—Private 4 months' sight - | 3/8 |
| Sterling—Private 6 months' sight - | 3/8 |
| On Paris—Bank sight - | 4.61 |
| On Paris—Private 6 months' sight - | 4.72 |
| On Hongkong—Bank sight - | 1-16 0/10 dis. |
| On Hongkong Private 10 days' sight - | 4 0/10 dis. |
| On Shanghai—Bank sight - | 72½ |
| On Shanghai—Private 10 days' sight - | 73½ |
| On New York—Bank Bills on demand - | 88½ |
| On New York—Private 30 days' sight - | 89½ |
| On San Francisco—Bank Bills on demand - | 89½ |
| On San Francisco—Private 30 days' sight - | 89½ |

KINSATSU QUOTATIONS.

The following table shows the rate of the day, and the fluctuation during the past week:—

| | |
|--------------------------|------|
| Monday, August 13th - | 122 |
| Tuesday, August 14th - | 120½ |
| Wednesday, August 15th - | 121 |
| Thursday, August 16th - | 120½ |
| Friday, August 17th - | 119 |
| Saturday, August 18th - | 120 |

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c., is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

BARNET & FOSTER, Engineers,

23c, Forston Street, London, N.

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 25TH, 1883.

WEEKLY NOTES.

We referred, in a recent issue, to the different methods adopted by different Foreign Representatives in publishing the Regulations for Medical Inspection promulgated by the Japanese Government. The method of the United States Consulate had the merit of simplicity. It ran thus :-

TO AMERICAN RESIDENTS AND SHIPMASTERS.
[AM informed officially by the KENREI of Kanagawa, that SWATOW, China, having been declared by the Central Board of Health, a Port infected with Cholera, all vessels arriving from that Port will be subject to the Regulations for Medical Inspection promulgated by Imperial Decree No. 31, of last year.

(Signed) T. B. VAN BUREN,
Consul-General.

It would, perhaps, be hypercritical to point out that the application of this notice to American vessels is disputable. The Consul-General merely conveys to his nationals an intimation that the Japanese authorities have adopted certain precautions, and notified him of the fact. He does not say that ships of the United States will be required to observe those Regulations: still less does he declare that they will be subject to any penalties in the event of non-observance. Yet, from a practical point of view, his notification seems to meet all the requirements of the case, and would, doubtless, be quite sufficient but for the somewhat peculiar condition of foreign relations with Japan in these respects.

It would appear, however, that something more explicit was deemed necessary by the U. S. Minister, who has issued the following notification over his own name :-

TO ALL CITIZENS OF THE UNITED STATES OF AMERICA IN JAPAN, and to all COMMANDERS and MASTERS OF VESSELS bearing the flag of the UNITED STATES IN JAPANESE WATERS.

THE UNDERSIGNED, in accordance with the request of HIS IMPERIAL JAPANESE MAJESTY'S MINISTER FOR FOREIGN AFFAIRS, hereby notifies the CITIZENS OF THE UNITED STATES IN JAPAN and the COMMANDERS and MASTERS of all NAVAL and MERCHANT VESSELS OF THE UNITED STATES arriving from SWATOW, CHINA, at the Ports of NAGASAKI, KOBE, or YOKOHAMA, JAPAN, that the port of SWATOW, China, has been declared to be infected with CHOLERA, that all Vessels arriving at either of said Ports in JAPAN from SWATOW will be subject to MEDICAL INSPECTION, and that the Regulations for such Medical Inspection promulgated by the Imperial Decree of His Japanese Majesty's Government by Notification No. 31, dated the 23rd of June, sixteenth year of Meiji (1882), will be enforced in said several Japanese ports, in respect to all vessels arriving therein from SWATOW, and that the COMMANDERS and MASTERS of all UNITED STATES NAVAL or MERCHANT VESSELS arriving at either of said ports in JAPAN from SWATOW will be required, until further notice shall be given, to CONFORM in all respects to the PROVISIONS of the aforesaid REGULATIONS for the Medical Inspection of Vessels arriving from localities infected with Cholera.

Given under my hand, at the UNITED STATES LEGATION, Tokyo, Japan, this 21st day of August, 1883.

JNO. A. BINGHAM,
Envoy Extraordinary and Minister
Plenipotentiary of the United
States of America in Japan.

From the fact that this amended form is issued directly by the U.S. Legation, one is disposed to infer that the Consul-General took exception to the proposed change of terms. But this is scarcely probable. The authority to determine what methods shall be pursued in matters of this nature is unquestionably vested in the United States Minister, and if a departure from ordinary routine has been judged necessary in the present case, it is probably because the expediency of reissuing the same notice in different terms over the same signature seemed problematical. Mr. Bingham's notification is much more explicit than that of the Consul-General, though, we observe, it is equally silent as to the penalties to which masters of ships render themselves liable by refusing to comply with the Regulations. It says only that they "will be required to conform in all respects to the provisions of the Regulations." Like the German notification, however, it requires obedience to the Japanese Regulations themselves, not to a foreign Regulation founded upon them. This is the radical difference between the British method and those pursued by other countries. Which represents the correct rendering of the treaty, we do not

propose to discuss; but we shall be glad for the sake of England's popularity when she can see her way to be less singular.

PROBABLY the Editors of Japanese papers are not grieved that the reports of the trial, long drawn out, of the Fukushima suspects, occupies their columns to the exclusion of other subjects. Indeed, as is usual at this season of the year, with the Japanese as with ourselves, there are few local subjects of discussion; and the directors of vernacular journalism may be pardoned if they regard the arraignment of half a dozen enthusiasts among their compatriots, a public State trial, free access to the Court, and perfect liberty to report all proceedings, as a godsend. It provides them with subject matter of large extent and of considerable interest to their public, at the same time as it exempts them from the necessity of providing something else, and the consequent risk that they may be tempted into some of those scandals, libels, and diatribes against people in authority which are so frequent a source of loss of profit and liberty to those responsible for their utterance. As for the trial itself, it appears to be conducted with singular candor and propriety. It has now reached a stage in which Counsel for prosecution and defence are engaged in a sort of conversational debate in a style that is a little surprising to those accustomed to English methods of procedure. Another feature that must also strike frequenters of British Courts or students of British law reports, is the latitude of speech allowed—the invitations even to explain—to the accused. This lenience, however, is creditable to the Court, and appears to be in no way abused by those to whom it is extended. It is doubtless a part of the system inaugurated by the new Code of Criminal Procedure that prisoners, while enjoying the benefit of professional assistance, are at the same time permitted to act as their own Counsel. The result is a little confusing and, under easily conceivable circumstances, might become fatally obstructive. But in the present case, owing to the patient carefulness of the Judge and the decorous attitude of the prisoners themselves, no serious inconvenience has been experienced. The line adopted by the defence is not very ingenious. An attempt is made to show that the covenant by which the prisoners bound themselves to "overthrow the bureaucratic government" was cancelled before their arrest, and that the "bureaucratic government" referred to therein is not the Government

of Japan. Some discussion has also taken place about the exact signification of the word *ten-paku*, which is generally translated "overthrow." It is contended that this term is not less applicable to a legitimate, than to an illegitimate, programme of reform. Whatever these pleas may be worth, they are urged with considerable ability and persistence, and the result is awaited with interest by the foreign, as well as the Japanese, community.

A GENTLEMAN writing over the signature of "Jigai-hoken" (exterritoriality) complains, through the columns of the local press, that having missed the last train when on a trip to Tokiyo, and being "compelled to accept the hospitality of a Japanese merchant," he was disturbed in the early morning by a visit from the police, who came to enquire why his host had given lodging to a foreigner without informing the authorities. "Jigai-hoken" justly remonstrated against being disturbed, but was told that the enquiry was not addressed to him but to the master of the house, and the latter was ultimately fined 1.95 yen "for receiving a foreigner in his house without first obtaining permission from the police." The occurrence seems to have given much annoyance to "Jigai-hoken," and it must be confessed that, from his standpoint he had good reason for the criticisms he subsequently published and for the contrast he drew between the liberal treatment Japanese receive abroad and the illiberal treatment they sometimes meet out to foreigners in Japan. In the abstract there is not a word to be said in favour of the restrictions upon trade and travel to which strangers are subjected in this country. The incident which "Jigai-hoken" describes illustrates a most unhappy state of affairs. We do not, indeed, set much store by the fact that residence, or even lodging, outside the limits of the Foreign Settlement is forbidden in Tokiyo. That is easily explained. "Jigai-hoken" may not know that eight or nine years ago foreigners were virtually able to live where they pleased in the capital. To put up for three or four nights at any tea-house or inn outside Tsukiji was an affair of common occurrence. Of course this was irregular. Strictly speaking the Foreign Settlement was the only place foreigners had any right to pass the night, but the Japanese Government saw no reason to prevent what was in itself perfectly harmless. Strange as it may seem, however, foreigners themselves objected. A Tsukiji resident refused to pay his land-rent on the ground that the Japanese had broken faith with him by allowing others to live outside the limits existing when that rent was originally fixed. The case made a good deal of noise at the time, and had the effect of forcibly directing official attention to a state of affairs which, so far as the Japanese were concerned, presented no objectionable features. The immediate effect was a practical revival of restrictions which had become almost a dead letter, and which, had no such *contretemps* occurred, would soon have ceased to exercise

any authority whatsoever. Shortly afterwards this mischief was supplemented by another of a still more serious description. An attempt was made to compel the Japanese Government to extend to all foreigners the privilege of travel and residence in the interior. By an almost incredible twisting of the "favoured nation clause," the authorities were actually accused of violating the treaties because they allowed their foreign *employés* greater liberty than other Westerns! That such a pretext should have been gravely advanced seems grotesque; that it should have been entertained by the Japanese was even more absurd. Yet it was entertained, in a measure, for under the influence of their momentary alarm the Government consented to certain modifications of the passport regulations. But they drew in their horns in another direction. Even their *employés* were thenceforth obliged to apply for passports when they desired to go beyond treaty limits. It is to this short-sighted and unjust system of converting every spontaneous act of Japanese liberality into an official precedent or a ground of complaint that foreigners owe nearly all the inconvenient restrictions to which they are subjected to-day in Japan. Nothing can be gained by shutting our eyes to the situation. For good or for evil, Japan has obviously made up her mind that she will not agree to any alterations of the treaties in a sense favorable to our interests until we are prepared to meet her with similar concessions. Abuse will not help us. Inveective will not help us. Daily exhibitions of unreasoning rancour will not help us. The Japanese who are in a position to detect the difference between such unseemly exhibitions and our real mood are necessarily in the minority. What the bulk of the nation see is that we call upon them to do everything for us while at the same time refusing to do anything for them. Let it be granted that their own interests suffer most by their illiberality. To us that fact seems beyond question. But it is idle to talk of seemingly remote interests when sentiment is in question. That a Japanese gentleman residing in the capital should not be able to treat his foreign friend to the hospitality of a lodging for one night without the permission of the police, is a state of affairs that Japan may well be ashamed of. But the shame is not hers alone. Even if no direct evidence to the contrary were forthcoming, it would be absurd to assume that her illiberality is of her own choosing. The whole fault is seldom on one side, and Japan's conduct has shown, over and over again, that she is ready to sweep away every barrier which separates her from the Occident, provided only she is not called upon to make a permanent sacrifice of the rights that constitute national independence. She believes that the sacrifice will be permanent if she surrenders everything unconditionally. Is she justified in this belief, and should we ourselves act differently in her place?

THE Tonquin trouble hangs fire. Li Hung-chang has returned to his old post in Chili and, so far as China is concerned, things seem to

have drifted into a groove of indifference or hopelessness. M. Challemel-Lacour appears to be the only person actively concerned. His demonstrations in the Senate represent the sum and substance of French operations for the moment. But they are barren demonstrations. It is plain, as we conjectured some time ago, that the French cabinet is not unanimous, and we shall not be surprised to learn, at any moment, that M. Challemel-Lacour has carried his vapourings and indiscretions into private life. His last reported statement in the Senate is both ill-advised and equivocal. "Although there is not open war yet," the telegraph makes him say, "all the acts and language of Tu-Duc, and likewise of China and her Ambassadors, have been such that we must consider ourselves at war with Annam." On what conceivable grounds can war between France and Annam be attributed to the acts of China and her ambassadors? Hitherto the world's idea upon the subject has been that whatever part China takes in the trouble is designed to prevent, rather than to promote, war. Indeed the French Minister himself, elsewhere, in the very speech from which we have quoted, says he does not believe that the Tu-Duc has asked assistance from China, and seems desirous of confining the Middle Kingdom's responsibility to the acts of "a band of Chinese." We said three months ago, and we do not hesitate, to repeat to-day, that France's foreign interests are not in the hands of men who command much confidence. Everybody seems to be a little "exalted," from the Minister at Paris to his lieutenant in Shanghai. A correspondent of *L'Italie*, writing from Paris, under date 25th June, speaks of a rumour that M. Challemel-Lacour is not likely to hold the portfolio of Foreign Affairs much longer, inasmuch as Lord Granville has let M. Jules Ferry know, through Lord Lyons, that the diplomatic relations between France and England can scarcely remain upon a satisfactory footing if their conduct continues in M. Challemel-Lacour's hands. In support of this rumour it is mentioned that M. Tissot has received leave of absence for an indefinite period; that his First Secretary, the Count Lepelletier d'Aulnay is to be accredited to the Court of St. James's as Chargé d'Affaires, and that Lord Lyons, also, contemplates a temporary absence from Paris. Perhaps the best chance of a peaceable solution from the difficulties which French aggression has excited at this end of the world would be a change of Ministry in Paris. The Admiral who carried matters with such a high hand in Madagascar has resigned, and we are disposed to think that others might follow his example with advantage.

NOTES.

WE had occasion, a few days ago, to speak of an extraordinary ebullition of Chinese conceit, which the publishers of *Harper* found reason for circulating in their influential magazine. The authorship is attributed,—correctly enough, no doubt,—to a native of the Celestial Empire, named Wong Chin Foo, respecting whose pre-

tensions to credit as an eulogist of his native land we shall presently have a word to say. In their search for novelty and variety, the conductors of a popular periodical often accept strange material, and they are not expected to assume responsibility for the vagaries of their contributors; but it would seem that some rational limit ought to be fixed, if only to protect innocent readers from being led utterly astray by the eccentric or the wilfully mischievous. The essay of Wong Chin Foo may be a mere fantastic outburst of Oriental enthusiasm, or a work of premeditated deception; but, either way, it is the most unblushing compendium of sheer mendacity ever crowded by human ingenuity into less than five octavo pages. Its character, as a whole, can be estimated from a few of its imaginative gems, which we pick out at random;—premising that the writer's purpose is evidently to demonstrate the political and social superiority of China over every other nation now existing, or that ever has existed. The laws, he tells us, are ideal in their wisdom and majesty, and their administration is the perfection of purity. The method by which officials are appointed to "positions of distinction and trust," is "the very acme of human endeavour in this respect." After the installment of the candidates, as "the nation's honoured sons," they set themselves to work with an integrity which never varies, and which is accounted for partly by their love for the people, and partly by "good strong common sense among the masses." Another reason why "unimpeachable impartiality" prevails, and the powers of the magistrates are never abused, is found in the confidence of the community that, in the event of injustice, they can "secure immediate redress from those higher in power." This makes them "independent of their immediate superiors," and "insures an outspoken manifestation of their opinions," if any instance of official misconduct comes before their eyes. In fact, the proper application of the laws is in the hands of the populace, rather than in those of the dignitaries of State. We are informed, for example, that while there is a statute prohibiting larceny, and a punishment provided for that offence, no Chinaman who should "have stolen a loaf of bread by reason of being forced so to do by the pangs of hunger," even if "detected in the very act by the watchful guardian of the public peace," could possibly suffer the "additional wrong" of undergoing the penalty. Mr. Wong gives no hint as to the previous "wrong,"—that to which the wrong of punishment would be "additional." He simply says,—“Think you that, although tried and convicted of the crime, additional wrong would be heaped upon him by the carrying out of the sentence?” He himself thinks that among "the nation's honoured sons," as he calls the magistrates, there might be some so indiscreet as "to order the punishment inflicted," but in that case, "the lookers on would rise *en masse*" and add mobbery on a multitudinous scale to the robbery previously perpetrated, under the instigation of appetite, by a single citizen. We are called upon to "compare

this state of affairs" with the heart-rending spectacles witnessed in Christian lands, where thieves, when caught, are punished as often as not, and a peddler has been known to suffer "arrest for peddling without a license." Such a "cruel travesty upon justice" as this latter proceeding, would in China be "immediately avenged." The laws in that empire are framed "to enable the needy to help themselves." From what has been stated above, it might be supposed that our author would have us understand that the needy may "help themselves" to anything they can lay their fingers on, secure in the happy consciousness that, if called to account, no "additional wrong would be heaped upon them;" but that is not precisely his meaning. With the coöperation of the laws, the needy may "help themselves;" the deserving poor may "earn their living by every means not conflicting with the rights of their neighbour;" and all "controversies may be adjudicated free of cost to the parties concerned," without "rendering profitable the office of judge." These being the facts, it is pointed out that the plain duty of Western nations is to remodel their constitutions in imitation of that Asiatic empire which, "by the results here indicated, demonstrates mathematically her scientific attainments in political economy and Government wisdom." "In no other nation are political honours based upon scientific attainments in all branches of study as they are in China." Consequently, there is nothing left for us all to do but to turn Chinese, in principle if not by formal process of naturalization. There is no true system but that of the Middle Kingdom,—“a system which has stood the test for more than two thousand years;” and by which, alone, “can we ever hope for a pure and upright administration.” “The sooner Western nations adopt it, the sooner will the millennial day dawn upon our beclouded vision!”

This is not burlesque, as a hasty reader might imagine it to be, but a formal and elaborate plea for universal recognition of China's moral, intellectual, and political superiority to the nations that are made up of the rest of mankind. And now let us inquire for a moment into the antecedents of the Oriental sage to whom the liberal editors of *Harper* have accorded the unusual privilege of turning history and truth upside down in their columns. The name of Wong Chin-Foo ought not to be unfamiliar to those whose memory extends back half a dozen years. In 1877 he first came forward in New York as a shining light of philosophy, and for a considerable time scintillated through the cities of the United States, shedding illumination, by the way, upon innumerable dark questions of morality and religion. Wong Chin-Foo was only a portion of his name,—the nucleus, one might say; for twenty-one additional syllables followed, like the tail of a comet, obedient and ornamental, if not capable of utilization. The burden of his discourse was to prove the lofty ascendancy of Buddhism over all forms of faith; not forgetting that social supremacy of his native country, which we again find him pro-

claiming in 1883. It is, indeed, quite within probability that his communication to the *July Harper* may be one of his early addresses, or a fragment thereof. From descriptions published when he was passing through the period of platform notoriety, he seems to have been a rather commonplace, but not wholly ineffective instrument of some enterprising speculator. He wore a dress which, the newspapers announced, was "in strict conformity with the customs of his country, and exhibited that taste and richness that mark the Chinese upper classes." Inasmuch as all of us have not enjoyed the opportunity of learning how members of the Chinese upper classes clothe themselves, it may not be amiss to recall that his costume consisted of "a coat and waistcoat of black velvet embroidered with silk, a silk gown reaching to the ankles, shoes of velvet elegantly worked in coloured silk, a black skull cap for his head, a gold chain for his neck, and a diamond clasp for his scarf." Thus arrayed, he appeared night after night, and, after introducing himself by the whole of his name, "with a musical cadence to his voice, both marked, and pleasing," plunged into an animated narrative of his adventurous life and exciting experiences. He was twenty-six years of age. In 1869 he went to Harvard University, Massachusetts, after graduating at which institution he returned to China, was immediately taken into favour by the Emperor, rose to the station of chief translator, and was "admitted to membership in the Imperial household." But his ways were not long ways of pleasantness. The dynasty of China suddenly changed,—so he said; and "upon the succession of the Tartars he became involved in a conspiracy, and was obliged to seek safety in flight." His daring exploits and marvellous escapes were recounted in detail, and the conditions under which he was awaiting "a change in the Chinese Government" were felicitously explained.

This closed the second section of his entertainment, which we take to have been divided into three parts;—first, the announcement of his complete name, in twenty-four syllables; next, the recital of his personal history, and finally, his examination into the relative merits of Chinese and Western principles, resulting in a triumphant vindication of the former over all rival theories or systems. The exuberant fancies which embellish his arguments in *Harper* were not wanting in these earlier productions. Anglo-Saxon convictions respecting the habits, beliefs, present aspects, and future expectations of his countrymen, received such staggering blows as could be delivered only by one who was determined to let no trammels of veracity impede his resolute purpose. "Cruelty to man or beast," he averred, rarely stained the reputation of his race. "Children were almost worshipped in their youthful innocence." "Anger was the growth of foreign contact," and no Chinaman had been heard to swear, "unless in the English language, after he had become demoralized." That cats or dogs were eaten by the poor he "had never heard until told in America." "The Chinese cannot get divorces easily," and so they "do not

marry recklessly, like people in Christian states. Above all, they are a pitiful race, and are charitably inclined to see all men lifted to their own happy level; wherefore, while "very grateful to foreigners for sending them missionaries, they desire to send some in return, so that all the world may learn the value of the true principle of religion,—that is, Buddhism." That is the kind of man that Mr. Wong Chin Foo is, or was seven years ago. He may have renewed himself physically, in the interval, in accordance with a well understood scientific theory, but he appears to be mentally, in 1883, much the same as he was before. That so impudent a humbug should have been tolerated, even as an abnormal show, outside the ranks of Barnum's monstrosities, is rather to be regretted, but hardly to be wondered at, considering the public's omnivorous greed for any form of imposture; but that, after once fulfilling his rôle of mountebank, and sinking out of sight, he should come to the surface again, and go through the same old pranks and capers under the patronage of a highly respectable magazine, affords a somewhat melancholy proof of the eagerness with which civilized humanity submits itself to be imposed upon by the very clumsiest of tricksters. The Wongs of this world may always reckon upon popular credulity enough to carry them comfortably through the course of their worthless lives.

The Echo du Japon of the 20th instant publishes what it may well call "A Curious Document." It runs as follows:—Translations of a placard by Lun Vinh Phuc, chief of the Black Flags, sent to Mr. Chenieux, Consul of France at Hanoi, by the Tong Doc, Chief of the Annamite police, who found it affixed to the Southeast gate of the citadel on the 10th of May:—1883.

"The sturdy warrior Lun issues the following manifesto to the French:—

"You are nothing but brigands, without the pale of the law. Other nations take no account of you."

"Wherever you go, you say that you go to teach the true religion. That is a lie, intended to draw towards you the respect of the natives. You lie, again, when you say that you come for trade. You come to steal our land."

"You have the heart of a vile animal, and your conduct is that of a savage beast."

"Ever since you have arrived in the kingdom of Annam you have done nothing but take fortresses and assassinate our mandarins."

"Your crimes are as numerous as the hairs on your heads."

"You take possession of our Custom Houses, and lay your hand on all our products. This delinquency is death-worthy."

"You are the cause of the misery of the people; and through you the country is on the ragged edge of ruin."

"All the populace is enraged, and heaven is crying 'Vengeance!'"

"This day I (the Tao) have received orders to make war upon you. I have led my troops to Phu-Hoai-Duc. My flags and spears darken the sky. My guns and swords are as numerous as are the trees in a forest. I have made all these arrangements to come and kill you and blow up your infernal concession (*repairs*).

"But public interest must be considered before anything else. I will not allow myself to take for field of battle the outskirts of the town of Hanoi, for fear of doing damage to the fortunes of its inhabitants."

"For this reason I warn you that, if you are strong enough, you have only to bring your French troops to Phu-Hoai for me to take their measure."

"If you are frightened: if you have not courage enough to come along: all right. Cut off the heads of your Consul, your Commander-in-chief, your Colonel, and your Captains, and send them to me at my house."

"Next, give up the fortresses, go back to Europe, and then I will have sufficient pity not to massacre you all."

"If you are too long in coming to me, or if you fail to come at all, I will bring down my forces, and will kill you to the last man."

"Consequently, reflect!"

"The 4th day of the 4th month of the 36th year of Tuduc. (L.S.) Lun Van Phuc."

The Frenchman who forwarded this Homeric document to Europe says:—"We will take care not to answer this lunatic challenge. A sortie now would be a folly."

THE climate of the Channel Islands so much resembles that of Japan that the speculative person—the word being used in the abstract sense—wonders why the soil and gardeners of these islands should not produce between them Jargonelle pears instead of the woody and fibrous abominations which are dignified by the name of "pears" in this region. With improved methods of culture and careful grafting, the fruit of Japan may doubtless be brought to the perfection of that which Pomona prides herself on in Jersey, Devonshire, and Normandy orchards. Already her tubers, even of foreign origin, can defy the competition of the world. This year's early potato crop has been plethoric; and the consequent cheapness of the vegetable is extraordinary. On the average it costs about half a cent or less than a farthing per pound. Now, Jersey sent to London last year over forty thousand tons of early potatoes. The earliest market realised about 30s. a ton to the rearers, or at the rate of about six and a half cents per pound.

PROBABLY during last week the local heat was sufficient to satisfy the most cold-blooded individual, were he even a jelly-fish. But the recent heat of Yokohama and its environs has been outdone by that of Berlin, where Fahrenheit has been registering 100 degrees in the shade.

LORD DEAS, a well-known Scotch judge, was trying a man for sheepstealing recently, when the Public Prosecutor made the remark that it was so difficult to trace stolen sheep in Aberdeenshire that it would require almost a special Providence to assist the police. "Well," remarked his lordship, "if it requires a special Providence to get any trace of stolen sheep in Aberdeenshire, I should not like to have many sheep in it."

THE discussion that has taken place regarding overhead telegraph wires in London has not come a moment too soon. In the numerous

half-rotten and disused wires hung up in the air there is certain death or mutilation for those who happen to be passing under when they break. If the Metropolitan Board of Works cannot order these wires to be placed underground, they can at least find out and register the names of those to whom they belong, in order that the owners may be made liable for any damage done by them to individuals.

IN the summary of the *Ceylon Observer*, written immediately on the arrival of the last Australian mail, we read that the news that the Home Government had refused to sanction the annexation of Eastern New Guinea created quite a sensation throughout the Australian Colonies. Even remote Western Australia was roused to send in a protest through Governor Napier Broome, and strong representations are to be made by Victoria and Queensland, which are chiefly interested, supported, however, by New South Wales and New Zealand, and, we believe, also by the South Australian and Tasmanian Governments. It was shrewdly suspected that the refusal to annex New Guinea arose out of the simultaneous pressure with reference to the New Hebrides, Solomon and other Pacific groups of islands, and, if so, it will probably be found that Sir Arthur Gordon's well-known opposition to annexation has carried weight with the Ministry. Be that as it may, the Australian colonies have clearly gone too far to recede. The programme now will be the annexation of all islands between Fiji and New Guinea, the possession of which by any other European Power would undoubtedly form a menace to the Australian Governments. Already, it seems, the French are trying to form a settlement in the New Hebrides, and so far the mail brings the answer to one argument urged by Mr. Gladstone. However, it has since come out that the Home Government would withdraw its objection if the Colonies only agreed to federate with reference to the expense and control of the annexed islands, at the same time agreeing to use a common tariff and to adopt common measures for defence. Out of evil, good may come, if through the delay over the New Guinea annexation, the grand cause of Federation gets pushed on. The Melbourne press with its usual enterprise had started special expeditions to explore and report on New Guinea—that of the *Argus* being headed by Capt. Armit, F.L.S., a well-known Queensland explorer and clever writer; while the *Age* had secured young Mr. Morrison, whose travels among the South Sea Islands and walk across the Australian continent have brought him into notice. The *Age* refers to the expedition as follows:—

The unknown interior, for climatic reasons dependent on the altitude, is believed to be the most suitable place for an English settlement. The natives of the interior are also thought to be more civilized than those dwelling on the coasts. On these and many other points of like interest we may shortly expect to receive valuable information from Mr. Morrison. A walk of 300 miles across the island from east to west, unless there are unforeseen difficulties in the way, ought not to be a very formidable matter to a man who has tramped from the Gulf of Carpentaria to Melbourne. To be the first white man to penetrate into the silent wilderness, and see the teeming soil wasting

itself in magnificent but useless vegetation; to scale the topmost point of the Owen-Stanley range, and to be the first to view the glorious prospect of emerald valleys, of running waters, and of wood-crowned heights which that eminence must afford, to say nothing of the delight of being able to disclose the hidden secret of this "dark continent," will be a unique experience worth having lived for. The joy should be akin to that of

A watcher of the skies
When some new planet swims into his ken.

The question of the expense of annexation is, after all, the rock ahead of the Colonies, for, as "Egles" of the *Australasian* shrewdly argues:—

Looking on calmly from afar (mentally) one can reckon up pretty accurately that the gush for annexation will cool down presently. It is all lovely and joyous and serene until the time comes for paying the piper. Then those who have been dancing will begin to count the cost of the music. A General Australasian Protectorate—a kind of joint-stock kingship of the Cannibal Islands—is a rosy proposal, but just wait until some one has to adjust the contribution of each of the governing powers. Won't there be a snatching up of marbles, and a crying out of "I won't play any more!" This narrow jealousy—the dread of paying two-pence more than one's share—has done more to keep the colonies apart than anything else. Indeed, the first symptom of give-and-take was displayed in the conclusion of the Postal Union Conference. But despite that cheering sign, economic Parliaments will so wrangle over the contribution clauses that the idea of a joint government of detached islands is very remote and shadowy. And the cost would really be no trifling matter. Protectorate implies armed defence, and counting up the cost of Australasian military works (incomplete), where such are concentrated and comparatively easy, it would be a wild calculation to estimate the expense of defending a group of scattered islands.

On the other hand, New Zealand had already announced its readiness to bear a fair share of the cost. The latest telegraphic news from Australia reports the downfall of the Queensland Ministry on the question of Syndicate Railways, while the Opposition leader (Mr. Griffiths) is reported to be also opposed to Indian coolie immigration, although sound in reference to the annexation question. Finally railway communication between Melbourne and Adelaide is expected to be completed by 1886, so that the Exhibition of South Australia in 1886, the jubilee year of the colony, may have the full benefit of this advantage. Ere long it will be possible to travel by rail, from Western Australia right round the continent to Queensland.

REUTER has been needlessly murderous lately. It is a question, even now, whether his attack upon the life of the Comte de Chambord was successful. It would appear not, as the Orleans Princes have "gone to Frohsdorf." And now Cetewayo, who was reported killed on the 1st of August, has defeated his rival, Usibepu, and is recovering from his wounds.

Our telegraphic advices through Reuter's Agency inform us that the Chinese Government has ordered two more corvettes at Kiel. They will probably be on the *Ting Yuen* pattern. China evidently means to be armed for any contingency.

THE telegraph lines between Yokohama and Nagasaki were broken down from seven o'clock on Saturday night to ten o'clock on Sunday morning, shortly after which we learned that a severe gale, which commenced on Friday night (17th), had visited Nagasaki, and that the Mitsu Bishi mail steamer had been detained in

consequence. The gale was also felt in Kobe, and there is no doubt that the gusts of wind experienced in Yokohama during the early part of the week were connected with the atmospheric disturbances referred to above, especially as the direction of the storm was towards this port. The value of the Government weather reports as published in these columns daily is forcibly illustrated by these circumstances, as on Saturday morning the report wound up with the announcement that the S.W. Coast from Shimonoseki round to Kochi had been "warned." According to our information Shimonoseki experienced the worst of the gale.

WE regret to learn that cholera is on the increase in Egypt. With singular irrelevance and ill-nature, some of the Parisian papers ask whether cholera is one of the reforms introduced by the English into the land of the Pharaohs?

THE *Echo du Japon* of Saturday affirms that H.E. Mr. Tricou will not return to Japan; and that Mr. Sienckiewitz, formerly French Consul at Hongkong, and more recently Consul-General at Alexandria, a post that he occupied during the time of the British expedition to Egypt, has been nominated Minister Plenipotentiary for the Republic in Tokijo. The *Echo* has been informed that this intelligence was known here since the 4th instant, and adds:—"The person who gives us the information is astonished that the French Consul who, as every one knows, takes a peculiar interest in the *Echo du Japon*, did not communicate it to us many days ago."

DURING the thunderstorm of the 15th instant, says the *Nichi Nichi Shimbun*, the network of telegraph wires at the Central Police Station, in Kobiki-cho, Tokijo, was so violently affected by atmospheric electricity that the whole building was shaken. Lightning fell in an adjoining street, and the whole neighborhood quivered with the shock. One of the gas pipes in the Telegraph Office was broken, and the gas escaping burst into a blaze which was extinguished with difficulty by the officials on the spot.

THE *Daily Press* tells us that carrier pigeons in China are, as of course elsewhere, frequently molested by birds of prey; so, to ward off this danger, "a plan which is not wanting in originality has been put to the test. To the root of the pigeon's tail a little apparatus, consisting of slender bamboo tubes, is attached, being fastened firmly to the feathered traveller's body by means of threads passing beneath the wings. As the bird flies along, the action of the air through these tubes, ten in number, produces a shrill whistling sound, sufficiently audible to keep birds of prey at a respectful distance. The pigeon thus protected is in no way inconvenienced by the apparatus, the weight of which is hardly perceptible, and at present the plan has, it is stated, been found to answer satisfactorily. The only drawback to it is that some pigeons—nervous ones probably—are quite upset by the strange appendage fixed to their tails, and

find considerable difficulty in accustoming themselves to the shrill whistling sound. Their perplexity is very comprehensible; but perhaps in time they will be brought to understand the advantages of a system which, on a first application, very naturally puzzles them." This is all true, except as regards the novelty of the device. It is old—perhaps as old as the Chinese Wall itself. In the stillness of early morning, the visitor to Peking, if he happens to be awake, will hear and perhaps be startled by a noise, in tone not unlike that produced by big Japanese kites, rushing through the air, approaching and receding in succession in mournful cadence. It is produced by the flight of flocks of pigeons, soaring and wheeling about, each bird provided with one of these instruments. The effect produced is far from unpleasant. It has certainly been the subject of a good deal of wonder and guessing to the non-Chinese speaking European sojourning in the Manchu capital.

THE British three-masted schooner *Formosa* experienced heavy squalls all round the compass, and strong adverse currents between the Lammocks and Hongkong. On the 7th instant, when in company with an American barque, she saw that some accident occurred to the forward gear of the latter, as she went away to the N.E. with only a topsail set forward.

THE anomalous condition of British rule in Egypt is accentuated, oddly enough by the cholera, for which, as we remarked the other day, some of our good-natured French friends would make that rule responsible. And it is regrettable that English authority has not been asserted with sufficient beneficent force to check the scourge which now threatens to infect the whole of Europe and perhaps the world. "A dozen constables," we are told by *The Times* correspondent at Alexandria, "under intelligent officers, might, four months ago, have prevented the epidemic which has destroyed two per cent. of the Damietta population. . . . Rendered secure by the presence of English soldiers and the indifference of the people, the members of the Government close their eyes, live in a fool's paradise, and neglect all ordinary precautions." "This" pertinently remarks the *St. James's Budget*, "is the mischief of our ambiguous position in Egypt. Left to themselves, the Government would be bound to take action, if they would avert not only plague but disaffection; but as it is they can shelter themselves under the thought that the English will see them through somehow. This is a very unsatisfactory state of things; and it becomes increasingly plain that, if we do not intend to withdraw from Egypt, we shall have to accept the full responsibility of seeing that the country is properly governed."

ON Tuesday, in H.B.M. Court for Japan, before Russell Robertson Esq., Acting Judge, William Patterson was charged for the eighth time with being drunk and sleeping in the streets. The

prisoner begged His Honour to "give him two years," as the jail was the most comfortable place he knew, and he would promise to be good when he came out. His Honour passed a sentence of six weeks' imprisonment with hard labour, at which verdict the prisoner seemed much dissatisfied.

We read in *The Times* a Paris telegram dated the 4th of July in which reference is made to the sad death of Commandant Revière. It is added that some Japanese officers have obtained permission (from the French Government?) to accompany the French expedition to Tonquin.

THE *Whitehall* remarks that recent news from the Transvaal reads something like a Chapter from *Lothair*. There seems to be more gold than the diggers know what to do with. Two of them, says one report, "actually throw away lumps of quartz which they have not the necessary means of crushing, but which have been proved to contain 4 oz. of gold to the ton." At the same time, it may be remarked that if the diggers have no handy means of crushing the stone, it can hardly be expected that they are to carry about a ton of quartz because of a possibility that it may contain 4 oz. of gold. Indeed, under the circumstances, it is difficult to think what the diggers could have done with the quartz unless they did throw it away. But even in the "rubbish" nuggets weighing 20 or 30 oz. are found. If this really be so, we should strongly recommend the diggers to stick to the "rubbish," and let the tons of quartz take care of themselves. The Boers, it is said, object to gold-mining being prosecuted on their farms; but we fear that sentiment will avail but little when once the gold adventurer finds his way to the ore fields. The Japanese used to be adverse to gold-mining on the plea that it was robbing their successors of the riches of the earth. They have, however, become converted in this matter, and are now content to let the future take care of itself.

MR. GEORGE W. CLARKE, of the China Inland Mission, stationed in Yunnan, gives some interesting particulars on the introduction of opium culture into that district and Kweichow. The poppy was first grown there some time ago in small quantities for medicinal purposes. A record was discovered by Sir R. Alcock of its cultivation in Yunnan in A.D. 1736; but after diligent research Mr. Clarke has established, at least to his own satisfaction, that it has only been imported and cultivated for smoking during the last forty or fifty years. One old man, who applied to the writer for an anti-opium medicine, said that he had smoked the narcotic for the last mentioned period, commencing the practice when he was only thirteen years of age. In his youth no native opium was smoked. The drug used was foreign and, said the aged transgressor, "it was brought by Cantonese, and sold in small pills as medicine at thirty cash apiece. It was a peculiar stuff. After a short time of taking these pills you could not get on without them."

The missionary asked a native of a city near the border of Kweichow, who is forty years old, this question: "If you had not previously cultivated the poppy in Yunnan, whence did the people get the seed?" He replied, "My father told me that, about 1835 some seed was brought from Canton, and a few people began to cultivate small patches, and when asked what it was, they would give a false reply. At that time foreign opium was sold for about four ounces of silver an ounce, and the native drug for one ounce of silver an ounce. In course of time the consumption of both opiums increased, and their prices decreased because the native opium drove the foreign out of the market." The present price in Yunnan-fu is, for foreign opium its weight in silver (very little is used), native opium about one-tenth of its weight.

The evil habit of opium-smoking has spread in the districts mentioned with alarming rapidity during the last four or five decades. Our informant has been told by an old man of Kweichow-fu, how the Cantonese used to smuggle it to that city and sell it secretly; that about 1840, those who used it had to secrete themselves; that some found smoking had their property confiscated and were banished; and that a certain military mandarin cut off the upper lips of some of his soldiers addicted to the vice, or branded their cheeks with a hot iron. About this time the Viceroy of Yunnan killed his own son for smoking opium. During this potentate's time, opium merchants bought opium in the west of the province and had it conveyed to the city in coffins. Both foreign and native opium had to be sold secretly, and those who used it were not respected. The foreign drug led the way, but now native produce has driven it out of the market. And not only so, but millions of ounces are annually sold to the Cantonese who once brought the foreign drug into these provinces. Mr. Clarke believes that it is only a matter of time, when the foreign opium will be driven out of China by the native drug; because the ruined smokers will demand a cheaper article to supply their craving; and one presumes that Indian opium cannot be sold in the interior or seaboard provinces at the same price as the native drug.

Our writer exclaims:—"What terrible havoc opium has made in these provinces!" Forty years ago perhaps one person in ten thousand used it; but now probably seven-tenths of the men, perhaps one to three-tenths of the women, and a good many boys from ten to fourteen years of age, smoke it. He once employed eighteen coolies from Kweichow-fu to Ta-li-fu (thirty-seven days' journey), and seventeen of them smoked the narcotic. It would be safe to affirm that nine-tenths of the coolies engaged in the provinces of Kweichow and Yunnan are slaves to the pipe. The result is poverty, weakness, light loads at high rates, and thus both the imports and exports are somewhat retarded. Forty years ago opium had to be sold secretly, but now it is sold publicly. In front of the

Examination Hall in Kweichow-fu, daily there are at least a score of men who sit selling opium; each man has a basket containing several basins of opium; it is sold for eight-pence an ounce. In the rear of these men one sees the fruits of their trade, crowds of lazy, dirty fellows gambling, or selling their clothes, and old-clothes sellers. Mr. Clarke has often met men carrying a basin of opium about the main street for sale: the basin has a tax paper pasted on it, and a bit of straw stuck in it as a sign "for sale." In Yunnan-fu it is not thus sold, but there are many shops wholly devoted to the trade; whilst scores partly deal in the drug. At times one may see the counters of the wholesale shops covered with parcels and pans of opium being repacked, and many Cantonese or Hu-nan coolies waiting with their baskets to carry it away. Only those who are buried among the Chinese a thousand or more miles from Hankow, and who inquire into the working system of the native opium trade, have any idea of the great number of persons engaged—bankers, merchants, money-exchangers, pedlars, and a legion of scouts, who, hunt up the drug for buyers from Kwang-tung, Fuh-Kien, Cheh-Kiang, Hu-nan, and other provinces.

According to the *Choya Shimbun*, the sailing ship *Jinso-Maru*, of the Kiyodo Unyu Kwaisha, is reported to have been lost off Kagoshima on the night of the 21st instant, while on her way back from Karatsu, in Hizen, with a cargo of coal consigned to the Naval Department. Quite recently she had been repaired in the Yokosuka Dockyard, and was insured for yen 7,000 in the Tokiyo Marine Insurance Company. We regret to say that inquiry made at the Union Shipping Co.'s office proves that the rumour is substantially correct. The actual site of the wreck was a place called Fukumoto-mura, Yamagawa, about twenty-five miles from Kagoshima. One man is reported drowned.

THE *Brussels Nord*, whose relations with the Russian chancellerie are reputed to be very intimate, has received a letter from St. Petersburg which seems to annihilate the theory recently enunciated that Russia is likely to act as mediatrix between France and China in the Tonquin matter. According to this correspondent, apart from questions of domestic policy which compel her to maintain the greatest caution, Russia's interest is to remain a mere spectator of a quarrel, not one of whose issues can be to her advantage, "without expending a man or a rouble." The writer scouts the opinion of any war. The Chinese themselves are too well advised to let matters come to any such extremity. Indeed, he expects that China will make concessions whose result will be to enfeeble her in the eyes of her neighbours and her own people—a result which is wholly conformable to Russian interest. The more considerable the weakening, as for instance such as would ensue from an unsuccessful war with France, the greater would be the advantage that would accrue to Russia. On the other hand, this

writer argues, the action of France in Indo-China, which for the moment at least "attracts the centre of gravity of the diplomatic action," whatever that may mean, of the British Government in that direction, liberates Russia for some time to come from the worry that the jealous policy of Great Britain in Central Asia causes her. On the other hand, if she were to meddle in the affairs of Tonquin, Russia would only "expose herself to lose the modest results from which she ought to benefit to pursue others more than problematical, and which cannot in any event be more advantageous for her." The *Nord* correspondent concludes with the distinct assertion, whether inspired or not, that Russia's fixed intention is to remain neuter, in all respects, between France and China, at the same time carefully watching the course of events.

THE *Galley of Lorne*, Captain Pomeroy, which arrived here on the 23rd instant from London and Hongkong, brought in the three-masted schooner *Guam*, Captain Marns, bound from Takao to this port with a cargo of sugar. The *Galley of Lorne* fell in with the *Guam* on the 20th inst., in lat. 31 N. long. 132 E., and the schooner having been dismasted and otherwise disabled in a hurricane three days previously, the steamer took her in tow. The *Guam* had previously been in tow of the bark *Helena*, but the hawser having parted, the latter vessel kept on her course. The *Guam*, left Takao on the 1st August, and had light winds and calms for the first four days; on the 6th she experienced a heavy S.W. gale, and light winds again till the 17th, when she met a hurricane from the E.N.E., in which she lost foremast, bowsprit, and main top-mast, and sustained various damage to hull and decks. During the hurricane Captain Marns was injured by having his hands and feet crushed.

THE telegram in another column which reports the decrease of cholera in Egypt is eminently satisfactory, inasmuch as it is evidence that the sanitary measures introduced by the authorities are beginning to bear fruit, and, having commenced, may be expected to continue. The message states that the epidemic has almost disappeared from Cairo, and is decreasing in the provinces. Damietta, the stronghold of the pestilence, is not mentioned, but we shall probably learn more in a few days.

OUR telegraphic news of the 23rd instant announces the election of another Home Rule member of Parliament, the ranks of this strong element in the House having received another accession by the return of Mr. Lynch for Sligo by a large majority over his opponent.

MR. BLANCSEUR, a member of the Colonial Council of Saigon, has extraordinarily liberal ideas, for a French legislator, of the potential privileges of the press. He intends to ask the Council to open a credit to support the travelling expenses of a certain number of representatives

of newspapers who will have to be present in Tonquin during the probably approaching operations. For obvious reasons that proposition appears too extraordinary to be entertained for a moment; yet there is no knowing what extent of liberality, or the reverse, a Republican Government in a French colony may not achieve.

GENERAL BOUET is said to have ordered for signal-service in Tonquin a number of heliographs (*appareil de télégraphie optique*). They, together with three small gun-craft, for river service, are on their way to Tonquin, if they have not already arrived there, from Toulon, on board the French transport *Saone*.

A FRENCH journal, quoted by the *Echo du Japon*, announces, "from an English source," that the Chinese Government on learning that the French fleet will bombard Hué in case the demands of the Republic are refused, has declared that it would consider such an action a *casus belli* and would instantly take reprisals.

THE mania for striking, says a San Francisco paper, has become epidemic among the Chinese. Following the example of the Chinese shoemakers of this city, the laborers who have been employed on the California and Oregon Railroad have struck and are holding out with considerable obstinacy. Many members of the gangs have scattered through the mountains, with a view to prospecting for mines, while others have gone down into the valleys looking for work on the ranches, where laborers are now in demand. It is less than a year since the Immigration law went into effect, and the nightmare of cheap Chinese labor will soon be a thing of the past.

A WHITE marble memorial to Commander Wyatt Rawson, R.N., has been placed in the Royal Garrison Church at Portsmouth. Commander Rawson—whose last words, "Didn't I lead them straight, General?" will be long remembered—served as naval aide-de-camp to Lord Wolseley, by whom and the personal staff in Egypt the tablet has been erected, and, after conducting the army across the desert by the light of the stars, fell while with the second division at the Battle of Tel-el-Kebir. The tablet bears an inscription stating that it is erected "as a token of affection and esteem by Lord Wolseley and the members of the personal staff."

THE *Lancet* has made the discovery that there is "no more powerful apparatus for the conveyance of disease than a book." It mentions measles, scarlet fever, diphtheria, and other ills to which the juvenile community are especially prone as being easy to catch from books. The germs of disease may lie for months or even years between the leaves of books that are seldom handled. The *Lancet* does not recommend that books be excluded from schools nor that bound literature should be avoided. Indeed, it does not make any recommendations on the subject. Perhaps it would be well to sprinkle

books frequently with a weak solution of carbolic acid or some other disinfectant, but probably the most practical remedy against this storing up of disease germs would be to keep the books well aired.

TELEGRAMS from Wimbledon in San Francisco papers to hand by last mail, announce that the British team won the great match by 45 points, the total scores being—British, 1,951; Americans, 1,906. This means for our American cousins "defeat, but not disgrace." Particulars in another column describe the great cordiality that prevailed, and how Colonel Howard, in a little speech for the Americans, remarked that the latter "had enough backbone left in them to cheer the winners."

"CHICKEN-THIEVES" are just now very industrious. Several abductions of fowl are reported. The fowl-house at No. 38, Bluff, was emptied the other night, and not by a fox; for fourteen fowls, and an equal number of ducks and ducklings were carried away. There were no geese about, the birds which Sir Boyle Roche, or a countryman of his, described as "the best watch-dogs in the world," otherwise the inmates of the house might have been put on their guard.

THE *North China Daily News* understands that the French fleet will not go to Shanghai; the large vessels will go to Nagasaki and the smaller ones to Chinese ports. The *Triomphante* and *Tourville* have arrived to form part of the China squadron, and the *Kersaint*, now temporarily detached to that squadron, will return soon to the Tonquin fleet under Admiral Courbet.

MR. NIXON, in England, has shown what can be done in the way of tricycle speed by winning the 100-mile race in 7 hours and 23 minutes. This shows an average speed of fourteen miles an hour.

THAT there are some good points along with many bad ones about the Salvation Army seems to be admitted on all hands, and an effort is being made to develop the good and get rid of the bad in the establishment of what is to be called the "Church Army." A large meeting has been held in Lord Mount-Temple's house, in Great Stanhope Street, to hear details as to the working of the new "Army," which, if it be carried on in the way and in the spirit then indicated, may do a deal of good among the lower classes, who are difficult to reach by ordinary methods of working.

ONE reason says the *Alla*, for supposing that California will be found to possess universal advantages for rearing silk worms is that the climate is a matter of great importance, and that the dry Summer climate is just what is required. The silk worm, as a rule, objects to damp, moist weather, sudden changes of temperature, and clouds charged with electricity; when these occur in the fifth age, or after the fourth sleep or torpor, the mortality becomes very great, the

worms are attacked with a *flacherie*, or wasting away, they refuse to eat, and die. In China the hatching of the eggs of the silk worm takes place about the 20th of April, and according to Chinese account the rearing should be accomplished, if the weather is warm, say 69° to 74°, in 23 to 24 days. A Chinese work on sericulture is quoted from as follows by a Shanghai exchange: "If the meals of mulberry leaves be given frequently the worms will advance rapidly to maturity; and if seldom, they will be long in arriving at the mature age. If this stage be arrived at in 25 days it is calculated that each hurdle of worms will produce 25 ounces of silk; if in 28 days then each hurdle will produce only 20 ounces; but if the worms are a month or 40 days in coming to maturity, then each hurdle will only give ten or a dozen ounces; when the silk worms fall into and awake from their torpor at irregular intervals the silk will be deficient in quantity. After the great (fourth) torpor, silk worms only require 15 or 16 meals before they arrive at maturity." And these must be very large ones, as may be judge from the following remark: "When the worms are aroused from their third torpor, put a pound of them in one basket from which you will afterward obtain eight pounds' weight of cocoons."

FUNNIER than anything Mark Twain ever wrote was the remark of the melancholy clergyman of Pennsylvania, who said, as he returned the *Innocents Abroad* to the book-agent:—"The man who could shed tears over the tomb of Adam must be an idiot." Only a shade less amusing was the serious criticism which the *Saturday Review* published on the same work—a criticism of which Mark himself observes:—"If I had a cast-iron dog that could read this English criticism and preserve his austerity, I would drive him off the door-step." But neither the Pennsylvania parson nor the deluded reviewer can give any odds to the *London and China Express*, which, in criticising Mr. Holtham's *Eight Years in Japan*, says:—"The writing is rather what might be termed of the flighty style, though the facts are solid. There are numerous terms that may be called Americanisms, which the author is fond of using, while such words as "galumphing," p. 68, would puzzle anyone without the context. Even with it, it is hard to know the exact meaning, as no dictionary contains many of Mr. Holtham's words." This is one of the most consummate pieces of gentle idiocy we have ever been fortunate enough to encounter. Conceive this solemn critic searching Webster, Richardson, Latham, Johnson, and other celebrated lexicons, to discover the signification of "galumphing," and after patient turning over of leaves and conning of indexes, coming to the reluctant conclusion that the "exact meaning" of the word is "hard to know," and that even the context scarcely removes the obscurity altogether.

AMONGST the telegrams in the American papers is the announcement of the death of Sir William Fenwick Williams, better known as "Williams

of Kars," which took place on the 26th ult., at the advanced age of 83. The following particulars of his career are taken from *Men of the Time*:—

Williams, Gen. Sir William Fenwick, Bart, K.C.B., born in Nova Scotia, Dec. 4, 1800, entered the Royal Artillery in 1825, became First Lieut. in 1827, Captain in 1840, was employed in Turkey till 1843, and for his military services there received the brevet rank of Major. Having been sent to Erzeroum, to meet the Turkish and Persian plenipotentiaries, he took part in the conferences preceding the treaty concluded there in May, 1847, and for these services obtained the brevet rank of Lieut.-Colonel. In June, 1848, he was appointed English Commissioner for the settlement of the Turco-Persian boundary, and was admitted a Companion of the Order of the Bath in 1851. On being nominated British Commissioner with the Turkish army in the East, in Aug., 1854, he was promoted to the local rank of Colonel, and a few months later to that of Brigadier-General. The victory won, under his auspices, over the Russian General Mouravieff, on the heights above Kars, Sept. 29, 1855, after the city had been invested for four months, made his name familiar to the British public. Gen. Williams and his brave comrades, amongst whom was the Hungarian, the late Gen. Kmetz, did all that men could do in defence of Kars, holding out sternly on scantiest the hope. Gen. Mouravieff summoned the garrison to surrender, Nov. 14, and Gen. Williams, after holding a council of officers, sent a flag of truce to demand a suspension of hostilities. This medium failed though unforeseen difficulties, and Gen. Williams, having demanded an interview with Gen. Mouravieff, accepted terms of capitulation. Gen. Williams, on being restored to liberty, returned to England, and was rewarded with a baronetcy, a pension of £1,000 a year for life, the rank of K.C.B., the Turkish Order of the Medjidie with the rank of "Mushir," the honorary degree of D.C.L., at Oxford, and the freedom of the City of London. He was returned member in the Liberal interest for Calne, in July, 1856, and again at the general election in March, 1857, and retired in 1859. He was appointed to the command at Woolwich, and proceeded, in 1859, to assume the command of the troops in Canada, which post he held for some time. In Aug., 1870, he was appointed Governor-General of Gibraltar in place of Lieut.-Gen. Sir R. Airey. He resigned that post in Nov., 1875, and in Oct., 1877, he retired from the army.

LAST evening H.E. Sir H. S. Parkes, K.C.B., K.C.M.G., met his friends of the foreign community of Yokohama and Tokiyo in the Bluff Gardens, by special invitation, to bid them farewell. The pleasant grounds had been brilliantly illuminated, and the scene was one of the most delightful ever arranged in Yokohama. Accompanied by the Misses Parkes, Sir Harry arrived shortly after nine o'clock, and was conducted to a pavilion specially prepared at the lower end of the Gardens. There Mr. A. J. Wilkin, Chairman of the Committee of Reception, read a valedictory address, to which His Excellency replied eloquently and affectionately. The constantly improving charms of the Kiოდոသံ's music afforded an opportunity for some dancing on the velvet sward. At eleven o'clock the pleasant party broke up. The *amari aliquid* is that it was valedictory.

WE are informed that the P. & O. steamship *Zambesi* left Nagasaki for this port on Thursday, at 6.30 p.m., and that the *Kashgar* sailed from Nagasaki for Hongkong at 5.30 p.m. on the same day.

WE read in *Nature* that there will be an annular solar eclipse, visible here on the 31st of October next. In May last we had a case where the track of a total eclipse of the sun was almost wholly an ocean-track, and where it was consequently necessary to send expeditions to the Mid-Pacific to obtain observations. The annular eclipse in October next is similarly circumstanced; excepting possibly one or two mere rocks in the Pacific, it will not be observable on land, elsewhere than on the island of Nippon, Japan. If we calculate from the *Nautical Almanac* elements for longitude 9h. 20m. 48s.

E. and latitude 38° 11' N., we find the annular phase commences at 7h. 28m. 25. a.m., and ends at at 7h. 35m. 23s., a duration of 7m. 21s., and the sun will be at an altitude of about 12°. At Tokiyo the eclipse will not be annular; the greatest phase is at 7h. 28m. a.m., magnitude 0.88 (the sun's diameter being taken as unity).

THE telegraphic line to Europe *via* Siberia has been interrupted since yesterday morning, but the line *via* Hongkong is in working order.

THE fixture of the Autumn Meeting of the Nippon Race Club has been made, commencing on Monday, the 5th of November.

ABOUT 11 o'clock p.m., the 7th inst., a native jinrikisha-man was murdered by a foreigner in Shanghai. The *Mercury* says:—The murder is supposed, by the traces of blood, to have taken place opposite T. W. Soong's timber yard, about 100 yards from the Honan Road Bridge, on the pathway up the creek, where the deceased was stabbed in the throat just above the breast bone. The wound is about an inch and a quarter long, taking a downward direction, severing the wind pipe, and another wound in the back, which is supposed to have penetrated the lung. The poor fellow's jinrikisha and lantern were left opposite the timber yard, and in the vehicle were found four cash, and clenched in his hand were about five cash. It is supposed that deceased carried his fare as far as the timber yard, and that he was not satisfied with the amount he received, so he followed his fare some yards further on, where he received the stab in the throat, and that he then ran towards the bridge, the murderer running after him, giving him the second stab in the back just about where he was found. The murderer, of whom no trace had been discovered, was supposed to be a Manilaman.

A PARISIAN paper says that many Arabs exiled in Corsica on account of the Algerian rising in 1871 ask to be sent to Tonquin to fight in the French ranks, and thus both to give proof of their devotion to France and also to obtain leave at last to return to their homes. They have addressed their request to the Algerian deputies, whom they beg to plead their cause with the competent Ministers.

AMONGST the passengers by the *Tokio Maru*, which arrived here on the 23rd instant, is H.H. the Duke of Mecklenburg.

A GOOD story is told in some of the papers of one of the expedients resorted to by Georgians who do not believe in local option, which is the law there. One trader bought a lot of cocoa-nuts, and, draining off the milk, filled them up with whisky. Soon after a clergyman came into the store and wanted to buy a cocoa-nut. The dealer declared them to be unsound; but the minister shook one, and said it was all right. The fears of information and prosecution were relieved half an hour afterwards, when the customer sent for six more cocoa-nuts exactly like the first.

THE PROPOSED "KANA" REFORM.

WE learn from a paragraph in the Tokio newspapers that His Imperial Highness ARISUGAWA NO MIYA has accepted the presidency of the *Kana no Tomo*, a society whose object is to encourage a freer and more general use of the Japanese *kana* characters than now prevails, in all kinds of writing and printing. The ultimate aim, indeed, is to insure the abandonment of all other characters, and to relieve the written language from the various complexities which frequently render it next to incomprehensible by the masses. That any argument should be needed in support of such a purpose, is an illustration of the persistency with which conventional anomalies are sometimes cherished, when no shadow of reason can be offered in favour of their maintenance. In the *kana* syllabary, the Japanese have had for ages a pure phonetic system, the simplicity and perfection of which may well be envied by European philologists. Teachers who believe in the facilitation of study and would hasten the inevitable reforms of which orthography stands in need, all the world over, would rejoice everywhere at the prospect of so convenient a method for Western languages as the *kana* supplies for the Japanese. But here, where it has always existed, and needs only to be applied, it is looked upon with contempt, and pronounced fit for the ignorant alone. In other words, a result which inventors are endeavoring to produce by every effort of skill and ingenuity, and which they have failed to satisfactorily accomplish in Western countries, is ready and complete here, but is kept out of use by a prejudice which nobody can logically defend. What would be thought of the educated men of any European nation, who should similarly bind themselves together to oppose a measure of undoubted progress? Suppose, for instance, that all German boys and girls were obliged to devote five or six years of unremitting labour to the mere acquirement of the capacity to write a letter, or to read the newspaper, not to speak of a higher mastery of their own language; while an easy process lay disregarded and discouraged, by which the same end could be attained in a week, at the farthest. That is precisely what we now see in Japan. The *kana* signs, which any intelligent child can commit to memory in a few days, cover and embrace the whole breadth of the country's literature, as thoroughly as the Roman alphabet comprehends all the needs of the European tongues. In fact, the *kana*

is theoretically superior to the alphabet, not only by its conciseness, each character representing a syllable, but by its unvarying precision and accuracy. A word printed in *kana* can be pronounced in only one way. An English word spelled alphabetically may be pronounced in many ways, for its appearance gives no clue to the proper utterance, and the same sound may be indicated by half a dozen different combinations of letters. A person totally unacquainted with the Japanese language may, after a day's preparation, read aloud any book printed in *kana*, so as to be entirely intelligible to a native listener. A stranger to English speech may know all there is of the alphabet, and yet not read two lines so as to make himself understood.

These are elementary principles, with which the members of the society in question are familiar, and the soundness of which ought to be apparent to all scholars, no matter how wedded they may be to practices in which they have grown up and have been taught to consider suitable to a particular standard of culture. But the determination to ignore them is almost as obstinate to-day as if years had not been spent in the endeavour to demonstrate them and render them apparent to everybody's comprehension. The *Kana no Tomo* has been actively pursuing its design for a long period, under the auspices of an intelligent section of the community, and led by some of the most accomplished linguists of the capital, yet the obstacles in its way are almost as insuperable as when the founders first set themselves at work. It seems as if those to whom they appeal were wilfully blind and deaf on this subject. The friends of the movement assert what is virtually an axiom. The most primitive mathematical proposition could not be clearer or less disputable. But the conservative advocates of the Chinesesquare character either refuse altogether to consider the question, or bring up on their side a series of arguments so childish as to throw suspicion on their own faith in them. "The dignity and exclusiveness of literature must be preserved;" as if the first object of cultivated men should not be the *diffusion* of literature,—which in good time can take care of its own dignity. "The elegance of polite correspondence must be kept from contamination;" as if no communication were permissible excepting in stilted forms which are a burden both to writer and reader, and interpose a barrier rather than afford an encouragement to epistolary intercourse. "Shall the proclamations and decrees of Government be shorn of their stateliness and ceremony?" Better that,

than circulate unread and uncomprehended by those to whom they are addressed, as is often now the case. Such are the frivolous objections of the adherents of the old and established style. Occasionally, but rarely, remonstrance takes another tone. "Are we who have wasted our lives in attaining perfection in this difficult caligraphy, and who have no other claim to scholarship,—are we to be put aside as superfluous veterans, and is our sole accomplishment to be discarded as obsolete?" This, indeed, is an honest protest, and to that extent respectable; but it has no weight that should enable it to retard a needed change, while it is in truth the single cause to which all the opposition may be traced. The selfish vanity of the old school of scribes stands chiefly in the way of a reform the consequences of which would be of broader reach and more immediate advantage than any other educational improvement we can call to mind. By its agency, study would receive an impetus which no other expedient could give it. An impediment which has for centuries obstructed the dissemination of knowledge among the lower orders of the people would be swept away forever. New and abundant opportunities of instruction would be placed within the reach of all. In a single generation, thousands upon thousands,—millions, perhaps, in a country where the appetite for learning is so keen as in this,—would be added to the class of mentally developed and well informed citizens. We can conceive of no way in which so great a good can be effected by means so simple and easy. Yet, year after year, the reform remains unachieved.

To attract public attention to their project, the members of the association have established a periodical publication, in which it is intended to demonstrate the benefits of the proposed change, not only by appeals to the understanding of readers, but also by practical exemplification. This magazine, which is issued monthly, is called the *Kana no Michibiki (Kana Guide)*; is edited by SHIMIDZU USABURO, and is actively supported by gentlemen of scholarly distinction, including YOSHIMURA SHIGETOSHI, President of the Nihon Ginko; NABESHIMA CHOKUDAI, head of the house of Hizen; TAKAHASHI SHINKICHI, ITO KEISUKE, KOYASU SHUN, KANDA NAIBU, and others equally well known. A circumstance connected with the issue of the first number is said to indicate the spirit of the opposition brought to bear upon the movement. It is necessary to submit the title, etc., of all new publications to the *Naimusho*, on applying for a license;

and in this instance, conformably to the purpose of the undertaking, not only the name of the periodical was written in *kana*, but also the editor's, and that of the Government officer empowered to grant the requisite permission. To have employed any other style would have been a surrender of principle at the very outset. The innovation was not satisfactory, it appeared, to the *Naimusho* functionary concerned, and the petitioners were informed that their solicitation must be remodelled, in accordance with the established custom. To this they demurred, but no concession could be obtained, further than a promise that the subject should receive consideration at a future time. As the initial number was ready for distribution, and delay was particularly to be avoided, the point was waived by the applicants, and the old form was followed. But the incident was put to an ingenious use. The facts were succinctly stated in the second number, and the inflexibility of conventional antagonism was thus newly attested. We, who are not partisans in this matter, discover no necessity for impugning the propriety of the officer's action. Possibly he had no choice; and, even had he been inclined to grant the license without dispute, his instructions may have forbidden him to do so. But the controversy is enlivened by the occurrence, which, of course, is easily turned to the advantage of the *kana* vindicators. The general tone of discussion, in the *Michibiki*, is moderate and persuasive,—not at all defiant or aggressive. Certain statistical comparisons are presented, the mere statement of which should be more convincing than any argument that can be employed. For example, the number of square characters required for ordinary, every day purposes, and used in newspaper offices, is shown to be ten thousand,—the *kana* signs being less than fifty. For the highest and most refined style of composition, a knowledge of not ten thousand only, but of upwards of fifty thousand different characters is demanded,—the forty odd *kana* being still all-sufficient. A careful article is devoted to a refutation of the theory that *kana* will not meet the needs of scientific discourse, and that technical terms imperatively call for expression by the Chinese method. A treatise upon the human eye is printed in both ways. The *kana* version occupies more space, but the desired result is conclusively proved; every word and idea (as might be foreseen) being quite as exactly conveyed by the simple as by the formidable complex types,—and much more clearly. Some of the striking inconveniences of reliance

upon the old characters are exemplified as in cases where two or more are joined together, the spoken sound of each then undergoing an absolute change. The influence of this magazine, if it continue to be conducted with the same care as at the beginning, should soon be manifest. It is already in large demand, subscriptions having been received from all parts of the empire, excepting,—as the publishers candidly avow,—Kiyoto and Osaka. That the Kiyoto public should be indifferent or hostile to the ideas it represents is not surprising; that Osaka should inconsiderately reject them is not so easily explained. Since the appearance of the first number, numerous additions have been made to the *Kana no Tomo*; the names of several ladies, we are glad to observe, appearing on the list. It is eminently fitting that the half of the community most likely to derive immediate benefit from the projected reform should be welcomed to membership in the association.

FOREIGN JURISDICTION IN CHINA.

A CASE which recently created no little interest, and even excitement, in Shanghai, offers some curious illustrations of the relations at present existing between Foreigners and Chinese.

On the 8th (or 9th) of July a Chinaman by name WANG A-AN was arrested for fighting in the Settlement, and when taken to the police station two pawn-tickets, for a ring and a watch, were found in his possession. These were handed over to SI-YUNG, a detective in the employ of the Foreign Municipality, who proceeded to the pawn-shop, and, recovering the articles, delivered them to the proper authorities until their owners could be discovered. On the 11th of July (Wednesday), the man WANG A-AN was released on bail, and his first proceeding was to assault the detective SI-YUNG. His wife, or concubine, assisted at the attack, charging the detective with having taken her jewelry from the pawn-shop and made her "lose face." The exact incidents of the fight are still unknown, but while it was in progress a native constable came to the assistance of the detective, and the two assailants were marched off to the Central Police Station. There the woman was set free, and the man locked up until the following day (Thursday), when he was brought before the Mixed Court, but remanded owing to the absence of a Foreign Assessor. That evening he was released, on bail, by the Chinese Magistrate, and two days after-

wards he died. His friends, alleging that his death had been caused by injuries received at the hands of the detective, haled the latter before the Mixed Court, whence he was shortly afterwards taken to the Central Police Station by one of the Foreign Inspectors of the Municipality. Up to this point it will be seen that the proceedings of the authorities on both sides had been in order. The detective, being a servant of the Foreign Municipality, was entitled to have the charge against him duly formulated to his employers and investigated by the Mixed Court. If, after investigation, the nature of the offence was found to be such that the Court had no competence to adjudicate, then the accused should have been handed over to the Chinese Authorities, always presuming that the evidence seemed sufficient to warrant that step. Accordingly, on Monday morning—the detective's arrest had taken place on Saturday—a preliminary investigation was held by the Mixed Court. Both the Chinese Magistrate and the Foreign Assessor appear, however, to have conceived a very limited idea of their functions. The former confined himself to stating the charge against the prisoner, declaring, at the same time, that he could not deal with it at all; and the latter, accepting this disclaimer, merely told the detective what he was accused of, and then agreed that he should be sent at once to the Taotai's Yamén. No steps were taken to inform the Municipality of their servant's offence, nor were the details of that offence explicitly stated at the Mixed Court. This was specially regrettable, because it left the foreign public under an erroneous impression that the charge against the detective had reference solely to his encounter with WANG and his wife on Wednesday the 11th, when the latter were the assailants, whereas in reality the prosecution alleged that the detective had fought with the deceased on Friday evening, and given him a kick in the stomach which disabled him at once and caused his death on the following day. On the strength of the former theory, many persons had little difficulty in believing that the whole charge had been trumped up by some rowdies with the design of ruining an officer whom they found inconveniently active. This view received emphatic endorsement from a section of the local press, which, from the first, imported into the affair every element calculated to defeat the ends of justice. The detective himself said that a "squeeze" was the sole aim of his accusers, and that they had offered him the alternative of paying \$100 or standing his trial—a pro-

ceeding which, even if it were true, could prove nothing as to the cause of WANG'S death, but only that his friends were willing to condone the detective's alleged crime for a pecuniary consideration.

SI-YUNG, it will be observed, was handed over to the Chinese Authorities on Monday. On the preceding day (Sunday), while he was still in charge of the foreign police, an inquest was held by the Marine Sub-Prefect on the body of WANG, and, not unnaturally, the evidence of the detective was required. A message was accordingly sent to the Central Police Station requesting SI-YUNG'S attendance, but the Superintendent of Police, acting under instructions from the Municipal Council, refused to comply. Four times the Magistrate of the Mixed Court—who was assisting at the inquest—visited the Central Police Station with the same request, and four times he received the same reply:—that violence on the part of the mob was apprehended, and that unless a guarantee were given for the safety of the detective, his attendance could not be permitted. The Magistrate seems to have been a man of singular patience and perseverance. His last visit to the Police Station was at 9 o'clock in the evening, and he was then so tired and hungry that he was fain to dine off a seventy-five cent bottle of sweet biscuits, using the office desk as a table. The remnants of this repast he wrapped up in a soiled handkerchief, and sent them to his brother Mandarin, the Sub-Prefect, who remained at his post until eleven o'clock, and then went home without having obtained the necessary evidence. The whole incident is most noteworthy. Those two Chinese dignitaries, the one sitting for seven hours beside a corpse at the end of a dirty alley, surrounded and probably ridiculed by a crowd of idle loafers; the other persistently journeying to and fro in the humble hope of at last overcoming the obduracy of the Foreign Police and persuading them to let a Chinese witness come to give evidence at the inquest of a Chinese supposed to have been murdered; these two Mandarins unable to satisfy the laws of which they were the guardians, and in the end going home tired and baffled, are a spectacle which, viewed from this distance, seems to imply that the power of the Chinese to administer justice to their own people in Shanghai is sometimes dependent upon foreign caprice. We do not doubt that the Foreign Municipality believed they were acting for the best in this matter, but it is certain that the only motive they assigned for refusing to comply with the Magistrate's request

was a rumour that the mob contemplated violence.

On Monday, then, the detective, after a very perfunctory investigation at the Mixed Court, was handed over to the Chinese authorities with the consent of the British Assessor. The transfer seems to have been quite an imposing ceremony. The Chinese Magistrate and his retainers headed the procession; after them came a carriage with SI-YUNG and two Foreign Police Inspectors; then followed a dozen Foreign sergeants and constables in jinrikishas, while the rear was brought up by a crowd of sightseers. Arrived at the Taotai's Yamén, the detective was placed in a cell, and the foreign portion of his escort took their departure. It does not appear that the Taotai gave any promise as to the place of SI-YUNG'S detention, and certainly he was at liberty to send the man to whatever prison seemed most convenient. Yet when he sent him to the Yamén of the District Magistrate, an English local newspaper did not hesitate to describe the act as an "outrageous deception on the part of the Chinese Authorities."

SI-YUNG had not been long in the hands of the Chinese when the mistake that had been made in giving him up was discovered. The Municipal Council, whose servant he was, had received no official intimation of the charge preferred against him, and the Chairman of that body accordingly wrote to the Senior Consul requesting him to move for the restoration of the detective to their custody. It might be expected that in an official communication of this nature, the Chairman would have confined himself to noting the irregularities that had been committed and simply formulating his demand for redress. He went a good deal farther, for he did not scruple to add:—"The Council consider the charge made against WANG SI-YUNG to be an unfounded one, and that what he did was done in the execution of his duty." In other words, the Council undertook to prejudge the merits of a case which had not yet been officially submitted to them. It seemed as though their clear vision was momentarily obscured by the same spirit which induced one of the local English journals to write:—"The issue in this case is really whether the Municipal Council are to have power to suppress crime and preserve the peace in these Settlements, or whether the lawless mob of thieves, gamblers, loafers, and ruffians, who intimidate the Che'sien and his deputies in the City and the Sub-Prefect of the Mixed Court, are to have their own way. It is an undeniable fact

that in this case these bad characters have conspired to kill SI-YUNG, a detective who has endeavoured to discharge his duties to the Municipality faithfully, and for the benefit of the community." All this, be it observed, while the details of the charge preferred against the man were still unknown!

The Senior Consul, on receipt of the Municipal Council's letter, paid an official visit to the Taotai, and pointing out that an error had been committed, requested that it should be corrected before further steps were taken. The Taotai declared himself "anxious at all times to preserve the cordiality which had hitherto marked the intercourse of his office with the Foreign Settlement," but remarked, very pertinently, that the detective had been sent to him "in charge of the chief peace officer of the Municipality, acting under the orders of the Mixed Court Magistrate and a Foreign Assessor." Ultimately it was arranged that SI-YUNG should be given up on receipt of a guarantee from the Municipal Council that they would produce him for trial, and after the return of the District Magistrate, who was then absent. Carrying this guarantee, and accompanied by about twenty armed constables, the Inspector of Police set out at 10 o'clock p.m. for the Taotai's Yamén. During the progress of the police a large crowd followed them, "hooting and yelling," and increasing constantly "in numbers and indignation, so that before their destination was reached, the four fellows who were in rear were in rather a dangerous position." Their guides led them, in the first place, to the District Magistrate's Yamén, where the detective actually was, but the party pushed on without stopping. Arrived at the Taotai's Yamén, they learned that SI-YUNG was at that of the District Magistrate, and "this," said one of the local journals, "was the first indication of the hanky-panky work by which the object of the expedition was defeated. * * * The game played by the Taotai seemed to be a 'dark trick,' and a direct insult to the Consuls, the Municipality, and to all foreigners alike." And yet the Taotai, in his despatch to the Consul General, had most carefully pointed out that SI-YUNG was at the Yamén of the District Magistrate, and had explained the law which required his detention there!

Much time was lost at the Taotai's Yamén in translating and writing despatches, the Yamén runners coming in, meanwhile, and reporting that there were indications of a serious disturbance outside the city gates. The party waiting in the court-yard of the

Yamén had nothing but tea and water to sustain them, and these they obliged the Chinese attendants to "sample" by way of precaution! At half-past one o'clock the Inspector came out. He reported that the Taotai, though willing to give up the detective, feared that an attack might be made on the foreign constables while escorting him through the streets at such an hour. So the party had to return empty handed, "defeated," as the paper from which we have quoted above declared, "by duplicity and false alarm." Yet the Taotai, in this instance, only allowed himself to be influenced by the same considerations which had prevented the Municipal Police from permitting SI-YUNG to attend the inquest at the reiterated request of two Chinese Magistrates. Moreover, he had not promised to give up the detective until the return of the District Magistrate, so that the expedition of the police could only have been successful by chance or special complacency on the part of the Chinese.

This happened on Thursday night, and on Friday evening the District Magistrate returned. The Taotai immediately notified the Senior Consul of the fact, and the latter requested the Austro-Hungarian Consul to receive the detective and act as assessor at his examination. Here another *contre-temps* occurred. It was understood that SI-YUNG would be brought out by the Little East Gate of the City, but after the Consul had waited there more than two hours, it was found that the District Magistrate and his prisoner had already reached the Mixed Court, having gone out by the North Gate. This change of programme seems to have given the Austro-Hungarian Consul much umbrage. What followed is thus described by a local journal:—"When Mr. HAAS came on the bench along with Mr. CHEN, he was enraged at the insult which had been given to him, and to the Senior Consul as well, by the breach of faith on the part of the Taotai and Che'sien. Mr. HAAS called on the armed police to take their stand in the arena of the Court, and then he demanded the immediate production of SI-YUNG. The unfortunate detective was soon dragged into Court by two of the Che'sien's men, one of them holding him by the chain which was round his neck, and the other pushing behind him. Mr. HAAS, with a sternness that made old CHEN shiver like an aspen leaf, gave the order, 'Police, take off the chain, and bring the man on with me!' Detective MACK caught hold of the chain, while two of the Che'sien's men were holding on to it, and they made a slight show of resistance, but only for a moment, as Mr. HAAS spoke to them

in Chinese in a tone that made every Chinaman in the room tremble, and the armed police surrounded SI-YUNG. CHEN came down from the bench and round to the door of the Court-room; here he placed his hand on the arm of one of the Foreigners, and he was shaking with excitement."

The detective was then carried off to the office of the Senior Consul, but it turned out that that gentleman had gone to the Mixed Court expecting to find the trial in progress, so there was nothing for it, but to take SI-YUNG back again. During the course of these proceedings the Austro-Hungarian Consul seems to have purposely ignored the Chinese Magistrates. If the newspaper report be correct, he did not even vouchsafe to offer his native colleague of the Mixed Court a word of explanation. It was doubtless quite in order that the chain should be removed from the prisoner's neck, and that his transfer to Consular protection should be completed before the trial commenced. But the singular and significant part of the matter is that the District Magistrate's desire to put a childish and purposeless insult upon a Foreign Consul should have been taken for granted, and that a Foreign Official, acting in an official capacity, should have resented the insult in a violent and public manner without pausing to make any enquiries. The District Magistrate, when consulted with regard to the change of programme which had been the means of detaining the Austro-Hungarian Consul more than two hours at the East Gate, was able to offer an entirely satisfactory explanation, but not to alter the conditions illustrated by the incidents, namely—readiness on the foreign side to credit the Chinese authorities with offensive purposes; proneness to take offence, and promptness to resent it without regard to place or circumstance. It is worth noting here, as a further illustration of the temper prevailing in Shanghai, that a band of young men, variously estimated at from thirty to fifty, paid a visit one evening during the course of the proceedings to the residences of the Austro-Hungarian and American Consuls, and gave three lusty cheers for those officials, followed by three groans for the British Assessor. Midnight demonstrations of this sort are, perhaps, less remarkable for the feeling that prompts them than for the feeling they create. It is pleasant to find that, two days before receiving this ovation, the United States Consul had written to the Taotai in the following terms:—"I have again to thank you most cordially for the promptness and good

faith in which Your Excellency has acted with me in the conduct of this difficult and unfortunate business."

In noting these events it has not been our purpose to criticise them, but rather to submit them in sequence to our readers as a significant phase of Chinese and foreign relations. Our concern with the matter virtually ends here, but as a certain vicarious interest attaches to the fate of the detective, SI-YUNG, we may mention that up to the date of the latest advices, his case had been examined by the Mixed Court at two sittings. Two witnesses were produced to prove that the deceased had been carried home in a jinrikisha on Friday evening in a disabled condition: that he had charged the detective with inflicting his injuries, and that he had presumably died from the effects of them on the following day; while a third witness deposed to having seen SI-YUNG assault WANG, and double him up with a kick in the stomach. Between all these witnesses and the prisoner a cross-fire of innuendo and recrimination was carried on, each charging the other with bribery, conspiracy, and collusion. Singularly enough no testimony was offered as to the real cause of the man's death, though it was surely before all things important to ascertain whether he died of cholera or of injuries violently inflicted. Medical evidence upon this point ought to have been furnished at the inquest. Such testimony was virtually inaccessible a fortnight after the event, and this difficulty gives further salience to the unfortunate absence of coöperation between the Chinese Authorities and the Municipality. The solicitude displayed by the latter on behalf of their *employé* became practically useless in consequence of their refusal to assist the ends of justice at the inquest. Strange to say, too, no evidence whatsoever was produced for the defence. So much prominence had been given to the affair, that those who might have spoken in SI-YUNG'S behalf took care to be absent. The Municipal Council had officially declared that they considered the charge unfounded, and that the detective had only acted in discharge of his duty, yet they failed to produce a tittle of evidence in support of this view. Possibly their failure could be satisfactorily explained, but the only explanation they offered was that the witnesses were afraid to come forward. If this were true of a trial conducted at the Mixed Court, the unfortunate detective's chances of obtaining justice in the city seem small indeed. In the absence, then, of any defence, the Magistrate of the Mixed Court declared himself satisfied that

the evidence was sufficient to justify sending the case forward for trial by the City Authorities, and in the propriety of this course—clearly defined as it was by the Regulations of the Court—the Foreign Assessor was apparently compelled to acquiesce, though he withheld his formal consent until after consultation with the Senior Consul. Ultimately SI-YUNG was again handed over to the District Magistrate, who, it is to be hoped, will employ some efficient means of obtaining testimony not entirely one-sided.

ITALIAN FINANCE.

SUFFICIENT time has now elapsed to justify a confident verdict upon the issue of the scheme adopted by Italian financiers for the resumption of specie payments. It will be remembered that the operation commenced on the first of April, and three months' experience have made it quite plain that unless some violent monetary crisis occurs—a contingency of which there is no apparent peril whatsoever—the suppression of the forced currency may be regarded as an accomplished fact. Yet for the bulk of the Italian public, no perceptible change has taken place. It is true, indeed, that the banks are called upon to pass over their counters a certain amount of gold, but it seems to be equally true that scarcely one piece of that metal has found its way into ordinary circulation. Subsidiary silver coins are said to be more abundant than they were before the period of resumption, but a use is still found for one, and two franc notes. Something of this result is doubtless attributable to the fact that the Treasury does not pay out any gold except on demand. All the disbursements on account of Governmental expenses, salaries, etc., are made in paper and subsidiary coin. The recipients of this money are not likely to concern themselves much about its form, unless they have payments to make abroad, and even then they probably prefer to purchase foreign paper at once. The fears that were entertained of an unfavorable balance of trade and a consequent efflux of the precious metals—for there are in Italy persons who still regard such conjunctures with apprehension—these fears, we say, have not been realized. On the contrary, the very opposite is reported both from Naples and from Rome. Exports have received an impetus and the metallic reserves at the Treasury are actually increasing. The *New York Nation* will doubtless say that under these circumstances Italy is on the fair route to ruin, since she is giving away more than she

receives—an amusing method of calculation which commends itself to some arithmeticians, but which, if it be true at all, means that a man is always doing himself an injury when he sells, and can only be growing rich when he buys. Italy, however, without troubling herself about these abstract problems, is conscious of a desire to see her newly-acquired gold pass into circulation among her own people, so that she may be able to feel confident of having finally escaped the evils of a fiat currency. She has her wish, and Mr. MAGLIANI is to be sincerely congratulated. He has made one of the most brilliant financial *coups* of the century, or indeed of any century. He has resumed specie payments without resuming; or, in other words, he has re-established the circulation of gold, and has, at the same time, kept in the Treasury vaults the gold he borrowed to effect the operation. It sounds as if there was not quite so much truth as people suppose in the old proverb about not being able to have one's cake and eat it. We sincerely hope that Japan may be in a position ere long to follow Italy's example. If everything we are told be true—though we confess that we are exceedingly sceptical—her former financiers contemplated a scheme which virtually amounted to repudiation—for the redemption of Government paper at current rates of depreciation means nothing more or less than repudiation. That danger, if it ever existed, exists no longer. The nation is steadily progressing towards final escape from the intolerable evils of an unsound currency, and if the Government pursues its present path, it will be able to declare resumption when the fitting time comes without resort to expedients which, if not absolutely dishonest, would certainly be dishonourable.

A CHAPTER OF YOKOHAMA HISTORY.

Yokohama itself has no reason to complain of fortune's want of benevolence. A place where twenty-five years ago seven men would have lost caste in sane society by building themselves tabernacles, it now numbers seventy thousand inhabitants, and the limits of its growth seem not less elastic than ever. But its opportunities have not kept pace with its development. The commerce it commands has been divided and subdivided, until the share remaining to each individual is only large enough to invite, without rewarding, enterprise and ability. Thus, if this peninsula of exile and poverty, with its muddy isthmus and muddier morals, be remarkable for the piping times its ever augmenting population and ever widening environs seem to attest, it is

not less remarkable for the game of see-saw which fate has amused herself in playing with the fortunes of its residents. The pastime has not been impartial. The foreign end of the beam has generally been the lower of the two, and occasionally its downward bumps have been disastrous to those seated on it. A few have leaped off in good time. Others, while themselves escaping at a fairly auspicious moment, left partners to ride in their seats, and had to come back again to mingle the fragments of their shattered fortunes with those of their fallen representatives. But these are old stories. To-day it is not a question of making a triumphant exit, but of holding on by tooth and nail, so as haply to avoid the fall that smashes. There are no more golden dreams now nor airy reveries, but only

the toll
Of dropping buckets into empty wells,
And growing old in drawing nothing up.

The better part has fallen to the lot of the Japanese. Their luck, too, has oscillated, but on the whole its mean level has always shown an upward tendency. They have not overgrown their opportunity, for though their aggregate has increased from cipher to something like sixty-five thousand, the majority of that number are mere parasites who subsist by gathering up the fragments of the feast. Those that sit at the board have managed to keep the table entirely to themselves, and have thus fared more and more sumptuously year by year. Hard times come, to be sure, but while they seem to have the effect of adding fresh fuel to foreign competition until their hardship becomes doubtfully accentuated for foreigners, they promote, on the Japanese side, a spirit of combination which, if it may not wholly annul, certainly goes far towards blunting, their evils.

Among the Japanese who benefited most easily and largely by Yokohama's growth, the first place must unquestionably be given to landowners. Twenty-five years ago, half an acre of land in the neighbourhood of Bente-dori would scarcely have fetched a hundred *yen*: to-day, it is worth fifty thousand. Veracity directs us to place one of these lucky individuals in the frontispiece of this chapter of history. For reasons which will hereafter explain themselves, an approximation to his name must suffice. Let us call him Ginjiro. Another reason, which our readers will doubtless divine, prevents us from setting down the exact sum of which he found himself possessed one fine morning, when a speculator bought his hitherto valueless patch of barren land for a lofty pile of silver. It was, at all events, a pile high enough to raise him from actual poverty into the vicinity of virtual opulence. But it did not bring him "that jewel which no Indian mine can buy." When, indeed, has the sudden acquisition of unexpected wealth been accompanied by contentment? Ginjiro's case was only another proof of the principle, so successfully urged against democratic and socialistic dogmas—the principle that the desire for inequality is as incapable of satisfaction as it is universal, and that without it there could be no civilized production. Having become

rich, he wanted to become richer, and after casting about for means of accomplishing his desire, he arrived at a remarkable conclusion. Our readers have probably observed an impression which prevails almost universally among the Japanese, that the household deities of the Occident are Bacchus and Venus. These good people imagine that, in the presence of Westerns, the acme of conviviality is inebriation, and the essence of wit, libertinism. It does not say much for our civilization that these are the two aspects under which it has presented itself most vividly to Eastern eyes. There is the fact, however, explain it how we may. Ginjiro recognised it, and moulded his speculations accordingly. He purchased himself a house, and having fitted it up with all the appurtenances his wealth justified, he added to it a wine tavern. At first sight, the locality he had selected did not seem specially convenient. Retired, so far as to be almost invisible, from the main road, it was sandwiched between a precipitous hill and a row of second-hand furniture stores, emporiums for cast-off garments, and hand-to-mouth looking tenements of all varieties. The so-called, "main road" itself was a miserable jagged causeway, bordering a canal which, having ruined its projectors, had now lapsed into a water way to some Kerosene godowns and a receptacle of Cholera Hospital refuse. But Ginjiro did not court publicity. The precipitous hill, too, was a feature of special attraction in his programme. Reached by a flight of steps, to climb which was in itself an entertaining feat, its summit commanded a prospect too beautiful to be profaned by description. Seldom has nature painted a picture with background so lovely as Fuji-san, and foreground more becoming than the wide expanse of billowing woods and golden rice valleys that stretch down to the blue waters of Yedo Bay. It is true that nothing of this prospect was visible from our Vintner's dwelling. If he looked for customers among lovers of scenery, he should have moved his house higher up, but, as has been already observed, "a city that is set on a hill" is objectionable under certain circumstances. To utilize the hill and at the same time avoid a superfluity of sunlight, Ginjiro called into request the services of his sisters. He had two, whose names we shall call Tada and Gin. The former, a married lady, neither very young nor very old, took up her abode in a pretty little house on the top of the hill, opening, at the same time, a stall where way-farers might refresh themselves with modest beverages and admire the incomparable prospect. This villa was connected, with Ginjiro's more pretentious residence by a telephone. Thus, if it chanced that visitors to either place showed themselves not mere wine-bibbers or view-gazers, but disciples of that principle which, as Disraeli tells us in *Sybil*, is "the principle of existence and its only end," the telephone was put into requisition, and Mrs. O-Tada either bespoke the services of Ginjiro's household to make the necessary arrangements,

or was herself summoned from above to undertake their conduct. It is scarcely necessary to descant upon the facilities offered by this dual disposition of forces. They enabled respectability to be as disrespectful as it pleased without risk of exposure, and they conferred on their designer the reward of all astute villany, signal success.

We have spoken of Yokohama morals as muddy. The term is weak if only the half of what rumour asserts be true. Here, however, we have nothing to do with rumour. Our concern is entirely with facts, and that the ancient landowner prospered in his new trade of vintner with *et ceteras*, is a fact beyond all question. It is a fact, too, that in the days when his prosperity was at its zenith, the moral reputation of Yokohama was at its nadir. Let men's creeds be never so steadfast, their practice varies more or less with opportunity and circumstance. Thus, a regiment coming to Yokohama with a wonderfully fair record has been known to fill its defaulters' book to overflowing in a twelvemonth. Some theorists hold that Japanese air breaks down foreign brain tissue slowly and surely; others that it loosens the muscles and unstrings the nerves; but the keenest observers of all say that its first effect is to decompose the moral fibre. Whether one symptom of this last malady be not a species of wanton desire to incapacitate the law, is a question we have often considered uneasily. The Japanese, whom their foreign friends call bad governors, are here required to govern under conditions which might puzzle a Solon or a Lycurgus. They have to govern strangers of twelve or fourteen different nationalities, all of whom consider it the special privilege of their birthright not to obey any laws save those of their own making, nor to endure any control save that of their own authorities; and many are imbued with an idea that to maintain the position of superiority which they arrogate, it is essential not to cease sneering at and disparaging Orientals in general and Japanese in particular. It is true that this last is a vulgar trait, characteristic of the rowdy class alone; but rowdies are precisely the persons who stand most in need of restraint. In the matter of Municipal Government, Yokohama resembles a school where discipline has to be preserved by ushers whose powers are reduced almost to a cipher, and who must needs submit to being publicly flouted and ridiculed as incapables by every vicious boy ambitious of notoriety. The result is not quite satisfactory to lovers of peace and order, and the Japanese have been quick to discover what a pleasant asylum the place offers for law-breakers of all descriptions. The escaped felon can be sure of finding there an unmolested retreat, for every foreign resident's compound is forbidden ground to the police, and its Japanese inmates can harbour or hide whom or what they please. A story is told of a thief whose whereabouts was traced, and a search warrant obtained from the Consul of the firm on whose premises he was concealed. But the search proved fruitless; the culprit was *non*

inventus. The police, of course, had blundered and were suitably laughed at. But the police again traced the man to the same place; again procured a warrant—this time with much difficulty—and were again unsuccessful. Yet a third time the episode was repeated, ending in the total discomfiture of the guardians of the law, who only found out when it was too late to utilize the discovery, that the duties of a servant who lived on the compound in question lay partly in the Consulate, and that he had been able to give his friend warning so soon as ever the warrant was applied for. Perhaps occurrences of this nature do not impair the efficiency of the police in Japan. They would impair it anywhere else, however; and certainly, even in Japan, they have the effect of inducing all the dregs of the surrounding provinces' population to gravitate to Yokohama. Among these dregs, our hero, Mr. Ginjiro, and his partner, Mrs. O-Tada, found all the materials they required to minister to the fancies of their patrons, and their trade prospered amazingly.

There came a time, however, when the Augean condition into which affairs had drifted began to scandalize respectable foreigners and shock respectable Japanese. A new Prefect of Kanagawa having been appointed, his first step was to demand an increased police force. Up to July, 1883, the number of constables available for duty in the Foreign Settlement and on the Bluff had been 70 only. From that date it was raised to 250. The earliest effect of the more minute supervision thus made possible was that a great many errand ladies found their opportunities inconveniently circumscribed. It became perilous to practice gentle affability to wayfarers of the opposite sex. Yet courtesy and geniality had become so habitual with these Delilahs that they got perpetually run in for being too polite. Not unfrequently their arrest led to interesting scenes, illustrating some peculiar features of the lower strata of Yokohama society. For example. The police magistrate has scarcely commenced his examination of the prisoner when a foreigner tumbles into the station crying out:—"Kore, ikemasen. Watakushi okamisan arimas. Nase omaye?" The new-comer's evidence appearing more or less relevant, an attempt to unravel it is in process, when the proceedings are again interrupted. This time the intruder is a gentleman in shirt sleeves with a Sarah-Gamp breath. He has not had time to complete his toilette, and plunges at once into facts:—"Nani Baka! Watakushi okamisan." The Magistrate looks perplexed. "Your wife too?" he enquires. "Two!" the shirt-sleeved hero shouts. "You think I'm a h-y bigamist. Here! No more of this b-y nonsense. Watakushi okamisan, I tell you. Omaye bonkots shinjo, watakushi shinimas." And with that the gallant worthy crosses over to Delilah's side, tucks her hand under his arm, and begins to drag her off. The first witness, not at all offended by this claim of common property in the alleged partner of his bosom, cheers his new associate on, but the Magistrate addresses a caution to the accused and she

declines to be "spirited" away. Then the philanthropic gentlemen are asked to state their case through an interpreter, and while they are doing so, lo! another rescuer hastily arrives. Again the cry is "*Watakushi okamisan. Naze omaye,*" and again the Magistrate looks to see these three claimants start in to strew the place with one another. But no. The last seems to have as valid a title as the first. "Come on Mac" or "Pippins" is the fashion of welcome; "bear a hand here to save O-ikky," and so in the end the Magistrate imposes a fine almost nominal which is at once paid by the stout humanitarians, and the four adjourn to anathematise the eyes of the police and denounce Japanese tyranny over a bottle of square-face.

If incidents of this nature had occasionally the effect of perplexing the police, a compensatory influence was exercised in another direction. Among the highly inflammable foreign material accumulated in Yokohama, always ready to burst into flame when any spark is blown towards it by an anti-Japanese wind, there is an official squib which goes off easily and makes a good noisy report. In the autumn of 1882, somebody conceived a notion that a certain approach to the Bluff presented objectionable features. He therefore struck a spark. To be sure, the good folks on the Bluff, who had used this particular approach for years without finding themselves shocked by anything they saw there, were puzzled when they heard the noise of the fire which the spark kindled. But they were not so ungrateful as to undervalue the good offices of an occasional visitor whose eyes had proved so much clearer than their own. Presently the squib went off. It shot a message of smoky censure towards the Local Authorities, and a declaration that the Inspector of Police ought to be severely and speedily punished for allowing the approach in question to witness improprieties. This kept the police up to the mark. It was a difficult matter, indeed, to exercise any control over the inmates of private houses, and the difficulty was enhanced by the extreme reluctance of the constables themselves to carry on the necessary supervision. But a broad rule was enacted that no interference was demanded except in cases of conduct amounting to a public scandal. The constables were directed simply to contrive that the inhabitants of the various wine-shops and other semi-public domiciles on the Bluff approaches and round the new road should feel themselves under a reasonable amount of surveillance. This was not a very sweeping measure, but to those most concerned it made all the difference between virtual license and unavoidable circumspection. Of course the irksomeness of the thing was felt very keenly by the foreign patrons of these various establishments. Whenever the shadow of a policeman darkened the revels of these worthies, their indignation bubbled over, and they longed greedily for a day when they might catch these spoil-sports on the hip and "feed fat the ancient grudge" they bore them.

Our history at this stage brings us back to its principal characters. This time we find them

on the sea shore. Not the ex-landowner himself, not yet his worthy sister, Mrs. O-Tada, but the younger blossom, O-Gin, is now to occupy our attention. She has a pretty little cottage near a sandy cove, where the fishes chase each other among the shadows of a forest of pines and camellias, and the air is full of the music of rustling leaves and rippling waters. O-Gin, the mistress of this pleasant retreat, has numbered some four or five and twenty summers. She is not beautiful, but she is charming, with a sympathetic heart and a temper as peaceful as the scenes she lives among. She can boast quite a large circle of acquaintances among foreigners, and for their convenience she has caused two planks to be stretched from the back of her premises into the sandy cove, so that on hot summer evenings her friends may come and disport themselves, like the fishes, among the shadows. Her kindness does not stop here. She causes the towels, bathing garments, &c., of her visitors to be looked after, and their general comforts ministered to, by a number of plump damsels not too prudish to be bad company for gentlemen *en naturel*. "What!" says the reader, "Are there *et ceteras* to this establishment also?" Well, never mind for the moment! There is one *et cetera*, at all events, and that is Mrs. O-Tada. "Naturally," the reader again exclaims. "She comes to visit her good little sister, and perhaps to dilute with pure sea air the odors of that abominable canal you told us of." Naturally, but her part in the play is more than that of a causal comer. She is co-proprietress of the cottage, and she does at least as much business there as at View Villa on the hill. The telephone, however, does not reach to Cove Cottage, and so she has to come there pretty well every evening "to make arrangements." Last year the sisters, like all their neighbours, began to find themselves sadly hampered by official activity, and being shrewd persons, they saw that their turn to get into trouble could not be for ever postponed. So they adopted a precaution. It was a bold conception and easily worked out. They took steps to let the police learn that any interference with the business of Cove Cottage would be the signal for an appeal to the foreign friends of that establishment, amongst whom were included the most influential men of Yokohama. Probably the police were alarmed. At any rate the Cottage escaped, though the adjoining bathing house was less fortunate. Of the latter, too, curious facts are on record. Its owner was a gentleman who had distinguished himself in connection with a bath-house in San Francisco, where he dressed a Chinese girl in Japanese clothes and exhibited her as a native of Japan. Obligated to come home in consequence of this escapade, he rented a house beside Cove Cottage, and placed there six waitresses of comely mein. But he lacked finesse. Everybody knew that the chief business of his new house lay in *et ceteras*. The police made it too hot for him. Profits fell off, and he was fain to take service in a sugar refinery at six *yen* a month. He did not abandon his interest in the sea-shore com-

merce, however, but retained the place while surrendering the management.

We are brought thus to the summer of 1883. The police were now happy in the consciousness of success. During the last six months of 1882, quite a considerable portion of their duties had been of the "*Watakushi okamisan*" nature. One hundred and thirty Phrynes had been fined, and sundry other repressive measures adopted, so that the evil was at length well in hand. The first half of 1883 showed only thirty-two cases; and a fair amount of decorum marked the proceedings of the various establishments in the neighbourhood of the Bluff. In short, everything looked *couleur de rose*. The police were triumphant, but being men of letters they remembered the phrase *yudan taiteki*, and refrained from hollering before they were out of the wood. For the future it would be sufficient, the Head Inspector said, to despatch a constable once a fortnight, at uncertain times, with instructions to let himself be seen and to take note of anything scandalous at the various houses which had black marks against them in the records. Sad, but not strange to say, Cove Cottage and its neighbour were among those thus distinguished; and still sadder, the former was the first to demand something more than surveillance. It happened on a Sunday in the early summer. The constable, whose beat took him alternately up the road and down the beach, became cognizant, as he paced along the sands of a concatenation of suspicious circumstances. In such a conjuncture his instructions were plain. Going round to the front of the Cottage, he was received by Mrs. O-Tada, who heard his complaint and promised that the offending young lady should be given up, but pleaded for a few minutes to attire her becomingly. The myrmidon of the law was nothing loath. He would have welcomed any reasonable excuse to escape the necessity of further action, and so he offered no remonstrance, though the "few minutes" stretched into a few hours. At length, after long delay, an old man appeared. He was the young lady's father, he said, and he lost no time in asserting his parental authority by rating her soundly. What did she mean by disgracing her people and herself? Had he not told her over and over again that if she visited such places as Cove Cottage there could be only one issue? and so following. Apparently, then, nobody had any excuse to offer. The fair culprit was marched off to the station. Elsewhere she would have been locked up for the night, but in Japan such cases are disposed of speedily. Half an hour later she was confronted by the Magistrate. The method of preliminary examination is simple and uniform throughout the country. Beside the Magistrate sits the recording clerk—in the majority of petty cases the Magistrate himself records—and before him, at a little distance, is a bar behind which the prisoner stands. No one else is present. The formula of examination is also uniform. Name, age, place of residence, rank, and occupation—these are the subjects embodied in the first question. Then the alleged offence is recited and admission

or denial asked for. There is no violence; no bluster; no reiteration or pressing of questions. It is simply a quiet conversation. If the prisoner pleads "not guilty," in spite of strong evidence, he or she is removed to a cell to await another examination later on. If the plea is accompanied by a satisfactory explanation, release immediately follows. In the instance of which we write, the denial was stout enough, but the testimony of the policeman presented some awkward features. So there was a remand for two hours and then a re-examination. This time the young lady essayed a diversion. She maintained her innocence of the charge immediately under consideration, but confessed to a previous sin. It was a common story enough. Her parents were miserably poor, and Miss O-Gin, of Cove Cottage, had spoken of several *yen* to be gained quickly and easily. There was some preliminary consultation, and then a steamer, a gentleman of African complexion, and two journeys by boat with the temptress completed the tableau. In the case of these and similar illicit proceedings the law provides penalties of from three to ten *yen* for the perpetrators five to fifteen *yen* for the conciliatrix, and five to twenty *yen* for the proprietors of the house where the offence takes place. The sinner of Cove Cottage was accordingly mulcted to the tune of five *yen*,—about one-fifth of the amount she had gained by the transgression—O-Gin had to pay seven *yen*, and the Captain of the steamer was inaccessible. Cove Cottage, too, was warned that it must be more circumspect. If these improper practices were to be persisted in, greater secrecy was necessary or the law would know the reason why. It was a bad business altogether for Cove Cottage, but chiefly bad because, for the moment, there was no recourse. The long threatened appeal to influential foreign sympathy could not come off this time. But what a *yowai mushi* this wretched girl had shown herself! Who was to know anything about her fire-worshipping patron if she had chosen to hold her tongue? But a confession! *Domo, komatta koto!* However, their time would come. They'd get even with those staff-bearing gentry yet. Only, happen what might, let there be no confessions. This was the *ultimatum* delivered to their inmates by Cove Cottage and its neighbour.

So the summer wore on. The ex-landowner found that though the receipts from his *el cateras* had fallen off, their monthly total was still a respectable figure, the telephone was still tolerably active, and the communication between View Villa and Cove Cottage more assiduous than ever. It fares best with vintners and such folk when suns are hottest, and of course the attractions of an evening roll in the limpid waves grew greater as the dog days multiplied. The majority of those that patronized the spring-boards at the Cove were men of high morality; but who will undertake to define the limits of the subtle charm exercised by such an *entourage* as Miss O-Gin and her neighbour had provided? Even Merlin's blood was capable of assuming opal tints under certain

circumstances, and Merlins do not infest Yokohama. The sensuous old Romans, the sybarites of Pompeii, understood how to introduce into their bath-houses a *souffron* of the rosy atmosphere that circulates in the neighbourhood of veiled sin. The Japanese gentleman of San Francisco understood this, too, else would he not have dressed his Chinese doll in *kimono* and *obi*, and though capricious fate had banished him temporarily to a sugar refinery, his talents found able exponents at the Cove. Always, however, that one little cloud, no bigger than a man's hand, was visible on the horizon. Once a fortnight a gentleman with a stick under his arm appeared, uninvited, on the outskirts of the entertainment, and took observations. He is at it now, this Sunday evening in July, and he seems considerably struck by what he sees and hears. This time the "jinks" are under weigh in the neighbour's house. There is one little Peri getting hoisted up by a circle of playful philanthropists and affectionately caressed as she descends, while another is sitting on the knee of a humanitarian and making a tippet of the arms of a sympathetic Adonis. The constable steps back and ponders. Here is a public scandal if ever such existed. The scene of the jinks cannot boast even the flimsy privacy of a bamboo rail, and the noise is enough to attract all the neighbourhood. He makes his way to the house, prefers his complaint and requires the attendance of the two damsels at the police station. A long delay and earnest confabulation ensue, but at last the culprits are led away and magisterial investigation commences. This time the ladies are obdurate. It is not their fault, they say, if foreign gentlemen choose to pull them about. Why don't they resist? So they would, but they must live. Things have to be made pleasant for the gentlemen who come to bathe or else custom would be ruined. They meant no harm, but what could two weak girls do among half a dozen strong foreigners? The magistrate cannot gainsay this. He resolves to discharge the girls, but, by way of admonition, asks them if their business is so very valuable that they prefer it to their reputation. The girls protest. Valuable indeed! Far from it! They only get their food and the barest pittance from their employers. As for the foreign gentlemen, they never give the waitresses a *sen*. How does it happen then, the Magistrate enquires, that they are so richly dressed—crape *jiban*, satin *obi*, and silk *kimono*? There is a moment's hesitation, and then one of the ladies says that they borrowed money from a Japanese gentleman and purchased clothes with it at such and such a shop. She declines to mention the name of the gentleman, and so, with a word of caution, the pair are discharged. But the magistrate is not satisfied. He causes enquiries to be made at the shop in question, and behold! such articles of female attire are not, and never were, sold there. The attendance of the ladies is again requested, and correct information required. But they either cannot or will not furnish it. They are there-

fore detained for three days, at the end of which time, nothing definite having been elicited, they are again released, their employers, however, being held responsible to produce them at any moment if necessary.

Meanwhile, those employers have not been idle. This is just the chance they were waiting for. Unless something be done now, all their past threats will go for nothing. Accordingly, a strong appeal is made to the sympathies of their foreign patrons. It is not a time to stick at trifles. The crime of the poor girls is represented as sitting on a gentleman's knee, while of the treatment meted out to them by the police imagination furnishes a vivid picture. Slapping of cheeks, twisting of arms, and other cruelties are charged against the myrmidons of the law, and eager ears drink in the whole fiction. There is another ignition of combustible material, though the spark, on this occasion, comes from a diametrically opposite direction to that of the preceding autumn. But a fig for consistency! only keep the ball rolling. Very soon the official squib goes off with a sudden puff. "Lucky for you contemptible ruffians of police!" it cries, "that I was able to restrain myself from exploding in your faces. But I require that your inspector be summarily and severely punished. By what right does he allow these poor girls to be interfered with? Six months ago—perhaps. But now—out upon your sneaking curs of constables!" Phew! There never was such a crackling and a phizzing. The local press reflects the flashes, and is eagerly and gladly spelled over at the vintner's and in the sugar refinery. What clever girls they are, to be sure, Miss O-Gin and Mrs. O-Tada! They said they would do it, and they've done it with a vengeance. Depend upon it the police will think twice before they come spying round our places again. "I really think I'll resign my situation at the sugar refinery, and assume personal direction of the business at the Cove," says the San Francisco Lothario. And "Truly, O-Tada, I'm not sure but it would pay to lay a telephone all the way to O-Gin's place," cries the jubilant vintner, while the ladies smile and perk. They are beginning to grow a little uneasy, to be sure, lest their romance about the cheek-slapping and arm-twisting should get them into trouble, but then, there is always the resource of flat denial; and the foreigners cannot be questioned by the police. So there is valid cause to chuckle. Who knows but the good old days of profitable license may revisit Yokohama. They will certainly come again, if only the squib can be induced to puff often enough and angrily enough.

Without the gift of prophesy this history cannot be carried any further. Moreover, our readers will now be able to follow the thread themselves, if they have leisure and inclination. For our own part we take leave here of the vintner, the sugar refiner, and the two enterprising ladies, whose knowledge of human nature and their ability to make capital out of its weaknesses command our warm admiration. We can even sympathise with the combustible material and the squib, to whom, however, we may be permitted to repeat the Persian Sage's saw:—

Foiled thou must be, though wisest of the wise!
Then be the fool of virtue, not of vice!

FAREWELL ENTERTAINMENT TO SIR H. S. PARKES.

Last evening the foreign community of Yokohama and Tokiyo met in the Bluff Gardens to bid farewell to the honored British Minister, Sir Harry Parkes, who leaves this scene of his long labors for the more important office of British Representative at Peking. At nine o'clock the guests had assembled. Sir Harry Parkes, accompanied by the two Misses Parkes, arrived and was escorted by the Reception Committee to a pavilion specially provided in the lower part of the Gardens, where the guest of the evening was presented with the following address:—

TO SIR HARRY SMITH PARKES,
KNIGHT COMMANDER OF THE MOST HONOURABLE ORDER OF THE BATH, AND KNIGHT GRAND CROSS OF THE MOST DISTINGUISHED ORDER OF ST. MICHAEL AND ST. GEORGE, HER BRITANNIC MAJESTY'S ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY AND CONSUL GENERAL IN JAPAN.

We have sought this opportunity of bidding you a united and public farewell, because we feel that it will be some alleviation of our sorrow to know that you accept this manifestation of the high esteem in which we hold you.

We come from various lands, we speak in various tongues,—but to-day we have but one voice. During eighteen years you have been amongst us:—some of us have resided here for the whole of this period, many for some considerable portion of it; and these eighteen years, as they have passed on, have served only to strengthen the feelings of respect and esteem with which we have always regarded you.

But the closeness of the ties which have so long bound us together has now to be broken. Changing and changeable as this community always is, it does not often occur that so long a period of mutual acquaintance,—and we may say, of friendship,—is permitted to run its course. For us, it is matter of congratulation that we have so long had you in our midst:—for you, it is but fitting that you should pass on to a higher sphere of labour.

You came amongst us already freighted with honours, and famous for distinguished services;—and full well have you here sustained the fame of former years. There have not been wanting occasions which have called forth an exhibition of the same courage and intrepidity as of yore, but not less have you won high and solid distinction in the quieter paths of patient labour.

For us, your memorials lie around us, and meet us on every hand. Those of us who are your own countrymen would desire to take this last opportunity to ask you to accept, as their Minister, this acknowledgment of their high appreciation of all the services you have rendered to them,—of the willingness you have ever shown to receive and attend to all their representations, and of your unsparing exertions in guarding their interests. And all of us equally feel a debt of gratitude for the much you have done to promote the well-being of this Settlement, and of the sister Settlements in Japan.

With its recreations, with its graver pursuits, with its benevolences, scarcely less than with its commercial interests, you have been always identified in a way which will leave behind you a blank not easy to fill.

There is much more we might say,—much more we would say, were this the time and the place. All we desire is that you would accept this much as the evidence of the unfeigned regret we feel at your leaving us.

And now we would bid yourself and your family circle God-speed. Believe us, your memory will remain green with us, and though gone from us we shall follow you with the pleasantest of recollections. May you spend a long career in health, happiness, and success, and increasing honour, and then enjoy with your family around you and growing up into years and prosperity, the meed of a gallant, honourable, and distinguished career, handing down to your children the heritage of a brilliant reputation.

And we trust that sometimes amidst the cares of the important office to which you have been called, or the repose of later years, may come back to you pleasant memories of the friends you leave in Japan.

A copy of the address, suitably mounted, was handed to His Excellency, who read the following reply:—

MR. WILKIN AND GENTLEMEN,

It is very difficult for me to find words to reply to an address expressive of such warm attachment not only on the part of my own countrymen but on that of the foreign residents in general.

The period of years which I have passed in Japan forms no small portion of life's span, and it would have been to my discredit, during that time, if I had not become intimately associated with most of the members of this united community. But I feel that you refer in far too generous terms to the services which you consider I have rendered you. I am myself only conscious of having endeavoured not to neglect the opportunities afforded me of fulfilling my trust, and if I have succeeded to your satisfaction, I am sensible that that result is in no small measure attributable to the cordial support I have derived from my countrymen, and also to the kind assistance which I have received from the members of other nationalities. I have always found this community ready to place a favourable construction upon my action; to make allowance for difficulties which were beyond my control; and, when little was accomplished, to give me credit for honest effort. This indulgent appreciation will go far to compensate me for the pain of separation, and will always cause me to look back with pleasure on my long residence in this country.

The proximity of the post to which I am now transferred will enable me to retain a deep interest in your affairs and also in the future of this nation. I have received much kindness from the Sovereign, the authorities, and the people of Japan; and in endeavouring, as it was my first duty to do, to advance the welfare of my own countrymen, I have always felt that the interests of foreigners in this country were inseparable from those of the people, and I have therefore only advocated measures and pursued a policy which I believe to be conducive to the benefit of both. I have also always considered—and it is only due to the foreign residents to say that this feeling is a reflection of their own—that the Government of Japan is entitled to our best sympathy in the trials and difficulties with which it has to contend in passing through the period of transition and in entering on the wide stage of reform which our advent may be said to have occasioned. But

when the changes which have been so rapidly initiated affected the position and interests of foreigners in Japan, I then maintained, as it was both my right and my duty to do, that they should be proceeded with deliberately, and that each step should be based upon mature reflection.

My earnest desire, which I am satisfied is shared by every one here present, is, that in following out reform, the attention of this nation may be seriously occupied not only with political movement but also with substantial economic and industrial progress, and that the well being of the people may be materially advanced by the removal of those obstacles which now impede the development of their national wealth and resources. We also trust that Japan will soon gain for herself a reputation for commercial intelligence and liberality equal to that which she has already acquired in regard to education and religious toleration, and that it may not long be said that the privileges which she gives to foreigners, in return for that free welcome which her people universally receive in Western States, are inferior to those which have been granted in the country to which I am now about to proceed.

Permit me to say to all those who have so kindly taken part in this entertainment, that I and my daughters are greatly touched by its cordial and spontaneous character, and by its being joined in by so many of the foreign residents upon whom we have no claim. In the presence of such a large concourse of ladies I see a graceful and to me a most acceptable acknowledgement of the fulfilment of those social duties to which your address alludes, but in which I myself have taken only a minor share. Believe me that my daughters and myself most heartily reciprocate your kind farewell, and earnestly wish for you greater prosperity than that which has been attained in our day.

And to my countrymen I would add that as you have so generously rung out your old Minister, so I am satisfied you will ring in, with as loyal a welcome, my successor, who is so favourably known to us all. It is no light satisfaction to me to resign your interests into his able charge, and also to feel that they will be most carefully guarded in the interval which will transpire before he arrives.

Sir Harry Parkes and his party left the Gardens at eleven o'clock, but many visitors remained, and dancing was kept up till midnight.

THE TOKIO DAI-GAKU.

We have received the Calendar for the year 2542-43, a date which our Christian chronology calls 1882-83, of the Department of Law, Science, and Literature of the University of Tokiyo. It is published by Messrs. Z. P. Maruya & Co., 2543 (1883), and is very creditably got up and printed. Its subject matter is closely similar to that of other Public School and University Calendars, rather dry in detail and "caviare to the general public," but the historical summary, which occupies the first nine or ten pages of the little brochure cannot fail to be of interest. In April of the tenth year of Meiji, the Tokio Kaisai Gakko was united to Tokio I-gakko (Medical College), to form the Tokio Dai-gaku (University of Tokio), which was divided into the four Departments of Law, Science, Medicine, and Literature. The Departments of Law, Science, and Literature were established in the former Kaisai Gakko, and the Department of Medicine in the former I-gakko. The Tokio Yeigo Gakko (Tokio English Language School) was made the Tokio Dai-

gaku Yobimon (Preparatory School to the University of Tokio), and put under the control of the Departments of Law, Science, and Literature. Mr. Hiroyuki Kato, *Sori* of the former Kaisai Gakko, was appointed *Sori* (President) of the Departments of Law, Science, and Literature, in Tokio Dai-gaku; Mr. Arata Hamao, Vice-Director of the former Kaisai-Gakko, was appointed *Sori-Ho* (Vice-President) of the same Departments of Law, Science, and Literature, and in addition to his duties as Vice-President was made *Shukan* (Principal) of Tokio Dai-gaku Yobimon. Mr. Ichizo Hattori, Director of the former Yeigo Gakko, was appointed *Shukan* of Tokio Dai-gaku Yobimon; and immediately after, the office of *Sori-Ho* of the Departments of Law, Science, and Literature, was assigned to him in addition to his duties as *Shukan*. All instructors in the former Kaisai Gakko and Yeigo Gakko became, respectively, professors in the Departments of Law, Science, and Literature, and teachers in the Yobimon.

So the record goes on, telling of the gradual but steady progress of the institution until we come to the 10th of July, 1879, which witnessed the first occasion of conferring degrees. Fifty-five students who had finished their respective courses received them, and the ceremony was more elaborate than had been customary in giving certificates.

The degree of *Hogakushi* was conferred upon fifteen, and that of *Rigakushi* upon forty. On this occasion, General Grant, Ex-President of the United States of America, who was then visiting this country, was present by invitation. A year later, on the 10th of July, 1880, degrees were granted with appropriate ceremony to thirty-eight students who had completed their respective courses. *Hogakushi* numbered six, *Rigakushi* twenty-four, and *Bungakushi* eight. Among the *Rigakushi* were eight students who had completed the course of Physics in the French language. This course was established for the students of the polytechnic course in French, when the latter was abolished in August of the 8th year of Meiji. The French course in Physics was also abolished on the graduation of the eight remaining students above mentioned. A month or so later, at the suggestion of Professor Mendenhall, in order to measure the velocity of sound under different conditions, an application was made to the government for permission to use at specified times the noon-day cannon in the castle grounds. This permission was granted on the 25th of December. These experiments were conducted in the following year. Meanwhile promising pupils in various departments were sent to France, Germany, and England to complete their curriculum.

In September, 1881, the regulation concerning the study of French and German was modified. Students in the Departments of Science and Literature are accordingly required to study German instead of choosing between French and German. This change has been made in order to enable students to pursue their studies or professions in future to the best advantage, since it is believed that Germany is the country where the sciences have reached the highest comparative development. The students in these departments, however, together with the Law students, may study French if they have sufficient time to do so. The course of Mathematics, Physics, and Astronomy, in the Department of Science, has been divided into three distinct courses; and the course of Philosophy, Political Philosophy, and Political Economy, in the Department of Literature, has been divided, with some modifications, into two

courses, viz., that of Philosophy, and that of Political Science and Economy.

At the end of October, last year, degrees were granted to sixty-six students who had completed their respective courses in the last Academic year. *Hogakushi* numbered eight, *Rigakushi* twenty, *Igakushi* twenty-nine, *Seiyakushi* five, and *Bungakushi* four. On this occasion the Ministers of the several Departments of the Government and other officials and gentlemen, including foreigners, were present. The Korean Ambassadors, who were then visiting this country, were also present. The ceremony which is usually held on the 10th of July was postponed to the above mentioned date, on account of the prevalence of cholera during the summer.

The organization of the University is as follows:—The Departments of Law, Science, and Literature, with the Department of Medicine, form the Tokio Dai-gaku, or University of Tokio, and provide special courses of instruction in Law, in the Department of Law; in Mathematics, Physics, Chemistry, Biology, Astronomy, Engineering, Geology, and Mining and Metallurgy, in the Department of Science; and in Philosophy, Political Science, and Political Economy, and Japanese and Chinese Literature, in the Department of Literature. Besides the above courses, there is *Koten Koshu Kua* (course in Japanese Classics, including Old Japanese Laws, History, Literature, etc.), belonging to the Department of Literature, the object of which course is to instruct the students in the historical facts of the country, in the history of old laws, in the development of the Japanese language, etc. The Tokio Dai-gaku Yobimon Honko, which belongs to the Tokio Dai-gaku and is under the control of the Departments of Law, Science, and Literature, is designed to provide a general course of education and to serve as a Preparatory School to the Departments. All the courses in the Departments of Law, Science, and Literature extend through four years, and there are four corresponding grades of students. In the Department of Law, the students all pursue the same course. In the Department of Science, eight courses have been established, and in the Department of Literature, three courses, with *Koten Koshu Kua*. The students in the Department of Literature and Science pursue one course respectively which they may elect. The intention is ultimately to use the Japanese language in all the Departments, but, for the present, instruction is given in the English language. The students are also taught the French language in the Department of Law, and the German language in the Departments of Science and Literature, except the students of Japanese and Chinese Literature. The little volume before us, with its lists of classes and courses of study, will be of interest to all those who desire to record or admire the marvellous progress made by Japan in the last decade in her adaptation of Occidental methods and sciences.

NOTIFICATION No. 29 OF THE PRIVY COUNCIL.

It was promulgated by Notification No. 7 in July of the 15th year of Meiji (1882) that a railway would be constructed between Kawaguchi, in the prefecture of Saitama, and Mayebashi in the prefecture of Gumbu. Hereby another Notification is issued to the effect that the Kawaguchi line will be extended to Shinagawa, through Itabashi, Shinjuku, and Meguro within the jurisdiction of the Tokiyo Fu, so that it may be connected at Shinagawa with the Tokiyo-Yokohama railway.

August 24th, 10th year of Meiji, (1883.)

(Signed) SANJO SAN'YOSHI,
First Minister of State.

(Signed) SASAKI TAKATSURA,
Minister of Public Works.

SPECIAL COURT, TOKIYO.

WEDNESDAY, AUGUST 15TH, 1883.

Before Mr. Justice TAMANO, and Messrs. HAYASHI, KAWADA, and NAGAOKA, Assessors.

THE PROSECUTION OF THE FUKUSHIMA SUSPECTS.

The Court opened at 8.30 a.m., when Judge Tamano directed prisoner No. 4, Tamano, to speak for himself.

Prisoner—The argument of the prosecution is too extensive for me to go into thoroughly, so I will reply to such portions of it as have a direct bearing upon my case. The prosecution is endeavoring to establish our culpability by the letter I sent to Mumei Kan, wherein I mentioned that the Government is resorting to measures of extreme oppression, etc. This remark had reference to the local administration of Fukushima, and I wrote it under the impulse of the occasion. Had we really intended to revolt, I should not have sent that letter by post. It concerns nobody but myself. It is unjust to incriminate the whole party for a letter for which I am exclusively responsible. Suppose that a shareholder in a company did wrong, would it be reasonable to hold the whole company responsible? Certainly not. This is an exact analogy to the case of myself and my letter. The suspicion that we lied in concert respecting the destruction of the covenant is the result of ignorance of the state of affairs. We were always busy going round the province delivering political lectures. In fact, we were constantly absent from home and never met together; so that we could not make any final arrangement to cancel our covenant. If the prosecution will inquire into this matter, it will find that our statement is correct.

Mr. Oi (Counsel for Tamano)—The prosecution insists that *tem-puku* must involve physical violence; but it has failed to show what was the cause and what the effect of this so-called conspiracy. Action is the result of will or intention. Without volition there can be no performance. The covenant in question was drawn up; but the accused never displayed any intention of carrying it into effect. Hence, there was no danger of the Government being overthrown by the accused so long as they had no intention to upset it. Therefore, there is no reason for punishing them. (Here the Speaker pointed out at great length the inaccuracy of the prosecution's interpretation of French terms). If the authorities had determined to punish every one who used the word *tem-puku*, few would get off scot-free. The contention of the prosecution that the scheme of political improvement devised by the accused did not extend to the whole world, and that the Government of this country was the object of its attack, is the result of ignorance of the prisoners' motives. Take the case of those sages who have founded schemes of logic in the various difficult departments of knowledge. Their work, if not immediately beneficent at the moment of its performance, has had an enduring effect upon human society. Appreciation of this fact impelled the accused to their praiseworthy undertaking. They deserve our gratitude for their endeavours, which reflect honor upon Japan.

Prisoner No. 4, Kono, recapitulated his previous statements and emphatically denied the accusation that the covenant was drawn up for the purpose of upsetting the Government of Japan.

Mr. Hoshi (Counsel for Kono)—I beg to ask the Court to allow me to address it at the conclusion of the proceedings.

Prosecutor—We shall avoid confusion by keeping to the present order of conducting the case.

Judge—There can be no inconvenience whatever in allowing Mr. Hoshi to speak last, provided that course is to the advantage of the accused.

Prisoner No. 5, Aizawa, was next ordered to reply to the accusation. He asserted that the words "bureaucratic Government" in the covenant, did not refer to the Government of Japan, inasmuch as Japan is about to have a national assembly in the 23rd year of Meiji.

Mr. Kitata, Counsel for Aizawa, said that he would address the Court at its next sitting, as there would not be time for him to finish his pleading that morning.

The Court rose at 11 a.m.

THURSDAY, AUGUST 16TH, 1883.

The Court opened at 8 a.m., when Judge Tamano requested Mr. Kitata to commence his argument.

Mr. Kitata—I will refer to the three points upon which the Prosecution's contention is based. Emphatically will I refer to one thing. The ideas of one individual should not be taken to represent that of a collective body. Monsieur Boissonade defining an "idea," says that it is a thought and that the human faculty is originally of the weakest description. When "idea" has developed, it is known by the name of volition. But this is not the last stage of its development. That is determination, and is an individual attribute. The idea of an association, is the determination of many individuals to achieve the consummation of a certain object. Thus, the idea of one individual must not be looked upon as identical with a plot contemplated by many. And this faculty (or idea) is liable to undergo many changes before it merges into determination. The law does not take cognizance of it in the case of common offences; but it is punishable in cases of high treason, because its nature is then very grave, and because after it is carried into effect its punishment is of no avail. I will now proceed to restate the charges put forward by the prosecution. They may be divided into three points;—(1) The words "bureaucratic Government of Japan;" (2) The words "overthrow the Government" suggests attempts to raise an insurrection; and (3) the statement that the covenant was cancelled, is untrue. The first and second points concern the general facts of the case; and the third point, the argument now under our consideration. The prosecution insists that the expression "bureaucratic Government" meant the Government of this country. In support of this contention, they produced the letter written by Tamano and the evidence of Hiroshima and Hanaka. This is all but the result of illusion. The letters and evidence were simply the sketch of each individual's own idea and not the deliberate determination of the lot. Hiroshima and Hanaka have proved that the evidence in question is inaccurate; and Tamano has deposed that he wrote the epistle under the pressure of the occasion. He has declared that his writing concerns nobody but himself, and that he is solely responsible for it. All the accused have established that the programme of their political work embraced the whole of human society. They are guiltless and cannot be punished. The words "bureaucratic government" might be applicable to such a government as that which existed under Louis XIV. and Louis XVI. But it cannot be applied to the Government of Japan, which is about to establish a liberal constitution. That the covenant was cancelled cannot be doubted. Speaking from

a legal standpoint, if the covenant had been an agreement between a debtor and creditor, it could not be broken otherwise than through mutual consent; but it happened to be of a totally different nature, and might be cancelled at the will of its deviser, provided he announced his intention to two or three of his companions. Subsequently, no matter though there existed a copy of the covenant, it was virtually extinct. Therefore, the contention as to the covenant is untrue, and because of difference in dates mentioned, is valueless. The argument that *tem-puku* necessitates physical violence, is ridiculous, since there are two ways of overthrowing a Government—peacefully and violently. Sometimes a thing may be overthrown by its own weight or by an accident. In the present case, the word *tem-puku* is used in its peaceful sense, and means improvement in the administrative organization. Suppose an edict was issued prohibiting travel to Kiyoto by sea; and a man journeyed there overland, would it be reasonable on the part of the police to arrest and punish him? Certainly not. Though the voyage there by sea was prohibited, the man was quite justified in going overland. This is an exact analogy of the circumstances of the prisoners. On consideration of the state of affairs when the accused drew up the covenant, we must be convinced that their scheme was of a peaceful nature. There is no reason why they should be punished.

Prisoner No. 6, Sawata, was next ordered to reply to the accusation, when he complained of being incriminated by the confessions extorted from others in the Fukushima Police-station and the Wakamatsu Court. He said that he had been arrested in Tokijo and had no part in the preliminary examination of his fellow prisoners. He asserted that the political work of his party was meant to extend to foreign countries—namely, Korea and China. The people of those two nations, he held, do not enjoy the gifts of liberty; and in view of the recent introduction into Japan of civilization from Occidental nations, it was the duty of Japan to introduce it to these two nations.

Mr. Uyeki (Counsel for Sawata) briefly addressed the Bench, pointing out that, in deciding this case, it would be necessary to find out what was the object of the accused in drawing up the covenant and what measures they were going to take to consummate it. Their object was, said Mr. Uyeki, to establish a liberal constitution—an object which could not be punished by law; and they had resorted to peaceful measures to attain that end.

Mr. Hoshi—Prior to proceeding with my argument, I should like to ascertain whether the Prosecution is influenced by a belief that the Government of Japan is bureaucratic, and in accordance with that belief refuses to credit the declarations made by the accused that the Government is not bureaucratic; or, whether the Government itself, regarding itself as bureaucratic, has instructed the Prosecution to institute this case.

Judge Tamano—I cannot tell whether the Prosecution would care to reply to your question. Will you (addressing the Prosecutor) answer it?

Prosecutor—It is a very strange question to put. It would be absurd for us to call the Government bureaucratic, oppressive, or by any other such name. It is quite useless to ask such a question. The only matter we have to consider, is whether or no the accused had the intention to overthrow the Government. We cannot reply to any such irrelevant question as that put by Mr. Hoshi.

The learned Counsel for the defence then esti-

mated that he would conclude his address on the following morning.

The Court rose at noon.

FRIDAY, AUGUST 17TH, 1883.

The Court opened at 8.20 a.m., when Judge Tamano requested Mr. Hoshi to commence his argument.

Mr. Hoshi—I must request the Court to read me the reports of Hiroshima's trial dated the 1st of February and 2nd of April this year. (Reports read. The learned Counsel indicated a few points in the reports in support of his contention.) He then said:—The two questions, as to what is the true definition of the word "insurrection" as described in the Criminal Code, and whether the evidence produced by the Prosecution is sufficient to prove the culpability of the accused, are of the first importance in this case. The four points* to which I referred yesterday are of only secondary moment. The second question has the principal bearing upon the matter, and I will deal with it first. The contention of the Prosecution can be divided into three heads:—(1) the words "bureaucratic Government" in the covenant meant the Government of Japan; (2) The words *seifu tem-puku* (to overthrow the Government) suggest an attempt to raise an insurrection; and (3) that the covenant was cancelled, is false. Beginning with the first point, I find that the Prosecution regards the Government of Japan as bureaucratic; for, whilst the accused said that the Government of Japan is excluded from the category of bureaucratic governments, they insist in their defence that it included the existing authorities in it. This partakes somewhat of the marvellous. I put therefore a question yesterday to ascertain the opinion of the Prosecution on this point, but the Prosecution gave me an equivocal reply. In the report of Hanaka's examination and that of Hiroshima, a statement occurs that they said that the words in question represented the existing Government of Japan. As the accused have already clearly shown that the report is full of gross errors, the statement in question cannot be believed. The two witnesses, Kamada and Sasaki, testified that they saw no such word as Japan in the covenant. Hence, it is evident that the accused did not refer to the Government of Japan. Had they meant the Government of Japan they would have written in the covenant to that effect. But it was well known that Japan is to have a liberal constitution in the 23rd year of Meiji (1890), and there was no reason why it should be called a bureaucratic Government. If, therefore, anyone designates the Government of Japan as bureaucratic, he must assign a reason for so doing. That the accused did not do so is owing to the fact that they referred to all the bureaucratic Governments of the world. With reference to the letter written by Tamano, I must contend that it concerns nobody but the author himself, and has nothing whatever to do with other prisoners. The Prosecution has insisted that the political reforms contemplated by the accused could not be extended to foreign countries. This is a matter of opinion, and in my contention a wrong view. There is no question that such reforms can be effected. (Here the Speaker took some pains to show the possibility of the work being executed by referring to the spread of Buddhism and Christianity). That the covenant was cancelled and that the words *seifu tem-puku* (overthrow the bureaucratic government) were changed to "improve the administrative system," are true, and cannot be disputed. Let us return to the first point. Before proceeding, however, I want to call the attention of the Court to the fact that there is a contradiction in the argument of the Prosecution. I will return to this point anon, and discuss it fully. At a former sitting, I said that the Japanese word *nairan* (domestic disorder or insurrection) is equivalent to the French term *guerre civile*. The Prosecution disputed this—that is, the correctness of my version,—and said that the French equivalent for *nairan*, is *crime contre la sûreté de l'état*. This is wrong. The French term

* The *Chojo Shimbun*, from which this report is translated, did not contain the argument of Mr. Hoshi on the said four points which had reference to the intellectual and moral condition of the accused prior and subsequent to the covenant being drawn up.

in question means in English, a crime against the safety of the State. The English equivalent for *naiwan* is civil war. There is a great difference between the English and French terms. Under the heading "*crime: contre la sûreté de l'État*," one finds two distinct clauses—crime against the Imperial family and the crime of civil war. The Prosecution got mixed in dealing with these two phrases. They insist that *guerre civile* means war among the people. But this is probably due to a misinterpretation of the word *civile*, which is derived from the Latin word *civis*, and means pertaining to a city, but after Rome established herself in all her splendour, it was used to represent State. The Prosecution, probably, did not understand this, and the consequence is their mistake. The contention of the Prosecution that Article 87 of the French Criminal Code corresponds with Article 121 of our Criminal Code, is wrong, because Article 121 embodies Articles 87 and 91 of our Criminal Code. The foregoing will, I believe, prove the correctness of my assertion. (Here Mr. Hoshi quoted from the English authority, Stephens, and the American authority Bishop, in support of his definition of the word insurrection, the equivalent of the Japanese word *naiwan*.) I wish to remind the Prosecution of an incident which is looked upon to the present day as a disgrace to the history of the English judiciary. In the reign of Charles I., a man was convicted for merely writing the words "I overthrow the government" on the margin of a letter, and was sentenced to death! I hope that the Court will not suffer the reproduction of such a shameful sentence.

Mr. Kitata rose and requested the Prosecution to thoroughly digest Article 146 of the Code of Criminal Procedure.

Judge Tamano—Will you (addressing the Prosecution) speak to the argument of the defence?

Prosecutor—We had previously to deal *seriatim* with the defence of each of the accused and with the arguments of their Counsel. This method has given rise to so much confusion that it is impossible to get at the bottom of the argument, and as we cannot take any other course than that adopted, we are compelled to a certain extent to stick to the same system. As our previous argument was apparently too much for obtuse individuals, we will explain it once more very plainly. The defence has often complained of the judgment being founded on presumption. The Prosecutor then went on to explain that Article 146 of the Code of Criminal Procedure does not concern the Judge, and that its spirit is to prevent the participation of the legislative officers in judicial matters. He said that criminal law was operative in the intellectual sphere, that is to say, that criminal intention was punishable by law.

The Court rose at 11.30 a.m.

SATURDAY, AUGUST 18TH, 1883.

The Court opened at 8.20 a.m., when the Prosecutor, in continuation of his speech, said that the argument of prisoner No. 1, Hanaka, and his Counsel, Mr. Yamada, can be arranged under five heads:—(1) the report of the accused's trial at the Fukushima police station is valueless; (2) the possibility of political reform being effected throughout the Orient; (3) the statement that the covenant was cancelled, is true; (4) the word "overthrow the Government" were changed to "improve the administrative system;" and (5) the so-called intention to overthrow the Government, does not come within the scope of what is meant by an "insurrection." With reference to the first point, he said that the prisoner had every opportunity to correct the report in the Special Court, but he admitted that the words "overthrow the Government" referred to the existing Government of Japan, as recorded in the report of the preliminary examination, and the proof was therefore conclusive that the accused meant "to overthrow" the present Government. As regards the second point, the Prosecutor said that such an universal political reform as was said to be contemplated by the prisoners, is quite impossible, and therefore a false plea. The third

point that the covenant was cancelled, is sheer invention, since the prisoners mentioned nothing of it on the occasions of previous hearings, till Kono spoke of it later on. The fourth point is of the same nature. The accused never even mooted it in previous hearings. The fifth point is untenable, since the covenant bore bloody signatures. People only sign in that fashion when they have thrown their life into the balance against the execution of their designs. Coming to the case of prisoner No. 2, Hiroshima, the speaker remarked that prisoner's defence consisted of three points:—(1) the words "bureaucratic Government" did not refer to the existing Government; (2) the asserted attempt to overthrow of the Government, is not insurrection; (3) the covenant was cancelled. All these conditions Counsel endeavoured to dispose of exactly in the same way as in his previous pleading. He then went on to say that the words *seifu tem-puku* were and are used in a sense of taking violent measures to attain an end, and thus convey a dangerous impression. He remarked that the rise and decline of Christianity and Buddhism had nothing to do with the case, and that (referring to the quotation of Hiroshima from Mencius) to overthrow morality, no physical power is required, but to overthrow the Government, bodily exertion is necessary. Therefore the prisoner's classical reference is inapplicable in this case, since the covenant speaks of "overthrowing the Government," not upsetting an abstract virtue. Replying to the Counsel for Hiroshima, Mr. Nakashima, the Prosecutor, divided his argument into four headings:—(1) an attempt to overthrow the Government, is not insurrection; (2) the proposed scheme of political reform did not embrace Japan; (3) the words "overthrow the Government" were altered to "improve the administrative system;" and (4) the covenant was cancelled. Counsel said:—The first point having been already gone into, it demands no fresh refutation. As regards the second point we contend that the work proposed could not have been extended to foreign lands. That idea is simply preposterous. Hanaka and Hiroshima said for the first time in this Court that the wording in question was altered, but they said nothing of the kind at the time of the preliminary examinations at Fukushima and Wakamatsu. After careful consideration we are convinced that they meant the existing Government of this realm. The third point is that of intention, as we have already indicated it. The accused and their Counsel insist that their scheme was to overthrow the Government by the force of their rhetoric. In support of this plea they sought an analogous case in the work of Rai Sanyo, who contributed toward the downfall of the Tokugawa usurpation. But the Prosecutor reminded the defence of the fact that the very nature of their argument was criminal. The overthrow of a Government may be effected by rhetoric, not directly, but indirectly. There are two methods whereby to attain the end. One is instigation, the other is the actual rising of people against their Government through their believing in the word of others. Instigators to rebellion are punishable criminally; and among them must be included political lecturers who, even unintentionally, speak in such a manner as to incite the people to oppose the Government. In such an instance, the orators are punishable under the Regulations for the Control of Public Meetings. Mr. Nakashima contends that, unless ammunition, provisions, and money have been obtained, a so-called insurrection is not an insurrection at all. But in law the preparation (*yobu*) with determination to raise a rebellion, is punishable as coming within the scope of secret plotting (*inbo*). Of the statement of prisoner No. 3, Tamano, that it is unreasonable to hold a company responsible for the wrong-doing of one of its shareholders, and that there is an analogy between such a case and himself and his letter, the Prosecutor held that his illustration was utterly inappropriate. The letter was produced in substantiation of the charge against Tamano and not as sole testimony.

SATURDAY, AUGUST 18TH, 1883.

The continuation of the Prosecutor's speech is as follows:—The contention of Mr. Oi, Counsel for prisoner No. 3, Tamano, can be divided into three parts:—(1) because the Prosecution bases the culpability of the accused on the wording in the covenant it is unreasonable to punish them for a

mere expression of opinion; (2) it is not difficult to overthrow all the Governments of the universe; (3) the argument of the Prosecution is of no value. With reference to the first point, the Speaker said that the crime of insurrection is not punishable in intention, and never until after committed. The second point, he said, had already been gone into, and required no fresh refutation. The third point was the ignorance of Mr. Oi of the meaning of the French terms cited by the Prosecution. (Here the Prosecution requested prisoner No. 4, Kono, to recapitulate his argument.) This done, the Prosecutor briefly discussed Mr. Kono's statement and said he would reply to it at the close of the case, or before the prisoner's Counsel, Mr. Hoshi spoke, to avoid confusion.

The Court rose at 11.30 a.m.

MONDAY, AUGUST 20TH, 1883.

On the opening of the Court, the Prosecutor resumed his argument. He said that the defence of prisoner No. 5, Aizawa, consisted of three points. The first—namely, that, as Japan was to have a National Assembly in the 23rd year of Meiji, the existing Government is excluded from the category of "bureaucratic governments"—has nothing to do with the case, and therefore requires no refutation. The second point—that the "overthrow" of the Government by physical force would require the combined efforts of many thousands of men, and that as the six prisoners could not overthrow the government they cannot be guilty of insurrection—is a worthless plea. Third, there was no evidence forthcoming that the accused had no intention to raise an insurrection. As for the argument of Mr. Kitata, Counsel for Aizawa, the Prosecutor remarked that it might be dealt with in four sections:—(1) the words "bureaucratic government" did not refer to the existing Government of Japan; (2) the covenant was cancelled; (3) the word *tem-puku* (overthrowing) does not signify insurrection; (4) the argument of the Prosecution is valueless. With regard to the first point, the speaker said that Aizawa evidently understood its meaning, as the report of his preliminary examinations and the letter written by Tamano clearly indicated. The second point, that the covenant was cancelled, is untenable, since no evidence has been produced to corroborate the statement. As regards the third point, the Prosecutor said, that the illustration of the incongruity in the accusation adduced by Mr. Kitata was inapplicable. In contradiction of the hypothesis that although a man were prohibited from going to Kiyoto by sea, he might be justified in going thither overland, the Speaker said that, in this case, the criminal intention of the accused was as clearly proved as that of a man who pretends to go to America overland while he can only go thither by sea. They had only one way of consummating this object—physical violence. The signature in blood is the most substantial proof that the accused plotted, and were fully conscious of the possible consequences of their action. As regard the fourth point, the Prosecutor remarked that the argument of the prisoner's Counsel was preposterous.

Mr. Kitata rose and begged to be allowed to reply to the Prosecution. (Allowed.) He said:—Article 146 of the Code of Criminal Procedure, is devised to prevent Judges from deciding on mere assumption. If such a course were tolerated, great dangers would arise. The learned Counsel emphatically protested that the Prosecution had confounded fact with intention.

Referring to the argument of prisoner No. 6, Sawata, the Prosecutor said that the alleged threats and deceit of the Fukushima police did not shake the accusation as no evidence was forthcoming to prove it. He then rapidly reviewed the argument of Mr. Uyeiki, Counsel for Sawata, and said that his theme demanded no refutation.

MONDAY, AUGUST 20TH, 1883.

Reviewing Mr. Hoshi's argument on behalf of Prisoner No. 4, Kono, the Prosecutor said that it might be dealt with under four headings, to wit:—(1) that, as there is no "bureaucratic" Government in the country, any plot to overthrow such an institution could not apply to the Government of this country. This plea is illogical, since attempts to upset a government do not take abstract account of whether the authorities are bureaucratic or con-

*Article 146.—The law forms no presumption of culpability deduced from the circumstances of the case. The confession of the accused, the declarations, the condemnatory evidence, the testimony of third parties, the reports of experts and indications of every kind are left to the discretion of the judges.

stitutional. They mean the overthrow of a certain government because it is opposed politically to the party that seeks its abolition and the establishment in power of its own adherents. The accused admitted their intention to overthrow all governments that are the foci of liberalism. Prisoner No. 1, Hanaka, categorically admitted that the idea of "bureaucracy" in his mind was exemplified in the Government of Japan. (2) The assertion that the words in question were altered to "improve the administration" is unsupported by any evidence, and is therefore of no value. (3) The statement of Sakai and Kanada that they had seen the correction cannot be received with any confidence, since, not only were they implicated in the same crime, but as the servants of Hiroshima they were likely to give evidence partial to him. (4) The theory that a secret plot (*inbo*) is not punishable, unless recourse is had, as a consequence of it, to physical violence, is untenable. Granted that no active measures of revolt had been resorted to by the prisoners; but they had plotted, and were indicted with the crime of *inbo*—conspiracy to raise an insurrection. Mr. Hoshi's attempted analogy of some serious error in a judgment delivered in an English Court is wholly irrelevant. The English judge delivered judgment according to the force of expressions used, whereas in this instance there is substantial evidence that the prisoner intended to overthrow the Government. (Here the speaker pointed out the incorrectness of Mr. Hoshi's interpreting of the French legal terms, and remarked that the counsel's quotations from English and American authorities were useless.) I have refuted the arguments of each of the accused and their Counsel. In consequence my argument is likely to become rather confused, to avoid this I will briefly recapitulate my argument. It consists of three sections:—First the statement of the accused, that the covenant was drawn up for the purpose of spreading liberal ideas, is false, for the document bore signatures in blood. This is only done when men throw their lives in the balance against the execution of their designs. The contention that the proposal for the publication of a newspaper shows that they had combined to effect a political improvement by peaceful means, is an invention. The second point requires no recapitulation. The third point, is that the accused is criminally punishable, since they were guilty of a secret plot (*inbo*) to raise an insurrection which action has been proved by the covenant.

Mr. Hoshi asked whether the Prosecution had finally concluded their argument.

The Prosecutor, in reply, remarked that should anything take place that required him to speak, he should do so without hesitation.

The Court rose at 11.30 a.m.

THE LAUNCH OF THE "TENRIU KAN."

According to announcement H.I.J.M.S. *Tenriu Kan* was launched on Saturday afternoon. From an early hour the people of the vicinity thronged to Yokosuka Dockyard; and visitors from Tokyo and Yokohama were so numerous that all the boats plying between this port and the arsenal were crowded thither with sightseers. The weather was delightful, and the bay as smooth as glass—falsely as usual; but the edge of the gale which has been raging South of us had not reached this harbor, nor did it, until after the visitors to the launch had returned to their respective homes. H.M. the Emperor was prevented from being present; but he was well represented at what was indeed a brilliant spectacle. The many Japanese men-of-war in harbor had dressed ship for the occasion, while the folks ashore were as joyous as Japanese alone can be. Among the distinguished personages present were their Imperial Highnesses Aru-gawa-no-Miya, Komatsu-no-Miya, Fu-himi-no-Miya, and Na-hime-no-Miya; their Excellencies Sanjo, Ito, Oki, Yamada, Yamagata, Matsukara, Sasaki and Fukuoka; Generals Saigo and Kuroda; Admirals Kawamura, Nakamura, and Nirei; Captains Aiura and Kurooka. The party was conveyed by steamer to and from Yokosuka, and in the evening on return was entertained at supper in the Eastern Admiralty Office. There was also present a large number of distinguished civil and military officers.

The *Tenriu* was designed by Rear-Admiral Akamatsu, on a mixed English and Russian model, and was constructed by Messrs. Shido (superintendent of the dockyard), Hamaguchi (vice-superintendent), and Akamine (chief engineer). The work was commenced in February, 1878, and completed last month. The *Tenriu Kan* is a vessel of the third-class. Her dimensions are: length 63.74 metres; breadth 11 metres; draught 4.8 metres (foreward) and 5.7 metres (aft). She is barque-rigged; her speed is 12 knots an hour; tonnage register 925; and displacement 1,372 tons. Her armament consists of one 15 and one 17 centimetre Krupp gun and four 12 centimetre Krupp. She has compound surface-condensing engine, and the steam pressure is one cubic inch of 65 pounds; horse-power, indicated, 1,250; nominal, 250.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, AUGUST 17TH, 1883.

Observatory of Daigaku, Noto-Fujicho, Hongō, Tokiyo, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
represents velocity of wind.
percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

• Rain in inches. † Direction of Wind. ‡ Weather.

Maximum velocity of wind 32.3 miles per hour on Sunday at 3 p.m.

The highest reading of the barometer for the week was 30.115 inches on Tuesday at 9.57 p.m., and the lowest was 29.778 inches on Monday at 2 p.m.

The highest temperature for the week was 80.4 on Monday, and the lowest was 63.2 on Wednesday. The maximum and minimum for the corresponding week of last year were 80.0 and 63.4 respectively.

The total amount of rain for the week was .363 inches against .433 inches for the corresponding week of last year.

LATEST SHIPPING.

FREIGHTS.

At present in port the steamship *Oxfordshire* still occupies the berth for New York. For San Francisco the berth is divided between the *St. David*, advertised to sail on the 28th, and the *Mary Winkelman*. In local business, the bark *Wandering Minstrel* and the brig *Minerva* have been taken up to load wheat at this port. The French bark *Louise* left this for Nagasaki, and the German bark *Galveston* is now ready to leave for the same port in ballast. The British bark *Stillwater* is also ready to depart for Hakodate to load for San Francisco. The *Merionethshire* and *Galley of Lorne* are discharging cargo; the latter vessel is advertised for New York, via Suez Canal, with dispatch. The British 3-masted schooner *Guam*, from Takao with sugar was towed into port on Thursday morning by the steamship *Galley of Lorne*, having been dismantled on the 17th in a hurricane lat. 31 N., long. 132 E.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Wakanoura Maru*, from Kobe:—Rev. C. F. Warrenson, Messrs. J. Mill, W. C. Mitchell, and J. Roberts in cabin and 99 Japanese in steerage.

Per Japanese steamer *Toyoshima Maru*, from Hakodate:—5 Japanese in cabin; and 55 Japanese in steerage.

Per Japanese steamer *Kworio Maru*, from Yokkaichi:—123 Japanese in steerage.

Per Japanese steamer *Tsuruga Maru*, from Kobe:—2 Japanese in cabin; and 30 Japanese in steerage.

Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—H. H. Duke of Mecklenberg.

Baron Frill Winckler, Count Seiertorff, Lieutenant Mason, U.S.N., Dr. Salter, Messrs. Robins, F. Cochard, Bing, Ahrens, Bowen, Mini, Yoneda, Hojio, Atsumi, and Hitotsuyamaga in cabin; and Mr. D. McCarthy, U.S.N. and 64 Europeans, 1 Chinese, and 168 Japanese in steerage.

Per American steamer *City of Rio de Janeiro*, from San Francisco:—Rev. and Mrs. W. E. Walz, Vicomte Henry de Baré de Comongne, Secrétaire de Legation de S. M. le Roi des Belges, Dr. T. Harada, Messrs. F. J. Higgins, U.S.N., L. D. de Fontenague, August Kappler, J. T. Darling, W. K. Seelz, Jas. Orr, R. Davidson, A. H. Hogeman, and H. B. Tritsall in cabin. For Shanghai: Miss E. Reifenyder, M.D., Rev. and Mrs. Chas. Leaman and 2 children, and Dr. J. Lurhsen in cabin. For Nagasaki: Mr. and Mrs. W. Kasbevaroff and 3 children in cabin.

DEPARTED.

Per British steamer *Arabic*, for San Francisco:—Mrs. Thomas in cabin; and 6 Europeans, 5 Koreans, and 227 Chinese in steerage. For New York: H. E. Ming Yong Ik-Konar, Minister, H. E. Hong Yeng Sik, Vice-Minister, Wo Ho Lang, Korean Embassy, Lo Kuon Bom, Secretary, Embassy, Percival Lovell, and J. Murata and servant in cabin. For Liverpool: Mr. and Mrs. J. H. Hudson, Messrs. H. G. James, R. McGregor Grant, T. Craven, and D. Marcus in cabin. For London: Messrs. J. J. Enslie, and M. Beazeley in cabin. For Paris: Mr. Louis Simon in cabin.

REPORTS.

The Japanese steamer *Toyoshima Maru*, Captain Thomas, reports leaving Hakodate on the 17th instant, at 5 p.m. with light variable winds and fine weather to Kinkasan; thence to port fresh south and S.S.W. winds with a heavy southerly swell.

The Japanese steamer *Kworio Maru*, Captain G. Withers, reports having experienced at Yokkaichi on the 20th instant light breeze and cloudy weather; at 4 p.m. moderate breeze and cloudy weather attended by light showers; at 7 p.m. left Yokkaichi with moderate N.E. winds and heavy lightning to eastward; at midnight; coast of Yenshiu, calm and cloudy weather; on the 21st at 4 a.m., off Omayesaki Lighthouse, fresh northerly breeze and cloudy weather; at noon strong N.E. winds and clear weather; at 4 p.m. fresh breeze and cloudy weather with inclination of rain; at 8 p.m. moderate breeze and clear weather off Sagami Lighthouse; and at 11 p.m. anchored at Yokohama.

The Japanese steamer *Tsuruga Maru*, Captain Dithleisen, reports leaving Kobe on the 20th inst., at 6 p.m., with strong easterly winds and very heavy southerly swell; thence to Rock Islands strong E. to N.E. winds and heavy head sea; and thence to port fine weather.

The British steamer *Galley of Lorne*, Captain Pomeroy, reports having picked up the British 3-masted schooner *Guam* in lat. 31° N., long. 132° E., asking assistance.

The British 3-masted schooner *Guam*, Captain Marns, reports having experienced light winds and calm for the first four days after leaving the port. On the 6th instant had a heavy S.W. gale; afterwards light winds until the 16th, and on the 17th experienced a hurricane from the E.N.E. in which lost fore mast, bowsprit and main top-mast with various other damage to hull and decks. During the gale Captain Marns had his feet and hands severely injured. The *Galley of Lorne* took the vessel in tow on the 20th instant; had previously been in tow of the bark *Helena*, but the thawser having broken the bark went on her way.

The American steamer *City of Rio de Janeiro*, Captain W. B. Seabury, reports leaving San Francisco on the 4th August, at 12 o'clock, with the fine weather throughout the entire passage in excepting a short but sharp gale from the southward on the 18th August.

MEN-OF-WAR.

Essex, American gun-vessel, 619, Captain A. H. McCormack, 11th August,—Honolulu 8th July.

Kongo Kan, Japanese corvette, 13 guns, 1,341, Captain Aiura, 22nd May.—Yokosuka.

Richmond, American flagship, 14 guns, 300 men, 2,700, Captain J. S. Skerrett, U.S.N., 9th July,—Nagasaki 5th July.

LATEST COMMERCIAL.

IMPORTS.

Since our last report, there has been but a very small business in Yarns, while there has been rather more doing in Shirtings in small lots at a time. All round it has been a very quiet week, and there is nothing calling for any special comment. Woollens continue neglected, and the weather is too hot for working Metals.

| White, No. 5 - | 5.00 to 5.20 |
| Brown Formosa - | 4.35 to 4.47 |

EXPORTS.

SILK.

There is a good current business doing. Settlements for the week are fully 700 piculs, and all descriptions have had a share. We leave prices unchanged, but for good Silks they are decidedly in favor of sellers. Export to date is 3,193 bales, against 3,411 bales to same date last year, and the

Tanis has several hundred bales already engaged.

Hanks.—A fair quantity has found buyers, Shinshiu sorts at \$520, Omana \$505, Annaka \$495, and ordinary Mayebashi \$475. Larger arrivals of better class Hanks from Shinshiu and Joshiu provinces are now looked for.

Filatures.—Still some demand for the Medium qualities. Best kinds are scarce, and command full rates. Hida and Mino sorts grading down have been dealt in at \$580/590.

Re-reels are not much sought for at the moment. Last quotations were about \$610 for Matsushirosha (Shinshiu) and \$605 for Five Girl (Mayebashi).

Kakedas.—Something done on basis of \$610 for Chocho with \$550 to \$530 for Medium down.

Hamatsuki.—Still in demand at \$470 for best, tailing off to \$460 and \$450 according to quality.

QUOTATIONS.

| Hamatsuki—No. 1, 2 - | 460 to 470 |
| Hamatsuki—No. 3, 4 - | 440 to 450 |

TEA.

The demand for this product has decidedly fallen off. Settlements since date of last report only reached to 1,205 piculs, whilst arrivals have come in steadily; prices show no alteration so far, and the Market closes quiet but steady. The following are the shipments of Tea to the United States and Canada since last weekly issue:—The steamship *Kashgar*, sailed on the 18th instant, for transhipment to the *Ascalon* at Kobe took 108,612 lbs. for New York. The steamship *Arabie*, sailed on the 18th August, took 393,572 lbs. of Tea, viz.:—119,492 lbs. for New York, 87,328 lbs. for Chicago, 142,198 lbs. for California, 44,554 lbs. for Canada. The O. & O. steamships *Oceanic* and *Coptic* are on berth for San Francisco; the former is advertised to leave on the 30th instant, and the latter on the 9th proximo, both at 2 cents per lb. gross to the Eastern States and Canada, and \$9 per ton of 40 cubic feet.

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c., is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

THE GREATEST WONDER OF MODERN TIMES

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

For the excellence of our Manufactures, we have received following AWARDS:—

Vienna Exhibition, 1873, Diploma of Merit.
South African Exhibition, 1877, Gold Medal.
Paris Exhibition, 1878, Gold Medal.*
Sydney Exhibition, 1879, First-class Diploma.
Melbourne Exhibition, 1881, First-class Award.

* The ONLY ONE awarded to any Tin Plate Manufacturer.

Sole Export Agent—BROOKER, DORE & Co., Corbet Court, London, E.C.

May 1st, 1883.

**ROOT'S PATENT
TUBULOUS STEAM BOILER,**

Safe, Economical, and Easy of Transport in Mountainous Countries.

Knap's Patent Mechanical STOKERS, applicable to all kinds of Boilers and Furnaces, economical and smoke consuming.

The Patent Steam Boiler Company,

HENEAGE STREET, BIRMINGHAM.

May 1st, 1883.

FOR SALE.

FOR SALE, a SMALL "CLYMER" COLUMBIAN PRINTING PRESS.

For Price apply to the MANAGER, *Japan Mail* Office, No. 72, Main Street, Yokohama.

Yokohama, May 1st, 1883.

NOTICE.

THE "JAPAN DAILY MAIL" is now the largest newspaper published in Japan. The paper is issued every morning and immediately delivered in the Settlement and Bluff.

A new rate of charges for Advertisements has been devised on a very moderate scale, and the Paper has a good and increasing circulation.

The "JAPAN DAILY MAIL" is the principal Morning Paper published in Yokohama in the English language, and is delivered at places of Business during Office Hours on the day of publication. Advertisers will therefore see that the "JAPAN DAILY MAIL" offers unusual facilities for public announcements.

OFFICE, 72, MAIN STREET, YOKOHAMA, Yokohama, 1st May, 1883.

**Macfarlane's Castings.**

Plain and Ornamental for Rain Water and Building purposes.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 1ST, 1883.

BIRTH.

On the 27th instant, at Her Britannic Majesty's Naval Hospital, the wife of W. J. HOOPER of a Daughter.

DEATH.

Died on the 30th instant, at his Residence, No. 1208, Bluff, Dr. A. J. C. GEERTS, Director of the Imperial Japanese Government Laboratory, aged 40 years. The funeral will take place this afternoon, at half-past four o'clock, from the German Hospital.

WEEKLY NOTES.

THE typhoon which swept across Japan between the 17th and 20th instant, entering these islands at a point south-west of Kagoshima and leaving them about midway between Tokiyo and Nobiru, produced a sensible fall of temperature; and, though some sultry days subsequently visited us, the general character of the weather since then has been cool and pleasant. Little if any serious damage seems to have been caused by the storm, though the destruction of some telegraph wires prevented the transmission of valuable meteorological information at the very time when it would have been most useful. An interesting letter from

Professor Knipping, published in our correspondence columns, explains the track of the typhoon and furnishes other scientific data with regard to it. The writer points out that, had a certain shifting of wind and cloud, noticed at Kagoshima, been telegraphed without delay to Tokiyo, it would have been possible to know that the storm must certainly pass to the West of Kiushiu—knowledge which is, of course, invaluable in furnishing storm warnings. Such a signal instance of the inconveniences that may be caused by a system of one single meteorological telegram per diem, will probably have the effect of bringing about a more complete method. In one respect the storm was most beneficent. At all stations near its track—that it to say, throughout the length and breadth of Japan, with very few exceptions—copious rain fell, thus removing all apprehensions as to the possible effects of a drought of nearly two months. We may say at once, however, that these apprehensions were unfounded. It is difficult for the summer to be too dry in Japan. Among the farmers a common saying is that many dews make much plenty, or, in other words, that a rainless summer gives the best crops. The upland rice must of course suffer, more or less, from such an uninterrupted series of fine days as July and August brought us this season, but this injury is as nothing compared with the benefit conferred on the crop generally. At present the prospects are everything that can be desired. The recent rains came just in time to freshen the uplands, and were not heavy enough to cause any injury elsewhere. If the country is not visited by any violent winds during the first half of September, we may look for one of the most plentiful harvests that has been enjoyed for many a year.

SIR HARRY PARKES left Japan on Wednesday to enter upon his duties as Her Majesty's Representative at Peking. His departure was made the occasion for a demonstration such as Yokohama does not often witness. It was announced that at four o'clock in the afternoon he would receive his friends at the Consulate, and since every member of the foreign community has had more or less reason to count himself in that category, the whole Settlement responded to the invitation. After a most cordial leave-taking Sir Harry proceeded to the steamer, being conveyed on board by the American Admiral's barge. He was accompanied by their Excellencies Ito and Inouye, the United States Representative, Mr. Bingham, the Honorable P.

Le Poer French, now British *Chargé d'Affaires*, and several other friends. As the *Tokiyo Maru* steamed out of harbour she was met, at the Light Ship, by a procession of five boats from the Boat Club, and three ringing cheers concluded Yokohama's farewell to the most popular official in the East. It may truly be said of Sir Harry Parkes that he does not leave behind him one enemy which a man in so prominent a position could have avoided. Some there are indeed—and we frankly confess ourselves among the number—who would have been glad to see him adopt a policy more consistent with the character of his country, and worthier of the large interests he represented. But whether of those that differed from, or of those that endorsed, his views, there are none who have anything but the warmest admiration, respect, and, let us add, affection for the nobility of his character and the unflinching earnestness of his life.

On Thursday morning Dr. A. J. C. Geerts breathed his last at his residence on the Bluff. Dr. Geerts was but forty years of age. He had been in the service of the Japanese Government since 1868, and scarcely a fortnight before his decease the Emperor conferred on him the decoration of the Rising Sun. It was known for some time that the malady from which Dr. Geerts suffered was cancer in the stomach and that his recovery was quite hopeless. Nevertheless his death seemed at the last comparatively sudden. He leaves behind him a high reputation for scientific ability and industrious research. At the early age of 25 he was appointed to the chair of Chemistry at the School of Military Medicine in Utrecht, and having already distinguished himself by his love of Oriental research, he was offered the appointment of Professor of Chemistry and Natural Science at the Medical College in Nagasaki. This appointment he held for five years, when he was summoned to Tokiyo to perform the duties of adviser to the Department of Hygiene. Subsequently it became his duty to establish in Kiyoto as well as in Tokiyo laboratories of chemistry applied to medicine and hygiene, and on January 1st, 1877, the Government commissioned him to perform a similar service in Yokohama. Despite the arduous nature of his duties, and the assiduity with which he invariably performed them, Dr. Geerts found time to engage in extensive independent researches. He contributed numerous papers of great interest to the proceedings of the German and English Asiatic Societies of Tokiyo; was the author of a Japanese Pharma-

copzia, based upon the European method, a Guide to the Hot Springs of Japan, and a work of large scope and extensive research which, unfortunately, he did not live to complete—*Les Produits de la Nature Japonaise et Chinoise*. Always devoted to scientific pursuits, Dr. Geerts did not find leisure to cultivate a very extensive circle of acquaintances, but his rare qualities were highly esteemed by all those capable of appreciating them, and it is universally felt that the Japanese Government have lost services not easily replaced, and this community the society of a gentleman who contributed largely to the reputation of Westerns in Japan.

JAPAN has not failed to add her quota to the list of terrible accidents which sadden the record of the past twelvemonth. From the province of Sanuki comes news that a theatre has been destroyed by fire, and that, owing to faulty means of exit, about twenty adults and sixty children lost their lives. There is nothing surprising in the intelligence. We venture to say that throughout the length and breadth of Japan there is not so much as one theatre in which an alarm of fire could fail to bring about a cruel catastrophe. A Japanese play-house is a veritable fire-trap. In the first place, the entrance is so narrow that ingress or egress for more than one person at a time is inconvenient; and in the next, the gallery is only accessible by a steep ladder, to descend which at the best of times is no easy matter. Moreover, the majority of a Japanese theatrical audience consists of women and children. A child can scarcely be too young to go to the play, if only it is old enough to be capable of keeping quiet under persuasion. Thus anything like a panic in a Japanese theatre can only mean death or serious injury for a number of the spectators. The authorities seem to regard all this with the utmost indifference. Perhaps the accident in Sanuki may teach the public something, but that it will lead to practical measures of reform, we do not for a moment believe.

FRANCE has cut the Gordian knot in Annam by going to Hué itself and pounding it into submission. The latest news is that the Tu-duc has agreed to all the terms proposed by the invaders of his kingdom. It is difficult to see what else he could have done. From the moment when assistance from China became hopeless, there was nothing for it but to submit as speedily as possible. Perhaps in the interests of present peace this sharp, short, and decisive policy was the wisest that could have been adopted, but certainly it will not have the effect of improving China's mood towards foreigners. It will be ludicrous to speak to her any more of Western justice. Henceforth she cannot be blamed if she estimates international morality at a very low figure. It is said, indeed, that France has agreed to submit the differences between herself and the Middle Kingdom to arbitration, and that she has avowed her intention not to occupy Annam. But so long as M. Challe-

Lacour remains at the Foreign Office such professions will be regarded as empty fables. It may be consistent with the imperturbable gravity of Chinese *hauteur* to subside, at the eleventh hour, from bluster and menace into silence and indifference, but by no possibility can we reconcile the notion of a quiet retreat from Annam with the resolution France has displayed, the successes she has obtained and, the programme she has formulated. Moreover, it is to be sincerely trusted that having gone so far she will *not* retire. There is, to be sure, a great deal more to be done before her occupation of the delta of the Red River can become a profitable enterprise. The bombardment of Hué does not help to free the navigation of the river from the obstacles offered by the Black Flags. Their suppression will probably prove by far the most difficult part of the whole business; but on the other hand, nobody will have any sympathy with such piratical rascals. The sooner they are swept away the better. It may be said, then, that of France's self imposed task the portion which remains to be accomplished is perfectly legitimate. She has finished the arbitrarily aggressive part of the business, and the only atonement she can now make for the mistrust with which her conduct must inspire Oriental nations, is to stand her ground and do what she may to confer the benefits of civilized prosperity on the newly occupied regions. There is a great deal to be said against the first step which commits an European power to such a policy as France seems bent upon pursuing, but there is no excuse to be offered for looking back when once the hand has been put to the plough.

While we write news comes that the preliminaries of a new treaty between France and Annam were arranged at Hué on the 25th of August. The principal items of the treaty, as published by the *Echo du Japon*, are:—

- (1) Complete and entire recognition of a French protectorate over Annam and Tonkin.
- (2) Definitive annexation by France of the province of Binhthuan.
- (3) Permanent occupation of the line of Vain-khuia and the forts of Thuan-an.
- (4) The issue of orders to the Mandarins to return to their posts and confirmation of the nominations made by the French authorities.
- (5) The presence of a French Resident, assisted by sufficient forces, at the chief town of every province.
- (6) The placing in the hands of France of the customs of the whole Kingdom.
- (7) Erection of lines of telegraph between Saigon and Hanoi.
- (8) Permanent installation at Hué of a Resident possessing authority to obtain personal audiences with the King.
- (9) The establishment of French military posts along the Red River, and of fortifications wherever it may be deemed necessary.
- (10) Circulation of dollars and Cochinchinese currency throughout the Kingdom.
- (11) The details of the commercial régime, those of tariff and other points to be arranged at subsequent conferences held at Hué.

This Convention has been sent to Paris for ratification. It finally disposes of all question as to French intentions. One province only is openly annexed, but the difference between annexing and protecting, when two such powers as France and Annam are concerned, is more theoretical than real. It is difficult to approve of the policy which drove France to embark upon this adven-

ture, but there can be no second opinion about the admirably efficient and vigorous steps she has taken to carry it out. General Bouet and his forces deserve to be sincerely congratulated. The rapidity and thoroughness of the successes they have achieved will go far towards preventing the evils which might have attended such an arbitrary display of French enterprise. The Black Flags remain to be disposed of. They appear to have suffered a severe defeat at a place called Fuhai, in the neighbourhood of Hanoi. The forces under General Bouet's command at the latter town, to the number of two thousand, made a sortie on the 14th of August, and attacked the position of the Black Flags at Fuhai, about six miles from Hanoi. The enemy's force was estimated at 13,000, and after a stubborn resistance they abandoned their lines and fell back upon Son-tai, their headquarters. The French loss in this encounter was nine killed and thirty wounded. To-day (Sept. 1st) is fixed for an attack upon Son-tai, where results equally decisive will doubtless be obtained.

THE return to Japan of Mr. Mori, His Imperial Japanese Majesty's Representative at the Court of St. James's, is spoken of as likely to take place very shortly. It cannot be said that Mr. Mori has achieved signal success as a diplomatist. His talents seem to be rather of a literary order. Indeed, there are rumours that his reputation as a philosophical disputant is quite formidable at the Athenæum Club and that some of his theories have attracted considerable attention. Doubtless this is all very agreeable, but it is scarcely quite what Japan expects of her Minister in London. There are questions at issue which studies of Kant and Plato do not help to solve, and Mr. Mori would probably be more in his element at the Department of Education or the School of Moral Philosophy. Admiral Yenomoto is spoken of as his successor, but this rumour requires confirmation. We are inclined to think that Japan's interests would be best served by reducing the number of her representatives in Europe. One diplomatist of energy and ability, accredited, let us say, to Paris, London, and Berlin, might acquire and exercise an influence not possible under the present system.

It would appear that Prefect Mishima's scheme for the construction of roads in Fukushima Prefecture was by no means a capricious whim, as his enemies attempted to demonstrate. Our readers will remember that at the trial of the men charged with conspiring to overthrow the Government, one of the pleas for the defence was Mr. Mishima's oppressive proceedings, the chief count against him being, according to the *Hochi Shinbun*, that he wanted to compel everybody to work at road-making or to pay a fine. It is now stated that a sum of yen 16,500 has been granted by the Treasury towards the fund for the construction of roads in that Prefecture. At the rates of alternative fines fixed by Mr. Mishima, this sum represents the work of eleven hundred persons for a year, so that the expense to which

the people would have been subjected was not very terrible. At all events, by making this special appropriation, the Central Government lets it be seen that the Prefect's proposal was practically necessary. Sixteen or seventeen thousand *yen* will not go very far towards connecting Fukushima with Tokiyo and Niigata, but it will show the people that the measures of progress which their local officials propose and their local assemblies vote have the sympathy and support of the Central Government. It is almost amusing to observe that a Prefect attempts to impose a trivial tax upon the people for their own ultimate benefit are employed as a pretext by agitators for a Constitution. The benefits conferred by a constitutional Government in matters of taxation are very well illustrated by the case of Ireland, where, in the midst of penury and distress, every man, woman, and child has to contribute 26 shillings per annum to the Imperial treasury. Twenty-six shillings means something over six *yen*, which is more than three times the amount similarly levied per head of the population in Japan.

NOTES.

Our telegraphic information announces the prorogation of Parliament. The past session has been a remarkable one, and a great deal more work has been got through than was expected at the outset in consequence of the anticipated obstruction to business threatened by a section of the Irish members. The obstructionists at the time appeared as if they were in possession of the power to put an end to all chance of passing the much-needed measures before the House, but after a great waste of time in the early part of the session they were brought into something like order, and since then a large amount of work has been done. Notably affairs in Ireland have been adjusted to the extent that law has, at least temporarily, triumphed over disorder. With incalculable toil, the much abused Police Department has succeeded in detecting and bringing to justice the Phoenix Park murderers, and in breaking up a formidable, well organized, and eminently secret gang of terrorists and assassins. That the informer Carey should have been murdered by one who no doubt will prove to be a former associate is, in a good sense, a warning to traitors: it shows the futility of the best devised conspiracy in a bad cause, and how, when public law and justice have effectually vindicated themselves, private grudges complete their work. The fate of Carey will have as deterrent an effect upon public as upon private treason. Evidently, according to the synopsis of the Queen's speech, given in our telegraphic column, Parliament separated under unexpectedly favorable conditions to the Gladstone Cabinet. Passing by the platitudes about Egypt and the English occupation, we find that the trouble with France, arising out of the useless bombardment of Tamatave, is considered settled by the Sovereign and representatives of the nation. A separate despatch confirms this. "The

French Admiral in command at Madagascar has reinstated the Consuls at Tamatave," an inevitable result of course, but probably the last and unwilling act of Admiral Pierre before leaving his command on peremptory recall. That Zululand and the Transvaal are only in an "unsatisfactory" condition is as much as the present Government could expect, and a condition of affairs that the British nation may well rejoice at; but, after all, the conclusion of the message is the most satisfactory part of all:—the estimates for the revenue have been fully realised: agriculture, the backbone of the country, has improved in condition; and trade, which is Britain's limbs, and achieves and maintains her greatness, is in a sound and healthy state. In fine, the sky is cleared, though it is not free from clouds.

The *London and China Express* remarks that "it is as yet almost too premature to say much on the prospects of silk for the coming season. That the export from the Far East—China and Japan—will be below the average seems to be well assured, but advices from the Continent, which were at first positive for a small crop, are now rapidly bringing up the total, and the Italian crop is expected to be pretty well up to the average. It would have been just as well for all engaged in the silk trade—except, of course, the growers—certainly for merchants in this country, if the Continental crop had also been short. Some relief would have been afforded to those who have grown weary with watching the trade gradually leaving London while stocks here increased. However, half a loaf is better than no bread, and some are no doubt grateful for the recent little spurt here, although it may only have been small mercies." The *L. & C. Express* does not cite its authority for believing that the export from Japan will be below the average. Neither the vernacular nor the foreign local press, so far as we know, is "well assured" on this subject.

From daylight yesterday morning until far into the afternoon, the bosky slope at the angle of the roads close to the race-course, looked like a scene from Quintin Durward. There were the myrmidons of the law, a constantly varying crowd of gaping peasants, a stout elmsapling, and a body pendant from a bough. But it was not a case of summary execution, but a more prosaic one of ordinary suicide induced by poverty and want. A man, a Japanese laborer, had hanged himself in despair. This is the third suicide, including that of a foreigner, committed in this very spot in the course of the last few years. The body was discovered by a betto at daybreak, and the event was immediately reported to the police, but the corpse was not removed until about three o'clock p.m.

Referring to the Central Asian exploration of the Hungarian traveller, Arminius Vambéry, a correspondent of an American paper writing from Vienna, says:—"A Turkish officer who had seen much service in the Central Asian provinces, and who knew Vambéry, told

me that his famous expedition to Samarkand consisted simply in going out on the Samarkand route to where he could interview the pilgrims, returning, and in getting from them all the details of information of the Samarkand world possible; but that in fact he had never approached that city. This was curiously confirmed by his mistakes in description, which were such as ignorant people and those not accustomed to accurate observation are likely to make, as shown by the Russian descriptions when their expedition occupied the city. My Turkish friend told me the name of the locality where Vambéry camped, but this I have forgotten."

Four officers sitting in a bungalow in India were deep in a game of whist. Suddenly one of them turning deadly pale, made signs that no one should move or speak. In a hushed voice, he exclaimed, "Keep still, for God's sake! I feel a cobra crawling about my legs!" He knew that timidity was one of the strongest characteristics of this snake, and that if not disturbed or alarmed it would in due time depart of its own accord. All present were accustomed to the stealthy intruders, and did not, happily, lose their presence of mind. They very noiselessly bent down so as to take a survey beneath the table, when sure enough, there was the unwelcome visitor, a full-sized cobra, twining and gliding about the legs of their hapless friend! Literally death was at his feet. A movement, a noise, even an agitated tremble, might have been fatal. Luckily one of the four was acquainted with the milk-loving habit of the cobra, and rising from his seat with quiet and cautious movements, not daring to hasten, yet dreading delay, he managed to steal from the room while he signed the rest to remain motionless. Quickly he crept back with a saucer of milk in his hand, and still with noiseless movements set the saucer under the table as close to the terrible reptile as it was safe to venture. That fearful strain on their nerves was happily not of long duration, for presently they were relieved by seeing the creature gradually untwine itself and go to the milk. Never before did that officer leap from his seat as he did then, the moment he felt himself free from the coils of the cobra, and read in the faces of his comrades that he was saved. Short shrift, however, had Mr. Cobra, for sticks and whip-handles were freely used even before the saucer was reached."—*Curiosities of Serpent Life*.

We read in the *New York Nation* that Secretary Folger has disposed of the question of the trade dollar, so far as the executive relations of the present Administration to it are concerned, and indeed, in the absence of legislation on the subject by Congress, the matter may be regarded as finally dismissed. On the 6th of July, the *Evening Post* published a letter from Mr. James C. Hallock, Jun., of Brooklyn, reviewing the legislative history of the trade dollar, contending that it was entitled to as much monetary consideration as the standard silver dollar, which contains seven grains and a half less

bullion, and concluding that "the President of United States has ample authority" to direct the Treasurer and Assistant Treasurers "to receive the trade dollars the same as the standard silver dollars, and when so requested, to exchange them for silver certificates." Secretary Folger, in reply to Mr. Hallock, who forwarded to him a copy of the letter, directs his attention to a letter written by ex-Secretary Sherman, which is of interest, not because the facts and opinions which it presents are new or unfamiliar, but because it states very clearly the view of the trade dollar which has always prevailed in the Treasury and in Congress. Mr. Sherman shows that the coins at once went out of the country, and that it was never expected that they would go anywhere else; that when, upon the depreciation of silver, bullion dealers found it profitable to put trade dollars—which by classification with other silver coins had been made a legal tender to the amount of five dollars—in circulation on the Pacific coast, Mr. Randall introduced in the House of Representatives, and Mr. Cox afterward reported, a bill taking away the legal-tender quality, which was passed by both branches of Congress without any objection whatever; that up to this time the trade dollar had not circulated outside of the Pacific States, because it "cost more than a paper-currency dollar," but when upon the resumption of specie payments the paper dollars appreciated and the trade dollars depreciated relatively, the bullion dealers found profit in putting the latter in circulation in the Western States. Thus, clearly, the Government had washed its hands of the trade dollar; had thoroughly discredited it as lawful money; had given notice in every possible way that it was not among the legal coins of the United States, long before the embarrassment now complained of began to be felt.

On Friday evening at 8.30 p.m., a very luminous meteor passed through the air a little over the house-tops of Tsukiji, in the direction of West to East, and dropped in the Sumida-gawa opposite the U.S. Legation. It resembled in appearance a large sky-rocket, more especially at the moment of its descent to the earth. Judging from its appearance its density must have been inconsiderable, or both in its passage through the air and in its descent its velocity would have been much greater. It was visible over a minute and a half.

NIAGARA has always possessed a strange fascination for the adventurous. Not only professional seekers of notoriety, but many men of social and scientific distinction, have risked their reputation for caution and sobriety of habit, as well as their lives, in the endeavour to associate their names with some act of unusual daring amid the waters or beneath the massive walls of the great cataract. Professor Huxley, it may be remembered, was unable to resist the impulse of penetrating the cavern beneath the Canada Fall to a greater depth than had been reached by any other explorer,—not excepting the practiced guides. The Prince of Wales,

during his youthful tour in North America, was tempted by the weird allurements of the scene to a recklessness which called for remonstrance on the part of his responsible advisers. Agassiz, the king of naturalists, whose philosophic composure was his strongest characteristic, was wont to say that he never set foot on the islands of the upper American rapids without experiencing an almost uncontrollable desire to march boldly into the shallow, treacherous stream, and oppose his strength,—or, rather, feebleness,—to the irresistible current. A certain intoxication of hardihood is one of the commonest sensations of those who are brought within the influence of this giant phenomenon. There may be something not altogether ignoble in the ambition of a resolute, plucky spirit, to contend with, and possibly to conquer, the tremendous forces which manifest themselves in various forms throughout the abyss of Niagara. To this extent, perhaps, the late attempt of the unfortunate Captain Webb may be preserved from reproach. But it would seem that his purpose, like the exploits of those who preceded him as exhibitors of feats of intrepidity, was inspired by more or less commendable mercenary considerations. The navigation of the pleasure steamboat, *Maid of the Mist*, from the comparatively quiet pool at the foot of the falls, over the swift rapids at the Suspension Bridge, and through the foaming whirlpool at the bend of the river, down to a secure shelter at Lewiston, was no doubt a desperate deed, but at the same time was a carefully calculated business operation. The owners were poor men, and the opportunity was afforded them of disposing of their property to good advantage, if they could bring it to an available market. The risk was heavy, but they accepted it, and carried their vessel triumphantly through, losing only the smoke funnel in the headlong voyage. Probably the history of their achievement, with its evidence that the passage could by some means be effected, afforded confidence to the latest aspirant for renown; and indeed it is not incomprehensible that a swimmer of such superlative skill and power as Captain Webb should believe himself quite capable of making his way, unaided, through waters over which a rather fragile steamer had been piloted in safety. Considering the nerve and endurance of the man, his undertaking does not seem so willful a defiance of destiny as some earlier performances in the same locality, the chief actors in which escaped uninjured. Sam Patch repeatedly leaped from Table Rock, a huge slab which formerly projected from the Canadian bank, at the very crest of the fall,—into the turbulent basin one hundred and fifty feet beneath, without sustaining the least harm. He lost his life in a similar plunge at the Genesee Falls, near Rochester, although the descent in this instance was only seventy feet. Blondin's wild escapades over the rapids, five miles below the falls,—a spot which he chose simply because to drop from his aerial cord would have been certain death there, while at every other point escape would have been just possible, in case of accident,—unquestionably

showed a more complete indifference to deadly peril than has been voluntarily displayed by any other individual on record,—excepting, of course, those who have hazarded their lives in obedience to nobler demands than a rope-dancer would be likely to appreciate. So far as it is possible to make a comparison, the conditions of the recent venture being partially unknown, the experiment of Captain Webb presents nothing so appalling to the imagination as the dizzy flights of the French funambulist. Indeed, although the project of swimming past the whirlpool is one which excites dread at first contemplation, there is no reason to doubt that, with due care in preparation and proper preliminary precautions, it will ultimately be accomplished;—for, now that it has been fruitlessly essayed, it is one of the certainties of the future that the effort will be repeated over and again. Without detracting from the manifold terrors of the place, we may remember that these are magnified and multiplied out of all proportion to the truth by its awful aspect. The gloom of the chasm, from which the overhanging rocks shut out the light of day; the unparalleled velocity of the raging current, which lashes the banks as if it would tear away their granite foundations; the ceaseless roar of the whirlpit, where the waters, checked by the sharp turn of the ravine, seem bent on forcing a way into the bowels of the earth rather than be diverted from their forward course; the tongue of foam which shoots upwards a hundred feet from the rocky jaws of the half submerged island in the centre of the torrent,—all these invest the scene with more frightful apparent attributes than a close investigation has proved to exist. It does not appear that Captain Webb made any of the tentative trials which might have enabled him to shape his course securely in the actual struggle. Possibly he wished for no diminution of the dangers, in order that the splendor of his victory might be the more brilliant. In his famous passage across the Channel he was not so rash; being accompanied by boats which would have rescued him at any moment, if the task had exhausted him. The sacrifice of so sturdy and robust a life is much to be regretted;—a wanton and needless sacrifice, we should be disposed to term it, although there may be some who hold that useful lessons are taught by these endeavours to extend the limits of man's capacity in battling with the elementary powers. The effect of the failure will certainly not be deterrent. Instead of serving as a warning to the foolhardy, Captain Webb's attempt will be taken as an example to be imitated, and by many who probably possess few or none of his extraordinary physical endowments. The whirlpool of the Niagara will engulf new victims, as a consequence of his ill-starred and extravagant enterprise.

FRIENDLY observers of Korean progress, while noting with interest the increase of her store of foreign luxuries, may be allowed to hope that her avidity in this respect will not become excessive. Admonition by apologue is an innocent, if not always an effective, method of exerting in-

fluence, and it may not be considered intrusive if we invoke from the regions of dramatic fable the well known presence of Mrs. Toodles, whose matchless instinct for "bargains" made her the queen of auction-rooms and the protecting genius of second-hand traffic. The extent and variety of this lady's purchases were beyond the power of human calculation. What she did not buy, in the course of her acquisitive passage through life, would have constituted a very small list in comparison with the vast aggregate of what she did accumulate. Her invariable reason for this interminable multiplication of odds and ends was, that in case they ever should be wanted, it would be "so handy to have them in the house." Watch-boxes, coffins, wheelbarrows, and a thousand other incongruities, filled her premises, from cellar depths to garret heights. In one fine frenzy of inspiration, she captured and bore home a brass door-plate, with the patronymic of Thompson inscribed thereon;—vindicating the outlay by the plea that she and her spouse might have a daughter, who might grow to maturity, and might marry a man by the name of Thompson,—in which climax of events, nothing could be more convenient than the possession of that useful article of exterior furniture. What Mr. Toodles thought, and how the neighbours regarded her proceedings, we all know; but she never was awed from the career of her humour, and persisted in surrounding herself with property of no immediate value, but of possible future utility, to the end of her days. Far be it from us to hint that a spirit similar to that of this provident matron of British comedy has descended upon the governing body of the newly awakened kingdom. It is only in one or two details that we detect a resemblance between its recent political and commercial acquirements and the prescient investments of Mrs. Toodles; and even these must be set down as pleasantly suggestive, rather than as affording grounds for adverse criticism. In common with others, we have watched with attention the organization of that experienced foreign corps of custom house officials, which, conjured into existence before it was definitely known whether a treaty with any Western nation would ever be ratified, now stands in an attitude of ripe fruition, ready to administer the imposts with a regularity, an energy, and a disciplined ardor not to be surpassed in the revenue service of the most advanced nations. It may be true that there are as yet no commercial imposts to be administered, and that the dawn of external trade has only just begun to irradiate the long darkened shores; but no one will deny that mercantile enterprise may in time enfold the peninsular kingdom in its embrace, nor that there may hereafter be an outlet for the activity of all the inspectors, tide-waiters, clerks and accountants which a far-seeing policy has gathered together. And then—how handy it will be to have them in the house. Again like others, we have read of the determination to institute a training school of diplomacy in the Korean capital, which in due season shall turn out ambassadors, envoys, secretaries and all the varied personnel required

for the formalities of international association. In the mind's eye, we can already see them, "piled up" as it were, like General Caproni's accretions of lumber on the Ishikari River,—classified, labelled and ready for use, on call. Up to this moment, Korea has treaty relations with only two States, in one of which she desires no permanent legation, while her delegates are now on their way to the other. When she will contract additional Western alliances, no man can yet say; but it is indisputable that if she does negotiate treaties; if those treaties are ratified; if the establishment of embassies, consulates, etc., in distant countries becomes essential, and the several ministers, attachés and agents are needed, it will be—so handy to have them in the house. We might be led into parallel avenues of speculation by the reports concerning the foundation of steamship companies by Korean capitalists, to compete for the coming transportation from port to port; by the stories of many-officered offices for the construction of machinery of foreign type; by the rumoured glimmer of military preparation, and kindred signs of material accession which those who think the expenditure of a nation should be regulated by its actual needs are bound to consider premature,—but for the present we leave these avenues unvisited. Korea has a fair right to use her resources, while they last, in the manner she likes best. After all, she has not fallen into vicious extravagance, and we may cherish the hope that, as her experience is enlarged, she may discover other objects as truly worthy of imitation as the formation of a staff for the collection of duties or the endowment of diplomatic scholarships. Perhaps the minds of her rulers will be turned toward a system of popular instruction, the basis of which might advantageously be copied from this country. If they have funds to spare, they could not apply them to a purpose more certain to win respect from foreigners than the building of primary schools throughout the land,—not for boys alone, but also for the sex which cannot be pronounced unworthy of educational privileges, since it claims one of the cleverest and most intelligent personages in the Kingdom. Everybody would be gratified to know, in process of time, that the Queen of Korea fulfils one of the duties of her station—a duty never lost sight of by the lady who shares the throne of this empire—by stimulating the diffusion of knowledge among the women of her realm.

There is one attribute of a high civilization with which Korea cannot long remain unprovided. It would not, indeed, surprise us to learn that she has already been supplied with it, although her people and her Government may languish in ignorance of the fact. At any rate, the time is not far distant when we shall assuredly be called upon to listen to the Korean National Anthem. This is a piece of property which, in the estimation of musicians, kingdoms cannot get along without. Some nations are born with national hymns, others achieve national hymns, and others—especially in the East,—

have national hymns thrust upon them. Japan has been fitted out with at least half a dozen of these tuneful symbols of enlightened progress. For many years no composer of the slightest pretensions came hither without seeking thus to identify himself with the empire's æsthetic future. The Japanese populace did not want a national air, never listened to one, and would not have known what it was if they had listened; but this did not prevent the flow of foreign inspiration nor diminish the endeavours to supply an utterly hypothetical demand. Possibly a flash of the same prophetic vision possessed by Mrs. Toodles, before mentioned, may have illumined the labors of the successive lyrists. They may have understood, though they certainly never said so, that the fifth wheel of a coach, or the subsidiary tail of a dog, was an object of primary indispensability compared with a patriotic anthem of the European pattern in an Oriental community; and, understanding this, they may have projected their fancies forward to the period when it might be handy to have a hymn in the house,—or a dozen, to choose from. Whatever their ideas may have been, the results of their labours are now shrouded in oblivion. They came, composed, and departed, and unless they kept copies of their effusions, the world will probably hear no more of them. Why they all failed, even in a musical sense, apart from the absence of any call for their productions,—we might easily explain, if the matter were thought to require demonstration. Now it is Korea's turn. Years hence she may have military bands as skilful as those which Japan now enjoys; but in the meanwhile she will be visited by all sorts of wandering minstrels, good, bad, and indifferent, each one of whom will leave traces of his sojourn in the form of a popular or patriotic song. Fortunately the Koreans will not be obliged to pay for these souvenirs. They will cost nothing but a little exercise of patience and self control on the part of those who are required to hear them. It would be a blessing if all foreign inoculations could be taken as easily or as inexpensively. Korea will go through her course of anthems much as if they were a light form of epidemic, and not one in a million of the people will know anything about it. The outside world will be told, periodically, that Korea has a national patriotic hymn, and there will be the end of it.

A COMMENDABLE feature in the theatrical representations of this country is the accuracy with which costumes of various ages are reproduced. The historical drama, which constitutes the most attractive entertainment of the play-houses, is in this particular a valuable aid to study and investigation. Tradition has preserved, among the actors, the means of satisfying almost every requirement of correctness and fidelity. Historic art, in Japan, is often transmitted from father to son, through many generations; and the present exponent of characters renowned in earlier days may look backward, in his own family, to performers who were contemporary with the heroes he is now called upon to im-

personate. In many instances, the dresses actually worn one or two hundred years ago are still kept ready for use, and it seldom happens that any deviation from exactitude, either as regards substance, form, or ornamentation, can be detected on the stage of any of the leading theatres. In the wardrobe department, if in no other, indifference to expense appears to be a standing rule. The silks, satins, crapes and velvets of the mimic scene are in every way as rich and costly as the materials possessed by the original wearers in real life. Visitors to the Asakusa houses, during the season which has just closed, have had opportunities of testing the care and attention given to this branch of the business. Dramas illustrative of divers periods, ranging from the time of Yoritomo to the last fifty years, have been produced with strict observance, in each case, of the laws of apparel. An example of the earnestness with which precision is sought for, even in matters seemingly unimportant, is related in connection with a recent characterization of the popular tragedian, Ichikawa Danjiuro. Having been cast for the rôle of a personage who flourished half a century ago, he found no difficulty in collecting the required garments, with the exception of the foot gear, which was known to be peculiar to the individual in question, who had invented a species of *geta* for his exclusive use. To ascertain in what the singularity consisted was now, in Danjiuro's estimation, a prime necessity; but although his inquiries were prosecuted in all directions, he was unable to obtain the desired information until close upon the time fixed for the performance, when he accidentally discovered that an aged relation of one of his students had been an humble servant,—with duties equivalent to those of shoe-black,—in the household of the officer about to be represented. This was sufficient authority, and from the description furnished by the old retainer, the clogs were straightway manufactured. Of the spectators who witnessed the play, very few, perhaps hardly any, were competent to decide whether the *geta* were properly or improperly constructed; but the anxiety of the actor was appeased and his mind was at rest. This is quite on a parallel with the anecdote of Mélingue, the French actor, who would not play Benvenuto Cellini without being surrounded by articles of the great Florentine's workmanship. In fact, it is only in the best French theatres that we find the same rigid adherence to harmonies of costume that is practised here. The English stage is reprehensibly disregarding of this point of duty, and, since the era of burlesque set in, has rather developed a tendency to dispense with costume of any kind than to be watchful of the clothes which are worn. A play of Shakespeare is more likely to be properly dressed at the Comédie Française than at any London establishment,—possibly excepting Irving's Lyceum. But the foremost French theatres are government institutions, and have facilities, as well as encouragements, which are not accorded in England. The Théâtre Français aims at accuracy not only in things French, but all the world

over. One hundred and fifty years ago, it devoted what was then considered a vast amount of enterprise to the "mounting" of a Chinese tragedy,—by Voltaire, if we remember aright. It will be a long time, we fear, before a Japanese manager becomes enthusiastic over the accessories of an European or American drama. The sense of responsibility extends only to subjects of Japanese origin; and excepting with respect to attire, little zeal is manifested. The costumes are admirable. The acting is often of great merit, even if judged by the severest standard. But in scenic appointments, mechanical appliances, and all that contributes to spectacular illusion, the Japanese stage is far from being what its foreign supporters, at least, would be glad to see it.

THE chief danger which the Orleans princes have to guard against for the moment seems to be the counsel of false friends, who seek to persuade them that some demonstration is absolutely inevitable in the position. Any demonstration would be compromising, and anything compromising would at once be converted into an excuse for the issue of a decree of exile. Thus when the physicians announced that all hopes of the Comte de Chambord's recovery were at an end, a proposal was immediately made to transport the remains of the chief of the Bourbons into France and bury them in the old domain of Chambord. This would assuredly have been converted into the occasion for a great and solemn manifestation, at which the Comte de Paris could not have failed to assist in his rôle of heir to the French Crown. Some word or act capable of being construed, or misconstrued, unfavourably, would assuredly have resulted, and then, farewell to Orleans for the present. The Comte de Chambord, however, seems to have foreseen this trap. His last testament, it is said, contains a clause desiring that his body shall rest, until better times, beside the bodies of his grandfather, Charles X., and of his uncle and aunt, the Duke and Duchess of Angoulême, who are entombed at Goritz. Henry of Bourbon will thus be followed to the grave by only a limited number of sure and faithful friends, and his obsequies, taking place abroad, will offer no opportunity for another exercise of that *rabies republicana* which, while professing to guarantee equal rights to all without distinction of person, refuses to live under the same heavens with men whose blood happens to be tainted with the poison of royalty.

A FEW days ago a foreigner sent his servant to buy some magnesia. The man returned with a quantity of what appeared to be roughly ground chalk. Although his master had told him to go to a foreign chemist's to make the purchase, the scamp had bought it at a native drug-store in Honchodori, in order to get a squeeze. On his master proceeding with him to the store and taking a survey of its contents, he was astonished to notice spurious drugs of all descriptions. Even patent medicines are being counterfeited. There were numerous boxes of

pills, labelled "Halleway's Pills," which are sold at 10 *sen* a box as Holloway's pills. The get-up of the outside wrapper is a very good imitation, and if it were not for the orthography and the low charge, the boxes might easily be palmed off on foreigners. When drugs of any description are sold in labelled boxes or bottles it is very easy for foreigners to detect the fraud, but when sold otherwise it is often difficult to do so. One cannot, therefore, lay too much stress on the precautions which should be taken when dealing with native druggists, and, in fact, we would caution foreigners from dealing at all except with tradesmen of established honesty.

L'Italie tells a charming little anecdote of Tourgueneff, the Great Russian novelist. It appears that the fashionable author possesses in Russia a noble estate where he loves to play the host with all the magnificent hospitality for which his countrymen are famous. As for his tenants, they adore him, and he treats them like a veritable father. Among them is a young Servian, twenty years of age. She is a blonde, of that blondness peculiar to the Servian women, a sort of pallid gold, like the rays of their melancholy sun. Tourgueneff had never observed this young-woman, but one day when on the eve of setting out for Saint Petersburg, he assembled his tenants, as was his custom, and enquired whether they had not some commission for the capital. Thereupon the young Servian with the pale gold locks stepped timidly forward and said:—"I have, master." "You wish me to bring you something from Saint Petersburg, my child?" "Yes, master." "Speak." "I pray you to buy me a piece of soap." Astonished, the author gazed silently at the young girl. Men whose business is to study hearts and brains are not fond of asking questions. They prefer guessing. Tourgueneff couldn't guess, however. He came back a month later as wise as when he set out. Sending for the golden haired young Servian, he handed her the soap and said:—"There, my child. There is what you asked me for." "Thanks, master." "Now, perhaps, you will allow me to ask you a question." "Speak, master." "Why did you wish me to bring you a piece of soap from the capital when you can get as much as you want in the shops here? What was the motive of this strange desire?" The golden haired girl became as red as a strawberry, and hung down her head. "You don't wish to reply, my child?" resumed Tourgueneff. "Master, it was because you entertain here many beautiful ladies who come from Petersburg." "Yes, and what then?" "You often kiss their hands. I wanted to wash my cheeks with Petersburg soap, and I hoped that you would do to my face what you do to their hands."

ALTHOUGH the indecencies which frequently disfigure the newspapers of Japan are severely condemned by the better class of citizens, there seems to be a general disposition to overlook the offences, on the ground that no serious injury to the empire's reputation is to be feared, the mis-

deeds of the press being known only to the circle of subscribers and readers. Supposing this to be a sufficient reason—which it certainly is not—for condoning these outrages upon morality, the impression that only Japanese, or residents in Japan, are aware of them, is entirely unfounded. They are detected and reprobated in every country where Japanese journalism has been heard of. We have before us an extract from an American publication, the *Paper World*, in which the periodical literature of this nation is thus criticized:—"The journals of largest circulation strike the lowest level of sensationalism, and border on looseness of morals; the restrictive press laws take no trouble about indecencies, but apply only to expressions as to Governmental affairs." This statement is afterward modified, to some extent, by the following observation:—"The code of 1878 does provide for a fine of five to one hundred yen for publication of anything offending against good morals and decency, but these terms are rather vaguely defined in Japan." Here is plain evidence that the good name of Japan abroad is tarnished by the unseemly practices of those who ought properly to represent the nation's best enlightenment. The newspapers, which should lead the way in progress and civilization, degrade themselves and disgrace their country by persisting in a grossness which would not be tolerated in any Western community. If it be true that a statute applicable to this nuisance exists, it should be brought into operation without delay. The theatres have long been subjected to the restraints of propriety, and the sale of obscene pictures by shop-keepers is prohibited. Why the press should be permitted to celebrate vice and to disseminate impurities which cannot otherwise be set before the public eye, it would be difficult for the most ingenious of sophists to explain. If the editors, as a body, were sensible of the dignity of their profession, they would at once put an end to the abomination. As it is, we shall be glad to see the first step taken by authority to call the offenders to account. So soon as it is found that the printing of a shameful anecdote or a foul jest entails a good, round penalty, the decent public may reckon upon a speedy abatement of the evil. It is quite time that the journalists of Japan should be made to assume the virtue of cleanliness, whether they have it or not.

THE work of uniting the new railway from Kumagai to the capital with the line to Yokohama is now in preparation. That the two roads should be joined is necessary for the complete utilization of the more recently constructed route. Some delay in arranging the preliminaries has been caused by differences of opinion as to whether the connecting rails should be laid, as directly as possible, from Ueno to Shinbashi, or should pass outside the limits of Tokiyo. The former plan would secure a saving of time in the transit, with perhaps other conveniences; but it would also involve great expense, owing to the high cost of land within the city. It has been decided, we understand,

that the track shall extend from Shinagawa to Kawaguchi, the latter station being somewhat farther from the Ueno terminus than the former is from Shinbashi. Through freight, therefore, need not enter Tokiyo, from either direction. The cross route will have the advantage of bringing into railway communication several suburban villages which can now be reached only by jinriki or other animal power.

A NOVEL kind of purse was found on the Bluff. A gentleman, while walking along, struck with his cane a match-box which was lying on the road and which he supposed to be empty. To his surprise, however, a metallic sound issued therefrom. On picking it up he found therein a gold coin and several silver ones. The owner may obtain it by applying at the office of this paper and mentioning the value of the coins. We are inclined to think that it must have belonged to a Japanese, for foreigners generally carry their money about in different kinds of receptacles.

BETWEEN 10 and 11 a.m. on the 30th ult. a fatal accident occurred on board the U.S. flagship *Richmond*. Mr. Noyes, a lieutenant, while putting some of the crew through spar-drill, was struck on the head by the fore-top-gallant mast which gave way and came down by the run, and knocked him down. He lingered in a state of unconsciousness for about an hour and then expired. The deceased officer was greatly respected on board and was a general favourite with the crew.

THE *Mainichi Shimbun* publishes some intelligence said to have been received in the capital from Pusan, Korea, on the 22nd ultimo. The natives in the neighbourhood of the port ascribe the arrival of Europeans to Japanese influence. They have therefore resolved to expel the Japanese from the country. With this view the inhabitants of Chhun-chhông-do, Chôl-la-do, and Kyông-sang-do, have united and agreed to disperse in case of the threatened failure of the crops through the drought now prevalent in the above three divisions of the country; if, however, the harvest is abundant, they will take plenty of provisions and rise in arms for the expulsion of the Japanese. As there was no rain until July 10th (old calendar), the plotters retired to their respective provinces. The *Mainichi* professes not to place much confidence in the report of this confederacy, yet, as it is freely referred to by natives of all classes, the rumor may mean that some disturbance is projected.—Measures are being taken by Japanese merchants to organize a company in which Koreans shall be shareholders.—Information from Wôn-san, received on the 19th ultimo, announces that the Japanese Lieutenant Kaitsu, who started from Pusan in June last with the intention of travelling from Gishiu to Sôul, was expected to return in a few days.—The weather has been exceedingly hot this year, the thermometer frequently registering one hundred degrees at noon.—A scheme to hold a religious service in memory of

the death of the Japanese murdered in Sôul last year, has been relinquished on account of the stagnation of trade.—Korean jugglers who have lately exhibited in the settlement were much admired.—Here, unlike the neighbourhood of Pusan, the crops are expected to be abundant, as much rain has fallen. The report of imports and exports for the first half of this year, compiled by the Chamber of Commerce, is as follows:—Imports of Japanese products, value yen 31,330; foreign, yen 330,063; of articles of daily use, yen 32,196; export of Korean products, yen 537,177; import of Japanese products from Wôn-san, yen 39,430; foreign, yen 39,270; Korean, yen 16,731; export of Japanese products to Wôn-san, yen 3,355; foreign, yen 70,240; of Korean, yen 8,995; import of Japanese product from In-chhôn, none; foreign, yen 4,980; Korean, yen 5,650; export of Japanese products to In-chhôn, yen 44,907; foreign, yen 50,894; Korean, yen 11,814.

We learn that Mr. T. R. H. McClatchie has been appointed Registrar of Her Majesty's Court in Yokohama. Mr. McClatchie's friends will be glad to hear that his health is now nearly restored, and that he will probably be able to return to duty before long.

"VILLANOUS saltpetre," even in its gunpowder development and its worst abuses, is as nothing in strength to the mixture of nitro-glycerine and mud which has some to be known as "dynamite." Not content with employing it to blow up palaces and murder kings, its devotees are now, with reckless thoughtlessness using it to exterminate the living treasures of the Ocean. In this context the *Daily Press* of Hongkong writes:—"A little knowledge is well known to be a dangerous thing, and so it proves to be in the amount of knowledge which Chinese have acquired of dynamite. They know that small cartridges of this powerful explosive will often provide a bigger haul of fish than they can obtain by hours of fishing, but they are probably not aware of what mischief they may cause by the unskilful use of this inexpensive but very dangerous aid in fishing operations. The danger attending the use of the cartridges by unskilful hands is well recognised by the authorities, who prohibit their use within the precincts of the harbour, but there is much to fear that the prohibition is often disregarded. When it is found that not only are cartridges exploded within the precincts of the harbour, but absolutely within a few yards of the Praya Central, or a public wharf, during the busy part of the day, by Chinese, this discovery is rather a startling one. This is what has recently been discovered in the following way:—Messrs. Douglas Lapraik & Co. learned that some person was using these cartridges close to, or under, their wharf, the charges being sunk to the bottom, and the foundations of the wharf were shaken by the explosion. How long this practice may have been going on it is hard to say, but it might have continued for an indefinite period undiscovered, as there would not be much to attract attention when the

cartridges were well sunk. A complaint was made to the police, who at once set about investigating the matter, and it was not long before the dynamite was discovered in the person of an old man, the master of a cargo boat. On his craft was a cartridge with fuse attached fastened to a piece of granite to sink it, and the proprietor was taken into custody. It would seem that this dangerous explosive is somewhat too easily obtainable."

THE *China Mail* of the 23rd ult., says:—Mr. Colquhoun, representing *The Times*, Mr. Cameron representing the *Standard*, and Mr. Gilder, representing the *New York Herald*, returned from Tonquin yesterday evening in the steamer *Saltee*. They regard the affair at Hanoi, of which we published particulars last night, practically as a repulse of the French troops, and assert that when the columns under General Bonet retired, the enemy followed them up to within a short distance of Hanoi. The enemy encountered—the Black Flags—are said to have been largely armed with Remington rifles and to have fought exceedingly well. The bullet wounds received by the French soldiers were chiefly in the lower parts, showing that the "Black Flags" understand the importance of firing low. They are far more formidable foes than the badly-armed Tonquinese rabble encountered at Nam-dinh. It is extremely doubtful if the French have, even now, sufficient troops in Tonquin to effect the subjection of the country, and if the programme laid down for them is to be carried out fully, it is more than probable that additional reinforcements will have to be sent for from Europe. Some absurdly-exaggerated reports of the sorties from Nam-dinh are circulating among the Chinese. The following account of them was handed in at our office this afternoon and purported to come from "a Chinese merchant who had returned to Hongkong from Haiphong in the *Saltee*." Not satisfied with killing hundreds of Frenchmen, he kills a large number of their horses while they are *en voyage* from Hongkong to Haiphong:—"On the 15th, the French came out from Nam-dinh to attack the Black Flags, but were repulsed with a loss of more than 400 men. On the 16th the battle was resumed and the French were again defeated with more than 700 killed. On the 19th there was more fighting, the French losing over 300 killed. During the last day it rained very hard. If there had been no rain the French would have been annihilated. This is the only information the merchant can give. Seventy per cent. of the horses which were taken by steamer from Hongkong to Haiphong died owing to the injuries they received through the rough sea on the voyage." Had all this slaughter taken place, the three special newspaper correspondents who came here direct from Hanoi and Haiphong last night must have heard something about it, but the account was as surprising to them as to us. There is no truth in the statement that 70 per cent. of the ponies died on their way down to Haiphong; they were all

landed alive, and, from anything we know to the contrary, in sound condition. Nam-dinh is distinctly stated in this Chinese account as the place where all this fighting took place, but had Hanoi been the locality given, the account would have been equally absurd.

IN connection with the matter of fish-food we observe in the London *Daily News* an interesting note. Professor Rice, of Brooklyn, has been investigating the food of those fishes which are the food of man. The subject does not seem very mysterious, except in the case of salmon. What salmon eat in fresh water no man knows, and perhaps no man ever will know. They appear (from post-mortem examinations) to take a swim on an empty stomach while they are in the rivers. They take the fly of course, but then the fly they take resembles nothing, except perhaps a big humming-bird, and in no condition can the salmon have lived on humming-birds. The salmon is supposed to rise at the fly out of mere curiosity. The salmon will also take a spinning minnow, which again resembles nothing in nature; and he does not disdain worms; yet worms are not found, any more than other articles of food, in his interior. Most big fish are cannibals. Trout eat small trout; and the bigger they grow the more they prefer to live on their own kindred. A Tweed trout is said to have bitten the hind leg off a rabbit; and Mr. Colquhoun knew a salmon which fed on young swallows when they fell out of their nest into the river. A pike will eat anything it can get outside of; and one pike is known to have swallowed a brown paper parcel full of sandwiches without even taking the trouble to undo the string. Trout are very fond of liver, which, if served out to them in proper quantities, fattens them amazingly. Flies are the most succulent and natural food of trout. Trout are also supposed to eat the very minute crustaceans which inhabit certain lakes. But on the whole fish are omnivorous, and it is traditionally reported that a perch was once caught on a hook baited with his own eye.

THE latest news from the Straits of Sunda make it particularly dangerous for vessels to attempt its navigation, and this condition of affairs must necessarily continue for some time. After a succession of volcanic eruptions had taken place, there has been a great earthquake, which, together with an enormous tidal wave, have demolished the lighthouse. The extent of the phenomenon can be judged when the strength of such erections are considered.

WE understand that several cases of partial "fish-poisoning" have occurred recently among foreigners in the settlement and Japanese outside it. The physical fact is that Nature, like Time, has her own revenges, and that this is not the season for lavish indulgence in fish—especially shell-fish.

A VERY judicious measure, in the furtherance of trade interests, has been recently taken by the

French Government. A Department of "Commercial Intelligence" has been established. Its duty will be to collect and publish for the use of French merchants and manufacturers information which may be of service to them. The main sources from which the intelligence is to be drawn are the French and foreign official documents and commercial or economical publications of all kinds, including consular and embassy reports. To this will be added contributions from special agents and correspondents. The whole will be published fortnightly in an official journal. The Minister of Commerce, in announcing this new departure, has invited the co-operation of the French Chambers of Commerce.

A RECENT telegram to *The Times* from Copenhagen gives an explanation of a fire still forgotten in London. It says:—A prisoner, named Jens Nielsen, who on Sunday and Monday last set fire to five farmhouses, near Copenhagen, has confessed that in February, 1881, he caused the terrible fire in the Victoria Docks, with the object of obtaining plunder. He only found, however, three dresses and two bonnets. Two days afterwards he set fire to a warehouse near London-bridge. On the same afternoon he was arrested for stealing; and the next day was sentenced at Bow-street to two months' imprisonment.

WE learn from private advices that the Japanese steamship *Ise Maru*, belonging to the Kiodo Uyu Kwaisha, which left London for this port on the 22nd June, encountered a severe storm in the Red Sea on the 17th July, in which she was unfortunate enough to have her foremast carried away. At the date of our information the *Ise Maru* was at Aden, undergoing necessary repairs, and she will probably not reach Japan until near the end of next month. The *Ise Maru* is quite a new steamer, and before hoisting the Japanese flag was called the *Craigmount*.

AN appalling calamity is reported from Sanuki. A theatre, thronged with sight-seers, in Katamoto-mura, Yamada-gori took fire, and a panic ensued. The flames rapidly spread through the flimsy building; and in the confusion and fright fifteen grown persons and sixty children were crushed or burned to death; and upwards of one hundred people are reported seriously injured.

ANOTHER large forest fire is reported to be burning in Hokkaido. A storm has swept over the villages in the vale of Usui, Gumba Ken, hail stones falling of a size, and with a velocity of descent, sufficient to smash the tiles of the houses.

THE senior Annamite member of the Saigon Colonial Council has been placed under arrest on suspicion of conspiring against French dominion; and the Hongkong *Daily Press* makes this event the occasion of an argument which appears to mean that even British-born Chinese should not be appointed members of an English Colonial Council. The line of reasoning taken is not convincing—not even strong.

THE ADDRESS TO SIR HARRY PARKES.

THE valedictory address presented by the community of Yokohama to Sir HARRY PARKES on Friday evening is a document any public man might be gratified to receive. It is couched in terms that leave no doubt as to the hearty sincerity of its signatories. One can easily see that its composers did not set themselves the task of attaining any high oratorical standard. What they wrote was written spontaneously, and the spirit that permeates it is that of men who would have been glad to exchange the restraints of formal language for a fashion of farewell more consonant with the strong feelings that swayed them. It is not wonderful that this should be so. During the eighteen years he has lived in Japan, the untiring industry and earnestness of Sir HARRY PARKES' career have been, if possible, less remarkable than the genial kindliness of his nature. He has been every man's friend. It does not often happen that a politician whose idiosyncrasy is to allow himself no leisure, possesses the ability of dissociating his mind at a moment's notice from the cares of office, and bringing the whole strength of an exceptionally strong sympathy to bear upon the troubles of every applicant, however humble. Yet this was an essential trait of Sir HARRY'S intercourse with his fellow residents. To carry a complaint to the British Legation was to be assured of finding, not the mere co-operation of a conscientious official, but the assistance of an unwearied friend. Such broad-shouldered good-nature, ready to bear a share of everyone's burdens, is not common. Still more uncommon is its complete survival of influences that surround the occupants of high office, and we cannot wonder that the language of Yokohama's valedictory address was that of men who bid farewell to a tried friend rather than of men associated to take leave of a distinguished official.

This is the second time within eighteen months that Sir HARRY PARKES has been called on to reply to an address of congratulation. The first occasion was that of his return to his functions in the spring of 1882. The sentiments with which he was then received were not inspired wholly by the pleasure of welcoming back to his post an official who had won the confidence and friendship of all his nationals. There was another cause which helped appreciably to increase the warmth of the greeting accorded to him. Persistent attempts had been made to throw discredit on his official conduct, and the natural resentment of his

friends, added to certain international prejudices excited by the controversy, imparted to his reception in Yokohama the character of a vindication quite as much as of a welcome. This was natural, and might have been harmless. But it happened that unwarranted and reckless essays had been made to associate the Japanese Government with these attacks, and that Sir HARRY PARKES had been depicted by the rowdy element among his admirers as the only Foreign Representative capable of safeguarding Western interests against Oriental treachery and finesse. In common with all rational men, Sir HARRY must have understood that to accept the rôle thus thrust upon him would have been to fatally mar his prospects of usefulness and influence in Japan. He could afford to leave unnoticed the assaults of his enemies, but when his avowed friends came forward, and, in their clumsy anxiety to belaud, did not hesitate to accredit him with the very sentiments his opponents condemned, he seemed to be in the position of a man who could not repel the accusations of his assailants without rejecting, at the same time, the encomiums of his advocates. It need scarcely be said that the better classes, in other words the majority, of the foreign residents recognised and deplored this dilemma, for the creation of which they were not responsible. But they trusted that Sir HARRY PARKES would see his way to rescue himself and them from so mischievous and invidious a position, and they were not mistaken. In replying to the address of welcome, Her Majesty's Representative, while dissociating the situation, as far as possible, from any political element, made use of it to declare that he regarded the interests of Japan as one and the same with the interests of the country he represented. He had not come back to threaten, to extort, or to suspect, but to treat Japan with confidence and friendship, believing these to be the best means of advancing the cause he had in hand.

On this, the second occasion of replying to a laudatory address from his own, and other, nationals, Sir HARRY PARKES was less careful to avoid political themes. On the contrary, he did not hesitate to give a succinct *résumé* of the motives that have guided his official conduct as well as of the conditions that appear to exist in Japan. There will be differences of opinion with regard to the wisdom of this frankness. Many persons will doubtless hold that a garden party is scarcely a fitting opportunity for Her Majesty's Representative to enter into such explanations, and some may

think that international politics gain nothing by being discussed on such a platform. But the circumstance does not allow itself to be disposed of in this summary fashion. It cannot be forgotten that Sir HARRY PARKES has always preserved the most intimate relations with this community, and it may be inferred that he has fully weighed the advantages of the intelligent sympathy and advice offered by the better classes against the danger of having his policy mistaken for a mere reflection of local sentiment. The danger would be insignificant did that sentiment find genuine and temperate expression, but such is by no means the case, and in electing to identify himself so closely with a community so perniciously championed, Her Majesty's Minister must often have been obliged to sacrifice his judgment to his associations. Under these circumstances, Sir HARRY PARKES could scarcely have been expected to avoid all political allusions when saying farewell to the men who for years had enjoyed his confidence, who had earnestly shared his hopes and intelligently seconded his efforts for the promotion of Japan's prosperity and, reciprocally, of their own. It is plain, too, from the substance of what he permitted himself to say, that his object was far-sighted:—

I have received much kindness from the Sovereign, the authorities, and the people of Japan; and in endeavouring, as it was my first duty to do, to advance the welfare of my own countrymen, I have always felt that the interests of foreigners in this country were inseparable from those of the people, and I have therefore only advocated measures and pursued a policy which I believe to be conducive to the benefit of both. I have also always considered—and it is only due to the foreign residents to say that this feeling is a reflection of their own—that the Government of Japan is entitled to our best sympathy in the trials and difficulties with which it has to contend in passing through the period of transition and in entering on the wide stage of reform which our advent may be said to have occasioned.

Here, again, we have a reiterated assurance that the interests of foreigners in Japan are inseparable from those of the people, and that Sir HARRY PARKES has advocated only measures which he believed to be mutually beneficial. But he goes farther than this. He undertakes to enunciate the sentiment of the foreign community, that the Government of Japan "is entitled to our best sympathy in the trials and difficulties with which it has to contend in passing through the period of transition and in entering on the wide stage of reform which the advent of foreigners may be said to have occasioned." We have always endeavoured in the columns of this journal to maintain the wide distinction which exists between the real feeling of the foreign residents and the false interpretation it receives at the hands of its turbulent champions. Sir HARRY PARKES could scarcely have done anything more useful than to

emphasize that distinction. He must know, as every rational man knows, that the difficulties of a British Minister in Japan and the disabilities of his nationals are immensely augmented by the peculiar conditions under which the function of representing British sentiments and championing British interests has been successfully arrogated by persons whose only title to be heard is the violence of their effrontery. Possessing more than an average amount of educated intelligence, and at least an average sense of justice, this community is made to appear not alone incompetent, but also unwilling, to be either clear-sighted, generous, or impartial. It was well that, even at the eleventh hour, Sir HARRY PARKES should endeavour publicly to dispel this delusion. We find it very difficult to believe that his influence might not have been usefully exercised in the same direction long ago. It was surely within his competence,—and it would certainly have benefited in no small degree the cause for which he has always laboured so earnestly,—to impose some check on the disgraceful abuse of Japanese officials which has disfigured the columns of the local English press for the past two years; on the cowardly calumnies uttered against the Government, its administration, its motives, and its integrity; on the base attempts made to stir up sedition among the people and to embroil Japan with foreign countries. However insignificant the utterers of these libels and the agents of this mischief may have appeared, we cannot think that the license they have been suffered to enjoy is consistent with the professed character of our relations with this country, and most assuredly it has been highly injurious to English influence and English reputation.

Sir HARRY PARKES then proceeds to say:—

My earnest desire, which I am satisfied is shared by every one here present, is that, in following out reform, the attention of this nation may be seriously occupied not only with political movement, but also with substantial economic and industrial progress, and that the well-being of the people may be materially advanced by the removal of those obstacles which now impede the development of their national wealth and resources. We also trust that Japan will soon gain for herself a reputation for commercial intelligence and liberality equal to that which she has already acquired in regard to education and religious toleration, and that it may not long be said that the privileges which she gives to foreigners, in return for that free welcome which her people universally receive in Western States, are inferior to those which have been granted in the country to which I am now about to proceed.

Sir HARRY PARKES here forgot to be just. That no rapid development of national wealth and resources is possible in a country where foreign intercourse and commerce are subject to such restrictions and impediments as exist in Japan, is a proposition which cannot be gainsaid.

But why do those restrictions exist? Is it because the people of this country mistrust themselves? Or because they mistrust us? Or because we mistrust them? The truth is that we have changed positions with the Japanese. Twenty-five years ago they either mistrusted us or mistrusted their own ability to associate with us, and therefore declined anything beyond a partial intercourse. To-day, it is we who, on the ground of mistrusting them, refuse to extend that intercourse. Arrangements for throwing the whole country open would be willingly undertaken on their side to-morrow did we consent to concede them just so much jurisdiction as is necessary to the preservation of peace and good order. But we will concede nothing—absolutely nothing. After all these years of effort, to the success and earnestness of which Sir HARRY PARKES has now borne unequivocal testimony, Japan is treated precisely as we treat China, whose sullen obstinacy and exclusiveness are by-words. Allusion is made to the superior privileges which the latter empire has given to foreigners. Granted that, from a commercial standpoint, she has been more liberal than Japan, does that prove anything? Does it prove that China is right in sacrificing a Government's first duty—the duty of protecting the lives and properties of its subjects—to the chances of increased mercantile profits? Suppose that Japan were to allow foreign trade and travel in the interior under existing conditions of jurisdiction, could she guarantee justice to her people in the event of any trouble with their foreign visitors? Here is no question of reliance on the integrity of foreign tribunals. The point is that, whatever the nature of the wrong he had suffered, a Japanese subject would have no resource but to carry his case, it might be half a dozen days' journey, and lay it before a foreign tribunal at an open port, whereas the foreigner could appeal immediately to a local court. We cannot expect the Government of this country to consent to any such arrangement, neither have we any right to adduce Chinese acquiescence as a precedent. The Chinese have their own idea about law and order: Japan has hers.

Equally unjust is it to speak of "the free welcome which Japanese universally receive in Western States." The conditions are quite different. Nobody will maintain, we presume, that England would allow Orientals to trade and travel within her territory, were they subject only to the jurisdiction of their own Courts, established at two or three places on the sea-coast.

No parallel can be fairly drawn until all the conditions are assimilated. When we consent to occupy in Japan the same legal status which the Japanese occupy among ourselves, then, and not till then, shall we be in a position to censure their want of reciprocity. These one-sided arguments aptly illustrate the impracticable nature of the policy we have been pursuing towards Japan—a policy which has completely checked the growth of her foreign intercourse and threatens to render our residence here both unprofitable and unpleasant. Nearly three years have passed since these facts were first pointed out in this journal. Can anybody say that we are so much as one day nearer the desired consummation? Can anybody pretend to think that the inelastic policy pursued up to the present is likely to prove more successful in other hands than it has proved in the hands of the indefatigable and able diplomatist whose single-hearted energy and unrelenting perseverance men of every nationality are constrained to admire to-day? The fashion of the moment is to ignore the truth, but the time will inevitably come when we shall recognise that, to be successful, that policy demands recourse to measures which no civilized nation is any longer disposed to adopt.

FRANCE AND ANNAM.

AN armed invasion of Oriental or other comparatively feeble states by the powerful nations of the West means almost invariably the permanent occupation or annexation, under one form or other, of the former. The career of British conquest in India is the most notable instance of this historic truth. When the more powerful nation having achieved its main object "marches back again," to quote Sir S. BAKER, either a former state of anarchy is restored, or the country subdued becomes in some other way all the worse for the probably well-meant, but certainly worse than useless, interference of its protector. An example may be found in the present condition of the Transvaal and Zululand, neither of which territories have benefited much by Great Britain's half-hearted and inconsistent interference. But we need not confine our view in this matter to our own policy. Latest despatches from Tonquin tell of complete Annamite submission to French authority, and the establishment of a French protectorate. No other *finale* to the affair could have been expected when once the French Government had embarked upon its recent eastern voyage. That the result will be advantageous to the

Republic itself we do not believe. On the contrary the influence of France in Europe will probably be weakened. None the less, however, must she adopt the motto of her last military President:—"J'y suis: j'y reste!" A month ago some of the profoundest of French thinkers recognized this and proclaimed it, either deprecating or applauding the policy which was leading up to the recent crisis. M. CHALLEMEL-LACOUR, the present exponent of colonially aggressive Republican France, said in the Chamber:—"Our commissioner to Tonquin will be charged with organizing the condition of the country; and, as soon as he can, will negotiate with Annam . . . he is ordered to teach the populations that France does not intend to conquer Annam . . . We will only occupy the delta of the Songkoi to the sea;" and so forth. Mr. LEROY BEAULIEU, whose usually bright political vision is obscured by the lens through which he beholds his country's future greatness in other lands than Europe, was not satisfied with these explanations. The best that he could find in them was that they were vague: that they represented mere floating velleities and not engagements. He held that it would be superfluous to tell the populations that France would not conquer Annam, inasmuch as she would be obliged to subdue it or at least its capital. It was premature to say that France would occupy only the delta of the Songkoi, because it was certain that she would have to occupy Hué at least, and probably one or two posts in the mountains of Tonquin. A "delta" can only be defended by some such process. The events of the last few days have proved—those of the next few weeks will further prove—how correct were his forecasts.

With the question as to the wisdom of the policy of colonization adopted by France we will not now deal: she is committed to it, and with or against her will, must pursue an inevitable course. How has it been with her in Tunis? In spite of declarations and promises, which we believe were absolutely sincere, she has been compelled by the mere force of events to occupy and to keep Tunis, Susa, Sfax, Gabes, Khernan and Bizerta. So it will be in Tonquin, where Hué, and at least three or four posts according to military exigences, will have to be held. Hence it would have been more prudent for the Government of the Republic to have despatched a large force earlier. The affair of Hanoi would then have been avoided, and the lives of the accomplished Rivière and his gallant comrades, would have been saved. The tactics employed by the Curiatii against

the surviving Horatius do not suit French, any more than they are favourable to English, aggression.

It is only another repetition of history. Take the case of Austria in Bosnia and Herzegovina. The great central European power entered these provinces with bright and probably liberal ideas. It found, like so many other theorists have found, that it had to fight for them—to fertilize its projects with the blood of its soldiers. The Austrians have thus made the territories in question their own. It is hard to see, now, how they could relinquish their possession. Take the case of England in Egypt, and here at least the French writer is just to his neighbours. He finds no difficulty in believing that GLADSTONE, at least, had no intention last year of keeping the British forces indefinitely in the region of the Nile; and that even to-day sundry radical members of the Cabinet would be content to abandon Egypt for good or for evil to her own devices. But, he asks pertinently, "how could this be done?" and answers his own question. "Every step backward made by Great Britain would cause her to lose the fruits of her labor; and the land she left behind her would fall into a worse state of anarchy than that which provoked the British expedition."

But let us go back half a century, giving the France of 1830, as we give the France of 1883, credit for the best intentions. When, as a consequence of an incident of ridiculously small importance and quite unforeseen, a mere blow with a fan, the French army landed at Sidi Ferruch, who could have foreseen what fifty years would produce in Algeria? Most probably neither CHARLES X. nor his Government, both on the verge of ruin, had any idea of the permanent conquest of a large territory because a monarch had so far forgotten his dignity as to strike an impertinent Consul in the face. Generals and journalists of that day would have been alike astonished had they been told that, five short decades later, a French garrison would be established at Laghwat, two hundred and forty miles from the coast: that French authority would extend at least one hundred and fifty miles further South into the dark continent: that a railway would be made and trains would ply to and from Kralfallah far beyond the region of the Shotts; and that one of their sons, a French Colonel, at the head of an official expedition, would meet his death at the Asiu Wells, near the 21st degree of North latitude, twelve hundred miles South of the Mediterranean littoral on the very confines of the mysterious mountain land of Asben.

Decidedly all these developments of the Dey of Algiers' intemperate fan blow did not enter within the vision of French diplomacy, which, it is only fair to say, has constantly made strenuous efforts to limit the occupation of Algeria. At first France was only to keep a few maritime posts; but with the best intentions she could not succeed. There was—and still exists—such a state document as the treaty of Tafna, which has shared the fate of all treaties. It provided for the suzerainty (or sovereignty) we forget which, of France, but recognized the right of the glorious Emir ABD EL KADIR over sundry provinces with the exception of a few trumpery towns and ports. The high-minded chieftain, under a sense of cruel wrong, broke the Tafna convention; and France had no alternative but to conquer the whole of Algeria.

Other facts are with the argument of the French economical authority, when he maintains that a "limited occupation" is a "*naïveté*." Only two kinds of colonial policy are possible—abstention and action, either one of which must be complete. There is no middle course. Gallant and loyal as ABD EL KADIR was, respected as he was by his Gallic foes and allies, he could not live as a joint sovereign or tributary, could not resist the temptation to endeavor to get rid of friends whose presence galled him, and whose very moderation he mistook for weakness. He failed, of course; and all attempts made by the Empire to establish a European colony side by side with an Arab kingdom were doomed to equally egregious failure. If we want another instance we can find it nearer here, in the recent history of Netherlands India. When the Dutch settled in Java and some of the isles of Sunda they little dreamed of the occupation of the whole region or their long protracted war in Acheen. When a few English merchants founded factories on the coast of Hindustan, they little imagined that they were dooming their descendants to effect the conquest of the giant peninsula and its dependences from Point de Galle to the scientific frontier of Afghanistan. To a similar policy France seems fated in Tonquin. That she can achieve like results is as improbable as it is certain that the circumstances are wholly unlike. It may almost be predicted that her present spasmodic, nay frantic, thirst for colonization will soon burn itself out, and that its attainments will share the fate of the French colonial schemes and ventures of the eighteenth century. However, be that as it may, she has entered a path upon which there is no repose, a road on which a nation entering must either advance in conquest, or retreat in disappointment and, perhaps, defeat.

THE ANNAMITE ARMY.

MR. PIERRE PONS D'ANTY, of the *Bibliothèque Nationale*, Paris, contributes to the *Progrès français* an article headed "The Annamite Army." He premises that, of recent days, there is not a journal which has not furnished its readers with an *exposé*, more or less exact of the military and naval forces of the Chinese empire, while not one has had a word to say about those of Annam. And, nevertheless, the writer thinks that it is hardly possible for China to interfere openly and arms in hand in this French business, whereas it is certain that France is engaged in a serious conflict with the troops of the TUDUC. It is true that the Annamite soldiery in Tonquin barely numbers two thousand men. At present the real adversaries of the French are the Chinese bandits known as the Black Flags; but the theatre of war might well be extended beyond the limits which bound it to-day. Mr. D'ANTY foresees the possibility that France may have to occupy the whole of Cochin China, in which case she would find herself face to face with the Annamite army, from which her soldiers would experience a fire belching from weapons which she has herself generously presented to her enemy, while her ironclads would be knocking to pieces the whilom French vessels which now constitute the main strength of the fleet of Annam.

First, as regards the land forces. During the reign of MINH MANG, about 1820, the Annamite army comprised about 200,000 well organized troops, armed in European style, and drilled by French officers in the service of the Emperor of ANNAM. This imposing military force no longer exists except upon paper. The strongest garrison, that of Hué, does not contain 6,000 men, and there are not more than 2,000 in the other posts of the province of which Hué is the capital. "Admitting," says Mr. DUTREUIL DE RHINS, "that all the other provinces of the realm have, each one, a garrison of half that strength, we shall arrive at a total of 88,000 men."

Mr. D'ANTY boldly divides these figures by half, and thinks he is not far from the truth when he opines that the Annamite army is never on ordinary occasions more than fifty thousand strong of all arms. The equipment and material are well worthy the *personnel*, which Mr. DUPUIS has seen, and which he describes as follows:—"Their manœuvres are executed with much posturing. It is worth while to watch them frisking about, running, dancing, and cutting heads off with extreme dexterity; but does

the least peril arise, all these doughty jugglers are swiftly in flight." We must not forget that in Annam, as in China, the profession of arms is but lightly esteemed. The officers are by one degree of rank inferior to civil mandarins of the same class, and more often than not the high commands are bestowed upon mere *littérati*, who know absolutely nothing of the science of war. Notwithstanding the liberal administration of "stick" to the rank and file by the non-commissioned officers, discipline is very lax. Desertion is common. If a deserter is recaptured he expiates his offence with the receipt of a moderate welting: if he cannot be found, his village is held to supply a substitute.

The term of military service is ten years; and it is furnished on the old feudal system of "bans." Generally two bans are enrolled at a time; in order that each may rest for three months alternately, while one is under arms. When all the bans are called out the period of intermittent leave and service is six months.

There are, in all, three different armies, to wit *Vê* (the Guard), *Cô* (the Provincial Army), and *Liu Suan Shan* or (Urban Militia).

The troops of the Guard are, as a rule stationed in the provinces of Binh Dinh and Nghe An, the birth place of the reigning dynasty. This *Vê* army consists of eighty battalions of five hundred men each, mobilized in companies of fifty and squads of ten. At the head of a battalion is a colonel, assisted by an adjutant: each company is commanded by a captain, while the squads are led by non-commissioned officers corresponding in status and service to our own sergeants and corporals. Ten battalions constitute a division, commanded by a general, assisted by his brigadiers. The number of the soldiers of the regiments of the Provincial Army is proportionate to the number of the inhabitants of the particular province. Otherwise the organization is identical with that of the Guard. The higher officers are all selected from the latter branch of the service. Each province has to provide and equip two companies of artillery, who are under the control of the commanders of the forts, all old officers of the Guard. Lastly the Urban Militia is furnished by the chief towns of the provinces. According to the relative importance of the town this local militia may contain one or many companies. The soldiers (Urban Guards) act as police, and are amenable to the authority of the military commandant in the provincial capital.

A General-in-Chief (Marshal of the

Centre) commands the entire army. The present incumbent of this important post is HOANG KE VIEN, a bitter enemy of the French and foreigners. The Staff is composed of four other marshals of lower rank, who reside at Hué; a military Governor-general, in each province: a major-general aided by brigadiers is placed under the orders of each Governor-General. The officer who comes immediately next in rank to the brigadiers is the General of Division, commanding five thousand men.

Let us turn now to the sea-service. The Annamite Navy is composed (1) of seven sailing corvettes, manned, according to their class, by from 120 to 200 sailors, and armed each with twenty guns, more or less: (2) some three hundred war-junks, small and great, with from two to six pieces and about forty men each: (3) three steamers recently purchased in Hongkong: (4) four or five vessels given by France. This makes a total of, say, for the Navy, 314 boats, 16,000 men, and 1,400 pieces of marine artillery. "But," exclaims Mr. D'ANTY, "Such men! such boats! such guns!" Mr. DUTREUIL DE RHINS, for his part, says that the "sailors get more cane than coopecks"—the proverbial "monkey's allowance." Hence they steal and sell anything whereon they can lay their hands on board; and, sooth to say, in this they only follow on a small scale the worthy example set them by their superiors of all ranks. "After one winter season," writes Mr. POSTEL, formerly a magistrate at Saigon, and author of a very interesting work entitled *L'Extrême Orient*, "the rigging of His Annamese Majesty's ships is simplified in a most fantastic manner."

The staff of officers of each ship is composed of (1) a literate: (2) of officers of the navy, artillery, and infantry detailed for special service. After all, the only individual on board who possesses the least trace of naval science is the *Cai*, a warrant officer designated to the charge of the helm on board sailing vessels—the engines in steamers.

Such, as described by Mr. D'ANTY, are the Annamite forces which France expects to see arrayed against her. Of the naval force, as we mentioned above, she has herself furnished the most formidable contingent. Article 7 of the treaty signed on the 15th of March, 1874, between Rear-Admiral DUPERRÉ and the Annamite plenipotentiaries, stipulated that "France should cede to the Annamite Government five steam vessels of war, having a total horse-power of 500, and thoroughly found; one hundred cannon, each provided with two hundred charges; and one thousand repeating rifles

with five hundred thousand cartridges." One can understand the soreness of some French writers in criticising a policy which has thus placed war-ships and arms at the disposal of an enemy; though one would think they might find consolation in the certainty that, should a serious war ensue between the European and the Asiatic powers, both vessels and arms must be recovered by the former, who may thus be held to have lent them only for a time.

REVIEW.

Eight Years in Japan, 1873-1881: Work, Travel, and Recreation. By E. G. HOLTHAM, M.I.C.E. London: Kegan Paul, French, & Co., 1883.

We have seldom read a book that gave us greater pleasure than this latest addition to Anglo-Japanese literature. Yet as we close the volume and ponder quietly over the impressions its perusal has conveyed, we are conscious that the most prominent among them are referable less to the author's skill than to his disposition. From cover to cover there is not one ill-natured remark, and every sentence has a ring of sincerity which makes one feel that did one meet the writer to-morrow, the mere ceremony of shaking hands would suffice to transform him into an old and trusted friend. It must be confessed that this is a delightful experience. Not alone is it pleasant to escape from the pert plagiarisms of a Griffis, the flippant puerilities of a Crow, and the ineffable snobisms of a Dresser, but it is a solid gain to feel assured that what one reads is the honest conviction of an honest man set down with only just so much reserve as is dictated by a nature too kindly to be critical. To this latter cause, perhaps, may be attributed a certain sentiment of disappointment which the book inspires. One feels that, as a record of eight years' professional experience, it might easily take us a little deeper below the surface. Nothing, perhaps, stands in more urgent need of reform in Japan than the fashions which govern the conduct of public works. The weight of expert testimony upon this point is not to be gainsaid. We do not mean to assert that things are worse here than they were among ourselves before improved systems of scrutiny and wider competition deposed "Nunkey" from his position of virtually irresponsible paymaster. But they certainly are not much better, and when the publication of Mr. Holtham's book was announced, we hoped that it would be found to embody a critical *resumé* of these evils and their causes. But the author avoids this part of his subject altogether. Possibly he lacked data. Everybody is familiar with the complaint so often urged by technical experts in the service of the Japanese Government that they are never permitted to look behind the scenes, and thus their conceptions of the economical systems which obtain here are based upon what they are forbidden, rather than upon what they are allowed, to know. If this were so in Mr. Holtham's case, we venture to think that he might have done good service by placing the fact on record, instead of leaving us to conjecture the cause of his singular silence upon many points of paramount interest to the earnest enquirer.

The discretion which induced him to restrain his pen in these matters, is in a measure compensated by his frankness in other directions. Arriving in

Japan towards the close of 1873, he was able to inspect the works on the Tokiyo-Yokohama Railway before they had undergone any of the alterations or improvements that brought them to their present condition. He does not tell us very much about them, but what he does tell is highly suggestive. "I will not venture to say that what we saw commanded our entire approval; but it is futile now to criticise in detail the works of this first railway in Japan, as it became necessary within a very few years to undertake operations that almost amounted to re-making the whole line from one end to the other." Proceeding almost immediately afterwards to Kobe, he compared notes, with the following result:—

The idea we had formed from our observations in the neighbourhood of Yokohama, namely, that railway engineering in Japan was not as railway engineering elsewhere within our knowledge, was strengthened by what we saw at Kobe. The permanent buildings for the station and workshops were of iron, and had been designed upon the assumption that all the columns would be most suitably supported upon screw-piles; but when it came to erecting them, the screw-piles proved to be not quite long enough to reach the ground when the columns were fixed with reference to the intended rail level. So the structure was propped up in the air on temporary supports, while the ground was elevated, by means of concrete in blocks and sand filling, until the screws at the lower ends of the piles were reached and imbedded. Hard by we found one of the engineering staff despairing of pangs intended to denote the centre line of railway, on a curve, because his theodolite was marked the wrong way round, as he said; but his resources were not by any means at an end, for in our presence he instructed his foreman to set the rails right, as near as he could, by eye alone, that he might get his centre line by measuring from them, and thus have no mistake as to the proper position of his future platforms! We had tiffin afterwards with this good fellow—as he really was—and I don't think he ever knew the real cause of our suddenly losing our gravity when he mentioned for our information that the railway had many quite unnecessary curves in it.

Other funny things did we see that day and the next, and presently learned to keep our countenances under proper discipline; and, moreover, ceased to wonder at the alleged delay in completing the line. For it appeared that the only known way of passing a stream of water eighteen inches wide under the line, was to build a couple of walls that would have served for the abutments of a fifty-foot bridge, a foot and a half apart, and span the yawning gulf between them by means of beams sixteen inches square, of expensive timber, of sufficient length to have about a dozen feet at each end buried in the embankment behind the masonry. The walls were of finely worked granite, and must have cost a mint of money; but a structure of this description was to be found nearly every hundred yards.

Then we came upon two tunnels under rivers, justified by the peculiarity of the situation, but remarkable as being constructed for a single line only, while a third tunnel, a little further on, was made wide enough for a double line—the difference being explained by the statement that it had always been intended that the tunnels should be for a double line, but it was not found out while the two first were being constructed that they were not so.

We found, at any rate, that our Chief, who had not been long in the country, and who had at first to make the best use he could of a staff constituted on the basis of taking any one to be an engineer who said he was an engineer, and who was rapidly bringing order out of chaos, had some justification for thinking that a few men selected in London would perhaps leave the whole lump so as to render his task in the future somewhat easier, establish a healthier constitution in his department, and secure for the Japanese good value for their money.

The author here illustrates a fact which has exercised a potent influence on Japan's conduct towards her foreign *employés*. There was a time—several years ago, indeed—when the most implicit confidence marked her attitude. Advice was no sooner tendered than it was received, and services performed in the ordinary routine of duty elicited expressions of gratitude as agreeable as they were unexpected. Perhaps it might be too much to assert that these pleasant traits would have proved permanent had their preservation depended upon the Japanese alone, but it is certain that they were first marred by foreign incompetence. The too facile trustfulness which "took any one to be an engineer who said he was an engineer," influenced a majority of the appointments made by the Government in those early years, and was followed ere long by a reaction which, though natural and necessary, was not always sufficiently discriminating. To the

same cause may be traced something of the illiberality that renders it almost hopeless to apply for leave of absence now. In nine cases out of ten a man has to choose between severing all his home ties or resigning his appointment. That there are occasional exceptions renders the general rule all the more irksome, and we are sometimes disposed to think that there is not very much to choose between the indiscretion which once saddled the service with a host of incapables and loafers and the ill-advised strictness which now withholds from all alike a reasonable indulgence. It is when speaking on this subject that Mr. Holtham allows himself to be betrayed into the only expression which contrasts unpleasantly with his uniform good-humor. The Principal Engineer in Tokiyo, who died there in 1876, "had been granted," writes our author, "six months leave, after seven years' service, when it was known that he could not possibly live to enjoy it; in accordance with the principles of the department." This is an ugly sentence, quite at variance with the writer's general good taste. Very different is the following, which, though not entirely free from traces of bias, contains some truths well worthy of note:—

I have before stated my belief that the measures taken by the government (that is the Council of State advising the Sovereign) to reduce or commute pensions and relieve the agricultural classes of a part of their imposts; were, in spite of some drawbacks and attendant evils, politically wise and beneficial to the nation as a whole, and I am inclined to think it probable that the continued existence of the government in its present form is due to that policy. But for the relief thus afforded to the great bulk of the producing but backward classes, Japan must, it seems to me, have succumbed to the organic troubles attending her conversion to modern ideas. It is, however, rarely that one hears this act of statesmanship referred to in terms at all adequate to express the approval that should be accorded to it by all thoughtful minds. Sometimes we find the permanence of the bureaucracy, the virtual form of government, in the *personnel* of which scarcely any Japanese professes to put any faith or confidence, wondered at by those who do not see that the cry of progress to which the nation once responded, is for the time in abeyance, and that the cry now is rightly for time to make good the drain caused by the progress so far effected—which cry and the necessity that evoked it, the government of the Mikado has not failed to recognize.

Like a youth who has been growing too fast, the nation has a period of delicacy to work through before the full vigour of its maturity can be developed; and the power that has said, "Do not trouble to equal or rival your fellows just now: lay in a stock of strength, and grow out to your stature first," is the most beneficent of future effort.

But it is open to any one to allege, as I do, that in a great number of cases the appearance has been taken for the reality of the required relief, and a false economy has been put in the place of judicious maintenance of effective power. I believe it may be said that there are only two remunerative undertakings that have been worked out by national funds—the railways and the telegraphs. Manufacturing and commercial concerns, having the command of Government money, have sprung up in all directions and resulted only in the transfer of public funds to private pockets; and it is only lately that the folly of continuing in such a course has been recognized and an attempt made to realize something out of the partnerships between the various departments and the promoters of the many concerns that have been parasitically fastened upon them. The utter worthlessness of the vast majority of these concerns was at once proved upon inquiry, and the taxpayers have at last awakened to the consciousness that they have been robbed under specious pretences, such as assisting commercial progress, establishing manufactures that might obviate the necessity of imports, and demonstrating the genius and ability of Japanese men of business.

This, however, is only a late phase. For years the government have been hoodwinked by the reports of subordinates, that great economy had been effected here, there, and everywhere, by the simple process of dispensing with the services of foreigners, and every Japanese commissioner, professor, cadet, or foreman who could represent himself as competent to supersede the foreigner, has been applauded for his energy and hailed as deserving well of his country, without due examination or check. That a continuous process of substitution of Japanese for foreigners is entirely justifiable by the gradual and efficient attainment by the former of technical knowledge and sense of responsibility, is not to be denied—at any rate by one who has for years been personally concerned in the conduct of an important undertaking in which such a process has been kept in view and put in action almost from the first; but it is undeniable that the credit of the proceeding, and of its happy results economically, has been appropriated by those who have always been trying to do too much, and denied to those who have done all that was possible.

So that after years of faithful service, and ungrudging co-operation in all that could promote efficiency and

economy, a time comes when the conscientious foreign civil servant, who has deserved at least a share in the credit his department has won by its success before the government and the public, retires amid a general round of congratulations, awarded to each other by his Japanese colleagues and successors, who can choose what report shall be made to their departmental or ministerial superiors of the circumstances under which his continued service has been rendered impossible. They are secure of approval, who have so dealt with "one of the least of these;" and the departing "hired person," who has probably acquired a certain amount of cynicism, and if he has been wise, has made provision for a rainy day, trolls out Ingoldsby's rhyme—

"And still on these words of the bard keep a fixed eye,
Ingratam si dixeris, omnia dixi!"

In my own case, I may confess the working, long after the event, of what seemed an occurrence round and self-contained enough in all conscience, that was the misfortune that befell me in the early part of the year 1880, by the loss of all my goods and chattels with the destruction of the house I occupied. During the remaining two years of my stay in Japan I was never settled down in any way, and, in fact, was less comfortable even, than when in my first two years I was up country on surveying duty. Between February, 1880, and April of the following year, I had four different places in succession, wherein to lay my head; and when I did get down to Kobe, such elements of uncertainty surrounded me as rendered it unadvisable to make arrangements that might constitute first a tie and then a loss. Thus successive removals added to my first bereavement; and at last, when my few odds and ends were sent to the hammer, to bring me in something less than half what they cost me, and my renewed library was simply shipped home again, so that outside my hat and boots I had only the wide world and Providence to trouble me, it was a positive relief, as I anticipated it would be. A man's lines must indeed be cast in pleasant places if after eight years' absence his thoughts do not turn homeward; and as the Japanese service knows no such thing as furlough or privilege leave, such thoughts are fatal.

Even more interesting than these reflections are the author's professional comments on the engineering works which came under his observation. Indeed, it may be said that these constitute the back-bone of the book, for though the descriptions of travels in the interior of the country are excellently written and often very entertaining, they have had too many predecessors to possess any novelty. The following account of quarrying in Japan is not encouraging from a practical point of view:—

At one time the Railway Department had imported a professed quarryman with a view to get systematically to work and supply good uniform stone for their buildings; but owing to some reasons not clearly stated, the man was never put to his proper work. What the Japanese call a quarry is in general a rough hill-side where they scratch for boulders big enough to split up with wedges into the sizes required; and when they get an order for a large stone the whole strength of the quarrying gang are sometimes scratching around for weeks in search of the required boulder; and if that is high up on the hill-side, when it is moved off its bed and rolled down, it may gambol away into a ravine or river, where it is so difficult to get at afterwards that a fresh hunt after another is instituted and all begins *de capo*.

Our own experience tells us that these failures to utilize the services of foreign experts, despite the most urgent occasion, are almost invariably referrible to rational causes, unless—as has not unfrequently been the case—some obstructiveness on the part of the *employé* himself is at fault. This, however, by the way. It does not affect Mr. Holtham's facts about stone-quarrying in Japan. Pleasant reading is his account of the conduct of a railway survey with the assistance of subordinate ignorant alike of technicalities and of English:—

Our native staff afforded us considerable amusement. With some addition to the force, by whom James had been accompanied up country, we had now two interpreters, three cadets, and two paymasters—the latter being by far the most important men of the expedition, and reputed, as we found, afterwards, to be the real railway makers, so many coolies and foreigners being employed in the rough outdoor work of the job under their orders. Tom and I had of course no knowledge of the native tongue to start with, though we soon picked up enough to enable us to get along every well with those of our men who did not happen to know any English. They were all wonderfully quick at seizing the idea of any operation that had to be carried out, and a mere hint, conveyed, perhaps, in the one intelligible word of a halting sentence, set them off, with eager, childlike *placé*, to cut down trees, set up poles, and manoeuvre with chains and staves. They kept their sharp black eyes fixed upon us with breathless interest, as we sat sometimes on the sunny side of a bank, making calculations that resulted in the circumventing of physical obstacles, and resumption of the right path beyond; and

when from some commanding elevation we could look back over the way we had come, and prove our work right, a general board grin of satisfaction and chorus of "Naruhodo!" showed their sympathy and admiration. The great difficulty we found in the language, was the proper use of verbs; but here an undoubted assistance was found in the auxiliary polite termination "mas," which should not, in strict propriety, be used in giving orders to persons of decidedly inferior class, and no doubt accounted for many contemptuous smiles on the generally impassive countenances of those superior persons, the interpreters, when we happened to dispense with their intervention. The use of the said "mas," however, had the great advantage of enabling the men to distinguish when we meant to use a verb, which, of course, implied that something was to be done, nine times out of ten; in fact, we generally made the verb, of which we were none too certain, as indistinct as possible, and brought in the termination, "mas!" with great aplomb, whereupon the two or three most intelligent and enterprising men started off to do as many different things, actuated by guesses at what was required; and the unsuccessful guessers had a good laugh at their own discomfiture, and united in "chaffing" the men who had hit the right nail on the head.

For instance, if we wanted a small tree cut down, or a pole brought a little nearer, or a small quantity of paint applied to the top of a stake, three ideas of "small" that should properly be expressed by altogether different words in Japanese—the usual formula was, "Hoi! chisai! pronounced (cheese-eye) mumble-mumble-hum-hum-mas!" and a wave of the hand, or a glance of the eye, or a preliminary handling of an instrument, gave an additional hint, in considerably less time than it would have taken to explain in English to an interpreter what was wanted, and get him to pass it on, with all his own misconceptions, to one of the men. Oh, those verbs! how we used to sweat at them, to use a schoolboy term; and how persistently we found ourselves telling people to go when we wanted some one to come, and to run when standing still like grim death was required! In my young days I used to flatter myself that I was quick at languages; the result, however, of talking up a Japanese grammar or vocabulary was generally prompt slumber; and in the hot season I used to invoke nature's sweet restorer, otherwise a stranger, by this simple process, and might have been discovered at the proper time and in the proper place, by any one who should intrude upon my privacy, under a mosquito net, with a book on the floor beside me, and a heavenly smile upon my countenance, murmuring in grateful dreams the names of Satow or Aston, beloved while yet unknown in the flesh.

We may fully supplement this testimony to the intelligence of the untrained classes by the following verdict on the trained Japanese staff:—

At the same time, I must acknowledge that by this means, as I suppose by this means only it could have been brought about, I came to know the native staff so well, and the gradual progress of their powers so intimately, that the anxiety I felt in the first days of substituting Japanese for foreign foremen at critical points became greatly limited, and I could confidently entrust to some of my native assistants, after a time, work that I should have thought it most rash to place in their hands earlier. On the whole, it may be said that, as regards the actual execution of work, the trained Japanese workmen and foremen are both intelligent and conscientious; and I had every reason, before leaving Tokyo, to be satisfied with the progress made by the native staff generally. It is no slight matter to their credit, that from the time when I first had to employ them without any intermediate supervision, until the renewals and doubling of the line were completed, not a single case of detention to the ordinary traffic, and but three cases of obstruction, so slight as only to merit remembrance because they were but three, occurred to be charged against the native staff. One of these was the placing of a block of stone temporarily, in process of shifting it, too near the open line, so that it was actually struck by the step of a passing engine, and the other two were failures to secure temporary erections so as to withstand unexpected gusts of wind that blew them over towards the railway and fouled the trains: in no case was any damage done that a few pence would not cover.

These are comfortable assurances, coming, as they do, from a skilled engineer. It is pleasant, too, to find that Mr. Holtham's estimate of the Japanese student's future is somewhat different from that of those captious persons who profess to be very desponding about the utility of the Engineering College and similar institutions because they have not yet supplied the country with a stock of ready-made experts. Here is what our author says:—

The best students of the Tokyo Engineering College have been sent, after obtaining the degree of Master in Engineering, to Glasgow to start again with a fresh education there. When they have done with Glasgow they will probably return to their native land and become professors in the college they started from, and the production of engineers will come in a later generation; or the second flight of passed pupils may be driven by stress of circumstances to qualify for that less showy calling.

It is characteristic of the Japanese that they pay so much attention to things done by their teachers, rather than to things antecedent, that a Japanese student becomes an

imitation of his teacher, so far as lies in his power. It is a natural result that the pupil of professors tends to become a professor, while the pupil of executive engineers tends to become an executive engineer. The one develops into a mathematician, a chemist, or a physical experimenter; the other into a calculator, a manufacturer, or a responsible director of works. It is an old controversy that, as to the comparative value of theoretical and practical instruction; and it cannot be denied that either term, if used as limiting the character of the instruction, may involve more than a suggestion of serious deficiency. The ridiculous pretensions of some ignorant men who call themselves "practical," as if it were to their credit to be without any theoretical command of principle, have tended to obscure the real value of experience in the conduct of special operations that repeat themselves, in slightly different forms, throughout the whole domain of applied mechanics; and, on the other hand, clever scholars who could sit down at any moment and write you off a chapter from Rankine are sometimes amusingly non-plussed at finding that, for all practical purposes, the theorems they have studied may be reduced to a few words bearing a strong resemblance to the ancient doctrines that two and two make four, and that every top must have a bottom; stated in terms specially applicable but with comprehensive significance. So far as we in the Railway Department had the opportunity of observing the work done, in producing results in concrete form, by past pupils of the Engineering College, it may be said that there is promise of a full justification of the pains taken by their teachers, to be hereafter shown by the practical usefulness of those taught; and that the cadets who have been actually educated upon work in progress will have to produce the result of private theoretical study in order to compete with them. So far as my observation, which has extended now over a sufficient period and field to enable me to state conclusions with some confidence, has led me to a knowledge of men and of work, this is just what we see everywhere producing in the aggregate the happiest results. The real value of the studies to which the pupils of the Engineering College have been introduced during their six years' course, will probably appear in due time; it would be premature to expect academical triumphs to be immediately continued in the field of actual work.

But space forbids us to follow Mr. Holtham any further. We have selected the above extracts entirely from the portion which he designates "Work," though by the general public other sections of the volume will doubtless be found more entertaining. On the whole the author's forecast of Japan's technical career is decidedly favorable. His book may possibly carry less weight than its merits warrant because of the somewhat jocose style of the writing. But it is essentially the work of an earnest man and the product of a mind above all things free from superficiality. We could wish, indeed, that Mr. Holtham had not "put himself outside" quite so much meat and drink; that he had not lived in quite such a perpetual atmosphere of tobacco smoke; that his usually clear judgment had not been warped whenever it encountered a mission or a missionary, and that he had refrained from inventing a Japanese phrase and then mis-translating it. But these are petty blemishes. Every word he has written is imbued with the spirit of work. That was the absorbing principle of his eight years' life in Japan. The steady, unwearying engineer looks out at us from behind every graceful picture of gaiety and frolic, and whether the man is battling with head and hand against the furious onset of an autumn flood, or "breakfasting off succulent steak, with a tree stump for a seat and a kitchen chair for a table" beside the smoking ruins of his house, you cannot fail to recognise that under this jovial *débonnaire* exterior lurks a more than common share of those qualities which have made Englishmen what they think they are. We cannot take a more fitting leave of Mr. Holtham and his delightful book than by quoting his verdict on the works of two brother professionals:—

The art works and Imperial reception-rooms were in a permanent building designed by an English architect, Josiah Conder, whose residence of some years in the capital and observation of Japanese requirements and possibilities enabled him to produce a work worthy of the purpose and the situation. A nobly proportioned and simply graceful front, crowned by dome and minaret, and indicating by the spacing of its windows and arcades the purpose that called it into being, stands in a clearing flanked by fine trees, and approached through a park that is one of the prizes of Tokyo. This is probably the most successful of the modern buildings of the city, which, however, can now boast some fine examples of architecture, chiefly works of the above-named gentleman and of M. de Boinville, who was for several years architect to the Public Works Department. There are also buildings, copies more or less of foreign examples, which, by their mass and in their several sites, add dignity to the capital and contrast admirably with the "packing-case" and "cheap toy" styles of earlier efforts, so prevalent in Japanese cities since the age of progress commenced.

THE STORM OF AUGUST 17TH TO 20TH, 1883.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—On the 5th and 6th instant, Shanghai was visited by a storm, which came up apparently from the Liukiu Islands on a north-westerly course. Its outer limits extended to Kiushiu on the 2nd and 3rd, as the Japanese weather maps show. At the time of its development and during its progress, the barometer ranged high in southern and eastern Japan, lowest in western Kiushiu, this distribution of pressure causing, during the whole period from August 1st to the 10th, much easterly winds and cooler weather.

From the 10th to the 16th, the barometrical changes over Japan were slight, as they usually are in the summer months, but on the 16th a change was preparing. It ushered in a second storm, coming from about the same quarter as the first, viz., the Liukiu Islands.

On the morning of Friday, 17th, an area of high barometer was forming over south-eastern Nippon, with rising pressure east of the line, joining Sakai in the southern sea of Japan with Wakayama, in Kii; while to the south-westward of this line, a gradually increasing fall was noticed towards Kagoshima, our south-western most station, owing to an area of low barometer advancing from the south-west or south.

The centre of this depression could not yet be located, but about its approach there appeared to be no doubt, and the south-west coast was warned.

At 10 a.m., on Friday, it was blowing already hard at Kagoshima. At 2 p.m., a violent gale was raging with falling barometer, and the whole south-west coast experienced strong winds.

From this time, until its disappearance in the Pacific on Monday, 20th, the storm can be easily tracked by the weather maps, which are constructed daily for 6 a.m., 2 p.m., and 10 p.m.

The centre must have been, on Friday, 17th, 6 a.m., about south-west of Kagoshima, west-south-west of Sata no Misaki; Saturday, 18th, 6 a.m., it bore about south-west from Nagasaki, probably pretty near the coast; Sunday 19th, 6 a.m., it was in Korea Strait, advancing leisurely at about the same rate till Sunday night at 10 p.m., having spent already its greatest force. From then till Monday 21st at 2 p.m. the centre took a long quick sweep over the Sea of Japan (being at 6 a.m. to the north-eastward of Oki Islands and to the westward of Noto) and continued in its rapid progress across Nippon, leaving it on the east coast about midway between Tokiyo and Nobiru. Part of the original depression remained in Korea Strait, gradually disappearing, while the main body went over to the Pacific.

The track of the storm may be approximately plotted on any small scale map by a circular arc, taking as radius 400 nautical miles and as centre the point of intersection of the parallel of Sata no Misaki with the meridian of Kanazawa (or of the western Gulf of Owari) as centre, commencing the arc to the south-westward of Kagoshima, carrying it up the west coast of Kiushiu, through Korea Strait, between Noto and Sado, and finishing just outside of Toyama on the east coast of Nippon.

The depression travelled until Sunday night, 19th at the rate of about 4 nautical miles per hour,

but about 35 n. m. p. h. across the sea of Japan and Nippon. It blew hardest at Kagoshima, Nagasaki, and Miyasaki, serious damage being caused at the first-named place; three buildings were blown down and telegraphic communication was interrupted.

The breaking down of telegraph lines, always likely to happen just at critical times, when reports of the weather are most needed, is one of many objections against the system of one single meteorological telegram a day, given up as insufficient in all other countries, even such as are far more favorably situated than Japan. In this instance no report was received from Kagoshima on Saturday, nor on Sunday morning, the Central Office thus being deprived of most valuable information as will be seen from the following observations:—

Kagoshima, Friday, August 17th, 2 p.m. Wind E. violent, lower clouds from E. rapid;
Kagoshima, Friday, August 17th, 10 p.m. Wind S.E. violent, lower clouds from S.E. rapid;
Kagoshima, Saturday, August 18th, 6 a.m. Wind S. violent, lower clouds from S. rapid.

The shifting of wind and cloud from E. to S.E., if known in time, would have shown as early as Friday night, that the storm would certainly pass west of Kiushiu, not east of it, a point which is plainly of the utmost importance in storm warnings.

With regular telegraphic reports three times a day the chances of delay in the receipt of valuable information are reduced to a minimum. Such regular reports can never be replaced by the makeshift of special telegrams.

The barometer was lowest at Kagoshima on Friday, 17th August, 10 p.m., (748 mm.), at Nagasaki on Saturday, 18th, 6 a.m. (747 mm.)

Copious rain fell at all stations near the track, no doubt a welcome gift to the farming population after a prolonged and general drought of about five weeks. The amount of rain for three consecutive days was for:—

| | | |
|------------------|--------------------|------------------|
| Kochi 225 mm. | Kagoshima 85 mm. | Kanagawa 56 mm. |
| Akita 116 mm. | Shimonoseki 79 mm. | Hiroshima 48 mm. |
| Nagasaki 107 mm. | Aomori 77 mm. | Sakai 36 mm. |
| Miyako 80 mm. | Niigata 75 mm. | |

At all other stations less than 25 mm. fell in 3 days.

The area of high pressure mentioned before in Southern Nippon, played an important part with regard to the track, keeping its place with the centre near Hamamatsu, from the commencement of the storm till the end of it. On the night of the 18th, and morning of the 19th, when pressure was diminishing over Nippon in the latitude of Niigata approximately, this area of high barometer in the South formed, so to speak, with another similar area in Hokkaido, two river banks, ready for the air current and whirl to pass through, with plenty of rain between the banks, but hardly any upon them.

It is thus important to watch not only the weather in the immediate vicinity of the depressions, but also everything that is going on at a greater distance, as this may often give a clue to the direction in which the storm will probably move.

E. KNIPPING.

Tokiyo, August 22nd, 1883.

THE TRADITIONAL PRIVILEGES OF FOREIGNERS IN CHINA AND JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In common, I think I may say, with the majority of the British residents present on the occasion, I listened with considerable attention to the words which fell from the lips of Her Britannic Majesty's Minister to China, on the evening of Friday last, in the Public Gardens. Although Sir

Harry Parkes' reply to the address presented to him was generally clear and lucid enough, there was one point which I failed to comprehend at the time of its enunciation, nor have I since, when thinking the matter over, arrived at a conclusion at all satisfactory to myself: further, I find on comparing notes with other listeners, that I am not singular in being unable to determine with certainty the meaning of a sentence made use of by Sir Harry Parkes on the occasion referred to and reproduced in the local papers on the following day. I thought when I saw yesterday that the *Japan Mail's* leading article was on the subject of the address and the reply, I should find a solution of the problem, but you entirely fail in that article to grasp the point, and although you quote the very words I wish to draw attention to, they appear to have presented themselves to you in altogether a different light—that is to say, in your comment on them, the range of your view is confined to Japan. Sir Harry Parkes said:—

We also trust that Japan will soon gain for herself a reputation for commercial intelligence and liberality equal to that which she has already acquired in regard to education and religious toleration, and that it may not long be said that the privileges which she has given to foreigners, in return for that free welcome which her people universally receive in Western States, are inferior to those which have been granted in the country to which I am now about to proceed.

It is quite true that the privileges of foreigners in this country could not well be smaller than they are under existing circumstances, but what I want to be informed about is—in what way they are "inferior to those which have been granted in the country" (China) to which His Excellency is about to proceed?
